Statutes against blasphemy and profanity have been in existence since the settlement of the colony, and in the seventeenth century these crimes were severely punished. The statutes now in force are traced to legislation of 1642 and 1650, and provide that one who shall blaspheme against God, either person of the Holy Trinity, the Christian religion, or the Holy Scriptures, shall be fined not more than one hundred dollars and imprisoned not more than one year, and bound to his good behaviour. One who shall use any profane oath or wickedly curse another shall be fined one dollar.

It has always been the custom to open each daily session of both houses of the General Assembly with prayer, and chaplains are appointed by each body whose salaries are fixed by law. It is still the custom to open each term of the Supreme and Superior courts with prayer. The clerk invites some clergyman to perform that office, and pays him an honorarium which is taxed in the regular expenses of the court. The great festival of Christmas received little recognition among the Congregationalists of Connecticut and the other New England States until the latter half of the nineteenth century. Almost from the settlement of the colony it was the custom for the governor to proclaim a day of thanksgiving in the late autumn to be observed as a religious holiday. It was originally intended to be and is still considered as a sort of harvest festival, and has long been esteemed in Connecticut as a day for family reunions and feasting. It was not until Episcopalians or, still later, Catholics became such prominent factors in the population that the 25th of December was declared by statute to be a legal holiday. Good Friday, as such, has never been made a legal holiday. The earlier settlers and their descendants were accustomed to observe a day in the early spring, proclaimed by legal authority as a day of fasting and prayer. For many years now it has been the custom for the governor to select Good Friday for the annual spring fast. Thus Christmas and Good Friday have in recent years received somewhat indirectly the recognition of civil authority. No statutes have been enacted, however, to compel their observance, and the statutes relating to Sunday observance are in no way applicable to these days. No other holy days of the Church are recognized in any manner by the law.

No privilege under the law attaches in any way to communications made to a priest under the seal of confession. As yet such privilege extends only to communications between a lawyer and his client, which the common law of England has always protected. It may be doubted if a law extending such privilege to priests or indeed to clergymen of any denomination could be passed through the legislature as at present constituted. No instance, however, exists, certainly in recent years, where an attempt has been made in any court of justice to compel a priest to disclose any knowledge which came to him through the confessional, and it is quite certain that public opinion would strongly disapprove any such attempt.

ECCLESIASTICAL CORPORATIONS.—The statutes of Connecticut contain quite elaborate provisions regulating ecclesiastical societies and the incorporation of churches. Many of those still in force were originally passed when the Congregational denomination was practically the State religion, and its various ecclesiastical societies had power to lay taxes for their support. Originally such a society was distinct from the church, constituting a separate organization. Individuals might be legal members of the society and not members of the church. This condition still remains in many communities, although, as before stated, one may escape liability of taxation by withdrawing from the society. It would be legally possible for an ecclesiastical society to be incorporated under these laws for the purpose of maintaining a church in communion with the Catholic Church. In early times before statutes were enacted for the organization and government of these societies, the several towns had the functions of ecclesiastical societies.

In recent years special statutory provisions have been made for the government of other denominations. Prior to 1866, when a law was passed having special reference to the Catholic Church, the title to most of its property was vested in the bishop and his

successors. In that year an act was passed by the legislature providing for the organization of a corporation in connexion with any Catholic church or congregation. Such corporation consists of the bishop and vicar-general of the diocese, the pastor and two laymen of the congregation. The lay members are appointed annually by the ex-officio or clerical members. Such corporation is empowered to hold all property conveyed to it for the purpose of maintaining religious worship according to the doctrine, discipline, and ritual of the Catholic Church, and for the support of the educational or charitable institutions of that church. A restriction exists to the effect that no one incorporated church or congregation may possess an amount of property, except church buildings, parsonages, school-houses, asylums and cemeteries, the annual income of which exceeds three thousand dollars. Such corporation shall at all times be subject to the general laws and discipline of the Catholic Church, and shall hold and enjoy its franchise solely for the purposes above mentioned. Upon a forfeiture of its franchise or surrender of its charter its property vests in the bishop and his successors, in trust for such congregation. This law has in the main worked with entire satisfaction. Property of various religious orders is usually legally vested in a corporation either specially chartered or organized under the general laws of the State where the mother-house of the community is located.

TAX EXEMPTION.—In the general statute providing for exemption from taxation are included buildings exclusively occupied as colleges, academies, churches, public school-houses, or infirmaries, and parsonages of any ecclesiastical society to the value of five thousand dollars, while used solely as such. So also are buildings belonging to and used exclusively for scientific, literary, benevolent or ecclesiastical societies. Clergymen are not exempt under the law from liability to perform jury duty or rendering military service. They are, however, rarely if ever found in a jury panel, for the reason that it is not customary to place their names on the lists from which jurors are drawn.

MARRIAGE AND DIVORCE.—The laws relating to marriage require that no persons shall be married until one of them under oath shall inform the registrar of the town in which the marriage is to be celebrated of the name, age, colour, occupation, birthplace, residence and condition (whether single, widowed, or divorced) of each. The registrar thereupon issues a certificate that the parties have complied with the provisions of law, which certificate is a license to any person authorized to celebrate marriage, to join them in marriage in that town. No such certificate shall be issued if either party is a minor without the written consent of the parent or guardian of such minor. The person celebrating the marriage is required to certify that fact upon the license, stating the time and place of such marriage, and return the same to the registrar before or during the first week of the month following the marriage. If he fails to do so he is liable to a fine of ten dollars. All judges and justices of the peace and ordained or licensed clergymen belonging to the State or any other State, so long as they continue in the work of the ministry, may join persons in marriage. A clergyman in solemnizing marriage is regarded in the law as a public officer, and his acts in that capacity are *prima facie* evidence of his character. Any person who attempts to join persons in marriage, knowing that he is not authorized so to do, may be fined not more than \$500 or imprisoned not more than one year, or both.

Divorces are granted by the superior court on any of the following grounds: adultery; fraudulent contract; wilful desertion for three years with total neglect of duty; seven years' absence, whereabouts unknown; habitual intemperance; intolerable cruelty;

sentence to imprisonment for life, or for any infamous crime involving a violation of conjugal duty punishable by imprisonment in the State's prison. The General Assembly may pass an act dissolving a marriage so far as its civic relation is concerned, but in recent years applications to that body have been regarded with disfavour and are very exceptional. Notwithstanding the fact that the judges have in recent years been increasingly vigilant in requiring strict proof of the facts upon which, under the law, a divorce may be adjudged, the number of divorces has alarmingly increased.

CHARITIES AND EXCISE.—The State is well supplied with hospitals and orphan asylums. The former, located in all of the principal cities, are, most of them, controlled by secular corporations, but in Hartford, Bridgeport, and New Haven, Catholic hospitals have been established in recent years. All hospitals, secular and Catholic, receive liberal annual grants from the State. Several orphan asylums are supported by the charity of non-Catholics, while the St. Francis Asylum, located in New Haven, provides for the needs of the Catholic population. County houses for dependent children who would otherwise have to be committed to the town poorhouses are established by law in each county and supported by public grants.

For many years the sale of spirituous and intoxicating liquors has been regulated by a law which secures local option to each city and town. On petition of twenty-five legal voters of any town a secret ballot must be held at the next annual election on the question of licence or no licence. Unless the vote is in the affirmative the sale of liquor in that town is absolutely prohibited, except by a public agent for limited purposes of necessity. Licences are granted by the county commissioners. The licence fee in towns of over 3000 inhabitants is \$450, and in other towns \$250. The business of the licensees is very strictly regulated by law, and their places must be closed from twelve o'clock at night until five the next morning, and on Sundays and all days on which any public election is held.

There is one State prison, located at Wethersfield, a reformatory for boys at Meriden, and an industrial school for girls at Middletown. No reformatory for adult convicts has yet been established in the State, though the matter has received legislative sanction, and the establishment of such a reformatory will doubtless be accomplished.

The statute of wills has been in force from the establishment of the colony. All persons of sound mind above eighteen years of age may dispose of their estate by will. A will must be in writing, subscribed by the testator, and attested by three witnesses, each of them subscribing in his presence.

The common law of public and charitable uses has always been in force in Connecticut. Grants for the "maintenance of the ministry of the Gospel", of schools of learning, the relief of the poor, the maintenance of any cemetery or lot therein, or monuments thereon, are especially declared to be within the law of charitable uses.

EDUCATIONAL FACILITIES.—New Haven, the principal city, having a population in 1900 of 108,027, and in 1908 estimated to be upwards of 125,000, is chiefly noted as being the seat of Yale University. The college from which this university has grown was chartered as a collegiate school by the Colonial Assembly in 1701, and first opened at Saybrook, a town at the mouth of the Connecticut River. Its promoters were the leading Congregational ministers of the colony, nearly all of whom had been graduated at Harvard College which had been founded at Cambridge by the General Court of the Colony of Massachusetts Bay in 1636. In 1718 the college was transferred to New Haven where the first building was erected, and where it took the name of Yale College on account of a dona-

tion of books and money of the value of about £800, made by Elihu Yale. Yale was born near Boston in 1648, but on his maturity removed to England where he died in 1721, never having returned to the colonies. The declared intention of the founders of the College was to educate young men for the ministry of the Congregational sect, then, and for many years after, the established religion of the colony. It received from time to time substantial grants from the Colonial Assembly, and the only one of its ancient group of buildings still remaining, and recently restored, was erected with funds granted for that purpose by the legislature. In 1715 it received a new charter.

To the original college other faculties and departments have from time to time been added. In 1812 a school of medicine was established; in 1822, theology; in 1824, law; in 1847, a school of science, now known as the Sheffield Scientific School; in 1868, a school of fine arts; in 1894, a department of music, and in 1900, a forest school. These several schools and departments, together with the Peabody Museum of Natural History, founded in 1866, and the Winchester Observatory in 1871, together constitute Yale University. More than 3,000 students are enrolled in all of its departments, and its various faculties number 320 professors and instructors. Its libraries contain about 500,000 volumes. In 1907 its property and funds amounted to nearly nine millions of dollars in value, and it expended in that year more than one million dollars in its operations. Yale has long since ceased to be denominational or sectarian in its character and influence, and has become substantially a secular institution. Upwards of 300 Catholics are numbered among its students, and several among the instructors.

Other colleges in the State are Trinity, established in Hartford, the capital of the State, by the Episcopalians in 1824, which has 200 students, and Wesleyan University at Middletown, chartered in 1831, and under the control of the Methodist Episcopalians. This institution has about 350 students, and thirty-five professors and instructors. There is no State university, as such, although a school of agriculture was established by the State in the town of Mansfield in 1881, upon the bequest of Augustus Storrs. This institution now receives the income of the various grants from the United States to Connecticut for the maintenance of colleges for instruction in agriculture and the mechanic arts, and is duly incorporated as the Connecticut Agricultural College. It has an enrollment of about 140 students, with twenty-eight professors and instructors. The Sheffield Scientific School of Yale University maintains advanced courses in civil, mechanical, electrical, and mining engineering, which are pursued by large numbers of students.

In the State system of public schools, high schools are maintained in all cities and considerable towns, and district or grammar schools are conveniently accessible to every child in the State. The public schools have a total enrollment of 163,141 pupils, with 4,281 teachers. The total amount expended for the maintenance of these schools, including expenditures for new buildings and repairs, was for the year 1905, \$3,795,259. Besides the State schools, good schools of the grammar grade are maintained in most of the larger Catholic parishes. There are 75 of these parochial schools in the State, with 31,877 pupils, and 714 teachers. The teachers are almost exclusively members of various sisterhoods. The establishment of these parochial schools has cost the Catholic population of the State \$3,290,700, and the annual cost of their maintenance has reached the sum of \$475,355. These schools receive no aid from the State or other public funds.

CHURCH STATISTICS.—The See of Hartford was erected 18 September, 1843, with jurisdiction over the States of Connecticut and Rhode Island. These

States had formerly been included in the Diocese of Boston. The first Bishop of Hartford was the Right Reverend William Taylor, who, with his successors, maintained the episcopal residence in the city of Providence until 1872, when Rhode Island was set apart as the Diocese of Providence, and Bishop McFarland then took up his residence in Hartford. In 1835 a census taken by Bishop Fenwick of Boston found about 720 Catholics in Connecticut, and in 1844 Catholics numbered 4817. In 1890 they had increased to 152,945, outnumbering the communicants of all Protestant denominations by more than 5000. In 1899 the Catholic population in Connecticut exceeded 250,000, and in 1908 had reached 395,354, with a remaining non-Catholic population of 725,000. Neither the coloured nor the Indian races contribute appreciably to this number. For the most part the Catholics of Connecticut are of Irish ancestry, largely augmented by the German, Italian, French Canadian, and Polish immigrations of recent years. Comparatively few trace their ancestry to the early settlers of the colony, and these generally are converts or belong to the families of converts. The number of conversions has been slowly but steadily increasing, but the enormous growth of the Catholic Church in Connecticut is still chiefly due to the great tide of immigration from European countries during the last half-century.

The Congregationalists are the most numerous of the Protestant denominations, having, according to the religious census taken in 1890, 59,154 members. The same census disclosed 26,652 Protestant Episcopalians, 29,411 Methodists, and 22,372 Baptists. It is notable that of Presbyterians, probably in other parts of the United States one of the most numerous of the Protestant bodies, there were in Connecticut at the time of the taking of this census only 1680 communicants.

JAMES HENRY WEBB.

Connolly, JOHN, second Bishop of New York, U. S. A., b. at Slane, Co. Meath, Ireland, 1750; d. New York, 6 February, 1825. He joined the Dominican Order in early youth and was sent to Rome, where, after ordination to the priesthood, he became professor at St. Clement's, theologian of the Minerva, agent of the Irish Bishops, and Prior of St. Clement's. Both Pius VI and Pius VII held him in high esteem. By his influence he saved the Irish, Scotch, and English colleges and his own convent, church, and library from being plundered by the French invaders. He was nominated Bishop of New York as successor to Bishop Concanen, who had desired his appointment in the first instance. He was consecrated in Rome, 6 November, 1814, but did not reach New York until 24 November, 1815. Despite advanced years and untoward circumstances, he did the fruitful work of both bishop and missionary almost to the day of his death. The diocese then included all New York and part of New Jersey, for which there were only four priests. He built several churches, founded an orphan asylum, and introduced the Sisters of Charity. Actively interested in religious progress throughout the country, he advocated the idea of a diocese in every state as the best means of promoting the cause of the Church.

Conon, POPE, date of birth unknown; d., after a long illness, 21 September, 687. The son, seemingly, of an officer in the Thracian troop, he was educated in Sicily and ordained priest at Rome. His age, venerable appearance, and simple character caused the clergy and soldiery of Rome, who were in disagreement, to put aside their respective candidates and to elect him as pope. He was consecrated (21 October, 686) after notice of his election had been sent to the Exarch of Ravenna, or after it had been confirmed by him (see BENEDICT I-X, POPES, under BENEDICT II). He received the Irish missionaries, St. Kilian and his companions, consecrated Kilian bishop, and commissioned him and the others to preach the Faith in Franconia. (Vita S. Kiliani, in Canisius, Lect. Antiquæ, III, 175-180.) He was in favour with the savage Emperor Justinian II who informed him that he had recovered the Acts of the Sixth General Council, by which, he wrote, it was his intention to abide. Justinian also remitted certain taxes and dues owing to the imperial exchequer from several papal patrimonies.

Conradin of Bornada (OF OF BRESCIA), Dominican preacher, b. in the latter part of the fourteenth century; d. at Bologna, 1 November, 1429. His parents, noble and wealthy Brescians, were devoted adherents of the Church in a time of many ills, including the great Western Schism. They gave their son a careful education and sent him, at the age of sixteen, to study civil and canon law at the University of Padua. There for five years amid the perils of the unbridled licence and moral disorders of the times, the youth was conspicuous for both talent and virtue, winning the esteem of his masters and compelling the respect of his fellow-students. He entered the Dominican Order at Padua in 1419, and was speedily found to be a model of religious observance. After his ordination his zeal found fruitful expression in his eloquent preaching. He was made prior of Brescia and shortly afterwards, by appointment of the master general, prior of the convent of St. Dominic at Bologna, where he was to restore strict observance. During a visitation of the black plague he displayed heroic zeal and intrepidity in ministering to the stricken people. Amid political upheavals, when Bologna under the influence of the Bentivogli had revolted against papal authority, Conradin took a firm stand against the conduct of the misguided populace. For publishing the papal interdict, which they had incurred but which they had disregarded, he was twice seized and imprisoned, suffering many indignities and cruelties. His courageous bearing and constant mediation finally prevailed, however, and peace was restored. Pope Martin V, in recognition of his services, sought to create him a cardinal, but the humble servant of God resolutely declined the honour. The plague breaking out anew, Conradin fell a victim to his charity and died in the midst of his heroic ministrations. His early biographers generally refer to him as Blessed.

JOHN R. VOLZ.

Conrad of Ascoli, BLESSED, Friar Minor and missionary, b. at Ascoli in the March of Ancona in 1234; d. there, 19 April, 1289. He belonged to the noble family of Milliano and from his earliest years made penance the predominating element of his life. He entered the Order of Friars Minor at Ascoli together

with his townsman and lifelong friend, Girolamo d'Ascoli, afterwards minister general, and later pope under the title of Nicholas IV. Having completed his studies at Perugia, Conrad was sent to Rome to teach theology. Later he obtained permission to go to Africa, where he preached with much fruit through the different provinces of Libya and worked numerous miracles. He was recalled from Africa to go on a mission to the King of France, then at war with Spain, and subsequently he became lector of theology at Paris. When not engaged in teaching, Conrad preached to the people or ministered to the sick in hospitals. In 1288 he was summoned to Rome by the new pope, Nicholas IV, who wished to make him cardinal, but Conrad died on the way after reaching his native city, being then fifty-five years of age. Nicholas IV was deeply grieved at the loss of his saintly friend, on whose counsel and zeal he had counted so much, and declared that Conrad's death was a great loss to the Church. The people of Ascoli erected a splendid tomb over the remains of Blessed Conrad. In 1371, when his body was removed to the new church of the Franciscans, it was found incorrupt and gave forth a sweet odour. Pius VI approved the cultus of Blessed Conrad. His feast is kept in the Order of Friars Minor on 19 April.

STEPHEN M. DONOVAN.

Conrad of Hochstadt (HOSTADEN), Archbishop of Cologne and Imperial Elector (1238-1261), and son of Count Lothar of Hochstadt and Mathilde of Vian-den, date of birth unknown; d. 28 September, 1261. Nothing is known of his early youth. In 1216 he became beneficiary of the parish of Wevelinghoven near Düsseldorf; in 1226 he was canon and, some years later, provost of the cathedral of Cologne. After the death of Henry of Molenark (26 March, 1238) the cathedral chapter elected Conrad Archbishop of Cologne. He received the archiepiscopal insignia from the Emperor Frederic II at Brescia in August of the same year. The following year, 28 October, he was ordained priest and consecrated archbishop by Ludolf of Münster.

During the first few months of his reign the new archbishop was on the side of the emperor in his conflict with Pope Gregory IX, but for unknown reasons went over to the papal party shortly after the emperor's excommunication (12 March, 1239). The whole temporal administration of Conrad was a series of struggles with some neighbouring princes and with the citizens of Cologne, who refused to acknowledge the temporal sovereignty of the archbishop over their city. Conrad was generally victorious, but his often treacherous manner of warfare has left many dark spots on his reputation. When Pope Innocent IV deposed Frederic II (17 July, 1245), it was chiefly due to the influence of Conrad that the pope's candidate, Henry Raspe, Landgrave of Thuringia, was elected king, and when Henry died after a short reign of seven months (17 February, 1247), it was again the influence of Conrad that placed the crown on the head of the youthful William of Holland.

In recognition of these services, Pope Innocent made him Apostolic legate in Germany (14 March, 1249), an office which had become vacant by the death of Archbishop Sifrit of Mainz, five days previously. The clergy and laity of Mainz desired to have the powerful Conrad of Cologne as their new archbishop. Conrad seems to have secretly encouraged them, but for diplomatic reasons referred them to the pope, who kindly but firmly refused to place the two most important ecclesiastical provinces of Germany under the power of one man. Shortly after this decision the hitherto friendly relations between Pope In-

nocent IV and the archbishop ceased, and in April, 1250, the Apostolic legation in Germany was committed to Peter, Bishop of Albano. At the same time began Conrad's estrangement from King William, which finally led to open rebellion. With all the means of a powerful and unscrupulous prince, Conrad attempted to dethrone William and would probably have been successful had not the king's premature death made the intrigues of the archbishop unnecessary. After the death of King William (28 January, 1256), Conrad played an important but despicable rôle in the election of the new king. For a large sum he sold his vote to Richard of Cornwall, brother of Henry III of England, and crowned him at Aachen, 17 May, 1257. This was the last important act of Conrad. He is buried in the cathedral of Cologne, of which he laid the corner-stone, 15 August, 1248.

MICHAEL OTT.

Conrad of Leonberg (LEONTORIUS), a Cistercian monk and Humanist, b. at Leonberg in Swabia in 1460; d. at Engenthal near Basle after 1520. He took vows at the Cistercian monastery of Maulbronn in the Neckar district, which, unlike most other Cistercian monasteries of those times, was then enjoying its golden age. In 1490 he became secretary to the general of his order. When the German Humanists began to revive the study of the Latin and Greek classics, as Conrad deplored the barbarous Latin in which the scholastic philosophers and theologians of Germany were expounding the doctrine of their great masters, he was in full accord with their endeavours to restore the classical Latinity of the Ciceronian Age. He also, by word and example, encouraged the study of Greek, but was especially attracted by the great Hebrew scholar Reuchlin (d. 1522) who inspired Conrad with his own enthusiasm for the study of Hebrew. Like Reuchlin, his friend and teacher, Conrad was convinced of the necessity of Hebrew for a thorough understanding of the Holy Scriptures, and became one of the few great Hebrew scholars of his time. He was in correspondence with the best writers in sacred and profane literature, and was highly esteemed by the learned men of his period. For a time he appears to have been engaged as proof-reader in the celebrated printing-office of Amerbach at Basle. Besides writing numerous Latin poems, orations, and epistles, he published (Basle, 1506-8) the Latin Bible with the "Postilla" and "Moralitates" of the Oxford Franciscan Nicolas de Lyra, together with the "Additiones" of Paul of Burgos (d. 1435) and the "Replicæ" of Mathias Thoring (d. 1469).

MICHAEL OTT.

Conrad of Lichtenau. See LICHTENAU.

Conrad of Marburg, confessor of Saint Elizabeth of Thuringia and papal inquisitor, b. at or near Marburg, Germany, in the second half of the twelfth century; d. 30 July, 1233. His contemporaries called him *Magister*, a proof that he had finished the course of studies at some university, perhaps Paris or Bologna. According to the Thuringian court-chaplain Berthold, and Cæsarius of Heisterbach, he was probably a secular priest, therefore neither a Dominican, as Hausrath states, nor a Franciscan, as is asserted by Henke and others. Papal letters and contemporary chroniclers describe Conrad as a man of much ability, large theological learning, great eloquence, ardent zeal in defence of the purity of Catholic Faith, and a

severe ascetic. They also agree as to the sternness of his character. He is first heard of as a vigorous preacher of the crusade proclaimed in 1213 by Innocent III. The death of Innocent and the consequent relaxation of interest in the crusade, did not dampen the ardour of Conrad, while, in addition, he was charged with various important commissions. Honorius III authorized him (1219) to adjust the differences of the convent of Nienburg with the Duke of Saxony and the Count of Askanien. The abbot of Hayna, the provost of St. Stephen, Mainz, and Conrad were appointed in 1227 papal commissioners for the separation of Marburg from the parish of Oberweimar. The synod of Mainz (1225) had issued several decrees for the improvement of the clergy and Conrad was intrusted with their execution; he was also charged with the reform of certain convents, as Nordhausen. In 1232 he describes himself as *visitator monasteriorum in Alemannia*. In the course of these labours Conrad became acquainted with the Landgrave Ludwig of Thuringia and his wife, St. Elizabeth. The prince held Conrad in high esteem, and the latter exercised great influence at the Thuringian court, being authorized by Ludwig to appoint to all ecclesiastical offices in the gift of the landgrave. This power of appointing to ecclesiastical livings was confirmed (12 June, 1227) by Gregory IX (*Mon. Germ. Hist.: Epistolæ Sæc. XIII*, ed. Rodenberg, I, 276, n. 361).

In 1225, after the recall of the Franciscan Roderig, Conrad became the spiritual director and confessor of the pious landgravine. He treated her with the same severity that he used against himself, a procedure in accordance with her own wishes. At times, however, he checked her pious zeal and forbade excessive mortifications. Conrad has been often blamed, quite unjustly, for the direction, in keeping with the custom of the time, which he imparted to the soul of St. Elizabeth. After the death of St. Elizabeth on 19 November, 1231, Conrad was deputed, with the Archbishop of Mainz and the Abbot of Eberbach, to examine witnesses concerning her life and the miracles attributed to her intercession. He also wrote for the process of canonization a short life of St. Elizabeth. In his later years Conrad was very active in Germany as papal inquisitor. The heresies of the Catharists and the Waldenses were spreading throughout the land; to Catharism, in particular, was owing the fantastic sect of the Luciferians (see Michael, *Geschichte des deutschen Volkes*, II, 266). From the beginning of the thirteenth century the German ecclesiastical authority, in union with the civil power, had proceeded vigorously against all heresies. The conflict in which Conrad had so large a share was waged according to the medieval views of public right and welfare. The first process in which he took part was that directed against Heinrich Minnike, Provost of Goslar. In 1224 after a trial that lasted two years, Minnike was declared guilty of heresy, delivered to the secular arm, and perished at the stake. In the following years Conrad preached with great vigour against the heretics and was warmly praised and encouraged to greater zeal by Gregory IX in a letter of 1227. The Archbishops of Trier and of Mainz both wrote to the pope in 1231 in praise of the extraordinary activity of Conrad and reported his triumphs over several heretical leaders. Thereupon Pope Gregory conferred on Conrad (11 October, 1231) the extensive authority of papal inquisitor, the first such officer appointed in Germany. At the same time the pope released Conrad from the obligation of following the ordinary canonical procedure (*te a cognitionibus causarum habere volumus excusatum*) and authorized him to proceed resolutely against heretics as he thought best, but with due observance of the papal decrees on the subject.

In the exercise of this authority, even according to

the sympathetic accounts of contemporary annalists, Conrad proved too severe and harsh. His assistants, Conrad Dorso, a Dominican lay brother, and John, a layman, were ignorant fanatics unqualified for such work. Conrad believed too easily the declarations of persons accused of heresy; on the strength of their statements, and without further investigation, others were arrested and treated as heretics. The accused either confessed their guilt and had their heads shaved for penance, or denied their guilt, were delivered as obstinate heretics to the secular arm, and perished at the stake. How great was the number of victims cannot now be ascertained. In Western Germany a general panic followed the appearance of this severe judge of heretics, who did not fear to summon before his tribunal powerful nobles, suspected of heresy, among such the Count of Sayn. The count appealed to the Archbishop of Mainz who convened a synod of his suffragans (25 July, 1233), at which King Henry also assisted. Both the bishops and the influential nobles were generally ill-disposed towards Conrad, who was present at the synod, and it was found impossible to prove the charge of heresy against the Count of Sayn. Thereupon Conrad undertook, in the exercise of his papal commission, to preach a crusade against heretic nobles. Shortly afterwards (30 July, 1233) both he and his companion, the Franciscan Gerhard Lutzelkolb, were murdered while returning to Marburg. He was buried in Marburg near St. Elizabeth. Despite the unfavourable action of the synod of Mainz, Gregory IX extended his protection to the memory of the deceased inquisitor and insisted that severe punishment be meted out to his murderers.

J. P. KIRSCH.

Conrad of Offida, BLESSED, Friar Minor, b. at Offida, a little town in the March of Ancona, c. 1241; d. at Bastia in Umbria, 12 December, 1306. When barely fourteen years old he entered the Order of Friars Minor at Ascoli, and was making rapid progress in the study of sacred sciences, when an internal voice called him to humbler offices of the religious life. He therefore abandoned his studies with the consent of his superiors, and for many years was employed as cook and questor. His superiors subsequently had him ordained and sent him forth to preach. His impassioned sermons touched the hearts of the most hardened. Conrad modelled his life after that of his seraphic father, St. Francis. He was especially zealous for the observance of poverty. During his long religious life he always wore the same habit and always went barefoot, without sandals. The early legend declares that Conrad's guardian angel was the same that had formerly fulfilled this office for St. Francis, and that Blessed Giles came back to earth to teach him the mysteries of contemplation. When Brother Leo, the companion and confessor of St. Francis, was dying, he sent for Conrad and made him the depositary of his writings. Conrad was allied with Angelo Clareno and intimately united with John of La Penna, John of Parma, Peter of John Olivi, Peter of Monticello, and others of the "Spirituals". In 1294 he obtained permission from Celestine V to separate from the main body of the order and found the Celestines by whom the Rule of St. Francis was observed in all its purity. When this congregation was suppressed by Boniface VIII, Conrad immediately returned under the authority of the superiors of the order. The letter written in 1295 by Peter of

John Olivi to Blessed Conrad in which the legitimacy of Boniface VIII's election is defended, has been edited by Ignatius Jeiler (*Historisches Jahrbuch*, III, 649). During a course of missions he was giving at Bastia, he passed away at the age of about sixty-five years and was buried in that place. Fifty-six years later his remains were carried off by the Perugians and buried at San Francesco. They now repose beside those of Blessed Giles in the choir of the cathedral at Perugia. Pius VII in 1817 ratified the cultus of Blessed Conrad. His feast is kept in the Order of Friars Minor on 19 December.

See the early *Vita Fr. Conradi* in *Analecta Franciscana* (Quaracchi, 1897), III, 422-430; an epitome of the same is given in *Analecta Franciscana* (Quaracchi, 1906), IV, 233-4; *Verba B. STEPHEN M. DONOVAN.

Conrad of Piacenza, SAINT, hermit of the Third Order of St. Francis, date of birth uncertain; d. at Noto in Sicily, 19 February, 1351. He belonged to one of the noblest families of Piacenza, and having married when he was quite young, led a virtuous and God-fearing life. On one occasion, when he was engaged in his usual pastime of hunting, he ordered his attendants to fire some brushwood in which game had taken refuge. The prevailing wind caused the flames to spread rapidly, and the surrounding fields and forest were soon in a state of conflagration. A mendicant, who happened to be found near the place where the fire had originated, was accused of being the author. He was imprisoned, tried, and condemned to death. As the poor man was being led to execution, Conrad, stricken with remorse, made open confession of his guilt; and in order to repair the damage of which he had been the cause, was obliged to sell all his possessions. Thus reduced to poverty, Conrad retired to a lonely hermitage some distance from Piacenza, while his wife entered the Order of Poor Clares. Later he went to Rome, and thence to Sicily, where for thirty years he lived a most austere and penitential life and worked numerous miracles. He is especially invoked for the cure of hernia. In 1515 Leo X permitted the town of Noto to celebrate his feast, which permission was later extended by Urban VIII to the whole Order of St. Francis. Though bearing the title of saint, Conrad was never formally canonized. His feast is kept in the Franciscan Order on 19 February.

STEPHEN M. DONOVAN.

Conrad of Saxony (also called CONRADUS SAXO, CONRAD OF BRUNSWICK, or CONRADUS HOLYINGER), Friar Minor and ascetical writer, date and place of birth uncertain; d. at Bologna in 1279. Holyinger is perhaps his family name. The error has been made by some of confounding Conrad of Saxony with another person of the same name who suffered for the Faith in 1284, whereas it is certain that they were two distinct individuals, though belonging to the same province of the order in Germany. Conrad became provincial minister of the province of Saxony in 1245, and for sixteen years ruled the province with much zeal and prudence. While on his way to the general chapter of 1279, he was attacked with a grievous illness and died at Bologna in the same year. The writings of Conrad of Saxony include several ser-

mons and the "Speculum Beatæ Mariæ Virginis"; the latter, at times erroneously attributed to St. Bonaventure, has recently been edited by the Friars Minor at Quaracchi. The preface to this excellent edition of the "Speculum" contains a brief sketch of the life of Conrad of Saxony and a critical estimate of his other writings.

STEPHEN M. DONOVAN.

Conrad of Urach, Cardinal-Bishop of Porto and Santa Rufina; born about 1180; d. 1227. At an early age he became canon of the church of St. Lambert, the cathedral of Liège. In 1199 he entered the Cistercian monastery of Villers in Belgium, of which he soon became prior and, in 1209, abbot. In 1214 he was chosen Abbot of Clairvaux and, in 1217, Abbot of Cîteaux and general of his order. Pope Honorius III created him cardinal, 8 January, 1219, and charged him with two important legations, one in France (1220-23), to suppress the Albigenses; the other in Germany (1224-26), to preach and arrange the crusade which Frederick II had vowed to undertake. After the death of Honorius III the cardinals agreed to elect him pope, but he refused the dignity. The Cistercians venerate him as Blessed (30 September).

MICHAEL OTT.

Conrad of Utrecht, BISHOP, b. in Swabia at an unknown date; killed at Utrecht, 14 April, 1099. Before becoming bishop he was chamberlain of Archbishop Anno II of Cologne and, for a time, tutor of Prince Henry, the future Emperor Henry IV. When the excommunicated Bishop William of Utrecht died in 1076, the emperor gave the episcopal See of Utrecht to Conrad, who, like his predecessor, sided with Henry IV in his conflicts with Gregory VII, and at the Synod of Brixen in 1080 even condemned the pope as a heretic. The contemporary annalist, Lambert of Hersfeld, calls Conrad a schismatic bishop, unworthy of holding an episcopal see. In a battle with Robert, Count of Flanders, Conrad was defeated, afterwards taken captive and compelled to yield part of South Holland to Robert. This territorial loss of the bishop was compensated by the emperor, who, in 1077, gave him the district of Stavoren in Friesland, and in 1086 added the two other Frisian districts, Ostergau and Westergau. Conrad is the founder and architect of the collegiate church of Notre-Dame at Utrecht. He was assassinated, shortly after completing the Holy Sacrifice, by his Frisian architect whom he had discharged, and who, in the opinion of some, was instigated by a certain nobleman whose domains Conrad held unjustly. He is said to have written the discourse "Pro Imperatore contra Papam", and to have delivered it at the Synod of Gerstungen in 1085. It is inserted by Aventinus (d. 1534) in his "Vita Henrici IV" and by Goldast (d. 1606) in his "Pro Henrico IV imperatore". Hefele (*Concilien-geschichte*, V, 180, note) is of the opinion that the discourse is falsely attributed to Conrad of Utrecht, and that Aventinus himself is the author.

Ruperti Chronicon in Mon. Germ. Hist.: Script., VIII, 278.

MICHAEL OTT.

Conry (or CONROY), FLORENCE, in Irish FLAITHRI O'MAOLCONAIRE (O'MULCONRY), Archbishop of Tuam, patriot, theologian, and founder of the Irish (Franciscan) College of St. Anthony at Louvain, b. in Galway, 1560; d. at Madrid, 18 Nov., 1629. His early studies were made on the Continent, in the Netherlands, and in Spain; at Salamanca he joined the Fran-

ciscans. In 1588 he was appointed provincial of the order in Ireland and as such sailed with the Spanish Armada; we have no details as to the manner of his escape from the disaster which overtook that ill-fated expedition. At all times active in the interest of his native land he was again sent to Ireland, this time by Clement VIII, to aid with counsel and influence the Irish and their Spanish allies during the last struggle of Hugh O'Neill (Tyrone's Rebellion) for the independence of Ireland. After the disaster of Kinsale (1601) he accompanied Hugh Roe O'Donnell (Prince of Tyrconnell) to Spain in the hope of interesting anew the Spanish Court. But the great chieftain soon died at Simancas, being assisted on his death-bed by Father Conry (Four Masters, ad an. 1602) who also accompanied the remains to their last resting place in the Franciscan church at Valladolid. Conry was also deeply interested in the welfare of the Irish College at Salamanca (q. v.). When the native Irish chieftains, the Earl of Tyrone (Hugh O'Neill) and the Earl of Tyrconnell (Rory O'Donnell, brother of Hugh Roe), fled from Ireland in 1607, Conry proved a devoted friend in their exile and accompanied them to Rome. For the so-called "Revelations" of Christopher St. Laurence, Baron of Howth, implicating Father Conry and the principal Irish in an imaginary plot to seize Dublin Castle and raise a new rebellion just previous to the "Flight of the Earls" see Meehan (cited below), pp. 67-73. At Rome Father Conry was consecrated Archbishop of Tuam in 1609 by Cardinal Maffeo Barberini (later Urban VIII), always a warm friend of the persecuted Irish Catholics. In 1614 Conry wrote from Valladolid a vigorous remonstrance to the Catholic members of the Irish Parliament for their cowardly adhesion to the Bill of Attainder that deprived of their estates the fugitive Irish earls and their adherents and vested six whole counties of Ulster in the English Crown. Meehan says of this document that it is "stamped in its every line with the impress of a great mind" (Fate and Fortunes of the Earls of Tyrone and Tyrconnell, Dublin, 1886, 3d ed., pp. 262, 395).

In 1616 Archbishop Conry founded at Louvain for Irish Franciscan youth the College of St. Anthony of Padua, principally with means furnished by Princess Isabella, wife of Archduke Albert, and daughter of Philip the Second. The archbishop was himself the foremost member of this famous Irish Franciscan house of studies whence came a long line of erudite and virtuous historians and archaeologists (O'Clery, Colgan, Hugh Ward, Francis Walsh, and others: cf. V. De Buck, "L'archéologie irlandaise au couvent de Saint-Antoine de Padoue à Louvain", Paris, 1869), and where the most active Irish printing press on the Continent was long in operation. One of the earliest works of Conry was a translation from Spanish into very pure Irish of a catechism known as "The Mirror of Christian Life", printed at Louvain in 1626, but probably current in manuscript at an earlier date, both in Ireland and among the Irish troops in the Netherlands; this was composed, as he says himself "out of charity for the souls of the Gael". As Archbishop of Tuam, Conry never took possession of his see, owing to the royal proclamations of 1606, 1614, 1623, commanding all bishops and priests, under the gravest penalties, to quit the kingdom. But he governed Tuam through vicars-general and continued to live principally at St. Anthony's in Louvain, not improbably on the bounty of the King of Spain, as was the case with many Irish ecclesiastics of the time. His influence in Irish matters at the royal court was always considerable; thus, as late as 1618 we find him presenting to the Council of Spain Philip O'Sullivan Beare's "Relation of Ireland and the Number of Irish therein", and in the following year his own "Statement of the Severities Practised by England against the Irish Catholics". Like his fellow-Franciscan, Luke Wadding, and Peter Lombard, Archbishop of Armagh, he was ever at the

disposition of his exiled countrymen. He communicated (1610) to the Council of Spain a translation of the original (Irish) statement of one Francis Maguire concerning his observations in the "State of Virginia", between 1608 and 1610, a curious and unique document for the earliest English settlements in the New World and the life and habits of the Indian tribes (Alexander Brown, *The Genesis of the United States*, Boston, 1890, I, 392-99).

Archbishop Conry was a profound scholastic theologian, very learned especially in the writings of St. Augustine, all of whose works he read seven times, while those pertaining to grace he read some twenty times. In the interpretation of the more difficult passages he frequently had recourse to prayer and fasting. At Louvain he sat at the feet of Baius, and was also a friend of Jansenius (d. 1638). He had, however, by his own efforts arrived independently at conclusions concerning the teaching of St. Augustine on grace and free will quite similar to those of his teachers. Most of his writings on these subjects were published after his death. His work on the fate of unbaptized children (*De statu parvulorum sine baptismo decedentium ex hac vitâ juxta sensum beati Augustini*, Louvain, 1624, 1635; Rouen, 1643) was reprinted by the Jansenists as an appendix to the 1652 edition of the "Augustinus". Cardinal Noris (*Vindic. Aug.*, ch. iii, § 5) says that in it Conry abundantly demonstrates from the Scriptures and Augustine the sensible character of the sufferings of such unbaptized children. His "Peregrinus Jerichontinus, h. e. de naturâ humanâ feliciter institutâ, infeliciter lapsâ, miserabiliter vulneratâ, misericorditer restauratâ" (ed. Thady MacNamara, Paris, 1641) treats of original sin, the grace of Christ, free will, etc., the "Pilgrim of Jericho" being human nature itself, the robber Satan, the good Samaritan Our Lord. Hurter says that this edition was owing to Arnauld, and that the same ardent Jansenist is possibly the author of the (Paris, 1645) French version. Conry wrote also other works expository of the teaching and opinions of the great Doctor of Grace, e.g. "De gratiâ Christi" (Paris, 1646); "De flagellis justorum" (Paris, 1644); "De Augustini sensu circa b. Mariæ Virginis conceptionem" (Antwerp, 1619). In 1654 his body was brought back from Madrid and buried in the collegiate chapel of St. Anthony's, near the high altar, where an epitaph by Nicholas Aylmer recorded his virtues, learning, and love of country:—

Ordinis altus honor, fidei patriæque honos,
Pontificum merito laude perenne jubar.

Thomas Darcy Magee says of this patriotic scholar: "He is the leading figure in a class of exiled Catholic churchmen who were of great service to religion and letters and not seldom powerful allies of their country. From the founding of a college to the composition of a catechism he shrank from no labour that could, according to his convictions, benefit the people of his native land."

STEPHEN M. DONOVAN.

Consalvi, ERCOLE, cardinal and statesman, b. in Rome, 8 June, 1757; d. there, 24 January, 1824. His ancestors belonged to the noble family of the Brunacci in Pisa, one of whom settled in the town of Toscanella in the Papal States about the middle of the seventeenth century. The grandfather of the cardinal, Gregorio Brunacci, inherited from Ercole

Consalvi of Rome a large fortune on condition of taking the name and arms of the Consalvi family. In this way Gregorio Brunacci became Marchese Gregorio Consalvi, with residence in Rome. At the age of nine, Ercole Consalvi was placed in the college of the Scolopi or Brothers of the Pious Schools at Urbino, where he remained from 1766 to 1771. From 1771 to 1776 he was in the seminary of Frascati, where he finished his studies in rhetoric, philosophy and theology; it was there also that he gained the powerful protection of the Cardinal, Duke of York, Bishop of Frascati. The years from 1776 to 1782 were devoted to the studies of jurisprudence and ecclesiastical history in the *Accademia Ecclesiastica* of Rome, where he had among other professors the Jesuit scholar, Zaccaria. He then entered on his public career. Named private chamberlain by Pius VI in April, 1783, in 1786 he was made *Ponente del buon governo*, i.e. member of a congregation charged with the direction of municipal affairs. Appointed in 1787 secretary of the congregation commissioned to administer the Ospizio di San Michele a Ripa, in 1790 he became *Volante di Segnatura*, or member of a high court of appeals, and in 1792 obtained the nomination of *Uditore di Rota*, or member of the high court of justice. He was made assessor in 1796 of a military commission established by Pius VI for the purpose of preventing revolutionary disturbances and intervention of the French Directory in the Papal States. In this latter capacity he accomplished his work with such tact, prudence, and foresight that no serious troubles arose, which could have served as an excuse for an invasion of Rome by the armies of the French Republic. Unfortunately on 28 December, 1797, the French general Duphot was killed in Rome; he was himself largely to blame, and the event took place without the slightest fault of the Papal Government. Still it was used as a pretext for the occupation of the city. On 10 February, 1798, General Berthier entered Rome with an army, and five days afterwards the pope was deprived of his temporal sovereignty, and a Roman republic proclaimed. Consalvi, having been assessor of the military commission, was placed first on the list of those who were to be handed over to the French Government. He was arrested, imprisoned in the fortress of Sant' Angelo, sent to Civitavecchia en route to Cayenne, French Guiana, brought back to the castle of Sant' Angelo, and then sent to Terracina, whence he was finally permitted to repair to Naples.

Consalvi thus recovered his personal liberty; but he disliked to remain in Naples, and wished rather to join Pius VI, who shortly after the occupation of Rome was taken from his capital and held a captive in a Carthusian monastery near Florence. Having obtained permission from the Neapolitan Government, he went by sea to Leghorn and thence to Florence, where he made two visits to the pope; his wish to remain with the pontiff was frustrated by the French envoy at Florence. Towards the end of September, 1798, he took up his residence in Venice. After the death of Pius VI at Valence in France, 29 August, 1799, the cardinals assembled in Venice for the conclave, and Consalvi was chosen secretary by an almost unanimous vote. He had a large share in securing the election of Cardinal Chiaramonti, Bishop of Imola (14 March, 1800). The new pope, Pius VII (1800-23), soon appointed Consalvi pro-secretary of state; and thus Consalvi accompanied the pope to Rome, where they arrived 3 July, 1800. Shortly before, the pope had recovered possession of the Papal States, which were then partly under the control of Austria and partly under that of Naples. On 11 August, 1800, Consalvi was made cardinal and appointed definitively secretary of state. In this capacity he first endeavoured

ERCOLE CARDINAL CONSALVI

to restore better conditions in the Papal States. He abolished the custom of furnishing food to the people at low prices, introduced free trade, withdrew from circulation all depreciated money, and admitted a large number of laymen to Government offices. He did much to embellish Rome and to make it an art-centre by designing public promenades along the Tiber, restoring the ancient monuments, and filling the museums with statues unearthed by excavations made under his direction. In his negotiations with the various courts or Governments of Europe he was ever watchful in safeguarding the interests of the Holy See, both temporal and spiritual, the latter especially, in which the pope as the head of Christendom was primarily concerned. In this respect he rendered an incalculable service to religion in signing the French Concordat. The negotiations commenced for that purpose by Monsignor Spina, Archbishop of Corinth, and Father Caselli, former Superior General of the Servites, seemed to lag; in order not to interrupt them completely Consalvi was sent to Paris in June, 1801. Long and painful discussions followed with Napoleon Bonaparte, then First Consul of the French Republic, or his commissioners, until finally, on the 15th of July, the Concordat was signed by the papal and the French commissioners, and afterwards ratified by the pope and the French Government. Consalvi left immediately for Rome, where he arrived on the 6th of August. With what are known as the "Organic Articles", added by the French Government to the Concordat, Consalvi had nothing to do; on the contrary he condemned them unequivocally as destructive of the Concordat, of which they pretended to be commentaries. He was also prominent in the negotiations that preceded the Italian Concordat, concluded with the Cisalpine Republic on the 16th of September, 1803.

When Napoleon was proclaimed emperor in 1804, Consalvi urged Pius VII to accept Bonaparte's invitation to crown him as the new sovereign of France, and during the pope's absence (November, 1804, to May, 1805) Consalvi acted as his representative to the entire satisfaction of his master. When the discussions between Napoleon and Pius VII commenced, Consalvi was blamed for the refusal of the pope to consider himself a vassal of the French emperor. The suspicions of Napoleon were confided to Cardinal Fesch, then French ambassador at Rome; and the dismissal of Consalvi was insisted upon. Consalvi, hoping to secure peace for his master, asked repeatedly to be relieved; but only after long hesitation did the pope consent to the demand. Consalvi left the secretariate of state on 17 June, 1806, but was often consulted privately on matters of importance. The imperial persecution of the pope reached its climax with the annexation of the Papal States to the French Empire (20 June, 1809), and the deportation of the pope to Savona during the night of 5-6 July. Consalvi was forced to depart from Rome, 10 December following; in company with Cardinal di Pietro he journeyed to Paris, where he arrived 20 February, 1810. There he lived in retirement as much as possible, and refused a pension of 30,000 francs assigned to him by the French Government. On the occasion of Napoleon's marriage to the Archduchess Marie Louise of Austria, Consalvi with twelve other cardinals declined to assist at the civil and religious ceremony, held 1-2 April, 1810, though he was present at the semi-solemn reception at Saint-Cloud, 31 March, and went also to the Tuileries in Paris for the great reception, on 3 April. He did not wish to appear as approving the second marriage of Napoleon, as long as the pope had not pronounced on the validity of the first. Napoleon was so incensed at his action, that he expelled him with the other cardinals of like sentiments from the Tuileries

on 3 April, and in the first moment of passion gave orders to have him shot. However, he modified his rash judgment and decreed that Consalvi and the twelve other cardinals should be deprived of their property and of their cardinalial dignity. From that moment these princes of the Church were compelled to wear black garments, whence their name of "black cardinals", and on 11 June they were all banished to various cities of France. Consalvi was sent to Reims; it was there in his enforced retirement that he wrote his memoirs. Set free on 26 January, 1813, he hastened to Pius VII, then at Fontainebleau. At his suggestion the pope retracted (24 March) the concessions made to Napoleon in a Brief from Savona and in a new concordat agreed upon at Fontainebleau; as a consequence Consalvi was restricted in his free intercourse with the pope. When Pius VII left Fontainebleau for Italy (23 January, 1814) Consalvi followed a few days afterwards, at first under a military escort as far as Béziers. Having heard of Napoleon's abdication in Fontainebleau (11 April, 1814) he asked for a passport and rejoined Pius VII in Italy. He was at once reappointed secretary of state by papal letter written from Foligno, 19 May, 1814.

Before taking office Consalvi went to Paris for the purpose of claiming from the allied Powers of Europe the restoration of the Papal States under the sovereignty of the pope. With the same object in view he went also to England, and assisted afterwards at the Congress of Vienna (September, 1814, to June, 1815). He was successful in his negotiations, and obtained the restitution of all papal territory such as it had been before the French Revolution, with the exception of Avignon, Venaissin, and a small strip of land in the legation of Ferrara. After his return to Rome Consalvi continued to work for the welfare of the Papal States and of the Church. He abolished the ancient privileges of the nobility and of the papal cities, devised a new plan of administration for the papal territory, readjusted the finances, prepared a new civil and criminal code of laws, reorganized the system of education, and provided for public safety. He continued the elaboration of his plans for the embellishment of Rome and the improvement of the Campagna; he endeavoured, as already said, to make Rome a centre of art, and extended his protection to such famous artists as Canova and Thorwaldsen. At the same time he maintained with firmness the rights and sovereignty of the pope. When in 1817 the Carbonari tried to bring about a rebellion, a few of their leaders were prosecuted, banished, or imprisoned; and in 1821 a Bull was issued against these disturbers. During this period several concordats or similar agreements were concluded with foreign Powers: with Bavaria in 1817, with Prussia and the princes of the Upper Rhine in 1821, with Hanover in 1823, with Victor Emmanuel of Sardinia in 1817, with King Ferdinand I of the Two Sicilies in 1818. The new French Concordat concluded in 1817 with King Louis XVIII never received legal force in France; hence that of 1801 continued in existence. The career of Consalvi came to an end with the death of Pius VII (20 August, 1823). After his retirement his thoughts were devoted to the erection of a monument at St. Peter's in honour of his former master; only a few months afterwards he was carried himself to his tomb in San Lorenzo, while his heart was taken to the Pantheon. Appropriate monuments were erected to his memory in both places.

Ercole Consalvi is to be regarded as one of the greatest statesmen who has ever served the papal court; his eminent qualities were at all times apparent during the great trials of the papacy. If not always successful in his enterprises, it was largely because of the scarcity of means at his disposal and the prejudices

of his age. The purity of his life was the more admired because in his position he had to mingle much with a worldly society. He was devoted to works of charity and religion; the poor knew him as their friend, and in his exercises of devotion he was most punctual. Finally he was very unselfish and disinterested. He served the pope and the Church loyally without looking for personal advantage. He never asked for a position, except for that of *Uditore di Rota*, which appeared desirable owing to the studies he had made and the great opportunities it offered for travelling during the vacation months. The many gifts, pensions, or legacies, offered him, and at times persistently, by friends, admirers, and patrons, were invariably declined. All in all, both for the work he accomplished and for his personal character, Consalvi is one of the purest glories of the Church of Rome.

FRANCIS J. SCHAEFER.

Consanguinity (IN CANON LAW), a diriment impediment of marriage as far as the fourth degree of kinship inclusive. The term *consanguinity* here means, within certain limitations defined by the law of nature, the positive law of God, or the supreme authority of State or Church, the blood-relationship (*cognatio naturalis*), or the natural bond between persons descended from the same stock. In view of the recognized descent of all men from one common stock, there is a general blood-relationship between all men; hence the limitation mentioned has reference to the nearest root or source of consanguinity. This bond or union of blood takes place in one case through the descent of one person from the other; this is called the direct line. In another case it takes place because the common blood is drawn from a common root, the same ancestor, from whom both persons descend, though they do not descend one from the other, and are therefore not in a direct but in a transverse or collateral line. By the law of nature, it is universally conceded, marriage is prohibited between parent and child, for the reverential relation between them is recognized as incompatible with the equality of relations engendered by the bond of marriage. The universal sentiment of peoples is likewise opposed to marriage between all persons related in any degree in the direct line, thus between grandparent and grandchild.

HISTORY OF IMPEDIMENT.—Because of the acknowledged derivation of the human race from the common progenitors, Adam and Eve, it is difficult to accept the opinion of some theologians that the marriage of brother and sister is against the law of nature; otherwise the propagation of the human race would have begun by violation of the natural law. It is readily understood that, considering the freedom of intercourse between such persons, some effort would soon be made (in the interest of the social welfare) to prevent early corruption within the close family circle by placing a bar to the hope of marriage. Hence among all peoples there has arisen a natural repugnance to the marriage of brother and sister. Some theologians suppose herein a positive Divine law, but it is not easy to point out any such early Divine enactment. Abraham married Sarah who was his sister by his father, though of a different mother (Gen., xi; cf. Gen. xx, 12). Marriage was allowed at Athens with half-sisters by the same father (Plutarch, *Cim.*, iv; Themist., xxxii), with half-sisters by the same mother at Sparta (Philo, *De Special. Leg.*, tr. Yonge, III, 306), and with full-sisters in Egypt (Diodorus Siculus, I, 27) and Persia, as illustrated in the well-known instances of

the Ptolemies in the former, and of Cambyses in the latter, country (Herodian, III, 31). For a good summary of non-Christian customs in this respect see Melody, "Marriage of Near Kin" in "Catholic University Bulletin" (Washington, Jan., 1903, pp. 40-60).

In the earlier history of the human race there was a tendency in a family group to keep marriages of its members within the group. Of this we have examples in the marriage of Isaac and Rebecca (Gen., xxiv) and Jacob and Lia-Rachel (ibid., xxix). We know from Exodus, vi, 20, that Amram took Jochabed, his father's sister, to wife, and she bore him Aaron and Moses. The Mosaic Law, however, introduced important modifications into the arrangements of marriage or carnal intercourse between near relations by blood as also by affinity; these modifications were founded mainly upon the sharpened instincts of human nature and the importance of guarding against the dangers of corruption from the intimacy of very near relations, which prompted the cutting off all hope of covering past impurity by subsequent marriage. Undoubtedly this danger increased the instinctive natural repugnance to marriage between those connected by the closest ties of blood and family affection. These prohibitions relating to consanguinity, between a man and the "flesh of his flesh", are contained mainly in Lev., xviii, 7-13, and xx, 17, 19. Specific prohibitions are here made with regard to marriage or carnal intercourse with a mother, granddaughter, aunt by blood on either side, sister, or half-sister, whether "born at home or abroad". This expression has generally been understood as equivalent to "in or out of wedlock". Yet, as late as David's time, the language of Tamar towards her half-brother Amnon (II K., xiii, 13) seems to imply the possibility of their union with consent of their father, perhaps because he was also king (for a contrary opinion see Wernz, *Jus Decretalium*, Rome, 1894, II, 634). Some theologians held the daughters of Lot (Gen., xix, 30-38) somewhat excusable because they thought that the human race had been swallowed up by fire, and could be continued through their father alone (Kenrick, *De Imped. Matr.*, ch. v, p. 318).

In early Roman times marriage of cousins was not allowed, though it was not infrequent after the Second Punic War. Marriage between uncle and niece was unlawful among Romans. Consanguinity in the direct line, to any extent, was recognized by the Church as an impediment to marriage. Worthy of notice is the declaration by Nicholas I (858-67) in his letter to the Bulgarians, that "between those persons who are related as parents and children marriage cannot be contracted, as between father and daughter, grandfather and granddaughter, or mother and son, grandmother and grandson, and so on indefinitely". Billuart, however, calls attention to the fact that Innocent III, without distinction of lines, allows indiscriminately infidels converted to Christianity to retain their wives who are blood-relations in the second degree. Other theologians take it for granted that this declaration of Innocent III has no reference to the direct line. In the early ages the Church accepted the collateral degrees put forward by the State as an impediment to marriage. St. Ambrose (Ep. ix in P. L., XVI, 1185) and St. Augustine (*De Civ. Dei*, XV, xvi) approved the law of Theodosius which forbade (c. 384) the marriage of cousins. This law was retained in the Western Church, though it was revoked (400), at least in the East, by Arcadius, for which reason, doubtless, the text of the law has been lost. The Code of Justinian permitted the marriage of first cousins (*consobrinis*), but the Greek Church in 692 (Second Trullan Synod, can. liv) condemned such marriages, and, according to Balsamon, even those of second cousins (*sobrinis*).

This discipline continued throughout the Church

till the eighth century. We then meet with the canon (c. 16, C. 55, q. 2), attributed to various popes and embodied in a letter of Gregory III (732), which forbids marriage among the Germans to the seventh degree of consanguinity. Wernz (*Jus Decretal.*, IV, p. 624), says that at this date so severe a prohibition cannot be based on the canonical computation, but rather on that of the Roman law; it is, therefore, no proof of so early an acceptance by the Church of the Germanic computation. For a fuller exposition of the theory that the canonical computation is borrowed from the Germanic system see Von Scherer, "*Handbuch des Kirchenrechts*" (Graz, 1898), II, 291, and the excellent exposé of Wernz, "*Jus Decretalium*", IV, 616-25, especially p. 621, where he sets forth with moderation both the free and original action of the Church in establishing the degrees within which it was forbidden relations to marry and her natural tendency, so often exhibited in other matters, to accept whatever was good or useful in the manners and institutions of newly converted peoples. Von Scherer calls attention (op. cit., II, 296-9) to the influence of the ninth-century Pseudo-Isidore (and the canonical collections based on him, e. g. the "*Decretum*" of Burchard) in familiarizing the West with the Germanic computation, and says that it does not appear in any genuine papal decretals before Alexander II, and that its exact character is not yet thoroughly ascertained. The Roman canonist De Angelis (*Praelectiones Jur. Can.*, Bk. III, tit. xiv) holds rightly that the computation of degrees was originally the same as that of the Roman civil law for inheritance. He states that in the eleventh century Alexander II (c. 2, C. 35, q. 5) adopted the now usual system of computation, which established for collateral consanguinity the principle that persons were remote from one another by as many degrees as they are remote from the common stock, omitting the common stock (Wernz, however, op. cit., IV, 623, believes that this system, *de facto* the Germanic computation was adopted at some earlier period, though doubtless not so early as Gasparri maintains). In this way the degrees of relationship were determined by the number of generations on one side only; while in the Roman civil system the number of degrees resulted from the sum of the generations on both sides. In the Roman system (*computatio Romana civilis*) first cousins would be in the fourth degree, while in the new computation they would be in the second degree of consanguinity. This, as is seen, would extend the impediment of consanguinity.

Some have called the new computation Germanic (*computatio Germanica*) because it has a similarity to the peculiar Germanic system of determining inheritance, and whose technical terms were borrowed from the seven joints of the body (on both sides) from the neck to the finger-tips. But Santi-Leitner calls attention (ed. 1905, III, 241, against Gasparri) to various discrepancies between the ecclesiastical (*computatio canonica*) and the Germanic systems which often led the newly-converted Franks and other Germans to oppose the system of the Church. The latter system was more directly connected with the natural relations of marriage, and Alexander II (1061-73) treated it as peculiarly ecclesiastical law (c. 2, C. 35, q. 5) and threatened severely all advocates of a return to the Roman, or civil, calculation. The reception and extension of this severe discipline regarding the impediment of consanguinity came about gradually and by custom, says Wernz, from the sixth and seventh centuries (when first the third and then the fourth degree, i. e. respectively second and third cousins, were the limit) to the eleventh and twelfth centuries; in the eleventh century the controversy of St. Peter Damian ("*De parentela gradibus*" in P. L., XLIV, 191 sqq.) with the Roman legists of Ravenna, decided in his favour by Alexander II, helped to fix the popular view in the sense of extreme strictness. It is,

however, doubtful whether the sixth and seventh degrees of consanguinity were ever a diriment impediment, at least everywhere. It is not improbable that even the fifth was only a preventive impediment (Wernz, op. cit., IV, 626). While in the twelfth century the theory of the remote degrees was strictly maintained by canonists, councils, and popes, in practice marriages ignorantly contracted within them were healed by dispensation or dissimulation (Wernz, loc. cit.). Finally, in the Fourth Lateran Council (1215) Innocent III restricted consanguinity as a diriment impediment to the fourth degree. He explains that it was found difficult to carry out the extension to further degrees. In those days of imperfect registration it was, of course, often impossible to ascertain the distant degrees of relationship. (For a defence of his illustrative reference to the current theory of the "four bodily humours", borrowed from the ancient physiology, see Santi-Leitner, op. cit. III, 248; cf. Wernz, op. cit., IV, 629.)

Gregory I (590-604), if the letter in question be truly his, granted to the newly converted Anglo-Saxons restriction of the impediment to the fourth degree of consanguinity (c. 20, C. 35, qq. 2, 3); Paul III restricted it to the second degree for American Indians (Zitelli, *Apparat. Jur. Eccl.*, 405), and also for natives of the Philippines. Benedict XIV (Letter "*Estas Anni*", 11 Oct., 1757) states that the Roman pontiffs have never granted dispensation from the first degree of collateral consanguinity (brothers and sisters). For converted infidels it is recognized that the Church does not insist upon annulment of marriages beyond this first degree of consanguinity. (For further details of the history of ecclesiastical legislation concerning this impediment see Esmein, "*Le mariage en droit canonique*", Paris, 1891, I, 335-56; II, 258, 345; Santi-Leitner, op. cit. below, 247-48; and Wernz, "*Jus Decretal.*", II, 614 sqq.)

MOTIVES OF IMPEDIMENT.—The Church was prompted by various reasons first to recognize the prohibitive legislation of the Roman State and then to extend the impediment of consanguinity beyond the limits of the civil legislation. The welfare of the social order, according to St. Augustine (*De Civ. Dei*, XV, xvi) and St. Thomas (*Suppl. Q. liii, a. 3*), demanded the widest possible extension of friendship and love among all humankind, to which desirable aim the intermarriage of close blood-relations was opposed; this was especially true in the first half of the Middle Ages, when the best interests of society required the unification of the numerous tribes and peoples which had settled on the soil of the Roman Empire. By overthrowing the barriers between inimical families and races, ruinous internecine warfare was diminished and greater peace and harmony secured among the newly-converted Christians. In the moral order the prohibition of marriage between near relations served as a barrier against early corruption among young persons of either sex brought habitually into close intimacy with one another; it tended also to strengthen the natural feeling of respect for closely related persons (St. Thomas, II-II, Q. cliv, a. 9; St. Augustine, *De Civ. Dei*, XV, x). Nature itself seemed to abhor the marriage of close kin, since such unions are often childless and their offspring seem subject to grave physical and mental weakness (epilepsy, deaf-muteness, weak eyes, nervous diseases), and incur easily and transmit the defects, physical or moral, of their parents, especially when the interbreeding of blood-relations is repeated (Santi-Leitner, op. cit., IV, 252; Huth, "*The Marriage of Near Kin, considered with respect to the Law of Nations, the results of Experience and the teachings of Biology*", London, 1875; Surbled, "*La morale dans ses rapports avec la médecine et l'hygiène*", Paris, 1892, II, 245-55; Eschbach, "*Disputat. physiologico-theolog.*", 99 sqq.; Luckock, "*The History of Marriage, Jewish and Christian, in*

relation to divorce and certain forbidden degrees", London, 1894; Esmein, "Le mariage en droit canonique", Paris, 1891, I, 337, sqq.; see also Wernz, op. cit. IV, 636-37, and the Encyclical of Gregory XVI, 22 Nov., 1836).

MODE OF CALCULATION.—In calculating the degree of consanguinity special attention must be paid to three things, the line, the degree, and the stock or root. The *stock*, or root, is the common ancestor, or the person, male or female, from whom descend as from the nearest common bond the persons whose blood-relationship is to be determined. The *degree* is the distance of one person from the other in regard to blood-relationship. The *line* is the classified series of persons descending from the common stock through one or more generations. The line is *direct* when the series of persons descend one from the other, as father and son, grandfather and grandchild. The line is *transverse*, or *collateral*, when the blood-relations spring from a common stock, yet do not descend one from the other but form different branches side by side, as two brothers, two nephews. This collateral line is equal or unequal according as these persons derive equally or unequally from the same stock or root. The blood-relationship is computed according to the distance from the stock whence it is derived, and this is the rule by which the degrees or steps of consanguinity are determined.

In the direct line the Roman civil and the canon law agree on the principle that there are as many degrees as generations; hence as many degrees as there are persons, omitting the stock or root. A son is one degree from his father, a grandchild two degrees from the grandfather. In the computation of the degrees of the transverse or collateral line there is a serious difference between the Roman civil and the canon law. The civil law founded its degrees upon the number of generations, the number of degrees being equal to the number of generations; thus between brothers there are two degrees as there are two generations; between first cousins four degrees, corresponding to the four generations. The degrees are calculated easily in the civil law by summing up the number of persons in each line, omitting the common ancestor. Except for marriage, the canon law follows regularly the computation of the civil law, e. g. in the question of inheritance. But the canon law, in the collateral line of consanguinity, computes for marriage one series only of generations, and if the series are unequal, only the longer one. Hence the principle of canon law that in the transverse or collateral line there are as many degrees of consanguinity as there are persons in the longer series, omitting the common stock or root. If the two series are equal, the distance is the number of degrees of either from the common stock. Thus brother and sister are in the first degree, first cousins in the second degree; uncle and niece in the second degree because the niece is two degrees from the grandfather who is the common stock. Thus if Caius has two sons, Titius and Sempronius, and Sempronius has a son and grandchild, the relationship of the grandchild of Sempronius to Titius is in the third degree, because this grandchild is distant three degrees from the common stock, Caius. This rule holds if the common stock should only be one person; thus half-brothers and half-sisters, that is from either father or mother, are in the first degree. Children of the same father and mother are called german, as from the common germ; those of the same mother and not of the same father are called uterine, as from the same womb; and children of the same father and different mother are called blood-children. The legitimacy or illegitimacy of any member of the series does not modify the relationship as a bar to marriage.

For civil effects the civil law's computation of degrees must be known. In most European countries

the law follows mainly the computation of the Roman civil law. In England, since the Reformation, the Levitical law has been recognized as the standard by which to determine the prohibitions of marriage. For Catholics everywhere, as Alexander II decreed (c. 2, C. 35, q. 5), the ecclesiastical calculation (*computatio canonica*) must be followed for the direct question of the lawfulness of marriage. Clement V, in the Council of Vienne (1311), decreed that any one who knowingly contracted marriage within the forbidden degrees should by the fact incur excommunication, though not reserved; this penalty has ceased since the Bull "Apostolica Sedes" of Pius IX (1869). The Council of Trent (1563) required the absolute separation of those who knowingly contracted marriage within the prohibited degrees, and denied all hope of obtaining a dispensation, especially if the attempted marriage had been consummated. But in this regard the practice of the Church, probably on account of the recognition of such marriages by the State, and the consequent difficulty of enforcing the dissolution of illicit unions, has tended towards greater leniency. The Council of Trent, it is true (Sess. XXIV, c. v, De ref., matr.), made no changes in the existing legislation, despite the wishes of many for a reduction of the limits of the impediment (Theiner, Acta Conc. Trid., Leipzig, 1874, 336, 342). Such reduction would in all probability have been discussed at the Vatican Council (1870), had it not been interrupted (Lämmer, Zur Codification des can. Rechts, Freiburg, 1899, 137, sqq., and Martin, Coll. docum. Conc. Vat., p. 162 sqq.).

In the Uniat Eastern Churches, the marriage of blood-relations is forbidden in the collateral line to the seventh civil degree, i. e. second cousins touching third, but in that degree is only preventive, not diriment (Wernz, IV, 627). Among the Italo-Greeks, however, the Maronites, and the Syrians the legislation of the Roman Church obtains (Benedict XIV, Etsi Pastor, 26 May, 1742; Synod of Mount Lebanon, 1736; Synod. Sciarf. Syror., 1888). In the schismatic Churches of the East all marriages of relations in the direct line are prohibited; in the collateral line the seventh (civil) degree is the limit of prohibition; the remotest degree, however, is only a preventive impediment. In the National Greek Church, since 1873, marriage is forbidden within the sixth (civil) degree, i. e. second cousins; in Russia, since 1870, within the fourth (civil) degree, i. e. first cousins (cf. Zhishman, Eherecht d. oriental. Kirche, Vienna, 1864, and Milas, Das Kirchenrecht der morgenländ. Kirche, Mostar, 1897).

DISPENSATION FROM THE IMPEDIMENT.—Whatever dispensing power is available resides principally in the supreme authority of the Church, namely the Apostolic See. The pope generally exercises his power of dispensing through the Roman Congregations. For public dispensations (*in foro externo*) the *Dataria* (see ROMAN CURIA) is the ordinary medium for so-called Catholic countries; the *Sacra Penitentiaria* for cases of conscience (occult impediments) and of late for the cases of the poor. The Congregation of Propaganda is the medium for countries dependent on it, e. g. Great Britain and its dependencies and the United States. This power of dispensation with the right to subdelegate is often delegated to bishops, vicars Apostolic, and others having pastoral authority over souls. In whatever is forbidden by the law of nature there is no dispensation. In the direct line of consanguinity Nicholas I supposes that there is no room for dispensation. However, in cases of infidels when one or both are converted, while it is to be held that marriages within the first degree of the direct line are invalid, in all others the Holy See has to be consulted. The Holy See has the supreme right in doubtful cases to determine what may or may not be forbidden by the law of nature or by the Divine positive law. Benedict XIV, as already said, emphasized the fact that the

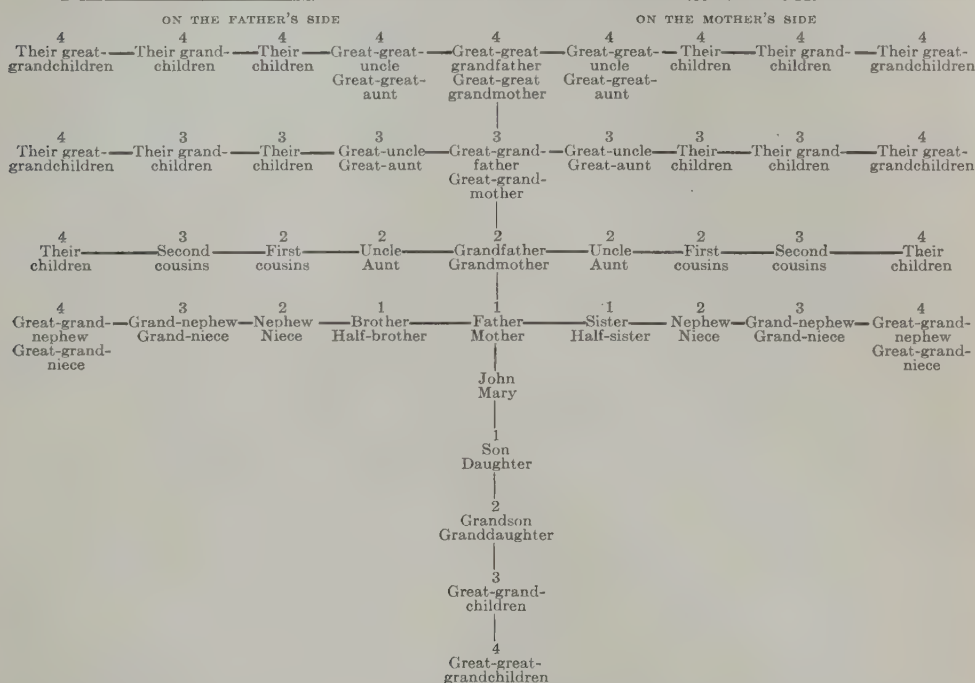

popes had never granted a dispensation for a marriage between brother and sister, even where the union might have occurred without a knowledge of the relationship on the part of the contracting persons.

Consanguinity may be duplicated as arising from two sources: first, from two roots, e. g. two brothers marrying two women who are cousins; the children of each brother will be related to those of the other in the second degree on the father's side, and in the third degree on the mother's side; second, from one root, but when the descendants intermarry. Hence, where there is a double consanguinity, there is a double impediment which must be expressed in the petition for dispensation; and should there be a more extensive

is also required if an attempt at marriage had been made, even if not consummated.

CIVIL LEGISLATION.—In the Eastern Church the Quinisext Council (692) forbade, as we have seen, marriages between first cousins. In the eighth century Emperors Leo and Constantine confirmed this decree and forbade alliances between persons in the sixth degree of consanguinity according to the computation of the Roman civil law, i. e. between the grandchildren of brothers and sisters, and still later in the seventh degree of the same computation. This holds to-day in the Greek Church. The question of consanguinity is important in determining civil rights, which are mainly under control of the State, though illegitimacy

TABLE OF CONSANGUINITY

duplication by still further intermarriages, all the forbidden degrees resulting from the blood-relationship should be mentioned in seeking dispensation. In the petition for dispensation, both series in the collateral consanguinity must be mentioned, though this is not necessary for validity of the dispensation. A special proviso is made when dispensation is sought from collateral consanguinity. It must be mentioned, even for validity, if the one part is next of kin to the root or common ancestor and the other within the forbidden degrees; the sex of the next of kin should also be mentioned, because of the greater difficulty of the dispensation for a nephew to marry his aunt. If the farthest should be in the fifth degree, there is even in that case no prohibition of marriage. The impediment of marriage arises also from any carnal intercourse, even outside of marriage, to the fourth degree of consanguinity. To consanguinity within the prohibited degrees may be added the gravamen of the crime of incest. If the incest were committed in the hope of facilitating the grant of a dispensation, this circumstance must be mentioned in the petition for dispensation; mention

often produces ecclesiastical disbarments (see Birth). The hindrances to marriage based on consanguinity vary considerably in different States. In Germany consanguinity is a bar only in the direct line, and between brothers and sisters. In France uncle and niece, aunt and nephew, are forbidden to intermarry, but dispensation may be granted by the head of the State. The prohibition does not extend to this relationship arising from an illegitimate union. Even in the most conservative Catholic countries, there is a tendency to limit the impediment of consanguinity. In England the statutes of Henry VIII, repealed in part by Edward VI and wholly by Phillip and Mary, were revived in Elizabeth's first year, the provision being that "no prohibition, God's law except, shall trouble or impeach any marriage outside Levitical law". The ecclesiastical interpretation was that consanguinity was an impediment to marriage as far as the third degree of civil computation. A man might not marry his aunt, or his niece, but might marry his first cousin. Relationship by the half-blood was put on the same footing as the full-blood, and illegitimate consanguinity

ity was treated as equivalent to legitimate blood relationship. The courts regarded marriages within the forbidden degree as voidable rather than void, but such marriages were declared void by an act of 5 and 6 William IV (1835). In the United States all the States prohibit marriage between lineal descendants; most of them prohibit marriages between uncle and niece, nephew and aunt, and between first cousins (Desmond, *The Church and the Law*, Chicago, 1898, C. X).

GENEALOGICAL TABLE.—We subjoin a genealogical table which exhibits the various degrees of consanguinity according to a custom in use in the Western Church since the seventh century (Isidore of Seville). This will be a useful guide in determining the extent of the impediment of affinity (q. v.). Affinity from a true marriage is a diriment impediment to the fourth degree of consanguinity of the deceased spouse; according to the ecclesiastical law a widower may not marry any of his deceased wife's blood-relations as far as the fourth degree inclusively, nor a widow her deceased husband's blood-relations. There is a modification if the affinity be one arising from illicit intercourse.

RICHARD L. BURTSELL.

Conscience.—I. THE NAME.—In English we have done with a Latin word what neither the Latins nor the French have done: we have doubled the term, making "conscience" stand for the moral department and leaving "consciousness" for the universal field of objects about which we become aware. In Cicero we have to depend upon the context for the specific limitation to the ethical area, as in the sentence: "mea mihi conscientia pluris est quam omnium sermo" (*Att.*, XII, xxviii, 2). Sir W. Hamilton has discussed how far we can be said to be conscious of the outer objects which we know, and how far "consciousness" ought to be held a term restricted to states of self or self-consciousness. (See Thiele, *Die Philosophie des Selbstbewusstseins*, Berlin, 1895.) In the two words *Bewusstsein* and *Gewissen* the Germans have made a serviceable distinction answering to our "consciousness" and "conscience". The ancients mostly neglected such a discrimination. The Greeks often used *φρόνησις* where we should use "conscience", but the two terms are far from coincident. They also used *συνείδησις*, which occurs repeatedly for the purpose in hand both in the Old and the New Testament. The Hebrews had no formal psychology, though Delitzsch has endeavoured to find one in Scripture. There the heart often stands for conscience.

II. ORIGIN OF CONSCIENCE IN THE RACE AND IN THE INDIVIDUAL.—Of anthropologists some do and some do not accept the Biblical account of man's origin; and the former class, admitting that Adam's descendants might soon have lost the traces of their higher descent, are willing to hear, with no pledge of endorsing, what the latter class have to say on the assumption of the human development even from an animal ancestry, and on the further assumption that in the use of evidences they may neglect sequence of time and place. It is not maintained by any serious student that the Darwinian pedigree is certainly accurate: it has the value of a diagram giving some notion of the lines along which forces are supposed to have acted. Not

then, as accepting for fact, but as using it for a very limited purpose, we may give a characteristic sketch of ethical development as suggested in the last chapter of Mr. L. T. Hobbouse's "Morals in Evolution". It is a conjectural story, very like what other anthropologists offer for what it is worth and not for fully certified science.

Ethics is conduct or regulated life; and regulation has a crude beginning in the lowest animal life as a response to stimulus, as reflex action, as useful adaptation to environment. Thus the amoeba doubles itself round its food in the water and lives; it propagates by self-division. At another stage in the animal series we find blind impulses for the benefit of life and its propagation taking a more complex shape, until something like instinctive purpose is displayed. Useful actions are performed, not apparently pleasurable in themselves, yet with good in the sequel which cannot have been foreseen. The care of the animal for its young, the provision for the need of its future offspring is a kind of foreshadowed sense of duty. St. Thomas is bold to follow the terminology of Roman lawyers, and to assert a sort of morality in the pairing and the propagating of the higher animals: "ius naturale est quod natura omnia animalia docuit" (It is the natural law which nature has taught all animals.—"In IV Sent.", dist. xxxiii, a. 1, art. 4.) Customs are formed under the pressures and the interactions of actual living; they are fixed by heredity, and they await the analysis and the improvements of nascent reason. With the advent of man, in his rudest state—however he came to be in that state, whether by ascent or descent—there dawns a conscience, which, in the development theory, will have to pass through many stages. At first its categories of right and wrong are in a very fluid condition, keeping no fixed form, and easily intermixing, as in the chaos of a child's dreams, fancies, illusions, and fictions. The requirements of social life, which becomes the great moralizer of social action, are continually changing, and with them ethics varies its adaptations. As society advances, its ethics improves. "The lines on which custom is formed are determined in each society by the pressures, the thousand interactions of those forces of individual character and social relationship, which never cease remoulding until they have made men's loves and hates, their hopes and fears for themselves and their children, their dread of unseen agencies, their jealousies, their resentments, their antipathies, their sociability and dim sense of mutual dependence—all their qualities good and bad, selfish and sympathetic, social and anti-social." (*Op. cit.*, Vol. II, p. 262.) The grasp of experience widens and power of analysis increases, till, in a people like the Greeks, we come upon thinkers who can distinctly reflect on human conduct, and can put in practice the *γνώθι σεαυτόν* (know thyself), so that henceforth the method of ethics is secured for all times, with indefinite scope left for its better and better application. "Here we have reached the level of philosophical or spiritual religions, systems which seek to concentrate all experience in one focus, and to illuminate all morality from one centre, thought, as ever, becoming more comprehensive as it becomes more explicit" (*ibid.*, p. 266.)

What is said of the race is applied to the individual, as in him customary rules acquire ethical character by the recognition of distinct principles and ideals, all tending to a final unity or goal, which for the mere evolutionist is left very indeterminate, but for the Christian has adequate definition in a perfect possession of God by knowledge and love, without the contingency of further lapses from duty. To come to the fullness of knowledge possible in this world is for the individual a process of growth. The brain at first has not the organization which would enable it to be the instrument of rational thought: probably it is a necessity of our mind's nature that we should not start with the fully formed brain but that the first elements of knowledge

should be gathered with the gradations of the developing structure. In the morally good family the child slowly learns right conduct by imitation, by instruction, by sanction in the way of rewards and punishments. Bain exaggerates the predominance of the last named element as the source whence the sense of obligation comes, and therein he is like Shaftesbury (*Inquiry*, II, n. 1), who sees in conscience only the re-prover. This view is favoured also by Carlyle in his "Essay on Characteristics", and by Dr. Mackenzie in his "Manual of Ethics" (3rd ed., III, § 14), where we read: "I should prefer to say simply that conscience is a feeling of pain accompanying and resulting from our non-conformity to principle." Newman also has put the stress on the reproving office of conscience. Carlyle says we should not observe that we had a conscience if we had never offended. Green thinks that ethical theory is mostly of negative use for conduct. (*Prolegomena to Ethics*, IV, 1.) It is better to keep in view both sides of the truth and say that the mind ethically developed comes to a sense of satisfaction in right doing and of dissatisfaction in wrongdoing, and that the rewards and the punishments judiciously assigned to the young have for their purpose, as Aristotle puts it, to teach the teachable how to find pleasure in what ought to please and displeasure in what ought to displease. The immature mind must be given external sanctions before it can reach the inward. Its earliest glimmering of duty cannot be clear light: it begins by distinguishing conduct as nice or as nasty and naughty: as approved or disapproved by parents and teachers, behind whom in a dim way stands the oft-mentioned God, conceived, not only in an anthropomorphic, but in a neplomorphic way, not correct yet more correct than Caliban's speculations about Setebos. The perception of sin in the genuine sense is gradually formed until the age which we roughly designate as the seventh year, and henceforth the agent enters upon the awful career of responsibility according to the dictates of conscience. On grounds not ethical but scholastically theological, St. Thomas explains a theory that the unbaptized person at the dawn of reason goes through a first crisis in moral discrimination which turns simply on the acceptance or rejection of God, and entails mortal sin in case of failure. (I-II, Q. lxxxix, a. 6.)

III. WHAT CONSCIENCE IS IN THE SOUL OF MAN?—It is often a good maxim not to mind for a time how a thing came to be, but to see what it actually is. To do so in regard to conscience before we take up the history of philosophy in its regard is wise policy, for it will give us some clear doctrine upon which to lay hold, while we travel through a region perplexed with much confusion of thought. The following points are cardinal: (a) The natural conscience is no distinct faculty, but the one intellect of a man inasmuch as it considers right and wrong in conduct, aided meanwhile by a good will, by the use of the emotions, by the practical experience of living, and by all external helps that are to the purpose. (b) The natural conscience of the Christian is known by him to act not alone, but under the enlightenment and the impulse derived from revelation and grace in a strictly supernatural order. (c) As to the order of nature, which does not exist but which might have existed, St. Thomas (I-II, Q. cix, a. 3) teaches that both for the knowledge of God and for the knowledge of moral duty, men such as we are would require some assistance from God to make their knowledge sufficiently extensive, clear, constant, effective, and relatively adequate; and especially to put it within reach of those who are much engrossed with the cares of material life. It would be absurd to suppose that in the order of nature God could be debarred from any revelation of Himself, and would leave Himself to be searched for quite irresponsibly. (d) Being a practical thing, conscience depends in large measure for its correctness upon the good use of it and on proper care taken to heed its deliverances, cultivate its powers,

and frustrate its enemies. (e) Even where due diligence is employed conscience will err sometimes, but its inculpable mistakes will be admitted by God to be not blameworthy. These are so many principles needed to steady us as we tread some of the ways of ethical history, where pitfalls are many.

IV. THE PHILOSOPHY OF CONSCIENCE CONSIDERED HISTORICALLY.—(1) *In pre-Christian times*.—The earliest written testimonies that we can consult tell us of recognized principles in morals, and if we confine our attention to the good which we find and neglect for the present the inconstancy and the admixture of many evils, we shall experience a satisfaction in the history. The Persians stood for virtue against vice in their support of Ahura Mazda against Ahriman; and it was an excellence of theirs to rise above "independent ethics" to the conception of God as the rewarder and the punisher. They even touched the doctrine of Christ's saying, "What doth it profit a man if he gain the whole world, and lose his own soul?" when to the question, what is the worth of the whole creation displayed before us, the Zend-Avesta has the reply: "the man therein who is delivered from evil in thought, word, and deed: he is the most valuable object on earth." Here conscience was clearly enlightened. Of the moral virtues among the Persians truthfulness was conspicuous. Herodotus says that the youth were taught "to ride and shoot with the bow", and "to speak the truth". The unvarnished Greeks, who admired the wiles of an Odysseus, were surprised at Persian veracity (Herodotus, I, 136, 138); and it may be that Herodotus is not fair on this head to Darius (III, 72). The Hindus in the Vedas do not rise high, but in Brahminism there is something more spiritual, and still more in the Buddhist reform on its best side, considered apart from the pessimistic view of life upon which its false asceticism was grounded. Buddhism had ten prohibitive commandments: three concerning the body, forbidding murder, theft, and unchastity; four concerning speech, forbidding lying, slander, abusive language, and vain conversation; and three concerning the mind internally, covetousness, malicious thoughts, and the doubting spirit. The Egyptians show the workings of conscience. In the "Book of the Dead" we find an examination of conscience, or rather profession of innocence, before the Supreme Judge after death. Two confessions are given enunciating most of the virtues (chap. cxxv): reverence for God; duties to the dead; charity to neighbours; duties of superiors and subjects; care for human life and limb; chastity, honesty, truthfulness, and avoidance of slander; freedom from covetousness. The Assyro-Babylonian monuments offer us many items on the favourable side; nor could the people whence issued the Code of Hammurabi, at a date anterior to the Mosaic legislation by perhaps seven hundred years, be ethically undeveloped. If the Code of Hammurabi has no precepts of reverence to God corresponding with the first three Commandments of the Mosaic Law, at least its preface contains a recognition of God's supremacy. In China Confucius (c. 500 B. C.), in connexion with an idea of heaven, delivered a high morality; and Mencius (c. 300 B. C.) developed this code of uprightness and benevolence as "Heaven's appointment". Greek ethics began to pass from its gnostic condition when Socrates fixed attention on the γνῶσις αὐτῶν in the interests of moral reflection. Soon followed Aristotle, who put the science on a lasting basis, with the great drawback of neglecting the theistic side and consequently the full doctrine of obligation. Neither for "obligation" nor for "conscience" had the Greeks a fixed term. Still the pleasures of a good conscience and the pains of an evil one were well set forth in the fragments collected by Stobæus *περὶ τοῦ συνεδῶτος*. Penandros, asked what was true freedom, answered: "a good conscience" (Gaisford's Stobæus, vol. I, p. 429).

(2) *In the Christian Fathers*.—The patristic treatment of ethics joined together Holy Scripture and the

classical authors of paganism; no system was reached, but each Father did what was characteristic. Tertullian was a lawyer and spoke in legal terms: especially his Montanism urged him to inquire which were the mortal sins, and thus he started for future investigators a good line of inquiry. Clement of Alexandria was allegoric and mystic: a combiner of Orientalism, Hellenism, Judaism, and Christianity in their bearing on the several virtues and vices. The apologists, in defending the Christian character, dwelt on the marks of ethical conduct. St. Justin attributed this excellence to the Divine Logos, and thought that to Him, through Moses, the pagan philosophers were indebted (Apol., I, xlv). Similarly Origen accounted for pre-Christian examples of Christian virtue. As a Roman skilled in legal administration St. Ambrose was largely guided by Latin versions of Greek ethics, as is very well illustrated by his imitation in style of Cicero's "De Officiis", which he made the title of his own work. He discusses *honestum et utile* (I, ix); *decorum*, or *τὸ πρέπον*, as exhibited in Holy Scripture (x); various degrees of goodness, mediocre and perfect, in connexion with the text, "if thou wilt be perfect" (xi); the passions of hot youth (xvii). Subsequent chapters dwell on the various virtues, as fortitude in war and its allied quality, courage in martyrdom (xl, xli). The second book opens with a discussion of beatitude, and then returns to the different virtues. It is the pupil of St. Ambrose, St. Augustine, who is, perhaps, the most important of the Fathers in the development of the Christian doctrine of conscience, not so much on account of his frequent discourses about moral subjects, as because of the Platonism which he drank in before his conversion, and afterwards got rid of only by degrees. The abiding result to the Scholastic system was that many writers traced their ethics and theology more or less to innate ideas, or innate dispositions, or Divine illuminations, after the example of St. Augustine. Even in St. Thomas, who was so distinctly an Aristotelean empiricist, some fancy that they detect occasional remnants of Augustinianism on its Platonic side.

Before leaving the Fathers we may mention St. Basil as one who illustrates a theorizing attitude. He was sound enough in recognizing sin to be graver and less grave; yet in the stress of argument against some persons who seemed to admit only the worst offences against God to be real sins, he ventured, without approving of Stoic doctrine, to point out a sort of equality in all sin, so far as all sin is a disobedience to God (Hom. de Justitiâ Dei, v-viii). Later Abelard and recently Dr. Schell abused this suggestion. But it has had no influence in any way like that of St. Augustine's Platonism, of which a specimen may be seen in St. Bonaventure, when he is treating precisely of conscience, in a passage very useful as shedding light on a subsequent part of this article. Some habits, he says, are *acquired*, some *innate* as regards knowledge of singulars and knowledge of universals. "Quum enim ad cognitionem duo concurrant necessario, videlicet presentia cognoscibilis et lumen quo mediante de illo iudicamus, habitus cognoscitivi sunt quodammodo nobis *innati* ratione luminis animo inditi: sunt etiam *acquisiti* ratione speciei"—"For as two things necessarily concur for cognition, namely, the presence of something cognoscible, and the light by which we judge concerning it, cognoscitive habits are in a certain sense *innate*, by reason of the light wherewith the mind is endowed; and they are also *acquired*, by reason of the *species*." ("Comment. in II Lib. Sent.", dist. xxxix, art. 1, Q. ii. Cf. St. Thomas, "De Veritate", Q. xi, art. 1: "Principia dicuntur innata quæ statim lumine intellectus agentis cognoscuntur per species a sensibus abstractas".—Principles are called innate when they are known at once by the light of the active intellect through the *species* abstracted from the senses.) Then comes the very noticeable and easily misunderstood addition a little later: "si quæ sunt

cognoscibilia per sui essentiam, non per speciem, respectu talium poterit dici conscientia esse *habitus simpliciter innatus*, utpote respectu hujus quod est Deum amare et timere; Deus enim non cognoscitur per *similitudinem a sensu*, immo 'Dei notitia naturaliter est nobis inserta', sicut dicit Augustinus"—"if there are some things cognoscible through their very essence and not through the *species*, conscience, with regard to such things, may be called a *habitus simply innate*, as, for example, with regard to loving and serving God; for God is not known by sense through an image; rather, 'the knowledge of God is implanted in us by nature', as Augustine says" ("In Joan.", Tract. cvi, n. 4; "Confess.", X, xx, xxix; "De Lib. Arbitr.", I, xiv, xxxi; "De Mor. Eccl.", iii, iv; "De Trin.", XIII, iii, vi; "Joan. Dam. de Fide", I, i, iii). We must remember that St. Bonaventure is not only a theologian but also a mystic, supposing in man *oculus carnis*, *oculus rationis* and *oculus contemplationis* (the eye of the flesh, the eye of reason, and the eye of contemplation); and that he so seriously regards man's power to prove by arguments the existence of God as to devote his labour to explaining that logical conviction is consistent with faith in the same existence (Comm. in III Sent., dist. xxiv, art. 1, Q. iv). All these matters are highly significant for those who take up any thorough examination of the question as to what the Scholastics thought about man having a conscience by his very nature as a rational being. The point recurs frequently in Scholastic literature, to which we must next turn.

(3) *In Scholastic times*.—It will help to make intelligible the subtle and variable theories which follow, if it be premised that the Scholastics are apt to puzzle readers by mixing up with their philosophy of reason a real or apparent apriorism, which is called Augustinianism, Platonism, or Mysticism. (a) As a rule, to which Durandus with some others was an exception, the Schoolmen regarded created causes as unable to issue in any definite act unless applied or stimulated by God, the Prime Mover: whence came the Thomistic doctrine of *promotio physica* even for the intellect and the will, and the simple *concursus* of the non-Thomists. (b) Furthermore they supposed some powers to be *potential* and *passive*, that is, to need a creative determinant received into them as their complement: of which kind a prominent example was the *intellectus possibilis* informed by the *species intelligibiles*, and another instance was in relation to conscience, the *synteresis*. (St. Thomas, De Verit., Q. xvi, art. 1, ad 13.) (c) First principles or habits inherent in intellect and will were clearly traced by St. Thomas to an origin in experience and abstraction; but others spoke more ambiguously or even contradictorily; St. Thomas himself, in isolated passages, might seem to afford material for the priorist to utilize in favour of innate forms. But the Thomistic explanation of *appetitus innatus*, as contrasted with *elicitus*, saves the situation.

Abelard, in his "Ethics", or "Nosce Teipsum", does not plunge us into these depths, and yet he taught such an indwelling of the Holy Ghost in virtuous pagans as too unrestrictedly to make their virtues to be Christian. He placed morality so much in the inward act that he denied the morality of the outward, and sin he placed not in the objectively disordered deed but in contempt for God, in which opinion he was imitated by Prof. Schell. Moreover he opened a way to wrong opinions by calling free will "the free judgment about the will". In his errors, however, he was not so wholly astray as careless reading might lead some to infer. It was with Alexander of Hales that discussions which some will regard as the tedious minutiae of Scholastic speculation began. The origin lay in the introduction from St. Jerome (in Ezech., I, Bk. I, ch. 1) of the term *synteresis* or *synderesis*. There the commentator, having treated three of the mystic animals in the Prophecy as symbolizing respectively three Platonic powers of the soul: *τὸ ἐπιθυμητικόν* (the appetitive), *τὸ θυμηκόν*

(the irascible), and *τὸ λογικόν* (the rational), uses the fourth animal, the eagle, to represent what he calls *συνήρησις*. The last, according to the texts employed by him to describe it, is a supernatural knowledge: it is the Spirit Who groans in man (Rom., viii, 26), the Spirit who alone knows what is in man (I Cor., ii, 11), the Spirit who with the body and the soul forms the Pauline trichotomy of I Thess., v, 23. Alexander of Hales neglects this limitation to the supernatural, and takes *synteresis* as neither a *potentia* alone, nor a *habitus* alone, but a *potentia habitualis*, something native, essential, indestructible in the soul, yet liable to be obscured and baffled. It resides both in the intelligence and in the will: it is identified with conscience, not indeed on its lower side, as it is deliberative and makes concrete applications, but on its higher side as it is wholly general in principle, intuitive, a *lumen innatum* in the intellect and a native inclination to good in the will, *voluntas naturalis non deliberativa* (Summa Theol., Pt. II, Q. Q. lxxi-lxxvii). St. Bonaventure, the pupil, follows on the same lines in his "Commentarium in II Sent." (dist. xxxix), with the difference that he locates the *synteresis* as *calor et pondus* in the will only, distinguishing it from the conscience in the practical intellect, which he calls an innate habit—"rationale iudicatorium, habitus cognoscitivus moralium principiorum"—"a rational judgment, a habit cognoscitive of moral principles". Unlike Alexander he retains the name conscience for descent to particulars: "*conscientia non solum consistit in universalis sed etiam descendit ad particularia deliberativa*"—"conscience not only consists in the universal but also descends to deliberative particulars". As regards general principles in the conscience, the habits are innate: while as regards particular applications, they are acquired (II Sent., dist. xxxix, art. 1, Q. ii).

As forming a transition from the Franciscan to the Dominican School we may take one whom the Servite Order can at least claim as a great patron, though he seems not to have joined their body, Henry of Ghent. He places conscience in the intellect, not in the affective part—"non ad affectivam pertinet"—by which the Scholastics meant generally the will without special reference to feeling or emotion as distinguished in the modern sense from will. While Nicholas of Cusa described the Divine illumination as acting in blind-born man (*virtus illuminati cæcinati qui per fidem visum acquirit*), Henry of Ghent required only assistances to human sight. Therefore he supposed: (a) an *influentia generalis Dei* to apprehend concrete objects and to generalize thence ideas and principles; (b) a light of faith; (c) a *lumen speciale* wherewith was known the *sincera et limpida veritas rerum* by chosen men only, who saw things in their Divine exemplars but not God Himself; (d) the *lumen gloriæ* to see God. For our purpose we specially note this: "*conscientia ad partem animæ cognitivam non pertinet, sed ad affectivam*"—"conscience belongs not to the cognitive part of the mind, but to the affective" (Quodlibet., I, xviii). St. Thomas, leading the Dominicans, places *synteresis* not in the will but in the intellect, and he applies the term *conscience* to the concrete determinations of the general principle which the *synteresis* furnishes: "*By conscience the knowledge given through synteresis is applied to particular actions*", ("De Verit.", Q. xvii, a. 2. Cf. "Summa Theol.", Q. lxxix, a. 13; "III Sent.", dist. xiv, a. 1, Q. ii; "Contra Gent.", II, 59.) Albertus agrees with St. Thomas in assigning to the intellect the *synteresis*, which he unfortunately derives from *syn* and *hærens* (*hærens in aliquo*) (Summa Theol., Pt. II, Q. xcix, memb. 2, 3; Summa de Creaturis, Pt. II, Q. lxxix, a. 1). Yet he does not deny all place to the will: "Est rationis prætiæ . . . non sine voluntate naturali, sed nihil est voluntatis deliberativæ (Summa Theol., Pt. II, Q. xcix, memb. 1). The preference of the Franciscan School for the prominence of will, and the prefer-

ence of the Thomistic School for the prominence of intellect is characteristic. (See Scotus, IV Sent., dist. xlix, Q. iv.) Often this preference is less significant than it seems. Fouillée, the great defender of the *idée force*—idea as the active principle—allows in a controversy with Spencer that feeling and will may be involved in the idea. Having shown how Scholasticism began its research into conscience as a fixed terminology, we must leave the matter there, adding only three heads under which occasion was given for serious errors outside the Catholic tradition:—

(a) While St. Augustine did excellent service in developing the doctrine of grace, he never so clearly defined the exact character of the supernatural as to approach the precision which was given through the condemnation of propositions taught by Baius and Jansenius; and in consequence his doctrine of original sin remained unsatisfactory. When Alexander of Hales, without distinction of natural and supernatural, introduced among the Scholastics the words of St. Jerome about *synteresis* as *scintilla conscientia*, and called it *lumen innatum*, he helped to perpetuate the Augustinian obscurity.

(b) As regards the intellect, several Scholastics inclined to the Arabian doctrine of *intellectus agens*, or to the Aristotelean doctrine of the Divine *vois* higher than the human soul and not perishable with it. Roger Bacon called the *intellectus agens* a distinct substance. Allied with this went Exemplarism, or the doctrine of archetypic ideas and the supposed knowledge of things in these Divine ideas. [Compare the *προτύποις ἐμφαντοῖς* of the Stoics, which were universals, *κοινὰ ἔννοια* (Zeller, Stoics, ch. vi)]. Henry of Ghent distinguished in man a double knowledge: "*primum exemplar rei est species eius universalis causata a re: secundum est ars divina, continens rerum ideales rationes*"—"the first exemplar of a thing is universal species of it caused by the thing: the second is the Divine Art containing the ideal reasons (*rationes*) of things" (Theol., I, 2, n. 15). Of the former he says: "*per tale exemplar acquiritur certa et infallibilis notitia veritatis est omnino impossibilis*"—"through such an acquired exemplar, certain and infallible knowledge of truth is utterly impossible" (n. 17); and of the latter: "*illi soli certam veritatem valent agnoscere qui eam in exemplari (æterno) valent aspicere, quod non omnes valent*"—"they alone can know certain truth who can behold it in the (eternal) exemplar, which not all can do" (I, 1, n. 26). The perplexity was further increased when some, with Occam, asserted a confused intuition of things singular as opposed to the clearer idea got by the process of abstraction: "*Cognitio singularis abstractiva præsupponit intuitivam ejusdem objecti*"—"abstractive cognition of a singular presupposes intuitive cognition of the same object" (Quodlibet., I, Q. xiii). Scotus also has taught the confused intuition of the singulars. Here was much occasion for perplexity on the intellectual side, about the knowledge of general principles in ethics and their application when the priority of the general to the particular was in question.

(c) The will also was a source of obscurity. Descartes supposed the free will of God to have determined what for conscience was to be right and what wrong, and he placed the act of volition in an affirmation of the judgment. Scotus did not go thus far, but some Scotists exaggerated the determining power of Divine will, especially so as to leave it to the choice of God indefinitely to enlarge a creature's natural faculties in a way that made it hard to distinguish the natural from the supernatural. Connected with the philosophy of the will in matters of conscience is another statement open to controversy, namely, that the will can tend to any good object in particular only by reason of its universal tendency to the good. This is what Alexander of Hales means by *synteresis* as it exists in the will, when he says that it is not an inactive habit

but a habit in some sense active of itself, or a general tendency, disposition, bias, weight, or virtuality. With this we might contrast Kant's pure noumenal will, good apart from all determinedly good objects.

(4) *Anti-Scholastic Schools*.—The history of ethics outside the Scholastic domain, so far as it is antagonistic, has its extremes in Monism or Pantheism on the one side and in Materialism on the other.

(a) Spinoza is a type of the Pantheistic opposition. His views are erroneous inasmuch as they regard all things in the light of a fated necessity, with no free will in either God or man; no preventable evil in the natural course of things; no purposed good of creation; no individual destiny or immortality for the responsible agent: indeed no strict responsibility and no strict retribution by reward or punishment. On the other hand many of Spinoza's sayings, if lifted into the theistic region, may be transformed into something noble. The theist, taking up Spinoza's phraseology in a converted sense, may, under this new interpretation, view all passionate action, all sinful choice, as an "inadequate idea of things", as "the preference of a part to the detriment of the whole", while all virtue is seen as an "adequate idea" taking in man's "full relation to himself as a whole, to human society and to God". Again, Spinoza's *amor Dei intellectualis* becomes finally, when duly corrected, the Beatific Vision, after having been the darker understanding of God enjoyed by holy men before death, who love all objects in reference to God. Spinoza was not an antinomian in conduct; he recommended and practised virtues. He was better than his philosophy on its bad side, and worse than his philosophy on its good side after it has been improved by Christian interpretation.

(b) Hobbes stands for ethics on a Materialistic basis. Tracing all human action to self-love, he had to explain the generous virtues as the more respectable exhibitions of that quality when modified by social life. He set various schools of antagonistic thought devising hypotheses to account for disinterested action in man. The Cambridge Platonists unsatisfactorily attacked him on the principle of their eponymous philosopher, supposing the innate *νοῦμα* to rule the empirical *αἰσθηματα* by the aid of what Henry More called a "boniform faculty", which tasted "the sweetness and savour of virtue". This calling in of a special faculty had imitators outside the Platonic School; for example in Hutcheson, who had recourse to Divine "implantations" of benevolent disposition and moral sense, which remind us somewhat of synderesis as imperfectly described by Alexander of Hales. A robust reliance on reason to prove ethical truth as it proved mathematical truths, by inspection and analysis, characterized the opposition which Dr. Samuel Clarke presented to Hobbes. It was a fashion of the age to treat philosophy with mathematical rigour; but very different was the "geometrical ethics" of Spinoza, the necessarian, from that of Descartes, the libertarian, who thought that God's free will chose even the ultimate reasons of right and wrong and might have chosen otherwise. If Hobbes has his representatives in the Utilitarians, the Cambridge Platonists have their representatives in more or less of the school of which T. H. Green is a leading light. A universal infinite mind seeks to realize itself finitely in each human mind or brain, which therefore must seek to free itself from the bondage of mere natural causality and rise to the liberty of the spirit, to a complete self-realization in the infinite Self and after its pattern. What this pattern ultimately is Green cannot say; but he holds that our way towards it at present is through the recognized virtues of European civilization, together with the cultivation of science and art. In the like spirit G. E. Moore finds the ascertainable objects that at present can be called "good in themselves" to be social intercourse and æsthetic delight.

(c) Kant may stand midway between the Pantheis-

tic and the purely Empirical ethics. On the one side he limited our knowledge, strictly so called, of things good to sense-experiences; but on the other he allowed a practical, regulative system of ideas lifting us up to God. Duty as referred to Divine commands was religion, not ethics: it was religion, not ethics, to regard moral precepts in the light of the commands of God. In ethics these were restricted to the autonomous aspect, that is, to the aspect of them under which the will of each man was its own legislator. Man, the noumenon, not the phenomenon, was his own law-giver and his own end so far as morality went: anything beyond was outside ethics proper. Again, the objects prescribed as good or forbidden as bad did not enter in among the constituents of ethical quality: they were only extrinsic conditions. The whole of morality intrinsically was in the good will as pure from all content or object of a definite kind, from all definite inclination to benevolence and as deriving its whole dignity from respect for the moral law simply as a moral law, self-imposed, and at the same time universalized for all other autonomous individuals of the rational order. For each moral agent as noumenal willed that the maxim of his conduct should become a principle for all moral agents.

We have to be careful how in practice we impute consequences to men who hold false theories of conscience. In our historical sketch we have found Spinoza a necessarian or fatalist; but he believed in effort and exhortation as aids to good life. We have seen Kant assert the non-morality of Divine precept and of the objective fitness of things, but he found a place for both these elements in his system. Similarly Paulsen gives in the body of his work a mundane ethics quite unaffected by his metaphysical principles as stated in his preface to Book II. Luther logically might be inferred to be a thorough antinomian: he declared the human will to be enslaved, with a natural freedom only for civic duties; he taught a theory of justification which was in spite of evil deeds; he called nature radically corrupt and forcibly held captive by the lusts of the flesh; he regarded Divine grace as a due and necessary complement to human nature, which as constituted by mere body and soul was a nature depraved; his justification was by faith, not only without works, but even in spite of evil works which were not imputed. Nevertheless he asserted that the good tree of the faith-justified man must bring forth good works; he condemned vice most bitterly, and exhorted men to virtue. Hence Protestants can depict a Luther simply the preacher of good, while Catholics may regard simply the preacher of evil. Luther has both sides.

V. CONSCIENCE IN ITS PRACTICAL WORKING.—(1) *The supremacy of conscience* is a great theme of discourse. "Were its might equal to its right", says Butler, "it would rule the world". With Kant we could say that conscience is autonomously supreme, if against Kant we added that thereby we meant only that every duty must be brought home to the individual by his own individual conscience, and is to this extent imposed by it; so that even he who follows authority contrary to his own private judgment should do so on his own private conviction that the former has the better claim. If the Church stands between God and conscience, then in another sense also the conscience is between God and the Church. Unless a man is conscientiously submissive to the Catholic Church his subjection is not really a matter of inner morality but a mechanical obedience.

(2) *Conscience as a matter of education and perfectibility*.—As in all other concerns of education, so in the training of conscience we must use the several means. As a check on individual caprice, especially in youth, we must consult the best living authorities and the best traditions of the past. At the same time that we are recipient our own active faculties must exert them-

selves in the pursuit with a keen outlook for the chances of error. Really unavoidable mistakes will not count against us; but many errors are remotely, when not proximately, preventable. From all our blunders we should learn a lesson. The diligent examiner and corrector of his own conscience has it in his power, by long diligence to reach a great delicacy and responsiveness to the call of duty and of higher virtue, whereas the negligent, and still more the perverse, may in some sense become dead to conscience. The hardening of the heart and the bad power to put light for darkness and darkness for light are results which may be achieved with only too much ease. Even the best criteria will leave residual perplexities for which provision has to be made in an ethical theory of probabilities which will be explained in the article *PROBABILISM*. Suffice it to say here that the theory leaves intact the old rule that a man in so acting must judge that he certainly is allowed thus to act, even though sometimes it might be more commendable to do otherwise. In inferring something to be permissible, the extremes of scrupulosity and of laxity have to be avoided.

(3) *The approvals and reprovals of conscience.*—The office of conscience is sometimes treated under too narrow a conception. Some writers, after the manner of Socrates when he spoke of his *dæmon* as rather a restrainer than a promoter of action, assign to conscience the office of forbidding, as others assign to law and government the negative duty of checking invasion upon individual liberty. Shaftesbury (*Inquiry* II, 2, 1) regards conscience as the consciousness of wrongdoing, not of rightdoing. Carlyle in his "Essay on Characteristics" asserts that we should have no sense of having a conscience but for the fact that we have sinned; with which view we may compare Green's idea about a reasoned system of ethics (*Proleg.*, Bk. IV, ch. ii, sect. 311) that its use is negative "to provide a safeguard against the pretext which in a speculative age some inadequate and misapplied theories may afford our selfishness rather than in the way of pointing out duties previously ignored". Others say that an ethics of conscience should no more be hortatory than art should be didactic. Mackenzie (*Ethics*, 3rd ed., Bk. III, ch. i, sect. 14) prefers to say simply that "conscience is a feeling of pain accompanying and resulting from non-conformity to principle". The suggestion which, by way of contrary, these remarks offer is that we should use conscience largely as an approving and an instigating and an inspiring agency to advance us in the right way. We should not in morals copy the physicists, who deny all attractive force and limit force to *vis a tergo*, a push from behind. Nor must we think that the positive side of conscience is exhausted in urging obligations: it may go on in spite of Kant, beyond duty to works of supererogation. Of course there is a theory which denies the existence of such works on the principle that every one is simply bound to the better and the best if he feels himself equal to the heroic achievement. This philosophy would lay it down that he who can renounce all and give it to the poor is simply obliged to do so, though a less generous nature is not bound, and may take advantage—if it be an advantage—of its own inferiority. Not such was the way in which Christ put the case: He said hypothetically, "if thou wilt be perfect", and His follower St. Peter said to Ananias "Was not [thy land] thine own? and after it was sold, was it not in thine own power? . . . Thou hast not lied unto men, but unto God." (*Acts*, v, 4.) We have, then, a sphere of duty and beyond that a sphere of free virtue, and we include both under the domain of conscience. It is objected that only a prig considers the approving side of his conscience, but that is true only of the priggish manner, not of the thing itself; for a sound mind may very well seek the joy which comes of a faithful, generous heart, and make it an effort of a conscience that outstrips duty to aim at higher perfection, not under the false persua-

sion that only after duty has been fulfilled does merit begin, but under the true conviction that duty is meritorious, and that so also is goodness in excess of duty. Not that the eye is to be too narrowly fixed on rewards: these are included, while virtue for virtue's sake and for the sake of God is carefully cultivated.

JOHN RICKABY.

Conscience, EXAMINATION OF. See *EXAMINATION OF CONSCIENCE*.

Conscience, HENDRIK, a Flemish novelist, b. at Antwerp, 3 December, 1812; d. at Brussels, 10 September, 1883. His father was French and his mother Flemish. Until the age of seven Conscience was a cripple, and was constantly under the care of his mother who used to tell him wonderful tales of fairies and angels. Little by little, however, he grew stronger, and was able to take part in the games of other children, but, as soon as he could read, books were his favourite companions. In fact, it was by reading that he mainly educated himself, for his schooling was limited to what would be considered to-day as the elementary grade. In 1830 he was a tutor in the Delin School, to some degree a fashionable institution of Antwerp, but at the very beginning of the struggle for independence he resigned his position and entered the army as a private.

His military service, which lasted six years, brought him into contact with the peasants of the northern part of Belgium, and gave him an opportunity to study their manners, their customs, and to see the attractive sides of their character, rough as it is on the surface. After leaving the army he was successively connected with the local administration of Antwerp, the academy of the same city, and, in 1857, with the local administration of Courtrui. In 1868 he was appointed commissioner of the royal museums of painting and sculpture. He had taught Flemish to the sons of King Leopold I, and in 1868 refused the chair of Flemish literature in the University of Ghent. In 1869 he became a member of the Royal Academy of Belgium.

While in the army Conscience began to write, but in French. In 1837, following the advice of his friend Jan Delaet, he made up his mind to write in Flemish, an idiom which was then considered too rude for literary composition. In this language he published his first novel, "The Wonderful Year", and six months later a volume of verse and prose, "Phantazij". These two highly romantic productions, where everything, romance, style, and even language, lay open to criticism, were failures. Conscience, however, was in no way dismayed and took in hand another work. This time his efforts were crowned with success. When, in 1838, "The Lion of Flanders" appeared, it enriched Flemish literature with a masterpiece. After this success he never ceased writing. His complete works embrace more than a hundred volumes.

Conscience got his inspiration from three main sources: the fatherland, the family, and loyalty to the Church. His conception of art is an idealistic one, though he gives a vivid account of the realities of life. His avowed purpose was always to inspire

the people with a love for the good and the beautiful. He possesses to a high degree the sense of the dramatic and pathetic; he has a wonderful power of grasping the picturesque side of things, and often renders it with a rare felicity of expression. His works enjoyed a great vogue, and have been translated into most of the European languages. Several English editions appeared in London, Edinburgh, and Baltimore. Among his historical novels "The Lion of Flanders" and "Jacob van Artevelde" are considered his best achievements; among his studies of life and manners the most successful were "Siska van Roosemael" and "The Blessing of Being Rich"; among his village tales the best known are "The Conscript" and "Baas Gansendonck". The city of Antwerp raised a monument to this famous son, which was unveiled some weeks before his death.

Conscience, LIBERTY OF. See TOLERATION.

Consciousness (Lat. *scientia*; Ger. *Bewusstsein*) cannot, strictly speaking, be defined. In its widest sense it includes all our sensations, thoughts, feelings, and volitions—in fact the sum total of our mental life. We indicate the meaning of the term best by contrasting conscious life with the unconscious state of a swoon, or of deep, dreamless sleep. We are said to be conscious of mental states when we are alive to them, or are aware of them in any degree. The term *self-conscious* is employed to denote the higher or more reflective form of knowledge, in which we formally recognize our states as our own. Consciousness in the wide sense has come to be recognized in modern times as the subject-matter of a special science, psychology; or, more definitely, phenomenal or empirical psychology. The investigation of the facts of consciousness, viewed as phenomena of the human mind, their observation, description, and analysis, their classification, the study of the conditions of their growth and development, the laws exhibited in their manifestation, and, in general, the explanation of the more complex mental operations and products by their reduction to more elementary states and processes, is held to be the business of the scientific psychologist at the present day.

HISTORY.—The scientific or systematic study of the phenomena of consciousness is modern. Particular mental operations, however, attracted the attention of acute thinkers from ancient times. Some of the phenomena connected with volition, such as motive, intention, choice, and the like, owing to their ethical importance, were elaborately investigated and described by early Christian moralists; whilst some of our cognitive operations were a subject of interest to the earliest Greek philosophers in their speculations on the problem of human knowledge. The common character, however, of all branches of philosophy in the ancient world, was objective, an inquiry into the nature of being and becoming in general, and of certain forms of being in particular. Even when epistemological questions, investigations into the nature of knowing, were undertaken, as e. g. by the School of Democritus, there seems to have been very little effort made to test the theories by careful comparison with the actual experience of our consciousness. Accordingly, crude hypotheses received a considerable amount of support. The great difference between ancient and modern methods of investigating the human mind will be best seen by comparing Aristotle's "De Animâ" and any modern treatise such as William James' "Principles of Psychology", or James Ward's article on psychology in the ninth edition of

the "Encyclopædia Britannica". Although there is plenty of evidence of inductive inquiry in the Greek philosopher's book, it is mainly of an objective character; and whilst there are incidentally acute observations on the operations of the senses and the constitution of some mental states, the bulk of the treatise is either physiological or metaphysical. On the other hand the aim of the modern inquirer throughout is the diligent study by introspection of different forms of consciousness, and the explanation of all complex forms of consciousness by resolving them into their simplest elements. The Schoolmen, in the main, followed the lines of the Greek philosophers, especially Aristotle. There is a striking uniformity in the treatise "De Animâ" in the hands of each successive writer throughout the whole of the Middle Ages. The object and conditions of the operations of the cognitive and appetitive faculties of the soul, the constitution of *species*, the character of the distinction between the soul and its faculties, the connexion of soul and body, the inner nature of the soul, its origin and destiny are discussed in each treatise from the twelfth to the sixteenth century; whilst the method of argument throughout rests rather on an ontological analysis of our concepts of the various phenomena than on painstaking introspective study of the character of our mental activities themselves.

However, as time went on, the importance of certain problems of Christian theology, not so vividly realized by the ancients, compelled a more searching observation of consciousness and helped on the subjective movement. Free will, responsibility, intention, consent, repentance, and conscience acquired a significance unknown to the old pagan world. This procured an increasingly copious treatment of these subjects from the moral theologians. The difficulties surrounding the relations between sensuous and intellectual knowledge evoked more systematic treatment in successive controversies. Certain questions in ascetical and mystical theology also necessitated more direct appeal to strictly psychological investigation among the later Schoolmen. Still, it must be admitted that the careful inductive observation and analysis of our consciousness, so characteristic of modern psychological literature, occupies a relatively small space in the classical *De animâ* of the medieval schools. The nature of our mental states and processes is usually assumed to be so obvious that detailed description is needless, and the main part of the writer's energy is devoted to metaphysical argument. Locke's "Essay Concerning Human Understanding" (1690) and the writings of Thomas Hobbes (1588–1679), both of which combine with confused and superficial metaphysics much acute observation and genuinely scientific attempts at analysis of various mental states, inaugurated the systematic inductive study of the phenomena of the mind which has grown into the modern science of consciousness, the empirical or phenomenal psychology of the present day. In Great Britain the idealism of Berkeley, which resolved the seemingly independent material world into a series of ideas awakened by God in the mind, and the scepticism of Hume, which professed to carry the analysis still farther, dissolving the mind itself into a cluster of states of consciousness, focused philosophical speculation more and more on the analytic study of mental phenomena, and gave rise to the Associationist School. This came at last virtually to identify all philosophy with psychology. Reid and Stewart, the ablest representatives of the Scotch School, whilst opposing Hume's teaching with a better psychology, still strengthened by their method the same tendency. Meantime, on the Continent, Descartes' system of methodic doubt, which would reduce all philosophical assumptions to his ultimate *cogito, ergo sum*, furthered the subjective movement of speculation from another side, for it planted the seed of the sundry modern

philosophies of consciousness, destined to be evolved along various lines by Fichte, Schelling, and Hartmann.

Such being in outline the history of modern speculation in regard to human consciousness, the question of primary interest here is: Viewed from the standpoint of Catholic theological and philosophical teaching, what estimate is to be formed of this modern psychological method, and of the modern science of the phenomena of consciousness? It seems to the present writer that the method of careful industrious observation of the activities of the mind, the accurate description and classification of the various forms of consciousness, and the effort to analyse complex mental products into their simplest elements, and to trace the laws of the growth and development of our several faculties, constitute a sound rational procedure which is as deserving of commendation as the employment of sound scientific method in any other branch of knowledge. Further, since the only natural means of acquiring information respecting the inner nature of the soul is by the investigation of its activities, the scientific study of the facts of consciousness is a necessary preliminary at the present day to any satisfactory metaphysics of the soul. Assuredly no philosophy of the human soul which ignores the results of scientific observation and experiment applied to the phenomena of consciousness can to-day claim assent to its teaching with much hope of success. On the other hand, most English-speaking psychologists since the time of Locke, partly through excessive devotion to the study of these phenomena, partly through contempt for metaphysics, seem to have fallen into the error of forgetting that the main ground for interest in the study of our mental activities lies in the hope that we may draw from them inferences as to the inner constitution of the being, subject, or agent from which these activities proceed. This error has made the science of consciousness, in the hands of many writers, a "psychology without a soul". This is, of course, no necessary consequence of the method. With respect to the relation between the study of consciousness and philosophy in general, Catholic thinkers would, for the most part, hold that a diligent investigation of the various forms of our cognitive consciousness must be undertaken as one of the first steps in philosophy; that one's own conscious existence must be the ultimate fact in every philosophical system; and that the veracity of our cognitive faculties, when carefully scrutinized, must be the ultimate postulate in every sound theory of cognition. But the prospect of constructing a general philosophy of consciousness on idealistic lines that will harmonize with sundry theological doctrines which the Church has stamped with her authority, does not seem promising. At the same time, although much of our dogmatic theology has been formulated in the technical language of the Aristotelean physics and metaphysics, and though it would be, to say the least, extremely difficult to disentangle the Divinely revealed religious element from the human and imperfect vehicle by which it is communicated, yet it is most important to remember that the conceptions of Aristotelean metaphysics are no more part of Divine Revelation than are the hypotheses of Aristotelean physics; and that the technical language with its philosophical associations and implications in which many of our theological doctrines are clothed, is a human instrument, subject to alteration and correction.

QUANTITATIVE SCIENCE OF CONSCIOUSNESS.—The term *psychophysics* is employed to denote a branch of experimental psychology which seeks to establish quantitative laws describing the general relations of intensity exhibited in various kinds of conscious states under certain conditions. Elaborate experiments and ingenious instruments have been devised by Weber, Fechner, Wundt, and others for the purpose of measuring the strength of the stimulus needed to

awaken the sensations of the several senses, the quantity of variation in the stimulus required to produce a consciously distinguishable sensation, and so to discover a minimum increment or unit of consciousness; also to measure the exact duration of particular conscious processes, the "reaction-time" or interval between the stimulation of a sense-organ and the performance of a responsive movement, and similar facts. These results have been stated in certain approximate laws. The best established of these is the Weber-Fechner generalization, which enunciates the general fact that the stimulus of a sensation must be increased in geometrical progression in order that the intensity of the resulting sensation be augmented in arithmetical progression. The law is true, however, only of certain kinds of sensation and within limits. Whilst these attempts to reach quantitative measurement—characteristic of the exact sciences—in the study of consciousness have not been directly very fruitful in new results, they have nevertheless been indirectly valuable in stimulating the pursuit of greater accuracy and precision in all methods of observing and registering the phenomena of consciousness.

SELF-CONSCIOUSNESS.—A most important form of consciousness from both a philosophical and a psychological point of view is self-consciousness. By this is understood the mind's consciousness of its operations as its own. Out of this cognition combined with memory of the past emerges the knowledge of our own abiding personality. We not only have conscious states like the lower animals, but we can reflect upon these states, recognize them as our own, and at the same time distinguish them from the permanent self of which they are the transitory modifications. Viewed as the form of consciousness by which we study our own states, this inner activity is called introspection. It is the chief instrument employed in the building up of the science of psychology, and it is one of the many *differentiæ* which separate the human from the animal mind. It has sometimes been spoken of as an "internal sense", the proper object of which is the phenomena of consciousness, as that of the external senses is the phenomena of physical nature. Introspection is, however, merely the function of the intellect applied to the observation of our own mental life. The peculiar reflective activity exhibited in all forms of self-consciousness has led modern psychologists who defend the spirituality of the soul, increasingly to insist on this operation of the human mind as a main argument against materialism. The cruder form of materialism advocated in the last century by Broussais, Vogt, Moleschott, and at times by Huxley, which maintained that thought is merely a "product", "secretion", or "function" of the brain, is shown to be untenable by a brief consideration of any form of consciousness. All "secretions" and "products" of material agents of which we have experience, are substances which occupy space, are observable by the external senses, and continue to exist when unobserved. But all states of consciousness are non-spatial; they cannot be observed by the senses, and they exist only as we are conscious of them—their *esse* is *percipi*. Similarly "functions" of material agents are, in the last resort, resolvable into movements of portions of matter. But states of consciousness are not movements any more than they are "secretions" of matter. The contention, however, that all states of consciousness, though not "secretions" or "products" of matter, are yet forms of activity which have their ultimate source in the brain and are intrinsically and absolutely dependent on the latter is not disposed of by this reasoning.

To meet this objection, attention is directed to the form of intellectual activity exhibited in reflective self-consciousness. In this process there is recognition of complete identity between the knowing agent and the object which is known; the *ego* is at once sub-

ject and object. This feature of our mental life has been adduced in evidence of the immateriality of the soul by former writers, but under the title of an argument from the unity of consciousness it has been stated in perhaps its most effective form by Lotze. The phrase "continuity of consciousness" has been employed to designate the apparent connectedness which characterizes our inner experience, and the term "stream" of consciousness has been popularized by Professor James as an apt designation of our conscious life as a whole. Strictly speaking, this continuity does not pertain to the "states" or phenomena of consciousness. One obviously large class of interruptions is to be found in the nightly suspension of consciousness during sleep. The connecting continuity is really in the underlying subject of consciousness. It is only through the reality of a permanent, abiding principle or being which endures the same whilst the transitory states come and go that the past experience can be linked with the present, and the apparent unity and continuity of our inner life be preserved. The effort to explain the seeming continuity of our mental existence has, in the form of the problem of personal identity, proved a hopeless crux to all schools of philosophy which decline to admit the reality of some permanent principle such as the human soul is conceived to be in the Scholastic philosophy. John Stuart Mill, adhering to the principles of Hume, was driven to the conclusion that the human mind is merely "a series of states of consciousness aware of itself as a series". This has been rightly termed by James "the definite bankruptcy" of the Associationist theory of the human mind. James' own account of the *ego* as "a stream of consciousness" in which "each passing thought" is the only "thinker" is not much more satisfactory.

ABNORMAL FORMS OF CONSCIOUSNESS.—In processes of self-conscious activity the relative prominence of the self and the states varies much. When the mind is keenly interested in some external event, e. g. a race, the notice of self may be diminished almost to zero. On the other hand, in efforts of difficult self-restraint and deliberate reflection, the consciousness of the *ego* reaches its highest level. Besides this experience of the varying degrees of the obtrusiveness of the self, we are all conscious at times of trains of thought taking place automatically within us, which seem to possess a certain independence of the main current of our mental life. Whilst going through some familiar intellectual operation with more or less attention, our mind may at the same time be occupied in working out a second series of thoughts connected and coherent in themselves, yet quite separate from the other process in which our intellect is engaged. These secondary "split-off" processes of thought may, in certain rare cases, develop into very distinct, consistent, and protracted streams of consciousness; and they may occasionally become so complete in themselves and so isolated from the main current of our mental life, as to possess at least a superficial appearance of being the outcome of a separate personality. We have here the phenomenon of the so-called "double ego". Sometimes the sections or fragments of one fairly consistent stream of consciousness alternate in succession with the sections of another current, and we have the alleged "mutations of the ego", in which two or more distinct personalities seem to occupy the same body in turn. Sometimes the second stream of thought appears to run on concomitantly with the main current of conscious experience, though so shut off as only to manifest its existence occasionally. These parallel currents of mental life have been adduced by some writers in support of an hypothesis of concomitant "multiple personalities". The psychological literature dealing with these phenomena which has grown up in recent years is already very large. Here it suf-

fices to observe in passing that all these phenomena belong to morbid mental life, that their nature and origin are admittedly extremely obscure, and that the cases in which the *ego* or subject of one stream of consciousness has absolutely no knowledge or memory of the experiences of the other, are extremely few and very doubtful. The careful and industrious observations, however, which are being collected in this field of mental pathology are valuable for many purposes; and even if they have not so far thrown much light on the problem of the inner nature of the soul, at all events they stimulate effort towards an important knowledge of the nervous conditions of mental processes, and they ought ultimately to prove fruitful for the study of mental disease.

Reverie, dreams, and somnambulistic experiences are forms of consciousness mediating between normal life and the eccentric species of mentality we have just been discussing. One particular form of abnormal consciousness which has attracted much attention during the last quarter of a century is that exhibited in hypnotism (q. v.). The type of consciousness presented here is in many respects similar to that of somnambulism. The main feature in which it differs is that the hypnotic state is artificially induced and that the subject of this state remains in a condition of *rapport* or special relation with the hypnotizer of such a kind that he is singularly susceptible to the suggestions of the latter. One feature of the hypnotic state in common with some types of somnambulism and certain forms of the "split-off" streams of consciousness consists in the fact that experiences which occurred in a previous section of the particular abnormal state, though quite forgotten during the succeeding normal consciousness, may be remembered during a return of the abnormal state. These and some other kindred facts have recently given rise to much ingenious speculation as to the nature of mental life below the "threshold" or "margin" of consciousness. Certain writers have adopted the hypothesis of a "subliminal", in addition to our ordinary "supraliminal", consciousness, and ascribe a somewhat mystic character to the former. Some assume a universal, pantheistic, subliminal consciousness continuous with the subliminal consciousness of the individual. Of this universal mind they maintain that each particular mind is but a part. The question, indeed, as to the existence and nature of unconscious mental operations in individual minds has been in one shape or another the subject of controversy from the time of Leibniz. That during our normal conscious existence obscure, subconscious mental processes, at best but faintly recognizable, do take place, is indisputable. That latent activities of the soul which are strictly unconscious, can be truly mental or intellectual operations is the point in debate. Whatever conclusions be adopted with respect to those various problems, the discussion of them has established beyond doubt the fact that our normal consciousness of everyday life is profoundly affected by subconscious processes of the soul which themselves escape our notice. (See PERSONALITY; PSYCHOLOGY; SOUL.)

MICHAEL MAHER.

Consecration, in general, is an act by which a thing is separated from a common and profane to a sacred use, or by which a person or thing is dedicated to the service and worship of God by prayers, rites, and ceremonies. The custom of consecrating persons to the Divine service and things to serve in the wor-

ship of God may be traced to the remotest times. We find rites of consecration mentioned in the early cult of the Egyptians and other pagan nations. Among the Semitic tribes it consisted in the threefold act of separating, sanctifying, or purifying, and devoting or offering to the Deity. In the Hebrew Law we find it applied to the entire people whom Moses, by a solemn act of consecration, designates as the People of God. As described in the Book of Exodus (xxiv), the rite used on this occasion consisted (1) of the erection of an altar and twelve memorial stones (to represent the twelve tribes); (2) of the selection of twelve youths to perform the burnt-offering of the holocaust; (3) Moses read the covenant, and the people made their profession of obedience; (4) Moses sprinkled upon the people the blood reserved from the holocaust. Later on we read of the consecration of the priests—Aaron and his sons (Exod., xxix)—who had been previously elected (Exod., xxviii). Here we have the act of consecration consisting of purifying, investing, and anointing (Lev., viii) as a preparation for their offering public sacrifice. The placing of the meat in their hands (Exod., xxix) was considered an essential part of the ceremony of consecration, whence the expression *filling the hand* has been considered identical with *consecrating*. As to the oil used in this consecration, we find the particulars in Exodus (xxx, 23, 24; xxxvii, 29).

Distinct from the priestly consecration is that of the Levites (Num., iii, 6) who represent the first-born of all the tribes. The rite of their consecration is described in Numbers, viii. Another kind of personal consecration among the Hebrews was that of the Nazarites (Num., vi). It implied the voluntary separation from certain things, dedication to God, and a vow of special sanctity. Similarly, the rites of consecration of objects—such as temples, altars, firstfruits, spoils of war, etc.—are minutely described in the Old Testament. Among the Romans whatever was devoted to the worship of their gods (fields, animals, etc.) was said to be *consecrated*, and the objects which pertained intimately to their worship (temples, altars, etc.) were said to be *dedicated*. These words were, however, often used indiscriminately, and in both cases it was understood that the object once consecrated or dedicated remained sacred in *perpetuum*.

The Church distinguishes consecration from blessing, both in regard to persons and to things. Hence the Roman Pontifical treats of the consecration of a bishop and of the blessing of an abbot, of the blessing of a corner-stone and the consecration of a church or altar. In both, the persons or things pass from a common, or profane, order to a new state, and become the subjects or the instruments of Divine protection. At a consecration the ceremonies are more solemn and elaborate than at a blessing. The ordinary minister of a consecration is a bishop, whilst the ordinary minister of a blessing is a priest. At every consecration the holy oils are used; at a blessing customarily only holy water. The new state to which consecration elevates persons or things is permanent, and the rite can never be repeated, which is not the case at a blessing; the graces attached to consecration are more numerous and efficacious than those attached to a blessing; the profanation of a consecrated person or thing carries with it a new species of sin, namely sacrilege, which the profanation of a blessed person or thing does not always do.

Of consecrations proper the Roman Pontifical contains one of *persons*, that is of a bishop, and four of *things*, that is, of a fixed altar, of an altar-stone, of a church, and of a chalice and paten. The consecration of a church is also called its *dedication* (q. v.), in accordance with the distinction between consecration and dedication among the ancient Romans pointed out above. To these might be probably added confirmation and Holy orders, for which, however, the Roman Pontifical, because they are distinct sacra-

ments, has retained their proper names. If we except the consecration of a bishop, which is a sacrament—although there is a question among theologians, whether the sacrament and the character imprinted by it are distinct from the sacrament and character of the priesthood, or only a certain extension of the sacerdotal sacrament and character—all the other consecrations are sacramentals. These are inanimate things which are not susceptible of Divine grace, but are a medium of its communication, since by their consecration they acquire a certain spiritual power by which they are rendered in *perpetuum* fit and suitable for Divine worship. (St. Thomas Aquinas, Summa Theol., III, Q. lxxxiii, a. 3, ad 3 and 4.)

In the Eastern Churches the prayers at the consecration of altars and sacred vessels are of the same import as those used in the Latin Church, and they are accompanied by the sign of the cross and the anointing with holy oils (Renaudot, "Liturgiarum Orient. Collectio", I, Ad benedictiones). At the consecration of a bishop, the Orientals hold, with the Latins, that the essence consists in the laying-on of hands, and they entirely omit the anointing with holy oils (Morinus, De sacris Ecclesiæ ordinationibus, Pars III, Appendix).

When we speak of *consecration* without any special qualification, we ordinarily understand it as the act by which, in the celebration of Holy Mass, the bread and wine are changed into the body and blood of Christ. It is called *transubstantiation*, for in the Sacrament of the Eucharist the substance of bread and wine do not remain, but the entire substance of bread is changed into the body of Christ, and the entire substance of wine is changed into His blood, the species or outward semblance of bread and wine alone remaining. This change is produced in virtue of the words: *This is my body* and *This is my blood*, or *This is the chalice of my blood*, pronounced by the priest assuming the person of Christ and using the same ceremonies that Christ used at the Last Supper. That this is the essential form has been the constant belief and teaching of both the Eastern and Western Churches (Renaudot, "Liturgiarum Orientalium Collectio, I, i).

I. CONSECRATION OF A BISHOP.—The consecration of a bishop marks the plenitude of the priesthood, and it is probable that on this account the "Pontificale Romanum" places the ceremony of episcopal consecration immediately after that of the ordination of priests, Tit. XIII, "De consecratione electi in Episcopum". Episcopal jurisdiction is acquired by the act of election and confirmation or by definite appointment, whilst the fullness of the priestly power itself is obtained in consecration, as the completion of hierarchical orders. Formerly the consecration of a suffragan bishop was performed *jure communi* by the metropolitan of the province, who could delegate another bishop. An archbishop was consecrated by one of his suffragans, the senior being usually selected. If the bishop-elect was not a suffragan of any ecclesiastical province, the nearest bishop performed the ceremony. According to the present discipline of the Church the office of consecrator is reserved to the Roman pontiff, who performs the consecration in person or delegates it to another (Benedict XIV, Const. "In postremo", 10 Oct., 1756, § 17). If the consecration takes place in Rome, and the bishop-elect receives the permission to choose the consecrator, he must select a cardinal who is a bishop, or one of the four titular Latin patriarchs residing in Rome. If they refuse to perform the ceremony, he may choose any archbishop or bishop. A suffragan, however, is obliged to select the metropolitan of his province, if the latter be in Rome (*ibidem*). In Rome the consecration takes place in a consecrated church or in the papal chapel (Cong. Sac. Rit., Decr. V of latest edit., no date). If the consecration is to take place outside of Rome, an Apostolic commission is sent to the bishop-elect, in which the Roman pontiff

grants him the faculty of choosing any bishop having communion with the Holy See to consecrate him and administer the oath, a pledge of obedience and respect to the Apostolic See. Besides the consecrator, the ancient canons and the general practice of the Church require two assistant bishops. This is not of Divine but of Apostolic institution (Santi, "Prælectiones Juris Canonici", Vol. I, Tit. vi, n. 49), and hence, in cases of necessity, when it is impossible to procure three bishops, the places of the two assistant bishops may, by Apostolic favour, be filled by priests, who should be dignitaries (Cong. Sac. Rit., 16 July, 1605). These priests must observe the rubrics of the "Pontificale Romanum" with regard to the imposition of hands and the kiss of peace (Cong. Sac. Rit., 9 June, 1853). Benedict XIV (De Synod. Dioc., Lib. XIII, cap. xiii, n. 2 sqq.) holds that the consecration of a bishop, when the consecrator is assisted by one priest, although the Apostolic Brief required two assistant priests, is *valid* although *illicit*. In missionary countries the consecrator may perform the ceremony without the assistance even of priests (Zitelli, "Apparatus Juris Ecclesiastici", Lib. I, Tit. i, § iv). The selection of the assistant bishops or priests is left to the consecrator, whose choice is, however, understood to be in harmony with the wishes of the bishop-elect (Martinucci, Lib. VII, cap. iv, n. 5).

The day of consecration should be a Sunday or the feast of an Apostle, that is to say a *dies natalitia*, not merely a day which commemorates some event of his life, e. g. the Conversion of St. Paul. Since in liturgy Evangelists are regarded as Apostles (Cong. Sac. Rit., 17 July, 1706) their feast days may be selected. The choice of any other day must be ratified by special indult of the Holy See. Outside of Rome the consecration ought to be performed, if it can be conveniently done, in the cathedral of the diocese, and within the province of the bishop-elect; the latter may, however, select any church or chapel for the ceremony. A bishop must be consecrated before the expiration of three months after his election or appointment. If it is delayed beyond this time without sufficient reason, the bishop is obliged to relinquish the revenues to which he is entitled; if it is delayed six months, he may be deprived of his episcopal see (Conc. Trid., Sess. XXIII, cap. ii, De Reform.). Titular bishops forfeit their right of episcopal dignity unless they are consecrated within six months of their appointment (Benedict XIV, Const. "Quum a nobis", 4 Aug., 1747, § Hæc sane). According to the ancient canons, both the consecrator and the bishop-elect are expected to observe the day preceding the consecration as a fast day.

The ceremony of consecration of a bishop is one of the most splendid and impressive known to the Church. It may be divided into four parts: the *preludes*, the *consecration proper*, the *presentation of the insignia*, and the *conclusion*. It takes place during Mass celebrated by both the consecrator and the bishop-elect. For this purpose a separate altar is erected for the bishop-elect near the altar at which the consecrator celebrates Mass, either in a side chapel, or in the sanctuary, or just outside of it.

Preludes.—The consecrator is vested in full pontificals of the colour of the Mass of the day; the assistant bishops, in amice, stole, and cope of the same colour, and a white linen or damask mitre; the bishop-elect in amice, alb, cincture, white stole crossed on the breast, and cope and biretta. The consecrator is seated on a faldstool placed on the predella of the altar, facing the bishop-elect, who sits between the assistant bishops, upon a seat placed on the sanctuary floor. The senior assistant bishop presents the elect to the consecrator, after which the Apostolic commission is called for and read. Then the elect, kneeling before the consecrator, takes an oath in which he promises to be obedient to the Holy See, to promote its rights, hon-

ours, privileges, and authority, visit the City of Rome at stated times, render an account of his whole pastoral office to the pope, execute all Apostolic mandates, and preserve inviolable all the possessions of his Church. Then follows the examination, in which seventeen questions concerning the canons of the Church and articles of faith are proposed, to which the elect answers, "I will", and, "I do believe", respectively, each time rising slightly and uncovering his head. Mass is now begun at the foot of the consecrator's altar and continued down to "Oremus. Aufer a nobis" inclusively. The elect is then led by the assistant bishop to the side altar, at which, having been clad in his pontifical vestments, he continues the Mass, simultaneously with the consecrator, down to the last verse of the Gradual, Tract, or Sequence exclusively, without any change in the liturgy, except that the collect for the elect is added to the prayer of the day under one conclusion. The elect is again presented to the consecrator, who sets forth the duties and powers of a bishop: "It behooves a bishop to judge, interpret, consecrate, offer, baptize and confirm." The clergy and the faithful are then invited to pray that God may bestow the abundance of His grace on the elect. The Litany of the Saints is now recited or chanted, while the elect lies prostrate on the floor of the sanctuary and all the others kneel.

Consecration.—The consecrator, aided by the assistant bishops, takes the book of the Gospels and, opening it, places it on the neck and shoulders of the elect, so that the bottom of the page be next to the elect's head, and the book is held in this manner by one of the clergy until it is to be given to the elect after the presentation of the ring. This rite is found in all the ancient rituals—Latin, Greek and Syriac—though in early times it seems not to have been universal among the Latins. Now follows the imposition of hands, which, according to the common opinion, is the essence of the consecration. Both the consecrator and the assistant bishops place both hands, to express the plenitude of the power conferred and of the grace asked for, on the head of the elect, saying, "Receive the Holy Ghost"—without restriction and with all His gifts, as the simple formula indicates. Theologians do not agree as to whether the communication of the gift of the Holy Ghost is directly implied in these words, but the prayers which follow seem to determine the imposition of hands by which the grace and power of the episcopacy is signified and conferred. In the Greek ritual the prayer which accompanies the imposition of hands is clearly the form. The "Veni, Creator Spiritus" is sung, during which the consecrator first makes the sign of the cross with holy chrism on the crown or tonsure of the new bishop and then anoints the rest of the crown. That this unction is to symbolize the gifts of the Holy Ghost with which the Church desires a bishop to be filled, is evident from the prayer which follows, "May constancy of faith, purity of love, sincerity of peace abound in him". The anointing of the hands of the bishop in the form of a cross, and afterwards of the entire palms, then follows. This unction indicates the powers that are given to him. The consecrator then makes thrice the sign of the cross over the hands thus anointed and prays: "Whatsoever thou shalt bless, may it be blessed; and whatsoever thou shalt sanctify may it be sanctified; and may the imposition of this consecrated hand and thumb be profitable in all things to salvation." The hands of the bishop are then joined, the right resting on the left, and placed in a linen cloth which is suspended from his neck.

Presentation of the episcopal insignia.—The crosier is then blessed and handed to the bishop, who receives it between the index and middle fingers, the hands remaining joined. The consecrator at the same time admonishes him, as the Ritual indicates, that the true character of the ecclesiastical shepherd is to temper

the exercise of justice with meekness, and not to neglect strictness of discipline through love of tranquillity. The consecrator then blesses the ring and places it on the third finger of the bishop's right hand, reminding the latter that it is the symbol of fidelity which he owes to Holy Church. The book of the Gospels is taken from the bishop's shoulders and handed to him, with the command to go and preach to the people committed to his care. He then receives the kiss of peace from the consecrator and the assistant bishops, and the latter conduct him to his altar, where the crown of his head is cleansed with crumbs of bread, and his hair is adjusted. Afterwards the bishop washes his hands, and both he and the consecrator, at their respective altars, continue the Mass as usual, down to the prayer of the Offertory inclusively. After the Offertory the new bishop is led to the consecrator's altar where he presents to the latter two lighted torches, two loaves of bread, and two small barrels of wine. This offering is a relic of ancient discipline, according to which the faithful made their offerings on such occasions for the support of the clergy and other purposes connected with religion. From the Offertory to the Communion the bishop stands at the Epistle side of the consecrator's altar and recites and acts together with the latter everything as indicated in the Missal. After the consecrator has consumed one-half of the Host which he consecrated at Mass, and partaken of one-half of the Precious Blood together with the particle of the consecrated Host that was dropped into the chalice, he communicates the bishop by giving him, first, the other half of the consecrated Host, and then the Precious Blood remaining in the chalice. Both take the ablutions from different chalices, after which the new bishop goes to the Gospel side of the consecrator's altar, and with the consecrator continues the Mass down to the blessing inclusively. The consecrator then blesses the mitre and places it on the head of the bishop, referring to its mystical signification as a helmet of protection and salvation, that the wearer of it may seem terrible to the opponents of truth and be their sturdy adversary. The gloves are then blessed and put on the hands of the bishop, referring to the action of Jacob, who, having his hands covered with the skins of kids, implored and received the paternal blessing. In like manner the consecrator prays that the wearer of the gloves may deserve to implore and receive the blessings of Divine grace by means of the saving Host offered by his hands.

Conclusion.—The new bishop is then enthroned on the faldstool on the predella, from which the consecrator has risen, or, if the ceremony be performed in the cathedral of the new bishop, on the usual episcopal throne. The *Te Deum* is now intoned by the consecrator, and while the hymn is being sung the new bishop is led by the assistant bishops through the church, that he may bless the people. Having returned to the altar—or to the throne in his own cathedral—the bishop gives the final solemn blessing as usual. The consecrator and assistant bishops move towards the Gospel corner of the altar and face the Epistle side; the new bishop goes to the Epistle corner, and there, with mitre and crosier, facing the consecrator, makes a genuflexion and chants "Ad multos annos". He proceeds to the middle of the predella and performs the same ceremony, chanting in a higher tone of voice. Finally, approaching the feet of the consecrator, he again genuflects, chanting in a still higher tone of voice. After this the consecrator and assistant bishops receive him to the kiss of peace. Accompanied by the assistant bishops, he returns to his altar, reciting the Gospel of St. John. All then lay aside their vestments and depart in peace.

II. CONSECRATION OF A FIXED ALTAR.—At the con-

secration of a church at least one fixed altar must be consecrated. Altars, permanent structures of stone, may be consecrated at other times, but only in churches that have been consecrated or at least solemnly blessed. We have instances in which a simple priest has performed this rite. Walafridus Strabo, in the *Life of St. Gall* (ch. vi), says that St. Columban, at that time being a priest, having dedicated the church of St. Aurelia at Bregenz on the Lake of Constance, anointed the altar, deposited the relics of St. Aurelia under it, and celebrated Mass on it. But according to the present discipline of the Church, the ordinary minister of its consecration is the diocesan bishop. Without the permission of the ordinary, a bishop of another diocese cannot *licitly* consecrate an altar, although without such permission the consecration would be *valid*. One and the same bishop must perform the rite from the beginning to the end. An altar may be consecrated on any day of the year, but a Sunday or feast day is to be preferred (*Pontificale Romanum*). It is difficult to determine when the rite used at present was introduced. To the essentials of consecration reference is made as early as the sixth century by the Council of Agde (506): "Altars are to be consecrated not only by the chrism, but with the sacerdotal blessing"; and by St. Cæsarius of Arles (d. about 542) in a sermon delivered at the consecration of an altar: "We have to-day consecrated an altar, the stone of which was blessed or anointed" (Migne, P. L., LXVII, Serml. ccxxx).

The ceremonies of the exposition of the relics on the evening before the day of consecration, the keeping of the vigil, the blessing of the Gregorian water, the sprinkling of the altar, and the translation of the relics to the church are the same as those described at the consecration of a church (see IV, below). When the relics have been carried to the church, the consecrator anoints with holy chrism, at the four corners, the sepulchre of the altar (see ALTAR), in which the relics are to be enclosed, thereby sanctifying the cavity in which the venerated remains of the martyrs are to rest, and then reverently places therein the case containing the relics and incenses them. Having anointed with holy chrism the nether side of the small slab that is to cover the sepulchre, he spreads blessed cement over the ledge of the sepulchre on the inside and fits the slab into the cavity, after which he anoints the upper side of the slab and the altar-table near it. He then incenses the altar, first, on every side—right, left, front and on top—whilst the chanters sing the antiphon "Stetit angelus"; secondly, in the form of a cross on the top, in the middle, and at the four corners; thirdly, whilst going round the altar three times. After the third incensation, the censer is given to a priest, vested in surplice, who, till the end of the consecration, continues going around the altar, incensing it on all sides, save when the bishop uses the censer. The incense symbolizes the sweet odour of prayer which is to ascend from the altar to heaven, whilst the fullness of the grace of the Holy Ghost, which is to descend on the altar and the faithful, is indicated by the prayers recited after the three unctions which follow. The consecrator then anoints the table of the altar at the middle and the four corners, twice with the oil of catechumens, and the third time with holy chrism. After each unction he goes round the altar once, incensing it continuously, the first and second time passing by the Epistle side, and third time by the Gospel side. Finally, as if to indicate the complete sanctification of the altar, he pours and spreads over its table the oil of catechumens and holy chrism together, rubbing the holy oils over it with his right hand, whilst the chanters sing the appropriate antiphon, "Behold the smell of my son is as the smell of a plentiful field", etc. (Gen., xxvii, 27, 28). When the church is consecrated at the same time, the twelve crosses on the inner walls are now anointed with holy

chrism and incensed. The consecrator then blesses the incense and sprinkles it with holy water. Then he forms it into five crosses, each consisting of five grains, on the table of the altar, in the middle and at the four corners. Over each cross of incense he places a cross made of thin wax taper. The ends of each cross are lighted, and with them the incense is burned and consumed. This ceremony symbolizes the true sacrifice which is thereafter to be offered on the altar; and it indicates that our prayers must be fervent and animated by true and lively faith if they are to be acceptable to God and efficacious against our spiritual enemies. Finally, the bishop traces with holy chrism a cross on the front of the altar and on the juncture of the table and the base on which it rests at the four corners, as if to join them together, to indicate that this altar is to be in future a firmly fixed and constant source of grace to all who with faith approach it. Then follow the blessings of the altar-cloths, vases, and ornaments of the altar, the celebration of Mass, and the publication of the Indulgences, as at the end of the consecration of a church.

Loss of Consecration.—An altar loses its consecration: (1) when the table of the altar is broken into two or more large pieces; (2) when at the corner of the table that portion which the consecrator anointed with holy oil is broken off; (3) when several large stones of the support of the table are removed; (4) when one of the columns which support the table at the corners is removed; (5) if for any reason whatever the table is removed from the support, or only raised from it—e. g., to renew the cement; (6) by the removal of the relics, or by the fracture or removal, by chance or design, of the small cover, or slab, placed over the cavity containing the relics. (See also ALTAR, HISTORY OF THE CHRISTIAN.)

L. T., *The Altar*, in *Am. Ecol. Rev.*, July, 1904; SCHULTE, *Consecranda* (New York, 1907).

III. CONSECRATION OF AN ALTAR-STONE.—Mass must be celebrated either on an altar which has been consecrated or on a consecrated altar-stone, or portable altar (Rubr. Gen. Miss., XX). Its consecration is a less solemn function than the consecration of an altar. It may take place on any day of the year, in the morning, as, after its consecration, Mass must be celebrated upon it the same day. If several stones are consecrated, it suffices to celebrate Mass on one of the altars so consecrated. The ceremony may take place in the church, sacristy, or any other suitable place.

The cavity for the relics is made on the top of the stone, usually near its front edge. It may be in the centre of the stone, but never on its front edge (Cong. Sac. Rit., 13 June, 1899). Relics of two martyrs, with three grains of incense, are placed immediately (i. e. without a reliquary) in its cavity, which is closed with a small slab of natural stone fitting exactly upon the opening. The Cong. Sac. Rit. (16 Feb., 1906) declared that for valid consecration it suffices to have enclosed in the cavity the relics of one martyr. The Pontifical makes no mention of the blessing of the cement with which the slab is secured, but the Cong. Sac. Rit. (10 May, 1890) prescribes it.

Ordinarily, only a bishop may consecrate an altar-stone, but by pontifical privilege some abbots have this faculty for altar-stones used in their own churches. The Holy See frequently grants this privilege to priests labouring in missionary countries. The bishops of the United States have the faculty of delegating priests to perform this function by virtue of the "Facultates Extraordinariæ", C, VI. The relics are not exposed, nor are Matins and Lauds recited on the

evening before the consecration; neither is the vigil kept. The ceremonies are similar to those used at the consecration of an altar. Hence the blessing of the Gregorian water, the sprinkling and incensation, the anointing with holy chrism and the oil of catechumens, the burning of incense and the offering of the Holy Sacrifice, take place; and the symbolical meanings of these ceremonies are the same as those given at the consecration of an altar.

IV. CONSECRATION OF A CHURCH.—By a decree of the Council of Trent (Sess. XXII), Mass should not be celebrated in any place except a consecrated or blessed church. Hence it is the wish of the Church that at least cathedrals and parish churches be solemnly consecrated, and that smaller churches be blessed (Cong. Sac. Rit., 7 Aug., 1875), but any church and public or semi-public oratory may be consecrated (Cong. Sac. Rit., 5 June, 1899). Both by consecration and by blessing a church is dedicated to Divine worship, which forbids its use for common or profane purposes. Consecration is a rite reserved to a bishop, who by the solemn anointing with holy chrism, and in the prescribed form, dedicates a building to the service of God, thereby raising it *in perpetuum* to a higher order, removing it from the malign influence of Satan, and rendering it a place in which the prayers of the faithful are more readily heard and favours are more graciously granted by God (Pontificale Romanum). The blessing of a church is a less solemn rite, which may be performed by a priest delegated by the diocesan bishop. It consists in the sprinkling with holy water and the recital of prayers, thus making it a sacred place, though not necessarily *in perpetuum*. Consecration differs from mere blessing in this, that it imprints an indelible mark (St. Thomas, II-II, Q. xxxix, a. 3) on the building, by reason of which it may never be transferred to common or profane uses.

The consecration of churches dates probably from Apostolic times and is, in a sense, a continuation of the Jewish rite instituted by Solomon. Some authors attribute its origin to Pope St. Evaristus (d. 105), but it is more probable that he merely promulgated formally as a law what had been the custom before his time, or prescribed that a church cannot be consecrated without the celebration of the Holy Sacrifice. That churches were consecrated before peace had been granted to the Church would appear not only from the life of St. Cecilia (Roman Breviary, 22 November), who prayed for a cessation from hostilities against the Christians in order that her home might be consecrated as a church by St. Urban I (222-230), but also from the life of St. Marcellus (308-309), who appears to have actually consecrated a church in the home of St. Lucina (Roman Breviary, 16 January). Before the time of Constantine the consecration of churches was, on account of the persecutions, necessarily private, but after the conversion of that emperor it became a solemn public rite, as appears from Eusebius of Cæsarea (Hist. Eccl., X): "After these things a spectacle earnestly prayed for and much desired by us all appeared, viz. the solemnization of the festival of the dedication of churches throughout every city, and the consecration of newly-built oratories." The passage clearly indicates that churches were consecrated before, and that accordingly the anniversaries of the dedication might now be publicly celebrated.

It is difficult to determine in what the rite of consecration consisted in early times. Many sermons preached on these occasions are still extant, and we find occasional notices of the vigil kept before the consecration, of the translation of the relics, and of the tracing of the Greek and the Latin alphabet on the pavement of the church. The relics were not always the whole body of a saint or even large portions of it, but sometimes merely articles with which the martyr

came in contact. Churches were sometimes consecrated without depositing relics. Some ancient forms of consecration prescribe that the Host consecrated by the bishop be deposited. Often only the Greek alphabet or the Latin was written twice; and sometimes to the Greek and Latin the Hebrew alphabet was added (Martène, *De Antiquis Ecclesiæ Ritibus*, II). The rite does not appear to have always been one and the same, but the essential element of the ceremony—namely, the actual separation of any building from common to a sacred use, which would be the first religious act in the process of initiating and appropriating it to a Divine use—was always called its consecration. In allusion to this fact the first beginning of anything is often styled its dedication (Bingham, *Origines sive Antiquit. Eccles.*, VIII, ix, §1), which word the Roman Pontifical uses in this place only—“*De Ecclesiæ Dedicatione seu Consecratione*”—elsewhere the word *consecratio* only is used. It cannot be definitely decided when the rite of consecration in use at present began to be employed. The Pontifical of Egbert, Archbishop of York (733–767), bears a striking resemblance to it.

The ordinary minister of consecration is the diocesan bishop. He may, however, delegate another bishop to perform this function. A bishop of another diocese cannot licitly consecrate a church without the permission of the diocesan bishop, although without such permission the church would be validly consecrated. A priest cannot perform this rite unless he be delegated in a special manner by the Roman pontiff (Benedict XIV, *Const.* “*Ex tuis precibus*”, 16 November, 1748, §2). To consecrate a church licitly it is necessary to consecrate a fixed altar in the same church, which altar ordinarily ought to be the main one (Cong. Sac. Rit., 19 Sept., 1665). If this altar is already consecrated, one of the side altars may be consecrated (Cong. Sac. Rit., 31 Aug., 1872). If all the altars of a church are already consecrated, it cannot be licitly consecrated except by special Apostolic indult. One and the same bishop must consecrate both the church and the altar (Cong. Sac. Rit., 3 March, 1866). Although the consecration of the altar may for some reason be invalid, yet the church remains consecrated (Cong. Sac. Rit., 17 June, 1843). The essence of the consecration of a church consists in the anointing of the twelve crosses on the inner walls with the form: “*Sanctificetur et consecratur hoc templum*”, etc. If before this ceremony the consecrator should become incapacitated for finishing the function, the whole rite must be repeated from the beginning (Cong. Sac. Rit., 12 April, 1614). The church should stand free on all sides so that the bishop may pass around it. If there be obstructions at only some points, the church may be consecrated (Cong. Sac. Rit., 19 September, 1665), but if the obstructions be of such a nature that the exterior walls cannot be reached, the church may not be consecrated without a special Apostolic indult (Cong. Sac. Rit., 22 February, 1888). On the walls inside the church twelve crosses must be painted, or (if they are made of stone or metal) attached to the walls. These crosses are not to be of wood or of any fragile material. They must never be removed (Cong. Sac. Rit., 18 February, 1696), and, documents failing, they serve to prove that the church has been consecrated. Under each cross a bracket holding a candle is affixed.

The consecration may take place on any day of the year, but a Sunday or feast day is to be preferred (Pontificale Romanum). The consecrator and those who ask for the consecration (Van der Stappen, III, quest. 32, iii, says, “all the parishioners, if it be a parish church”; Bernard, “*Le Pontifical*”, II, p. 7, only the clergy attached to the church; Marc, “*Institutiones Morales*”, I, n. 1221, nota 2°, only the parish priest, if he alone asked) are obliged to observe the day before the consecration as a day of fasting and absti-

nence. If the consecration takes place on Monday, the fast is observed on the preceding Saturday. On the evening preceding the day of consecration, the consecrating bishop places in a reliquary the relics of the martyrs, which are to be placed in the altar, three grains of incense, and an attestation written on parchment. The Cong. Sac. Rit., 16 February, 1906, declared that for the *valid* consecration it suffices to have enclosed the relics of one martyr. The reliquary is then placed in an urn or in the tabernacle of an altar in a nearby church or oratory, or in an adjacent room or the sacristy. At least two candles are kept burning before these relics during the night, and Matins and Lauds *de communi plurimorum martyrum* or of the proper Office of the martyrs whose relics have been placed in the reliquary, are sung or recited.

At the beginning of the consecration on the next day the candles under the crosses on the walls are lighted. After this the bishop and the clergy go to the place in which the relics of the martyrs were deposited before, the church meanwhile being left in charge of a deacon. Whilst the bishop is being vested the Seven Penitential Psalms are recited, after which all proceed to the main entrance of the church, where, remaining outside, the bishop blesses the water. The bishop then goes three times round the outside of the church, the first time sprinkling the upper part of the walls, the second time the lower part, and the third time on a level with his face. After each circuit the bishop strikes the door with the base of his crosier and says, “*Lift up your gates, ye princes, and be ye lifted up, ye everlasting doors, and the King of Glory shall come in.*” Three times the deacon within the church asks, “*Who is this King of Glory?*” Twice the bishop answers, “*The Lord, strong and mighty; the Lord mighty in battle*”; and the third time he says, “*The Lord of Armies, He is the King of Glory*”. This triple sprinkling and circuit of the walls, according to Bl. Yves of Chartres (*Sermo de Sacramentis Dedicationis*), symbolizes the triple immersion at holy baptism, the consecration of the soul as the spiritual temple of God, to which the material bears a certain analogy.

The bishop and his attendants now enter the church, leaving the clergy and people outside, and the door is closed. The chanters sing the “*Veni, Creator Spiritus*” and chant or recite the Litany of the Saints. After this, whilst the canticle “*Benedictus*” is being chanted, the bishop traces with the point of his crosier, in the ashes spread on the floor, first, the Greek alphabet, beginning at the left side of the church door and proceeding to the Epistle corner of the church near the altar, then the Latin alphabet, beginning at the right side of the church door and proceeding to the Gospel corner of the church near the altar. The “*Liber Sacramentorum*” of St. Gregory I and the “*Pontificale*” of Egbert, Archbishop of York, attest the antiquity of this ceremony, which symbolizes the instruction given to the newly baptized in the elements of faith and piety. The crossing of the two lines points to the cross, that is Christ crucified, as the prin-

cial dogma of the Christian religion. The Greek and Latin languages represent the Jews and Gentiles respectively. The Greek alphabet is written first because the Jews were first called to the Christian Faith. The bishop then blesses the Gregorian water, a mixture of water, salt, ashes, and wine, prescribed by St. Gregory I to be used at the consecration of a church (P. L., LXXXVIII, 152 sqq.). After this he goes to the main door of the church and with the point of the crozier traces a cross on the upper part and another on the lower part of the door inside. The ingredients of this water are to recall to our mind the legal purifications and the sacrifices of the Jewish people, the wine taking the place of the blood. The symbolism of this mixture is explained by authors in various manners. The cross traced on the door is to be, as it were, a guard lest the work of redemption in the church be thwarted by the malignant influences from without. The bishop now traces, with the Gregorian water, five crosses on the altar and then sprinkles the support and table of the altar seven times, passing round it seven times, whilst the chanters sing or recite the Psalm "Misere-re". He then sprinkles the walls in the interior of the church three times, first the lower part, then on a level with his face, and lastly, the upper part, after which he sprinkles the floor of the church in the form of a cross, passing from the altar to the door, and from the Gospel to the Epistle side in the middle of the church. Having returned to the middle of the church, he sprinkles with one swing each time the floor before him, behind him, at his left, and at his right.

The bishop, clergy, and laity then go to the place in which the relics repose and in solemn procession carry them to the church. Before entering, the relics are borne round the outside of the church, whilst the clergy and people repeat "Lord, have mercy on us". Having returned to the church door, the bishop gives a suitable exhortation to the people and addresses the founder of the church. Then one of the clergy reads the two decrees of the Council of Trent from the Pontifical. The bishop next anoints with holy chrism, three times, the pillar on each side of the door, after which the clergy and the laity enter the church, and the consecration of the altar takes place. (See II above.) Finally, the twelve crosses on the interior walls are anointed with holy chrism and incensed by the bishop; the altar-cloths, vases, and ornaments of the church and altar are blessed, and solemn or low Mass is celebrated by the bishop. If he be too fatigued, he may appoint a priest to celebrate a high Mass in his stead. If more than one altar has been consecrated, it will suffice to celebrate Mass on the principal one (Cong. Sac. Rit., 22 February, 1888). At the end of the Mass an Indulgence of one year is published, which may be gained by all who visit the church on the day of consecration. At the same time another Indulgence which may be gained in the same manner on the anniversary of the consecration is published. If the latter Indulgence is granted by a cardinal in his titular church or in his diocese, it may be of two hundred days; if by an archbishop, of one hundred days; if by a bishop, of fifty days, in their respective dioceses. (S. C. Indulg., 28 Aug., 1903.)

The anniversary of the consecration is kept solemnly as a double of the first class with an octave each recurring year, until the church falls into ruin or is profaned. In order to avoid the inconveniences likely to arise from its clashing with other solemnities, the bishop is empowered to appoint, in the act of consecration, another day for the anniversary, provided such day be not a double feast of the first or second class in the Universal Church, a privileged Sunday, or a local feast of the first class (Cong. Sac. Rit., 4 Feb., 1896), or a day in Advent or Lent (Cong. Sac. Rit., 12 June, 1660). Should the bishop fail to do so, or defer

making such arrangement, the anniversary must be kept on the recurring actual day, or recourse must be had to the Apostolic See (Gardellini, Adnot. super Decr. dat. 6 Sept., 1834).

Besides the anniversary of the consecration of individual or parish churches, the anniversary of the consecration of the cathedral of a diocese is celebrated as a double of the first class with an octave by the secular clergy living within the limits of the cathedral city; the secular clergy living outside the cathedral city celebrate it as a double of the first class without an octave, the regular clergy living within the limits of the cathedral city celebrate it as a double of the second class without an octave; the regular clergy outside the cathedral city are not obliged to celebrate it in any manner (Cong. Sac. Rit., 9 July, 1895). In some dioceses the simultaneous celebration on a fixed day of the consecration of all the churches of a diocese, irrespective of the fact that some of the churches are not consecrated, is granted by special indult. In this case individual consecrated churches are not allowed to celebrate the anniversary of the consecration of their respective churches. This day of common celebration is a double of the first class for all the clergy in the diocese, with this distinction, that it is a primary feast for those attached to consecrated churches and a secondary feast for the others (Cong. Sac. Rit., 24 March, 1900).

Loss of Consecration.—From the axiom in canon law "Consecratio adhæret parietibus Ecclesiæ", it follows that a church loses its consecration (1) when the walls of the church are totally or in greater part *simultaneously* demolished; (2) when the inner walls are totally or in greater part *simultaneously* destroyed by fire; (3) when an addition is made to the walls of the church in length, breadth, or height, greater than the original walls.

V. CONSECRATION OF A CHALICE AND PATEN.—The ordinary minister of the consecration of the chalice and paten used at Mass is a bishop. In missionary countries some priests, by Apostolic indult, have the privilege of consecrating these sacred vessels. The bishops of the United States have the faculty of delegating priests for performing this rite by virtue of the *Facultates Extraordinariæ*, C, VI. These two altar vessels must be consecrated before they can be used at the altar. They are always consecrated at the same time, because both are indispensable at the celebration of Mass, the paten for holding the Body of Christ and the chalice for containing the Precious Blood. Chalices which were formerly used for the offerings of wine made by the faithful, for the ornamentation of the altar, and at the administration of baptism, to give to the newly baptized a symbolical beverage composed of milk and honey, were not consecrated. The same is true of the patens used at present at the Communion of the faithful to prevent consecrated Particles from falling to the floor.

Chalices and patens may be consecrated on any day of the year and at any hour, without solemnity, although in many places this rite takes place after Mass and at the altar. First the paten is consecrated, probably because it is to hold the Sacred Host, which is consecrated before the Precious Blood, and because the species of bread is always mentioned before the species of wine. The function begins with an address to the faithful, or at least to the attendants, exhorting them to implore the blessing of God on the action the consecrator is about to perform. This is followed by a prayer that God may render the rite efficacious, after

which the consecrator anoints the paten twice with holy chrism, from rim to rim, in the form of a cross, and rubs the oils over the whole upper side of it, reciting at the same time the consecratory form. The same ceremony with a special address, prayer, and form, is performed over the chalice, except that the consecrator anoints the inside of the chalice twice from rim to rim, and rubs the oil all over the inside of the cup. The consecrator then recites a prayer in which allusion is made to the symbolical meaning of the chalice and paten, the former of which, according to Benedict XIV (De Sacrificio Missæ, Sect. i, n. 31), represents the tomb in which the body of Christ was laid, and the latter the stone with which the tomb was closed. Finally, he sprinkles both vessels with holy water, saying nothing.

It is difficult to determine when the Church began to consecrate chalices and patens. Some liturgists are of opinion that the custom of doing so goes back to the time of St. Sixtus I (d. 127), who, by a decree, forbade any other than those constituted in Sacred orders to touch the sacred vessels (Rom. Breviary, 16 April). Even if this decree is authentic, it would probably only prove that the prohibition was made out of respect due to the vessels which contained the Sacred Species. Others refer to a passage of St. Ambrose (d. 397) in which he says that the *vasa Ecclesiæ initiata* may be sold for the relief of the poor. Commentators interpret *initata* to mean not consecrated, but rather *usa*, or vessels which had been used for the sacred mysteries. The ancient canons and decrees decide the material of which chalices and patens must be made, but they do not say a word of the consecration, although they treat of the consecration of churches, altars, bishops, etc.; hence we may conclude that chalices and patens were not consecrated by a special form before the thirteenth century.

Loss of Consecration.—The chalice and paten lose their consecration (1) when they are regilt; (2) when they become battered or broken to such an extent that it would be unbecoming to use them; (3) when the slightest slit or break appears in the chalice near the bottom; not so, however, if the break be near the upper part, so that without fear of spilling its contents consecration can take place in it; (4) when a break appears in the paten so large that particles may fall through it.

A. J. SCHULTE.

Consent (IN CANON LAW), the deliberate agreement required of those concerned in legal transactions in order to legalize such actions. Words, deeds, writing, or silence bear witness to the existence of this consent. Completeness of consent is gauged not so much by the preliminaries of transactions as by their ratification, which is the psychological development of incipient consent, and gives consistency to legal transactions. The consent necessary to constitute contracts must be internal, external, mutual, and deliberate. Some authorities claim that contracts formed without any intention on the part of the contracting parties to oblige themselves are valid; others more rightly maintain the contrary, since the very essence of contracts embodies obligation. Consequently, whoever is unprepared to admit this obligation is in no position to make a contract. Two possible suppositions here present themselves. In the first the promise and intention of not assuming any obligation concern the same object under the same respect. Promises made in this way are utterly meaningless. In the second supposition the promise and intention of waiving the

obligation refer to the same object under different respects. In such cases it is necessary to ascertain which of these two contrary tendencies of the will is dominant. If the intention of making a contract possess greater efficacy, the obligation thereunto corresponding unquestionably holds good. On the contrary, if the intention of accepting no obligation prevail, no contract can be formed. Finally, if one intention is just as efficacious as another, the formation of a contract would then involve quest for an unattainable result. Contracts made by individuals having absolutely no intention of abiding by the obligation connected therewith are altogether invalid, and the parties thus fictitiously contracting are bound to indemnify those whose interests thereby suffer. The contract in question must always be capable of begetting an obligation. It is not impossible to find genuine consent which is worthless for giving consistency to contracts either because it is nullified beforehand by positive law or because it is the result of error, fraud, or fear (see CONTRACT).

Error affecting the very nature of the contract, or concerning the substance of the object in question or a naturally substantial quality of the object, or one considered indispensable by the contracting parties, vitiates consent and invalidates contracts. Error regarding an accidental quality of the contract, or pertaining to the motive underlying the contract, or to its material object, is insufficient to vitiate consent or nullify contracts. In like manner fraud, whether introduced by one of the contracting parties or by an extern, for the sake of provoking consent in the other party, counteracts consent as often as such fraud circumscribes the nature of the contract, the substance of the object at stake, or a quality naturally substantiated in that object or esteemed as substantial by the one upon whom the fraud is perpetrated. As often as accidental fraud induces another, in some measure, to consent, he is at liberty to rescind the contract, provided it is naturally dissoluble. In general, grave fear lawfully superinduced does not militate against consent in the will, and therefore renders contracts neither invalid nor rescindable. On the other hand, while fear unlawfully superinduced to extort consent does not invalidate contracts, it gives the intimidated party the liberty of rescinding them. According to the civil law of the United States, no contract is binding without the mutual assent of both parties. They must assent at the same time and to the same thing. This mutual assent consists of an offer by one party and its acceptance by another. When the offer is verbal, and the time allowed for acceptance is not mentioned, the offer must be immediately accepted to constitute a contract. In case the offer and acceptance are written and pass through the mail, the contract is complete when the acceptance is mailed, provided the party accepting has received no notice of the withdrawal of the offer before mailing his letter. As far as the validity of matrimony is concerned, genuine, internal, personal consent of both parties, covering the present and indicated by external signs, is unquestionably required. While internal consent must be complemented by some external manifestation, words are by no means necessary. The Congregation of the Inquisition (22 August, 1860) decided that marriages are entirely valid when the ceremony takes place in the presence of witnesses and according to the custom of the country in a manner which indicates that the contracting parties here and now mutually agree to enter wedlock. At the same time, if one or both contracting parties have no present intention of marrying in circumstances such as those outlined, they can make no marriage contract. The required matrimonial consent signified by proxy does not militate against the validity of the marriage contract. This consent must include the material object of the matrimonial contract, which material object is the mutual right of one party to the

body of the other, a right that carries with it every prerogative vested therein by the laws of nature. It is not necessary, however, that the intention of parties to a marriage contract should be explicitly directed to all its conditions or circumstances. On the contrary, an intention implicitly thereunto directed is entirely sufficient for all practical intents and purposes. Hence, as often as marriageable parties intend to contract marriage in the way in which men and women ordinarily understand that agreement, or according to the way in which it was instituted by the Author of this sacrament, they exhibit consent sufficient to render their marriage contract entirely valid, provided nothing essential is positively excluded by a counter intention usurping the place of the chief, indispensable intention in entering matrimony. While marriage contracts are null unless based on the consent of those concerned, it is usually very difficult to establish the actual absence of this consent so as to satisfy the judge in a matrimonial court, once the marriage ceremony has really taken place. (For the renewal of consent in the case of invalid marriages, see REVALIDATION, and for the consent requisite for espousals, see ESPOUSALS.) While in canon law the consent of parents is not necessary to validate the marriages of their children, it is usually required to render such marriages legitimate. [For the civil law concerning the consent of parents in France (modified 1907), Germany, Austria, Switzerland, Canada, etc., see MARRIAGE.]

In the United States the common law exacts no solemnity to validate matrimonial consent. In many of the States, however, special statutes carrying a penalty require certain conditions for the legitimacy of such consent. Common law regards marriage as a civil contract for which consent alone is essential. It demands no legal forms, nor religious solemnities, nor special mode of proof. According to common law, consent indicated by words covering the present, whether consummation follows or not, or by words pertaining to the future together with consummation, constitutes a valid marriage. In New York, Illinois, and Rhode Island words pertaining to the future, even with subsequent consummation, no longer render a marriage valid. Even without explicit proof of words implying consent, cohabitation, acknowledgment of a marriage by the parties concerned, reception of such parties as husband and wife by relatives, friends, or society, are sufficient to establish a valid marriage.

Canon law requires the consent of cathedral chapters to lend validity to certain official acts of bishops. In general, this consent is necessary in such matters as usually involve a serious obligation or the possibility of a notable damage, or in matters which simultaneously pertain to bishops and their chapters. Nevertheless, unwritten law can narrow the rights of chapters and widen the liberty of bishops in these matters unless circumstances conspire to stamp particular measures as unreasonable. In like manner, unwritten law may exact the consent of chapters in matters of secondary importance, a requirement sometimes enjoined by special statutes. When immediate action is necessary, and it is impossible to convoke their chapters, bishops may proceed validly without the chapters' consent. Inasmuch as there are no cathedral chapters in the United States, diocesan consultors constitute the advisory board of the bishops. The Third Plenary Council of Baltimore specifies several instances in which the bishops, though not obliged to abide by the advice of their consultors, are bound to seek such advice, else their acts in such cases are liable to nullification.

For consent in its relation to sinful acts, see SIN, and for the consent of the legislative authority in the formation of consuetudinary law, see CUSTOM.

J. D. O'NEILL.

Consentius.—The name of a fifth-century Gallo-Roman family, three of whose representatives are known in history:

(1) CONSENTIUS OF NARBONNE, *clarissimus*, "who combined the honour of a prefecture with philosophy", was a correspondent of Sidonius Apollinaris, who dedicated to him a poem on Narbonne. He used all metres—iambic, elegiac, hendecasyllabic, and the hexameter—and wrote in Greek as well as in Latin. His poems are redolent of flowers and thyme (Sidonius, *Carm.*, xxiii, 20, and 234-240; *Epist.*, III, 6; VIII, 4; IX, 15). However, these praises must not be taken too literally, as Sidonius counted among his friends thirty men who were similarly gifted. The authors of the "Histoire littéraire de la France" make a distinction between the Consentius to whom the poem was dedicated and Consentius the epistolary author, maintaining the former to have been the father of the latter.—(2) CONSENTIUS, father of the former, a native of Narbonne and a poet, a contemporary of Valentinian, and son-in-law of Flavius Valens Jovinus, consul in 367.—

(3) CONSENTIUS, a Gallic grammarian, was the author of two treatises, which are perhaps the fragments of a complete grammar: one on the noun and the verb, much used during the Carolingian period, and the other on barbarisms and metaphors. An edition of these treatises has been published by Keil in "Grammatici Latini" (Leipzig), vol. V, p. 336.

PAUL LEJAY.

Conservator (from Lat. *conservare*), a judge delegated by the pope to defend certain privileged classes of persons—as universities, religious orders, chapters, the poor—from manifest or notorious injury or violence, without recourse to a judicial process. Conservators were appointed as early as the thirteenth century. Innocent IV presupposes their existence in the decree (c. 15, de off. et pot. jud., del. I, 14, in VI^o) from which we first learn their power. Owing to abuses and complaints the Council of Trent (Sess. XIV, c. v, de ref.) limited their jurisdiction, but new controversies, often recurring, caused Clement VIII, Gregory XV, and Innocent X to define their privileges more precisely. Troubles continuing to arise, especially concerning the conservators of religious orders, Clement XIII (23 April, 1762) decreed that in missionary countries such officials should no longer be chosen, but that all controversies should be referred to the Holy See. From that time forth conservators fell into practical desuetude. According to law, these officials were to be chosen from among the prelates or dignitaries of cathedral and collegiate churches; later from the synodal judges. When a conservator had been chosen by regulars he could not be removed for five years without cause. He had no jurisdiction in cases that required juridical examination. While he took cognizance of all complaints against regulars, he had no authority to receive those of the regulars against others unless they were notorious. In the latter case the conservator decided the question summarily. He could punish with ecclesiastical penalties even high church dignitaries who interfered with his duties. His power was limited, however, to the one diocese in which he had been elected, nor could the same conservator have power in several dioceses.

Consistentes (BYSTANDERS). See PENITENCE.

Consistory, PAPAL.—I. DEFINITION.—During the Roman imperial epoch the term *consistorium* (Lat. *con-sistere*, to stand together) was used to designate the sacred council of the emperors. In time it came to designate the senate of the Roman pontiff, that is, "the assemblage of the Cardinals in council around the Pope" (Innocent III to the Bishop of Ely and the Archdeacon of Norwich, in 1212; see Gonzalez, "Commentaria in textus decretalium Gregorii IX", III, vii, 108).

II. ORIGIN AND HISTORICAL DEVELOPMENT.—The origin of the papal consistory is closely connected with the history of the Roman presbytery or body of the Roman clergy. In the old Roman *presbyterium* there were deacons, in charge of the ecclesiastical temporalities in the various regions of Rome; priests, at the head of the principal churches of the city, called *tituli*; and (at least by the eighth century) the bishops of the dioceses in the neighbourhood of Rome. The cardinals of to-day (divided likewise into the three orders of bishops, priests, and deacons) have succeeded the members of the ancient presbytery not only in the offices attaching to these three grades, though with somewhat different functions, but also, and chiefly, in the capacity of assisting the pope in the management of ecclesiastical affairs.

From the earliest Christian times the popes were wont to confer with the Roman presbytery on matters affecting the interests of the Church. From a letter of Pope Cornelius (254–255) to St. Cyprian we learn that he had summoned his presbytery before agreeing to the reconciliation of three schismatics. Likewise, Pope Liberius (352–363) informed the Roman clergy about the course of action he had deemed advisable to take during his exile. Pope Siricius (384–398) condemned the heresy of Jovinian after having convoked his presbytery. How far the more prominent members of the Roman clergy, eventually called cardinals, were being gradually entrusted with the management of ecclesiastical affairs is shown by the action of Leo IV and John VIII in the ninth century. The former ordered that the Roman cardinals should meet twice a week in the Sacred Palace to provide for the administration of the churches, look after the discipline of the clergy, and decide the cases of laymen. The latter ordered them to meet at least twice a month in order to take cognizance of and decide cases of clerics and laymen brought before the pope's tribunal. For many centuries, however, the Roman presbytery did not form the senate of the popes to the exclusion of all other clerics, at least in matters of greater importance. These matters were discussed and decided in the Roman councils, which, though admitting the Roman clergy to an active part, consisted chiefly of bishops summoned by the pope from the greater part of Italy, as well as of other bishops who happened to be in Rome at the time. These councils were very frequent until the beginning of the twelfth century. Thenceforth, the popes held them more rarely, finding it difficult to convoke them as often as the ever increasing volume of business demanded. In their stead the popes transacted the affairs brought before their court in the presence and with the assistance of the Roman cardinals, who about the same time had grown in dignity and importance, owing to the fact that the right of electing the pope now rested in them exclusively. Thus the Sacred College of Cardinals, assembled in consistory, became the chief organ of the supreme and universal government of the Church.

At first, matters of judicial as well as of administrative character were referred to the consistory. In course of time, however, the former were transferred to the Tribunal of the Sacred Rota. The "Corpus Juris" contains many of the decisions given by the popes in consistory, as is evidenced by the frequent

formula *de fratrum nostrorum consilio* (with the advice of our brethren). The papal consistory has continued ever since to act as the supreme council of the popes, though it lost much of its importance when in the fifteenth and sixteenth centuries the Roman Congregations were instituted. The amount of business brought before the Holy See had gradually increased to such a vast extent that it had to be divided among several particular committees of cardinals. These committees were at first temporary but gradually became permanent, and to each of them a definite kind of ecclesiastical affairs was assigned. These permanent committees came to be known as congregations. The first of them was instituted by Paul III, others by Pius IV and Pius V, but most of them owe their origin to Sixtus V. Once the Roman Congregations, embracing in their scope almost the whole range of ecclesiastical affairs, were instituted, it was but natural that the papal consistory should lose in importance. However, it did not go into desuetude altogether; it continued to be held, but more rarely, and only in the form which we proceed to describe.

III. PRESENT PRACTICE.—Consistories are of three kinds: secret or ordinary, public or extraordinary, and semi-public.—(1) The secret consistory is so called because no one save the pope and the cardinals is present at its deliberations. Formerly it was customary for the pope, soon after entering the hall of consistory, to confer singly with the cardinals on such personal matters as they wished to bring before him, and it was only after this audience was over that nobles and prelates were excluded from the hall. But at the present day this audience is omitted. The consistory is frequently opened with an address, or allocution, in which the pope often reviews the condition of the Church in general or in some particular country, pointing out what deserves praise or needs to be condemned. Such allocutions are afterwards given to the public in order that the world at large may know the mind of the pope on these matters. At the end of the allocution the creation of new cardinals takes place. The pope announces the names of those whom he intends to raise to the cardinalate, and asks the cardinals for their opinion; the cardinals remove their caps as a sign of consent, and the pope proceeds immediately to the formal appointment. It is also in the secret consistory that the cardinals receive from the pope the cardinal's ring, are appointed to some titular church or deaconry, exercise the option of passing from one titular church to another, and of ascending from the order of deacons and priests to the order of priests and bishops respectively. It is also here that the pope appoints the camerlengo and the Vice-Chancellor of the Holy Roman Church, and performs the ceremony of "closing" and "opening" the mouth of the new cardinals. To this consistory belong also the appointments of bishops, archbishops, and patriarchs, the transfers of these dignitaries from one see to another, the appointments of coadjutors, the creation and announcement of new dioceses, the division and union of dioceses already existing. But the details are not discussed in the consistory itself. All the previous consultations that are required in order that the pope may come to a prudent conclusion have taken place in a congregation called consistorial, and the pope in the consistory itself only gives his decision. There are some sees whose bishops are appointed through a Brief outside the consistory. Such are those in territories depending on the Sacred Congregation of Propaganda, and others as necessity may require. These appointments are merely promulgated in the secret consistory. At the end of the consistory the advocates called consistorial are admitted to request, with the usual formalities, the pallium for newly appointed archbishops; their petition is granted immediately, but the conferring of the pallium takes place later.

(2) The public consistory is so called because persons foreign to the Sacred College of Cardinals, such as Apostolic protonotaries, the auditors of the Sacred Rota, and other prelates are called to it. Laymen also, who have made previous application, are permitted to be present. Formerly, in this consistory the pope used to give solemn reception to kings, princes, and ambassadors; but this is no longer the custom. In the public consistory the pope performs the ceremony of delivering the red hat to the newly created cardinals. Moreover, the consistorial advocates plead here the causes of beatification and canonization. These pleadings are of two kinds. In the first permission is asked that the ordinary process of beatification or canonization may be introduced, or continued, or brought to completion. The second has reference only to causes of canonization. For in accordance with the practice of the Holy See, even after it has been conclusively proved that the miracles required for canonization have been performed through the intercession of one declared blessed, the honours of a saint are not decreed to him, unless the question as to whether canonization should take place has been treated in three consistories: secret, public, and semi-public. In the secret consistory the pope asks the opinions of the cardinals, who express it singly by answering *placet* or *non placet* (aye or no). In the public consistory one of the consistorial advocates pleads the cause and a prelate answers in the pope's name, inviting all to pray in order that the pope may be enlightened on the subject. The final voting takes place in the semi-public consistory.

(3) The semi-public consistory is so called because, besides the cardinals, bishops also take part in it. To this consistory the bishops residing within one hundred miles of Rome are summoned, while invitations are sent to all the other bishops of Italy; moreover, titular patriarchs and archbishops and bishops who live in Rome, as well as bishops who happen to be sojourning there at the time, are likewise present. After all the Fathers have expressed their opinions on the subject, the pope closes the assembly with an address on the following canonization. With regard to the time for holding the consistories, the old practice of assembling them at fixed intervals has passed out of use and to-day they meet, as occasion demands, at the pope's wish.

HECTOR PAPI.

Constable (formerly TUNSTALL), CUTHBERT, date of birth uncertain; d. 27 March, 1746. He was the son of Francis Tunstall of Wychiffe Hall, Yorkshire, England, and Cicely, daughter of John Constable, second Viscount Dunbar. When in 1718 he succeeded, on the death of his uncle, the last Viscount Dunbar, to the estates of Burton Constable, he changed his surname from Tunstall to Constable. He was educated at Douai and subsequently studied medicine at Montpellier, where he took the degree of Doctor of Medicine. He formed a large collection of books and MSS. at Burton Constable, and in other ways was a constant patron of Catholic literature, assisting Bishop Challoner by lending him documents for the "Memoirs of Missionary Priests", and Dodd, by contributing to the expenses of the "History of the Church of England". He also maintained friendly relations with non-Catholic scholars; and among the Burton Constable papers are two volumes of his correspondence with Mr. Nicholson of University Col-

lege, Oxford, and the well-known antiquary, Thomas Hearne. His correspondence with the former was chiefly concerned with particulars for the biography of Abraham Woodhead, for whom he had a great veneration. His only publication is a life of Woodhead prefixed to his edition of "The Third Part of the Brief Account of Church Government", written by that author (London, 1736). Gillow (*Bibl. Diet. Eng. Cath.*, I, 549) states that even this was largely taken from Nicholson, but is valuable for the complete Woodhead bibliography. The other works enumerated by Gillow (*loc. cit.*) are not by Constable, but were MSS. in his collection. The collection itself was sold by auction in 1889, some of the MSS. being purchased by Lord Herries and added to his collection at Everingham. Constable was twice married, first to Amy, daughter of Hugh, third Lord Clifford, by whom he had three children, William, Cicely, and Winifred, and secondly to Elizabeth Heneage, by whom he had one son, Marmaduke, who inherited the estate of Wycliffe and resumed the family name of Tunstall.

EDWIN BURTON.

Constable (*alias* LACEY), JOHN, controversialist (pen-name CLEROPHILUS ALETHES), b. in Lincolnshire, 10 November, 1676 or 1678; d. 28 March, 1743. In 1695 he entered the Society of Jesus. For many years he served the Fitzherbert family at Swinerton, where he is buried. Constable's chief controversial opponents were: the Abbé Courayer (1681-1776; *Diet. Nat. Biog.*, XII, 328), who championed Anglican orders, came over to England in 1728, was lionized, and eventually buried in the cloisters of Westminster; and Charles Dodd *vere* Hugh Tootell, who wrote with a prejudice against Jesuits. The chief writings of Constable are: "Remarks upon Courayer's Book in Defence of English Ordinations, wherein their invalidity is fully proved", an answer to Courayer's "Dissertations" of 1723; "The Stratagem Discovered to show that Courayer writes 'Booty', and is only a sham defender of these ordinations", by "Clerophilus Alethes", an answer to Courayer's "Defense"; "The Convocation Controvertist", by "Clerophilus Alethes" (8vo, 1729), against Rev. Joseph Trapp's "Defence of the Church of England"; "Doctrine of Antiquity concerning the Eucharist", by "Clerophilus Alethes" (8vo, 1736); "Specimen of Amendments proposed to the Compiler of 'The Church History of England'", by "Clerophilus Alethes" (12mo, 1741); "Advice to the Author of 'The Church History of England'", MS. at Stonyhurst. Gillow enumerates a few other writings by Constable.

PATRICK RYAN.

Constance (Lat. *Constantia*, Ger. *Konstanz* or *Constanz*, Czechic name *Kostnitz*), formerly the seat of a diocese. Constance, a very ancient town situated where the River Rhine flows out of the Bodensee (between the Bodensee and the Untersee) in the south-eastern part of the Grand Duchy of Baden, was originally a village of lake-dwellers which under Roman rule was fortified by Constantius Chlorus in 304. Christianity seems to have been introduced into Constance and the neighbouring country by Roman legions as early as the end of the second or the beginning of the third century. The episcopal see was first at Vindonissa, the present Windisch in the Canton of Aargau in Switzerland. It is not known when this see was erected. The first bishop of whom history has preserved any record is Bubulcus who was present at the Burgundian Synod of Epaon in 517. (Mansi, *Ampl.*

Coll. Conc., VIII, 565.) He was succeeded by Grammatius, who attended a Frankish synod at Clermont in 535 (*ibid.*, VIII, 863), one at Orléans in 541 (*ibid.*, IX, 120), and a third at Orléans in 549 (*ibid.*, IX, 136). After this time history makes no further mention of the Diocese of Vindonissa. Since, however, the neighbouring city of Constance is for the first time mentioned as an episcopal see about this time, it becomes almost a certainty that from Vindonissa the see was transferred to Constance. The episcopal catalogues of Constance designate Maximus as the first and Rudolph as the second bishop, but nothing further is known about them. Walafrid Strabo, in his "Vita S. Galli", speaks of a certain Gaudentius as Bishop of Constance, after whose death (c. 613) the bishopric was offered to St. Gall who, however, refused the dignity and recommended his disciple John in his stead. The sermon which St. Gall preached at John's consecration is still extant (H. Canisius, "Antiquæ Lectiones", edited by Basnage, "Thesaurus monum. eccl. et hist.", Antwerp, 1725, I, 785). Nothing is known of Marcian, Boso, Gangolf, Fidelis, and Rudolph, who are generally designated as successors of John.

The limits of the Diocese of Constance were fixed during the seventh century. The river Iller separated it from the Diocese of Augsburg. From the influx of the Iller into the Danube the boundary turned towards the north-west, past Gmünd, across the Neckar, north of Marbach, thence south-westerly till it reached the Rhine south of Breisach (Altbreisach). It followed the Rhine upward to the influx of the Aar, then up this river to the St. Gotthard, whence it turned north-easterly across Canton St. Gall to the source of the Iller. The dioceses surrounding it were Augsburg, Speyer, Strasburg, Basle, Lausanne, Chur, and (since 742) Würzburg. There was not a diocese in Germany which surpassed Constance either in area or population. It belonged to the province of Besançon until it became a suffragan of Mainz in 747. With few changes it retained the above-mentioned dimensions till the time of the Reformation. In the year 1435 the diocese had 17,060 priests, 1760 parishes, and 350 monasteries and convents. During the eighth and ninth centuries the bishops of Constance repeatedly infringed upon the rights of the Abbots of Reichenau and St. Gall and sometimes combined the abbatial with the episcopal dignity. Bishop Sidonius (746-760) was instrumental in the unjust deposition and imprisonment of St. Othmar, the Abbot of St. Gall, in 758 or 759 (Hefele, Conciliengeschichte, III, 596). Most bishops of the tenth century were great and holy men. Solomon III (890-919) had previously (885) been imperial chancellor and was equally beloved as Abbot of Reichenau and St. Gall and as Bishop of Constance. St. Conrad (934-975) was a great friend of the poor, made three pilgrimages to the Holy Land, built three new churches and renovated many old ones. He was canonized in 1123 and became patron of the diocese. St. Gebhard II (979-995) founded the Abbey of Petershausen in 983, began to be honoured as a saint soon after his death, and became patron of the city of Constance. During the conflict between Pope Gregory VII and Emperor Henry IV, concerning the right of

investiture, the episcopal See of Constance was occupied by Otto I (1071-1086), who sided with the emperor and was excommunicated because he took part in the deposition of Gregory VII at the Synod of Worms (1076). His successor Gebhard III (1084-1110) was an intrepid defender of the papal rights against Henry V, became Vicar Apostolic for Germany under Urban II (Mansi, Ampl. Coll. Conc., XX, 666 and 715), consecrated the new cathedral at Constance in 1089, held a synod in 1094, at which wholesome ecclesiastical reforms were decreed, and with the consent of the pope freed Henry V from the ban in 1095. During the papal conflicts with the Emperors Frederick I and Frederick II the bishops sided with the emperors until Bishop Henry I, von Thann (1233-1248) returned to papal allegiance in 1246. Bishop Rudolph von Montfort (1322-1334) supported Pope John XXII in his struggle against Louis the Bavarian until 1332, when he joined the party of the emperor. His successor Nicholas, von Kreuzlingen (1334-1344), sided with the popes. While

the Council of Constance (q. v.) was in session (1414-1418) the episcopal See of Constance was occupied by Otto III, von Hochberg (1411-1434). From the thirteenth century the bishops of Constance were princes of the German Empire. Their territory, as temporal rulers, extended over twenty-two German (about 482 English) square miles, with a population of about

50,000, and lasted until it was divided between Baden and Switzerland in 1802.

The decline of the diocese begins with the Protestant Reformation. The Swiss Cantons Zurich, Bern, St. Gall, Schaffhausen, and Thurgau were first to adopt the new doctrine (Zwinglianism). They were followed in 1526 by the city of Constance and in 1534 by the Duchy of Würtemberg. Baden became Protestant in 1556, but here the Catholic religion was restored in 1571. The old Faith was also slowly restored in the city of Constance from 1548 when that city came under Austrian rule. From 1526 the bishops of Constance resided at Meersburg. Despite the great losses sustained during the Reformation, the diocese in 1750 still numbered 3774 secular priests, 2764 monks, 3147 nuns, and a Catholic population of 891,948. In 1814 the portion of the diocese situated on Swiss territory was detached and apportioned to the Swiss dioceses of Chur, Basle, and St. Gall. After the death of Bishop Karl Theodor von Dalberg in 1817, the portion of the diocese lying in Würtemberg came under the jurisdiction of the vicar-general of Ellwangen-Rottenburg, and all the Bavarian territory was attached to the Diocese of Augsburg. In 1821 Pope Pius VII dissolved the Diocese of Constance and joined its remaining territory to the newly erected Archdiocese of Freiburg. The most important rulers of the diocese since the Reformation were: Cardinal Marcus Sitticus von Hohenems (Altemps), 1561-1589; Cardinal Andrew

CATHEDRAL, CONSTANCE

of Austria (1589-1600), Jacob Fugger (1604-1626), Karl Theodor von Dalberg (1800-1817) and his Vicar-General Heinrich Ignaz von Wessenberg. The last two espoused the doctrine of Febronius. Dalberg joined the Freemasons and the Illuminati, of whose real tendencies he was ignorant, and Wessenberg was heart and soul for the anti-ecclesiastical reforms of Emperor Joseph II.

The city of Constance received municipal rights in 780, became a free imperial city in 1192 and was one of the largest and most flourishing cities of Germany during the Middle Ages. Its population is said to have exceeded 40,000. Here the famous Peace of Constance, a treaty between Barbarossa and the Lombard cities was declared in 1183 and an imperial diet was convened by Maximilian I in 1507. Commercially it was highly important on account of its manufacture of choice linen the famous *tela di Costanza* which was known throughout Europe. Its ecclesiastical renown it owes to the fact that it was the seat of perhaps the largest diocese in Germany and that from 1414-18 the Sixteenth Œcumenical Council was celebrated there. For joining the Smalkaldic League and refusing to accept the Interim of Augsburg in 1548, it was deprived of its privileges as a free and imperial city and given to Austria by Emperor Charles V. It was unsuccessfully besieged by the Swedes in 1633, pillaged by the French (1740-45), and finally joined to Baden in 1805. Its population in 1900 consisted of 15,917 Catholics, 711 Old Catholics, and 565 Jews.

MICHAEL OTT.

Constance, COUNCIL OF, a (partly) Œcumenical council held at Constance, now in the Grand Duchy of Baden, from 5 Nov., 1414, to 22 April, 1418. Its forty-five general sessions were devoted to three chief purposes: (I) The Extinction of the So-Called Western Schism; (II) The Reformation of Ecclesiastical Government and Life; (III) The Repression of Heresy. The article will also take up: (IV) Attendance at the Council; General Considerations.

I. THE EXTINCTION OF THE SO-CALLED WESTERN SCHISM.—In its attempt to restore to the Church her immemorial unity of headship the Council of Pisa (q. v.) in 1409 had only added to the confusion and scandal that afflicted all Christendom since 1378 (see SCHISM, WESTERN). There were now three popes, the two deposed by the council (Gregory XII and Benedict XIII) and its own creation, Alexander V; the latter soon died (3 May, 1410) and was succeeded by Cardinal Baldassare Cossa as John XXIII. Obedient to a decree of the Council of Pisa that ordered a general council every three years, this pope convoked such an assembly at Rome for April, 1412, but with so little success that it was prorogued and again convoked for the beginning of 1413; its only important decree was a condemnation of the writings of Wyclif. In the meantime the treachery and violence of Ladislaus of Naples made John XXIII quite dependent politically on the new Emperor-elect Sigismund whose anxiety for a general council on German territory was finally satisfied by the pope, then an exile from Rome. He convoked it from Lodi, 9 December, 1413, for 1 November, 1414, at Constance, a free city of the empire, on Lake Constance. It was solemnly opened 5 November in the cathedral of Constance, where all the public sessions were held. The first public session took place 16 November under the presidency of John XXIII, and for a while it considered itself a continuation of

the Council of Pisa, and John XXIII the sole legitimate pope. It was soon evident, however, that many members of the new assembly (comparatively few bishops, many doctors of theology and of canon and civil law, procurators of bishops, deputies of universities, cathedral chapters, provosts, etc., agents and representatives of princes, etc.) favoured strongly the voluntary abdication of all three popes. This was also the idea of Emperor Sigismund (q. v.) present since Christmas Eve, 1414, and destined to exercise a profound and continuous influence on the course of the council in his character of imperial protector of the Church. The French deputies especially urged this solution of the intolerable crisis, under the leadership of Pierre d'Ailly (Cardinal and Bishop of Cambrai), Guillaume Fillastre (Cardinal and Bishop of San Marco), and Jean Charlier de Gerson, chancellor of the University of Paris, representative of the French king, and known with d'Ailly, as "the soul of the council". The Italian bishops who had accompanied John XXIII in large numbers and stood for his legitimacy were soon rendered helpless by new methods of discussion and voting. Early in January, 1415, envoys of Benedict XIII appeared, but only to propose a personal meeting at Nice of their pope and the emperor. Towards the end of the month Gregory XII (Angelo Corrarío) offered, through his representatives, to resign, on condition that the other popes did the same. The execution of this project, henceforth the main object of the council, was long delayed for reasons that will appear below. Pressure was at once brought to bear on John XXIII by Emperor Sigismund and by the non-Italian members. His resistance was finally broken by the resolution of the members to vote by "nations" and not by persons. The legality of this measure, an imitation of the "nations" of the universities, was more than questionable, but during February, 1415, it was carried through and thenceforth accepted in practice, though never authorized by any formal decree of the council (Finke, *Forschungen*, 31-33) and opposed by d'Ailly and Fillastre, who wanted, indeed, a considerable enlargement of the voting body, by the inclusion of professors (doctors) of theology, parish priests, etc., but not the abandonment of the traditional individual vote; the former was willing to compromise on a vote according to ecclesiastical provinces. The vote by nations was in great measure the work of the English, German, and French members, but the Italians did not long resist, and on this basis the council's work was organized and executed as follows: By each of the four nations represented at the council, i. e. Germans (with whom were counted the few Poles, Hungarians, Danes, and Scandinavians), English, French, and Italians, several deputies, ecclesiastical and lay, were appointed to represent the entire membership of the nation present at Constance. These national deputies met separately under a president of their own choice, but changed from month to month. Their decisions were reached by a majority vote, and were then communicated to the General Congregation of all four nations in which the vote of a majority (three) was decisive. There seems also to have been (Finke, *Forschungen*, 36-37) an important general committee appointed by the nations to prepare the subjects of discussion for the individual nations, and to act generally as intermediary. At the seventh session (2 May, 1415) the right to vote apart was withdrawn from the cardinals; henceforth they could only vote like other individual deputies in the meetings of their respective nations. The Roman Church, therefore, was not represented as such, while the small English nation (20 deputies, 3 bishops) was equal in influence to the entire Italian representation, as individuals about one-half the council. The decisions of the general congregations were presented at the public sessions of the council

and there promulgated, unanimously, as conciliar decrees.

While these measures were being taken John XXIII grew daily more suspicious of the council. Nevertheless, and partly in consequence of a fierce anonymous attack, from an Italian source, on his life and character, he promised under oath (2 March, 1415) to resign. On 20 March, however, he secretly fled from Constance and took refuge at Schaffhausen on territory of his friend Frederick, Duke of Austria-Tyrol. This step filled the council with consternation, for it threatened both its existence and its authority. Emperor Sigismund, however, held together the wavering assembly. Then followed the public sessions (third to fifth) of 26 and 30 March and 5 April out of which came the famous decrees "Articles of Constance", long a chief argument of Gallicanism (q. v.). As finally adopted in the fifth session they were five in number and declared that the council, legitimately called in the Holy Spirit, is a general council, represents the whole Church Militant, has its authority directly from God; and that in all that pertains to faith, the extinction of the schism and reformation in head and members, every Christian, even the pope, is bound to obey it; that in case of refusal to obey the council all recalcitrant Christians (even the pope) are subject to ecclesiastical punishment and in case of necessity to other (civil) sanctions; that without the consent of the council Pope John cannot call away from Constance the Roman Curia and its officials, whose absence might compel the closing of the council or hinder its work; that all censures inflicted since his departure by the pope on members and supporters of the council are void, and that Pope John and the members of the council have hitherto enjoyed full liberty. In the meantime (29 March, 1415) the English, German, and French nations had agreed to four articles, in the first two of which was expressed the complete supremacy of the council over the pope; these two were incorporated in the aforesaid articles of the fifth session. It has been maintained that these decrees were meant only for the extraordinary situation which then faced the council; they express, nevertheless, the well-known persuasion of the majority of the peculiar ecclesiastical representation at Constance that the council, independently of the pope, was the final depository of supreme ecclesiastical authority; indeed, by virtue of these decrees they proceeded at once to judge and depose John XXIII, hitherto for them the legitimate pope. It is to be noted that of the twelve cardinals present at Constance only seven or eight assisted at the fifth session, and they solely to avoid scandal (among the absent was d'Ailly). Nor would any cardinal announce these decrees; that office fell to a bishop, Andrew of Posen. The emperor was present at their promulgation, also 200 members, mostly doctors, etc. These decrees, it must be remembered, though adopted at Basle and often quoted by the disciples of Gallicanism and other opponents of papal supremacy, were formulated and accepted at Constance amid quite unusual circumstances, in much haste, and in quasi despair at the threatened failure of the long-desired general council; they ran counter to the immemorial praxis of the Church, and substituted for its Divine constitution the will of the multitude or at best a kind of theological parliamentarism. They were never approved by the Apostolic See (Funk, *Kirchengeschichtliche Studien*, Paderborn, 1897, I, 489-98) and were almost at once implicitly rejected by Martin V (Mansi, *Coll. Conc.*, XXVIII, 200). The rest of March, and the months of April and May were consumed in a tragic conflict of the council with John XXIII. He did not withdraw his resignation, but posited conditions that the council refused; he called away from Constance several cardinals and members of the Curia, who were soon, however, obliged to return; put forth a plea of lack of liberty; complained

to the King of France concerning the method of voting, as well as his treatment by the council and the emperor; and finally fled from Schaffhausen to Lauenburg, giving the council reason to fear either his final escape from imperial reach or the withdrawal of the Italian representatives. The pope soon fled again, this time to Freiburg in the Breisgau, and thence to Breisach on the Rhine, but was soon compelled to return to Freiburg, whence eventually (17 May) he was brought by deputies of the council to the vicinity of Constance, and there held prisoner, while the council proceeded to his trial. He had exhausted all means of resistance, and was morally vanquished. Unwilling to undergo the ordeal of the impending trial he renounced all right of defence and threw himself on the mercy of the council. He was deposed in the twelfth session (29 May, 1415), not for heresy but for notorious simony, abetting of schism, and scandalous life, having already been suspended by the council in the tenth session (14 May). Two days later he ratified under oath the action of the council and was condemned to indefinite imprisonment in the custody of the emperor. He was held successively in the castles of Gottlieben, Heidelberg, and Mannheim, but was eventually released, for a heavy ransom, with the help of Martin V, and in 1419 died at Florence as Cardinal-Bishop of Tusculum. (For a fuller treatment of the charges against him, see JOHN XXIII.) The promised resignation of Gregory XII (q. v.) was now in order, and was accomplished with the dignity to be expected from the pope usually considered by Catholic historians the legitimate occupant of the See of Peter, though at this time his obedience had practically vanished, being confined to Rimini and a few German dioceses. Through his protector and plenipotentiary, Carlo Malatesta, Lord of Rimini, he posited as conditions that the council should be reconvened by himself, and that in the session which accepted his resignation neither Baldassare Cossa nor any representative of him should preside. The council agreed to these conditions. The fourteenth session (4 July, 1415) had, therefore, for its president the Emperor Sigismund, whereby it appeared, as the supporters of Gregory wished it to appear, that hitherto the council was an assembly convoked by the civil authority. The famous Dominican Cardinal John of Ragusa (Johannes Dominici), friend and adviser of Gregory XII, and since 19 Dec., 1414, the pope's representative at Constance, convoked anew the council in the pope's name and authorized its future acts. The reunion of both obediences (Gregory XII and John XXIII) was then proclaimed, whereupon the Cardinal-Bishop of Ostia (Viviers) assumed the presidency, and Malatesta pronounced, in the name of Gregory, the latter's abdication of all right whatsoever to the papacy. Gregory confirmed these acts in the seventeenth session (14 July) and was himself confirmed as Cardinal-Bishop of Porto, Dean of the Sacred College and perpetual Legate of Ancona, in which position he died (18 Oct., 1417) at Recanati, in his ninetieth year in the odour of sanctity. From the fourteenth session, in which he convoked the council, it is considered by many with Phillips (*Kirchenrecht*, I, 256) a legitimate general council.

There remained now to obtain the resignation of Benedict XIII (Pedro de Luna). For this purpose, and because he insisted on personal dealings with himself, Emperor Sigismund and deputies of the council went to Perpignan, then Spanish territory, to confer with him, but the stubborn old man, despite his pretended willingness to resign, was not to be moved (Sept.-Oct., 1415) from the claims he had so persistently and amid so great vicissitudes defended. Soon, however, he was abandoned by the Kings of Aragon, Castile, and Navarre, hitherto his chief supporters. By the Treaty of Narbonne (13 Dec., 1415), they bound themselves to co-operate with the Council of

Constance for the deposition of Benedict and the election of a new pope. St. Vincent Ferrer (q. v.) hitherto the main support of Benedict, and his confessor, now gave him up as a perjurer; the council confirmed (4 Feb., 1416) the articles of Narbonne, the immediate execution of which was retarded, among other causes, by the flight of Benedict (13 Nov., 1415) from the fortress of Perpignan to the inaccessible rock of Peñíscola on the sea-coast near Valencia, where he died in 1423, maintaining to the end his good right (see LUNA, PEDRO DE).

Various causes, as just said, held back the appearance of the Spanish deputies at the council. Finally they arrived at Constance for the twenty-first session (15 Oct., 1416) and were thenceforth counted as the fifth nation (Fromme, *Die spanische Nation und das Konzil von Konstanz*, Münster, 1896). The next eight months were largely taken up with complicated canonical procedure destined to compel the abdication or justify the deposition of Benedict XIII, who in the meantime had excommunicated solemnly his former royal adherents and with a courage worthy of a better cause maintained that Holy Church, the Ark of Noe, was now on the wave-worn peak of Peñíscola, in the little group of a few thousand souls who yet clung to his shadowy authority, and not at Constance. He was finally deposed in the thirty-seventh session (26 July, 1417) as guilty of perjury, a schismatic, and a heretic; his private life and priestly character, unlike those of John XXIII, were never assailed. The Western Schism was thus at an end, after nearly forty years of disastrous life; one pope (Gregory XII) had voluntarily abdicated; another (John XXIII) had been suspended and then deposed, but had submitted in canonical form; the third claimant (Benedict XIII) was cut off from the body of the Church, "a pope without a Church, a shepherd without a flock" (Hergenröther-Kirsch). It had come about that, whichever of the three claimants of the papacy was the legitimate successor of Peter, there reigned throughout the Church a universal uncertainty and an intolerable confusion, so that saints and scholars and upright souls were to be found in all three obediences. On the principle that a doubtful pope is no pope, the Apostolic See appeared really vacant, and under the circumstances could not possibly be otherwise filled than by the action of a general council.

The canonical irregularities of the council seem less blameworthy when to this practical vacancy of the papal chair we add the universal disgust and weariness at the continuance of the so-called schism, despite all imaginable efforts to restore to the Church its unity of headship, the justified fear of new complications, the imminent peril of Catholic doctrine and discipline amid the temporary wreckage of the traditional authority of the Apostolic See, and the rapid growth of false teachings equally ruinous to Church and State.

Election of Martin V.—Under the circumstances the usual form of papal election by the cardinals alone (see CONCLAVE) was impossible, if only for the strongly inimical feeling of the majority of the council, which held them responsible not only for the horrors of the schism, but also for many of the administrative abuses of the Roman Curia (see below), the immediate correction of which seemed to not a few of no less importance, to say the least, than the election of a pope. This object was not obscured by minor dissensions, e. g. concerning the rightful rank of the Spanish nation, the number of votes of the Aragonese and Castilians, respectively, the right of the English to constitute a nation, etc. The French, Spanish, and Italian nations desired an immediate papal election; a Church without a head was a monstrosity, said d'Ailly. Under Bishop Robert of Salisbury the English held stoutly for the reforms that seemed imperative in the administration of the papacy and the Curia; Emperor Sigismund was foremost among the

Germans for the same cause, and was ready to take violent measures in its interest. But Robert of Salisbury died, and curiously enough, it was by another English bishop, Henry of Winchester, then on his way to Palestine, and a near relative of the King of England, that the antagonistic measures of papal election and curial reform were reconciled in favour of the priority of the former, but with satisfactory assurance, among other points, that the new pope would at once undertake a serious reform of all abuses; that those reforms would be at once proclaimed by the council on which all the nations agreed; and that the manner of the imminent papal election should be left to a special commission. Among the five reform decrees passed at once by the council in its thirty-ninth session (9 Oct., 1417) was the famous "Frequens" which provided for a general council every ten years; the next two, however, were to be convoked by the pope after five and seven years respectively, the first of them at Pavia.

In the fortieth session finally (30 Oct.) was discussed the manner of the new papal election. The council decreed that for this occasion to the twenty-three cardinals should be added thirty deputies of the council (six from each nation) making a body of fifty-three electors. Another decree of this session provided for the immediate and serious attention of the new pope to eighteen points concerning *reformatio in capite et Curia Romana*. The forty-first session (8 Nov.) provided for the details of the election and for this purpose had the Bull of Clement VI (6 Dec., 1351) read. That afternoon the electors assembled in conclave and after three days chose for the pope the Roman Cardinal Odo Colonna, who took the name of Martin V (q. v.). He was only a subdeacon, and so was successively made deacon, priest, and bishop (Fromme, "Die Wahl Martins V.", in "Röm. Quartalschrift", 1896). His coronation took place 21 November, 1417. At its forty-fifth session he solemnly closed the council (22 April, 1418), whereupon, declining invitations to Avignon or to some German city, he returned to Italy and after a short stay in Florence, entered Rome, 28 Sept., 1420, and took up his residence in the Vatican, thereby restoring to the See of Peter its ancient rights and prestige in Christendom.

II. REFORMATION OF ECCLESIASTICAL GOVERNMENT AND LIFE.—The long absence of the popes from Rome in the fourteenth century, entailing the economical and political ruin of the ancient Patrimony of Peter; the many grave abuses directly or indirectly connected with the administration of French popes at Avignon; the general civil disorders of the time (Hundred Years War, Condottieri, etc.), and other causes, had created, long before the Council of Constance, an earnest demand for a reformation of ecclesiastical conditions. The writings of theologians and canonists and the utterances of several popular saints (St. Bridget of Sweden, St. Catherine of Siena) are alone enough to show how well justified was this universal demand (Rocquain). In the minds of many members of the council this reformation, as already stated, was of equal importance with the closing of the schism; and to some, especially to the Germans, it seemed to overshadow even the need of a head for the Church. It was precisely the pope and the cardinals, they argued, whose administration most needed reform, and now, when both were weakest and for the first time in their history had felt the mastery of the theologians and canonists, seemed to this party the psychological moment to write these reforms into the common ecclesiastical law, whence they could not easily be expunged. Since July, 1415, there had been a reform commission of thirty-five members; a new one of twenty-five members had been appointed after the entry of the Spanish nation in October, 1416. During its long career many memorials were presented to the council concerning every

imaginable abuse. In its general congregations and sessions bitter reproaches were often uttered on the same themes. The academic equality of many of the members, the prostrate condition of ecclesiastical headship, the peculiar freedom of discussion in the "nation" meetings, and other causes made this council a unique forum for the discussion of all points and methods of reformation. More would certainly have been accomplished had the learned men and the zealous preachers been able to reach some degree of unanimity as to the importance and order of the reforms called for, and had there been more general anxiety for personal reformation and less passion in denouncing the past abuses of papal and curial administration. The Germans (*Avisamenta nationis germanicæ*) and the English were ardent for a reformation of the Roman Curia, so that a new, holy, and just pope would find his way made straight before him. The former asserted that for 150 years the popes had ceased to govern with that justice which for twelve centuries had characterized them. The cardinals, they said, had loved riches too much, and ecclesiastical synods had been neglected. These were the true causes, according to them, of the corruption of the clergy, the decay of good studies, the ruin of churches and abbeys. Reforms had been promised at Pisa, but what had become of these promises? As a matter of fact, however, the reforms most loudly called for meant the restoration to the bishops of their ancient freedom in the collation of benefices, also a notable diminution in the various dues and assessments payable to Rome from the ecclesiastical properties and revenues of the various nations, which for several reasons had been growing in number and size during the previous century, and were not always unjustified or inequitable. We have already seen that it was much against their will that the Germans agreed to a papal election before receiving full satisfaction in the matter of the aforesaid reforms. The day after his coronation Martin V appointed a (third) reform commission, but its members showed no more unanimity than their predecessors in the same office. The new pope declared that he was ready to accept any propositions that were unanimously agreed on. Eventually, after much discussion and various suggestions seven points were agreed to in the forty-third session (21 March, 1418). All exemptions granted during the synod were withdrawn, and in the future should be granted with difficulty; unions and incorporations of benefices were likewise to be diminished; the pope agreed to renounce the revenues of vacant benefices; all simony was forbidden, likewise the custom of dispensing benefited persons from the obligation of taking orders; the papal right to impose tithes on clergy and churches was sensibly restricted; ecclesiastics must henceforth wear the dress of their order (Mansi, Conc., XXVII, 1114-77). Other reforms were left to the initiative of each nation which provided for them by special concordats, a term said to have been here used for the first time. The German Concordat (including Poland, Hungary, and Scandinavia) and that with France, Spain, and Italy, ran for five years; the English Concordat was indefinite (for the details see Mansi, op. cit., XXVII, 1189 sqq., and Hübner, *Die Konstanzer Reform und die Konkordate von 1418*, Leipzig, 1867). The number of cardinals was fixed at twenty-four, and they were to be taken proportionately from the great nations. Stricter regulation was also agreed on for papal reservations, annates, commendams, indulgences, etc. Nevertheless, in a papal consistory (10 March, 1418), Martin V rejected any right of appeal from the Apostolic See to a future council, and asserted the supreme authority of the Roman pontiff as Vicar of Jesus Christ on earth in all questions of Catholic Faith (*Nulli fas est a supremo iudice, videlicet Apostolicâ sede seu Rom. Pontif. Jesu Christi vicario in terris appellare aut illius iudicium in*

causis fidei, quæ tamquam majores ad ipsum et sedem Apostolicam deferendæ sunt, declinare, Mansi, Conc., XXVIII, 200). Von Funk has shown (op. cit., 489 sqq.), that the oft-maintained confirmation of the decrees of Constance by Martin V, in the last session of the council (omnia et singula determinata et decreta in materiis fidei per præsens concilium conciliariter et non aliter nec alio modo) must be understood only of a specific case (Falkenberg, see below), and not of any notable part of, much less of all, the decrees of Constance. It is true that in the Bull "Inter Cunctas", 22 Feb., 1418, apropos of the Wycliffites and Hussites, he calls for a formal approval of the decrees of Constance (*in favorem fidei et salutem animarum*), but these words are easily understood of the council's action against the aforesaid heresies and its efforts to restore to the Church a certain head. In particular the famous five articles of the fifth session, establishing the supremacy of the council, never received papal confirmation (Hergenröther-Kirsch, II, 862, and Baudrillart, in *Dict. de théol. cath.*, II, 1219-23). For a refutation of the Gallican claim that these decrees possess a dogmatic character, see GALICANISM. Nevertheless, the Council of Constance is usually reckoned the Sixteenth General Council; some, as stated above, acknowledge it as such after the fourteenth session (reconvocation by Gregory XII); others again (Salember) after the thirty-fifth session (adherence of the Spanish nation); Hefele only in the final sessions (forty-second to forty-fifth) under Martin V. No papal approbation of it was ever meant to confirm its anti-papal acts; thus Eugene IV (22 July, 1446) approved the council, with due reserve of the rights, dignity, and supremacy of the Apostolic See (*absque tamen præiudicio juris dignitatis et præminentie Sedis Apostolicæ*). See Bouix, "De papa, ubi et de concilio œcumenico" (Paris, 1869), and Salembier (below), 313-23.

III. THE REPRESSION OF HERESY.—At various times the council dealt with current heresies, among them those of John Wyclif and John Hus. *Condemnation of Forty-five Wycliffite Propositions*.—In the eighth session it was question of Wyclif, whose writings had already been condemned at the Council of Rome (1412-13) under John XXIII. In this session forty-five propositions of Wyclif, already condemned by the universities of Paris and Prague, were censured as heretical, and in a later session another long list of 260 errors. All his writings were ordered to be burned and his body was condemned to be dug up and cast out of consecrated ground (this was not done until 1428 under Bishop Robert Fleming of Lincoln). In 1418 Martin V, by the aforesaid Bull "Inter Cunctas", approved the action of the council (Mansi, op. cit., XXVII, 1210 sq.; see WYCLIFFITES).

Condemnation and Execution of John Hus.—Since 1408 John Hus, an eloquent preacher of Prague, had openly taught the Wycliffite heresies. By his ardent zeal for ecclesiastical reforms on the basis of Wyclif's teachings, his patriotic insistence on the purity of Bohemian faith and his assertion of Bohemian nationalism, he had gone rapidly to the front as a leader of his nation, then deeply embittered against the Germans dominant in the political and academic life of Bohemia. Since 1412 he had been banished from Prague, but was only the more dangerous, by his fiery discourse and his writings, among the highly excited Bohemians, who mostly saw in him the flower of their national genius, and were otherwise embittered against a clergy which then offered too many elements of weakness to the attacks of such reformers as John Hus and his friend and admirer Jerome (Hieronymus) of Prague. The errors of Hus concerned chiefly the nature of the Church (only the predestined), the papal headship, the rule of faith (Scripture and the law of Christ), Communion under both kinds (q. v. also HUSSITES), auricular confession (unnecessary),

civil authority (dependent among Christians on state of grace). More than once (e. g. 1411) Hus had appealed to a general council, and when at the opening of the Council of Constance Emperor Sigismund and King Wenceslaus of Bohemia urged him to present himself, he was not unwilling; it was made up, he knew, of ardent reformers, and he could hope by his eloquence to convert them to his own intense faith in the ideas of Wyclif. He left Prague, 11 October, 1414, in the company of three Bohemian nobles and assured of a safe-conduct (*salvus conductus*) from Emperor Sigismund. They entered Constance 3 November, where Hus took up his residence in a private house, and where (5 November) the safe-conduct was delivered to him. The day after his arrival he appeared before John XXIII, who treated him courteously, removed the censures of excommunication and interdict, but forbade him to say Mass or to preach, also to appear at public ecclesiastical functions (his thoroughly heretical and even revolutionary doctrines were long notorious and, as said above, had already been condemned at Rome). He appeared again before the pope and the cardinals, 28 November, declared himself innocent of a single error, and said he was ready to retract and do penance if convicted of any. He had continued, however, to violate the papal prohibition, said Mass daily and preached to the people present. Consequently he was the same day arrested, by order of the Bishop of Constance, and a little later (6 December) placed in the Dominican convent. On complaining of the unsanitary condition of his place of confinement he was transferred to the castle of Gottlieben, and later to the Franciscan convent at Constance (June, 1415). His examination went on during April and May, and was conducted by d'Ailly and Fillastre; in the meantime he carried on an extensive correspondence, wrote various treatises, and replied to the charges of his opponents. His Bohemian friends protested against the arrest of Hus, and exhibited the emperor's safe-conduct (but only after the arrest). Sigismund was at first wroth over the arrest, but later (1 Jan., 1415) declared that he would not prevent the council from dealing according to law with persons accused of heresy. The aforesaid condemnation (4 May) of the forty-five propositions of Wyclif foreshadowed the fate of Hus, despite the protests of Bohemians and Poles against his severe incarceration, the slanders against Bohemian faith, the delay of justice, secrecy of the proceedings, and the violation of the imperial safe-conduct (Raynaldus, ad an. 1414, no. 10). The public trial took place on 5, 7, and 8 June, 1415; extracts from his works were read, witnesses were heard. He denied some of the teachings attributed to him, defended others, notably opinions of Wyclif, declared that no Bohemian was a heretic, etc. He refused all formulæ of submission, again declared himself conscious of no error, nor, as he said, had any been proved against him from the Scriptures. He declared that he would not condemn the truth, nor perjure himself. His books were burned by order of the council (24 June). New efforts to obtain a retraction proved fruitless. He was brought for final sentence before the fifteenth session (6 July, 1415), at which the emperor assisted, and on which occasion thirty propositions, taken mostly from the work of Hus "On the Church" (*De Ecclesiâ*), were read publicly. He refused to retract anything and so was condemned as a heretic, deposed, and degraded, and handed over to the secular arm, which in turn condemned him to perish at the stake, at that time the usual legal punishment of convicted heretics. He suffered that cruel death with self-possession and courage and when about to expire cried out, it is said: "Christ, Son of the living God, have mercy on us!" His ashes were thrown into the Rhine. Owing largely to the dramatic circumstances of his death, he became at once the hero of Bohemian patriotism and the martyr-saint of

multitudes in Bohemia and elsewhere who shared his demagogic and revolutionary principles. They were surely incompatible with either the ecclesiastical or the civil order of the time, and would at any period have bred both religious and civil anarchy, had they been put into practice. As to the safe-conduct of the emperor, we must distinguish, says Dr. von Funk (*Kirchengeschichte*, 3d ed., Freiburg, 1902, p. 495, and the more recent literature there quoted; also "Der Katholik", 1898, LXXVIII, 186-90, and K. Müller, non-Catholic, in the "Hist. Vierteljahrschrift", 1898, 41-86) between the arrest of Hus at Constance and his execution. The former act was always accounted in Bohemia a violation of the safe-conduct and a breach of faith on the emperor's part; on the other hand they knew well, and so did Hus, that the safe-conduct was only a guarantee against illegal violence and could not protect him from the sentence of his legitimate judges. (On the death penalty for heresy, see Ficker, "Die gesetzliche Einführung der Todesstrafe für Häresie" in "Mittheil. d. Inst. f. cest. Geschichtsforschung", 1888, 177 sqq., and Havet, "L'hérésie et le bras séculier au moyen âge jusqu'au XIII^e siècle", Paris, 1881; see also Gosselin, "Temporal Power of the Pope in the Middle Ages", I, 85-89.) In the mediæval German codes known as the *Sachsenspiegel* (about 1225) and the *Schwabenspiegel* (about 1275), heresy is already punishable with the stake. It is not true that the council declared that no faith should be kept with a heretic (see Pallavicino, "Hist. Conc. Trid.", XII, 15, 8; Höfler in "Hist. polit. Blätter", IV, 421, and Hefele, "Concilienesch.", VII, 227, also Baudrillart, op. cit., II, 1217). In the following year Jerome (Hieronymus) of Prague, the friend of Hus, suffered the same fate at Constance. He had come voluntarily to the council in April, 1415, but soon fled the city; afterwards, mindful of the fate of Hus, he obtained from the council a safe-conduct to return for his defence. He did not appear, however, and was soon seized in Bavaria and brought in chains to Constance. In September, 1415, he abjured the forty-five propositions of Wyclif and the thirty of Hus, but did not regain his freedom, as his sincerity was suspected, and new charges were made against him. Finally, he was brought before the council, 23 May, 1416, one year after his arrest. This time he solemnly withdrew his abjuration as a sinful act and compelled by fear, and proclaimed Hus a holy and upright man. He was forthwith condemned as a heretic in the twenty-first session (30 May, 1416) and perished at the stake with no less courage than Hus. The humanist Poggio was an eyewitness of his death, and his letter to Leonardo of Arezzo, describing the scene, may be seen in Hefele, "Concilienesch.", VII, 280 sqq. The death of both Hus and Jerome of Prague affected strongly other humanists of the time; Æneas Sylvius (later Pius II) said that they went to their deaths as men invited to a banquet. The immediate consequences were grave enough, i. e. the long Utraquist wars. For an equitable criticism of the defects in the trials of both Hus and Jerome see Baudrillart in "Dict. de théol. cath.", II, 1216-17. (See also HUSSITES.)

Jean Petit (*Johannes Parvus*) and Johann von Falkenberg.—The question of the licity of tyrannicide occupied the attention of the council. The Franciscan Jean Petit (*Parvus*) had publicly defended (in nine theses) the Duke of Burgundy for his share in the murder of Louis d'Orléans (23 Nov., 1407), on the ground that any subject might kill or cause to be killed a tyrannical ruler (Kervyn de Lettenhove, *Jean sans peur et l'apologie du tyrannicide*, Brussels, 1861). After several years of discussion this thesis was condemned at Paris in 1414 by the bishop, the inquisitor, and the university. The Duke of Burgundy appealed to the Roman See. At Constance the matter was discussed in the fifteenth session (6 July, 1415); many French doctors were eager for the for-

mal condemnation of Petit and his theses, but his Franciscan brethren defended him in a common memorial; the council finally was content with condemning in a general way the proposition that, regardless of his oath and without awaiting a judicial sentence, any vassal or subject might licitly kill, or cause to be killed, a tyrant. Quite similar was the case of Johann von Falkenberg, a German Dominican, who had maintained in a violent work against the King of Poland that it was allowed to kill him and all other Poles (Mansi, Conc., XXVII, 765). Many demanded with much earnestness the condemnation of Falkenberg, but no definite sentence was pronounced, despite the ardent discussions (see TYRANNICIDE), not even in the forty-fifth (last) session when the Poles urged it on Martin V; he declared that in matters of faith he would approve only what had been decided by the holy general council *conciliariter*, i. e. by the whole council and not by one or more nations. As noted above, these words of the pope refer only to the particular (Falkenberg) matter before him and not to all the decrees of the council, even in matters of faith.

IV. ATTENDANCE AT THE COUNCIL; GENERAL CONSIDERATIONS.—Owing to its long duration the attendance at the council varied much. The highest figures reached were: 29 cardinals, 3 patriarchs, 33 archbishops, 150 bishops, 100 abbots, 50 provosts, 300 doctors (mostly of theology). It was calculated that some 5000 monks and friars were present and in all about 18,000 ecclesiastics. The visitors are variously reckoned from 50,000 to 100,000 or more. Many European sovereigns and princes were present, invited by the emperor, among them (besides Emperor Sigismund and his suite) the Electors Ludwig von der Pfalz and Rudolph of Saxony, the Dukes of Bavaria, Austria, Saxony, Schleswig, Mecklenburg, Lorraine, and Teck, the Margrave of Brandenburg, also the ambassadors of the Kings of France, England, Scotland, Denmark, Poland, Naples, and the Spanish kingdoms. Towards the end the Greek emperor, Michael Palæologus, was also present (19 Feb., 1418, with 19 Greek bishops). In some respects the council resembled more a modern Catholic congress than a traditional ecclesiastical synod. The numerous princes and nobles by their tournaments and splendid amusements; the merchants by their rich and curious wares; the travellers by their number and importance; the fringe of fakirs and mountebanks found at all popular gatherings, made Constance for the time the cynosure of all Europe and even of the Greek world. There is, of course, no reason to wonder that in so motley a throng, suddenly gathered from all quarters, moral disorders and loose living should have manifested themselves. Quite apart from the reliability or animus of some gossip chroniclers, the council was directly responsible only for its own acts and not for the life of the city of Constance. It must also be remembered that in one way or another unforeseen events and situations protracted the council beyond all ordinary prevision. Among these were: the flight of John XXIII; the lengthy process of Benedict XIII; the general jealousy and dislike of the cardinals, and in turn, the natural efforts of the latter to save the ecclesiastical constitution from thorough ruin at the unhappiest moment for the papal authority, hitherto its corner-stone; the passionate longing for a public canonical purification of Catholicism from its acknowledged abuses and excrescences (in the head and in the Roman Curia). We need not wonder that at the end of his remarkable diary of the council, Cardinal Guillaume Fillastre wrote as follows (Finke ed., *Forschungen und Quellen*, p. 242): "Hoc Constantiense concilium . . . omnibus quæ precesserunt generalibus conciliis fuit in congregando difficilissimum, in progressu singulari, mirabilis et periculosus, et tempore diuturnus", i. e. no previous council was gotten together with so much difficulty, or ran a career so unique,

marvellous and perilous, or lasted so long. From an ecclesiastical point of view, the Council of Constance may truly be said to close the medieval and to open the modern period. It was an anti-climax for the all-dominant medieval papacy, while in Sigismund (Emperor-elect, King of Hungary, heir of Bohemia, etc.) for the last time appears a pale image of the ideal office of the medieval empire. The language of its orators and its "Acta" exhibits a certain dawn of Humanism (Finke) while there for the first time modern nationalism, quite different from its medieval prototype, comes to the front, dominates the entire situation, menaces even the immemorial unity of the Church, and begins its long career of discordant relations with the central administration of Catholicism (see GALLICANISM; HONTHEIM, JOHANN). Not a few elements of the later ecclesiastical revolution under Luther (q. v.) are already visibly present at Constance. The German nation in particular remained grievously discontented with the local results of the second of the great reform councils (Pisa, Constance, Basle), and throughout the fifteenth century sought variously, but with little success, to realize the demands put forth at the Council of Constance. [See EUGENE IV; MARTIN V; SIGISMUND, EMPEROR; F. Rocquain, "La cour de Rome et l'esprit de réforme avant Luther" (Paris, 1900), also Pastor (see below), and Janssen, "Hist. of the German People", etc. POPE; PRIMACY; REFORMATION; CHURCH; TRENT, COUNCIL OF; VATICAN, COUNCILS OF THE.]

Acts of the Council.—The chief collection of the Acts of the council and pertinent documents is that of VON DER HARDT, in six folio volumes, *Magnum æcumenicum Constantiense concilium* (Frankfurt and Leipzig, 1692-1700), whence they passed into HARDOUIN (VIII) and MANSI (XXVII-XXXIII). All former editions, however, of these Acts and documents are in many ways imperfect and uncritically edited, and must give way to the (partly finished) edition of HEINRICH FINKE, *Acta Concilii Constantiensis* I. (Münster, 1896), from 1410 to 1414; *Acta Aragonensia* (1907); cf. *Zur Kritik der Akten*, etc., in his *Forschungen und Quellen* (below), 52-68; also NOËL VALOIS, in preface to Vol. III of *La France et le grand schisme d'Occident* (Paris, 1901). Many important documents are in RATNALDUS, *Ann. Eccl.*, ad ann. 1414-18; see also for important correspondence and other documents MARTÈNE and DURAND, *Thesaurus novus anecd.*, II, and DÖLLINGER, *Beiträge zur Gesch. des XV-XVI. Jahrhunderts* (Munich, 1863), II. Cf. *Deutsche Reichstagsakten*, IV-XI, from 1400 to 1438 (Munich and Gotha, 1878-1900), a very important collection of civil and ecclesiastical interest; also the writings of PIERRE D'AILLY and GERSON.

Modern Histories of the Council.—*JOSEPHINIST* (Josephinist), *Hist. du Concile de Constance* (2nd ed., Amsterdam, 1727); ROYKO (Josephinist), *Gesch. der grossen allg. Kirchenversammlung zu Costnitz* (Prague and Vienna, 1782); WESSENBERG (Febronian), *Die grossen Kirchenversammlungen des XV. und XVI. Jahrhunderts* (Constance, 1840); CREIGHTON (non-Catholic), *A History of the Papacy during the Period of the Reformation, I: The Great Schism and the Council of Constance* (London, 1882). Excellent Catholic accounts: TOSTI, *Storia del Concilio di Costanza* (Naples, 1883); HEFELE, *Conciliengesch.*, VII, 26, 66 sqq.; PASTOR, *History of the Popes*, Vol. I, bk. II; SALEMBIER, *Le grand schisme d'Occident* (Paris, 1902), 291-416, has good literature of the subject; MARMOR, *Das Konzil zu Konstanz* (ibid., 1898); BLEMMETZREDER, *Das Generalkonzil zu Konstanz* (1904).

Diaries and Chronicles.—The most important of the contemporary accounts of the council is the *Diary* of GUILLAUME FILLASTRE, Cardinal of San Marco, and a leading spirit during the entire council. Dr. Finke says (p. 77) that it is throughout trustworthy and exact (it has been edited by him from Vatican MSS. 4173 and 4175, in *Forschungen und Quellen* (below), 163-242). Among the chroniclers of the council are THEODORICUS (DIETRICH) DE VRIE, an Osnabrück Augustinian, *De consolatione Ecclesie, seu Hist. Conc. Const.*, in the first volume of VON DER HARDT; THEODORICUS (DIETRICH) VON NIEM, a well-informed but partial and vindictive writer, *De schismate libri III* ed. ERLER (Leipzig, 1890), II, *Nemus unionis* (Basle, 1566), and *Id., Historia de vita Johannis XXIII*, in the second volume of VON DER HARDT; ULRICH VON RICHENVIAL, *Chronik des Konstanzer Konzils*, ed. M. R. BUCK, in *Bibl. d. literär. Vereins in Stuttgart* (Tübingen, 1882), Vol. CLVIII.

Lives of Prominent Participants.—ÄSCHBACH, *Geschichte Kaiser Sigismunds* (Hamburg, 1838-45); JEEP, *Gerson, Wicliff und Huss* (Göttingen, 1857); LOSERTH, *J. Huss und Wicliff* (Prague, 1884); SCHWAB, *Johannes Gerson* (Würzburg, 1858); MASSON, *Jean Gerson* (Lyons, 1894); SALEMBIER, *Petrus de Ailly* (Lille, 1884); TSCHACKERT, *Petrus de Ailly* (Gotha, 1877); FAGES, *Hist. de Saint Vincent Ferrier* (2nd ed., Louvain, 1901).

Special Dissertations.—KNEER, *Die Entstehung der konziliaren Theorie* (Rome, 1893); BESS, *Studien z. Gesch. des Konstanzer Konzils* (1891), I; DENIFLE, *Les délégués des universités françaises au Concile de Constance* in *Revue des Bibliothèques* (Paris, 1892); also his *Désolation des églises, des monastères et des*

hôpitaux de France durant la guerre de cent ans (Paris, 1889); FINKE, *Forschungen und Quellen zur Geschichte des Konstanzer Konzils* (Paderborn, 1889); IDEM, *Bilder vom Konstanzer Konzil in der Almanach of the Bad. Hist. Commission for 1903*; KEPLER, *Die Politik des Kardinalskollegiums in Konstanz* (Münster, 1899); F. MÜLLER, *Der Kampf um die Autorität auf dem Konzil zu Konstanz* (Berlin, 1860); SIEBECKING, *Die Organisation u. Geschäftsordnung des Costnitzer Konzils* (Leipzig, 1875), and STUHR, *Die Organisation u. Geschäftsordnung des Pisaner u. Konst. Konzils* (Schwerin, 1891); TRUTTMANN, *Das Konkclave auf dem Konzil zu Konstanz* (Freiburg, 1899).

Encyclopedia Articles.—KPPER in *Kirchenlex.* VII, 978-1006; VOIGT-BESS in HAUCK, *Realencykl.* XI, 30-34; ZELLER in *Kirchliches Handlexikon* (Munich, 1908), II, 470 sqq.; BAUDRILLART in *Dict. de théol. cath.* (Paris, 1908), II, 1200-24.

THOMAS J. SHAHAN.

Constantia, a titular see of Arabia and suffragan of Bostra. It figures in Hierocles' "Synecdemus" about 533, in the "Notitiæ episcopatum" of Anastasius I, Patriarch of Antioch, in the sixth century, and in Georgius Cyprius' "Descriptio orbis Romani" in the beginning of the seventh century. Two bishops only are known: Chilon, present at Constantinople in 381 (Mansi, Coll. Con., III, 569; Lequien, II, 865, says wrongly at Nicæa in 325), and Solemus at Chalcedon in 451 (Mansi, VII, 168). Eubel mentions (I, 211) three Latin bishops of Constantia in Phœnicia during the fourteenth century; this city is otherwise unknown and may be our Arabian see. Waddington (*Inscriptions grecques et latines* . . . Syrie, 575) has identified with much likelihood Constantia with Brāk, north of Lcdja, in Trachonitis. Brāk had a special era, and inscriptions prove that it had been embellished by Constantine, whence it took its name Constantia (also Constantine, or Constantiana). The ruins are rather important. There have recently settled on this site some Circassian immigrants. Constantia in Arabia is not to be confounded with Constantia, a suffragan see of Amida in Mesopotamia; Constantia, or Tella, a renowned Jacobite bishopric whose ruins are at Viran-Shehir, half-way between Mardin and Edessa; nor with Constantia, or Salamis, metropolis of Cyprus.

Revue biblique (1898), VII, 96-100, 283-285.

S. VAILHÉ.

Constantine, POPE, consecrated 25 March, 708; d. 9 April, 715; a Syrian, the son of John, and "a remarkably affable man". The first half of his reign was marked by a cruel famine in Rome, the second by an extraordinary abundance. For some time he had trouble with Felix, Archbishop of Ravenna, whom he had himself consecrated. Relying on the secular power, the new bishop refused to offer the pope due obedience. It was only after he had tasted of dire misfortune that Felix submitted. Constantine received as pilgrims two Anglo-Saxon kings, Coenred of Mercia and Offa of the East Saxons. They both received the tonsure in Rome and embraced the monastic life. (Bede, *Hist. eccl.*, V, xix, xx.) St. Egwin, Bishop of Worcester, went to Rome along with them and obtained from the pope various privileges for his monastery of Evesham. ("Chron. Abbat. de Evesham" in R. S.; "St. Egwin and his Abbey of Evesham", London, 1904.) The extant documents regarding this monastery which bear this pope's name are all spurious. (They are to be found in Haddan and Stubbs, "Councils", III, 281.) But his privilege for the monasteries of Bermondsey and Woking (*ibid.*, 276) may be genuine.

In 692 the Emperor Justinian II had caused to assemble the so-called Quinisext or Trullan Council. At this assembly, which was attended only by Greek bishops, 102 canons were passed, many of which established customs opposed to those of Rome. By canon xiii the celibacy of the Greek secular clergy became a thing of the past; and by canon xxxvi a further step was taken in the direction of rendering the Patriarch of Constantinople quite independent of the Holy See. Justinian made every effort to

secure the adhesion of the popes to these decrees. But one after another they all refused. At length he sent an order to Constantine to repair to Constantinople. Leaving behind him, according to the custom at the time, the archpriest, the archdeacon, and the *Primicerius*, or chief of the notaries, to govern the Church in his absence, he set sail for the East (709) with a number of bishops and clergy. Wherever his vessel touched, he was, by Justinian's orders, received with as much honour as the emperor himself. He entered Constantinople in triumph, and at Justinian's request crossed over to Nicomedia, where he was then residing. Strange to say, this cruel prince received the pope with the greatest honour, prostrating himself before him and kissing his feet. After receiving Holy Communion at the hands of the pope, he renewed all the privileges of the Roman Church. Exactly what passed between them on the subject of the Quinisext Council is not known. It would appear, however, that Constantine approved those canons which were not opposed to the true Faith or to sound morals, and that with this qualified approval of his council the emperor was content.

Soon after Constantine's return to Rome (Oct., 711), Justinian II was dethroned by Philipppicus Bardanes. The new emperor strove to revive Monothelism, and sent a letter to the pope which the latter caused to be examined in a synod and condemned. Further, as the emperor burnt the Acts of the Sixth General Council, restored to the diptychs the names which that council had caused to be erased, re-erected their images, and removed the representation of the council which was hanging in front of the palace, the pope and the people of Rome placed in the portico of St. Peter's a series of representations of the six general councils, and refused to place the new emperor's name on their charters or their money. They also declined to place his statue, according to custom, in the official chapel of St. Cæsarius on the Palatine, the site of which has just been discovered (1907), or to pray for him in the Canon of the Mass. To punish the Romans for these daring measures, a new duke was sent to Rome, and they would no doubt have had much to suffer but for the opportune deposition of Philipppicus by the orthodox Anastasius (Whitsun Eve, 713). The new emperor made haste to dispatch to Rome, through the Exarch Scholasticus, a letter in which he professed his orthodoxy and his adhesion to the Sixth General Council, which had condemned Monothelism. Constantine also received a letter from John, the Patriarch of Constantinople, acknowledging that the "apostolical pre-eminence of the Pope is to the whole Church, what the head is to the body", and that "according to the canons he is the head of the Christian priesthood". John assured the pope that, while co-operating with the Emperor Philipppicus, he had always been orthodox at heart, and that the decree, drawn up at the council in which the heretical emperor had hoped to re-establish Monothelism (712), was really orthodox in sense, although not apparently so in words. (See John's letter in the epilogue of the Deacon Agatho, in Mansi, "Coll. Conc.", XII, 192.)

Among other distinguished men who came to Rome in the days of Constantine was Benedict, Archbishop of Milan. He came not only to pray at the shrines of the Apostles, for he was a man of such remarkable holiness that he was distinguished for it in all Italy (Paul the Deacon, *Hist.*, VI, xxix), but also to discuss with the pope as to whose immediate jurisdiction belonged the Church of Pavia. At one time, certainly in the fifth century, the bishops of Pavia were subject to the bishops of Milan and were consecrated by them. For some reason, perhaps because the Lombards made Pavia their capital, its bishops had ceased to be dependent on those of Milan, and had

become directly subject to the popes. Accordingly, when it had been proved to Benedict that for some long time at least they had been consecrated at Rome, he definitely surrendered his claim to jurisdiction over them. The visit of a pope to a city at any distance from Rome being so comparatively rare, the people of several places at which Constantine touched in his journey to and from Constantinople were only too pleased to be able to avail themselves of the opportunity of getting him to consecrate a bishop for them. It is on record that he consecrated twelve in this way, and, at the customary times and places, no less than sixty-four.

HORACE K. MANN.

Constantine (Cirta), DIOCESE OF (CONSTANTINIANA), comprises the present arrondissement of Constantine in Algeria. It was separated from the Diocese of Algiers 25 July, 1866. A pontifical Brief,

CONSTANTINE FROM THE ROCK OF THE MARTYRS

dated 1867, authorized its bishop to adopt the title of Bishop of Constantine and Hippo.

The city of Cirta, which took in the fourth century the name of its restorer, Constantine, and in which this emperor built two churches, was an episcopal see from the second century up to the time of the Mussulman invasion. The Bishops Agapius and Secundinus, the soldier Æmilianus, and the virgins Tertulla and Antonia were martyred there under Valerian (253-60). A Latin inscription cut in the rocks at the entrance to the Rummel Pass (*Corpus Inscriptionum Latinarum: Africa, 7924*) mentions Sts. Marian and James as martyrs either at Cirta or Lambesa during the same persecution. Within the territory now comprising the Diocese of Constantine there were, in the fifth century, 195 dioceses, whose titles and episcopal lists have been published by Mgr. Toulotte, among them the Diocese of Hippo, governed by St. Augustine in the fifth century. On 30 August, 1842, Mgr. Dupuch, Bishop of Algiers, brought the right arm of St. Augustine from Pavia to Hippo, and the anniversary of the translation of this precious relic is celebrated annually. A new basilica erected on the hill of Hippo, purchased by Mgr. Lavigerie in 1880, was consecrated 11 March, 1900. Prior to the enforcement of the law of 1901, there were in the diocese Lazarists, the Little Brothers of Mary, and the White Fathers; at present only the latter remain. In 1900 the diocese contained 2 foundling asylums, 22 infant asylums, 2 boys' orphanages, 4 girls' orphanages, 3 industrial schools, 2 houses of shelter, 13 hospitals and hospices, 7 dispensaries, and 15 houses of religious who care for the sick. At the close of 1905 (end of the period under the Concordat) the diocese had a population of 137,041; 5 pastorates, 67 succur-

sal parishes (mission churches), and 17 curacies remunerated by the State.

GEORGES GOYAU.

Constantine, DONATION OF. See DONATION OF CONSTANTINE.

Constantine Africanus, a medieval medical writer and teacher; born c. 1015; died c. 1087. His name, Africanus, comes from the place of his nativity, Carthage in Africa. Early in life he devoted himself to the study of medicine, and as was the custom of the times made distant journeys, some of which brought him into the Far East. He became familiar with the Oriental languages and studied Arabian literature very deeply. His studies in Arabian medicine taught him many things unknown to his Western contemporaries. On his return to Carthage this led to great jealousy on the part of his professional brethren and to so much unpleasantness, for he is even said to have been accused of practising magic, that he gladly accepted the position of secretary to Duke Robert of Salerno. Before this he was, for a short time at least, secretary of the Emperor Constantine Monomachus in Reggio, a small town near Byzantium. While in Salerno Constantine became a professor of medicine and attracted widespread attention. He remained but a few years in this position, however, and gave up his honours and his worldly goods to become a Benedictine in the monastery of Monte Cassino. He was received with open arms by the Abbot Desiderius, one of the most learned men of the time, who afterwards became Pope Victor III. Nearly twenty years of Constantine's life were spent at Monte Cassino. He occupied himself with the writing of books, being stimulated thereto by Desiderius who was his most intimate friend. His best-known work is the so-called "Liber Pantegni", which is really a translation of the "Khitaab el Maleki" of Ali Ben el-Abbas. This book he dedicated to Desiderius. He also wrote some original works, but it has been found so difficult to separate what is undoubtedly genuine from what came to be attributed to him in time, that there is no certainty as to his original contributions to medicine. With Constantine begins the second epoch of the Salernitan School of Medicine, especially notable for its translation of all the great writers on medicine, Greek as well as Arabian, and for original work of a high order. Many of the distinguished professors of the twelfth century at Salerno were proud to proclaim Constantine as their master. Of the many editions of his works the chief is that of Basle (in fol., 1536).

JAMES J. WALSH.

Constantine the Great.—His coins give his name as M., or more frequently as C., Flavius Valerius Constantinus. He was born at Naissus, now Nisch in Serbia, the son of a Roman officer, Constantius, who later became Roman Emperor, and St. Helena, a woman of humble extraction but remarkable character and unusual ability. The date of his birth is not certain, being given as early as 275 (Schiller) and as late as 288 (Otto Seeck). After his father's elevation to the dignity of Caesar we find him at the court of Diocletian and later (305) fighting under Galerius on the Danube. When, on the resignation of Diocletian and Maximian (305), his father Constantius was made Augustus, the new Emperor of the West asked Galerius, the Eastern Emperor, to let Constantine, whom he had not seen for a long time, return

to his father's court. This was reluctantly granted. Constantine joined his father, under whom he had just time to distinguish himself in Britain before death carried off Constantius (25 July, 306). Constantine was immediately proclaimed Cæsar by his troops, and his title was acknowledged by Galerius somewhat hesitatingly. This event was the first break in Diocletian's scheme of a four-headed empire (tetrarchy) and was soon followed by the proclamation in Rome of Maxentius, the son of Maximian, a tyrant and profligate, as Cæsar, October, 306.

During the wars between Maxentius and the Emperors Severus and Galerius, Constantine remained inactive in his provinces. The attempt which the old Emperors Diocletian and Maximian made, at Carmentum in 307, to restore order in the empire having failed, the promotion of Licinius to the position of Augustus, the assumption of the imperial title by Maximinus Daia, and Maxentius' claim to be sole emperor (April, 308), led to the proclamation of Constantine as Augustus. Constantine, having the most efficient army, was acknowledged as such by Galerius, who was fighting against Maximinus in the East, as well as by Licinius.

So far Constantine, who was at this time defending his own frontier against the Germans, had taken no part in the quarrels of the other claimants to the throne. But when, in 311, Galerius, the eldest Augustus and the most violent persecutor of the Christians, had died a miserable death, after cancelling his edicts against the Christians, and when Maxentius, after throwing down Constantine's statues, proclaimed him a tyrant, the latter saw that war was inevitable. Though his army was far inferior to that of Maxentius, numbering according to various statements from 25,000 to 100,000 men, while Maxentius disposed of fully 190,000, he did not hesitate to march rapidly into Italy (spring of 312). After storming Susa and almost annihilating a powerful army near Turin, he continued his march southward. At Verona he met a hostile army under the prefect of Maxentius' guard, Ruricius, who shut himself up in the fortress. While besieging the city Constantine, with a detachment of his army, boldly assailed a fresh force of the enemy coming to the relief of the besieged fortress and completely defeated it. The surrender of Verona was the consequence. In spite of the overwhelming numbers of his enemy (Seeck reckons Maxentius' army at 100,000 against 20,000 in Constantine's army) the emperor confidently marched forward to Rome. A vision had assured him that he should conquer in the sign of the Christ, and his warriors carried Christ's monogram on their shields, though the majority of them were pagans. The opposing forces met near the bridge over the Tiber called the Milvian Bridge, and here Maxentius' troops suffered a complete defeat, the tyrant himself losing his life in the Tiber (28 October, 312). Of his gratitude to the God of the Christians the victor immediately gave convincing proof; the Christian worship was henceforth tolerated throughout the empire (Edict of Milan, early in 313). His enemies he treated with the greatest magnanimity; no bloody executions followed the victory of the Milvian Bridge. Constantine stayed in Rome but a short time after his victory. Proceeding to Milan (end of 312, or beginning of 313) he met his colleague the Augustus Licinius, married his sister to him, secured his protection for the Christians in the East, and promised him support against Maximinus Daia. The last, a bigoted pagan and a cruel tyrant, who persecuted the Christians even after Galerius' death, was now defeated by Licinius, whose soldiers, by his orders, had invoked the God of the Christians on the battle-field (30 April, 313). Maximinus, in his turn, implored the God of the Christians, but died of a painful disease in the following autumn.

Of all Diocletian's tetrarchs Licinius was now the

only survivor. His treachery soon compelled Constantine to make war on him. Pushing forward with his wonted impetuosity, the emperor struck him a decisive blow at Cibalæ (8 October, 314). But Licinius was able to recover himself, and the battle fought between the two rivals at Castra Jarba (November, 314) left the two armies in such a position that both parties thought it best to make peace. For ten years the peace lasted, but when, about 322, Licinius, not content with openly professing paganism, began to persecute the Christians, while at the same time he treated with contempt Constantine's undoubted rights and privileges, the outbreak of war was certain, and Constantine gathered an army of 125,000 infantry and 10,000 cavalry, besides a fleet of 200 vessels to gain control of the Bosphorus. Licinius, on the other hand, by leaving the eastern boundaries of the empire undefended succeeded in collecting an even more numerous army, made up of 150,000 infantry and 15,000 cavalry, while his fleet consisted of no fewer than 350 ships. The opposing armies met at Adrianople, 3 July, 324, and Constantine's well disciplined troops defeated and put to flight the less disciplined forces of Licinius. Licinius strengthened the garrison of Byzantium so that an attack seemed likely to result in failure, and the only hope of taking the fortress lay in a blockade and famine. This required the assistance of Constantine's fleet, but his opponent's ships barred the way. A sea fight at the entrance to the Dardanelles was indecisive, and Constantine's detachment retired to Elains, where it joined the bulk of his fleet. When the fleet of the Licinian admiral Abantus pursued on the following day, it was overtaken by a violent storm which destroyed 130 ships and 5000 men. Constantine crossed the Bosphorus, leaving a sufficient corps to maintain the blockade of Byzantium, and overtook his opponent's main body at Chrysopolis, near Chalcedon. Again he inflicted on him a crushing defeat, killing 25,000 men and scattering the greater part of the remainder. Licinius with 30,000 men escaped to Nicomedia. But he now saw that further resistance was useless. He surrendered at discretion, and his noble-hearted conqueror spared his life. But when, in the following year (325), Licinius renewed his treacherous practices he was condemned to death by the Roman Senate and executed.

Henceforth, Constantine was sole master of the Roman Empire. Shortly after the defeat of Licinius, Constantine determined to make Constantinople the future capital of the empire, and with his usual energy he took every measure to enlarge, strengthen, and beautify it. For the next ten years of his reign he devoted himself to promoting the moral, political, and economical welfare of his possessions and made dispositions for the future government of the empire. While he placed his nephews, Dalmatius and Hannibalianus in charge of lesser provinces, he designated his sons Constantius, Constantine, and Constans as the future rulers of the empire. Not long before his end,

EMPEROR CONSTANTINE, ROME

the hostile movement of the Persian king, Shápúr, again summoned him into the field. When he was about to march against the enemy he was seized with an illness of which he died in May, 337, after receiving baptism.

CHARLES G. HERBERMANN.

HISTORICAL APPRECIATION.—Constantine can rightfully claim the title of *Great*, for he turned the history of the world into a new course and made Christianity, which until then had suffered bloody persecution, the religion of the State. It is true that the deeper reasons for this change are to be found in the religious movement of the time, but these reasons were hardly imperative, as the Christians formed only a small portion of the population, being a fifth part in the West and the half of the population in a large section of the East. Constantine's decision depended less on general conditions than on a personal act; his personality, therefore, deserves careful consideration.

Long before this, belief in the old polytheism had been shaken; in more stolid natures, as Diocletian, it showed its strength only in the form of superstition, magic, and divination. The world was fully ripe for monotheism or its modified form, henotheism, but this monotheism offered itself in varied guises, under the forms of various Oriental religions: in the worship of the sun, in the veneration of Mithras, in Judaism, and in Christianity. Whoever wished to avoid making a violent break with the past and his surroundings sought out some Oriental form of worship which did not demand from him too severe a sacrifice; in such cases Christianity naturally came last. Probably many of the more noble-minded recognized the truth contained in Judaism and Christianity, but believed that they could appropriate it without being obliged on that account to renounce the beauty of other worships. Such a man was the Emperor Alexander Severus; another thus minded was Aurelian, whose opinions were confirmed by Christians like Paul of Samosata. Not only Gnostics and other heretics, but Christians who considered themselves faithful, held in a measure to the worship of the sun. Leo the Great in his day says that it was the custom of many Christians to stand on the steps of the church of St. Peter and pay homage to the sun by obeisance and prayers (cf. Euseb. Alexand. in Mai, "Nov. Patr. Bibl.", II, 523; Augustine, "Enarratio in Ps. x"; Leo I, Serm. xxvi; Grupp, "Kulturgeschichte der römischen Kaiserzeit", II, 130, 317, 348). When such conditions prevailed it is easy to understand that many of the emperors yielded to the delusion that they could unite all their subjects in the adoration of the one sun-god who combined in himself the Father-God of the Christians and the much-worshipped Mithras; thus the empire could be founded anew on unity of religion. Even Constantine, as will be shown farther on, for a time cherished this mistaken belief. It looks almost as though the last persecutions of the Christians were directed more against all irreconcilables and extremists than against the great body of Christians. The policy of the emperors was not a consistent one; Diocletian was at first friendly towards Christianity; even its grimmest foe, Julian, wavered. Cæsar Constantius, Constantine's father, protected the Christians during a most cruel persecution.

Constantine grew up under the influence of his father's ideas. He was the son of Constantius Chlorus by his first, informal marriage, called *concubinatus*, with Helena, a woman of inferior birth. For a short time Constantine had been compelled to stay at the court of Galerius, and had evidently not received a good impression from his surroundings there. When Diocletian retired, Constantius advanced from the position of Cæsar to that of Augustus, and the army, against the wishes of the other emperors, raised

the young Constantine to the vacant position. Right here was seen at once how unsuccessful would be the artificial system of division of the empire and succession to the throne by which Diocletian sought to frustrate the overweening power of the Prætorian Guard. Diocletian's personality is full of contradictions; he was just as crude in his religious feelings as he was shrewd and far-seeing in state affairs; a man of autocratic nature, but one who, under certain circumstances, voluntarily set bounds to himself. He began a reconstruction of the empire, which Constantine completed. The existence of the empire was threatened by many serious evils, the lack of national and religious unity, its financial and military weakness. Consequently the system of taxation had to be accommodated to the revived economic barter system. The taxes bore most heavily on the peasants, the peasant communities, and the landed proprietors; increasingly heavy compulsory service was also laid on those engaged in industrial pursuits, and they were therefore combined into state guilds. The army was strengthened, the troops on the frontier being increased to 360,000 men. In addition, the tribes living on the frontiers were taken into the pay of the State as allies, many cities were fortified, and new fortresses and garrisons were established, bringing soldiers and civilians more into contact, contrary to the old Roman axiom. When a frontier was endangered the household troops took the field. This body of soldiers, known as *pala-tini*, *comitatenses*, which had taken the place of the Prætorian Guard, numbered not quite 200,000 men (sometimes given as 194,500). A good postal service maintained constant communication between the different parts of the empire. The civil and military administration were, perhaps, somewhat more sharply divided than before, but an equally increased importance was laid on the military capacity of all state officials. Service at court was termed *militia*, "military service". Over all, like to a god, was enthroned the emperor, and the imperial dignity was surrounded by a halo, a sacredness, a ceremonial, which was borrowed from the Oriental theocracies. The East from the earliest times had been a favourable soil for theocratic government; each ruler was believed by his people to be in direct communication with the god-head, and the law of the State was regarded as revealed law. In the same manner the emperors allowed themselves to be venerated as holy oracles and deities, and everything connected with them was called sacred. Instead of *imperial*, the word *sacred* had now always to be used. A large court-retinue, elaborate court-ceremonials, and an ostentatious court-costume made access to the emperor more difficult. Whoever wished to approach the head of the State must first pass through many ante-rooms and prostrate himself before the emperor as before a divinity. As the old Roman population had no liking for such ceremonial, the emperors showed a constantly increasing preference for the East, where monotheism held almost undisputed sway, and where, besides, economic conditions were better. Rome was no longer able to control the whole of the great empire with its peculiar civilizations.

In all directions new and vigorous national forces began to show themselves. Only two policies were possible: either to give way to the various national movements, or to take a firm stand on the foundation of antiquity, to revive old Roman principles, the ancient military severity, and the patriotism of Old Rome. Several emperors had tried to follow this latter course, but in vain. It was just as impossible to bring men back to the old simplicity as to make them return to the old pagan beliefs and to the national form of worship. Consequently, the empire had to identify itself with the progressive movement, employ as far as possible the existing resources of national life, exercise tolerance, make concessions to

the new religious tendencies, and receive the Germanic tribes into the empire. This conviction constantly spread, especially as Constantine's father had obtained good results therefrom. In Gaul, Britain, and Spain, where Constantius Chlorus ruled, peace and contentment prevailed, and the prosperity of the provinces visibly increased, while in the East prosperity was undermined by the existing confusion and instability. But it was especially in the western part of the empire that the veneration of Mithras predominated. Would it not be possible to gather all the different nationalities around his altars? Could not *Sol Deus Invictus*, to whom even Constantine dedicated his coins for a long time, or *Sol Mithras Deus Invictus*, venerated by Diocletian and Galerius, become the supreme god of the empire? Constantine may have pondered over this. Nor had he absolutely rejected the thought even after a miraculous event had strongly influenced him in favour of the God of the Christians.

In deciding for Christianity he was no doubt also influenced by reasons of conscience—reasons resulting from the impression made on every unprejudiced person both by the Christians and by the moral force of Christianity, and from the practical knowledge which the emperors had of the Christian military officers and state officials. These reasons are, however, not mentioned in history, which gives the chief prominence to a miraculous event. Before Constantine advanced against his rival Maxentius, according to ancient custom he summoned the haruspices, who prophesied disaster; so reports a pagan panegyrist. But when the gods would not aid him, continues this writer, one particular god urged him on, for Constantine had close relations with the divinity itself. Under what form this connexion with the deity manifested itself is told by Lactantius (*De mort. persec.*, ch. xlv) and Eusebius (*Vita Const.*, I, xxvi-xxxi). He saw, according to the one in a dream, according to the other in a vision, a heavenly manifestation, a brilliant light in which he believed he described the cross or the monogram of Christ. Strengthened by this apparition, he advanced courageously to battle, defeated his rival, and won the supreme power. It was the result that gave to this vision its full importance, for when the emperor afterwards reflected on the event it was clear to him that the cross bore the inscription: *HOC VINCES* (in this sign wilt thou conquer). A monogram combining the first letters, X and P, of the name of Christ ($\chi\rho\iota\varsigma\tau\omicron\varsigma$), a form that cannot be proved to have been used by Christians before, was made one of the tokens of the standard and placed upon the *Labarum* (q. v.). In addition, this ensign was placed in the hand of a statue of the emperor at Rome, the pedestal of which bore the inscription: "By the aid of this salutary token of strength I have freed my city from the yoke of tyranny and restored to the Roman Senate and People the ancient splendour and glory." Directly after his victory Constantine granted tolerance to the Christians and next year (313) took a further step in their favour. In 313 Licinius and he issued at Milan the famous joint edict of tolerance. This declared that the two emperors had deliberated as to what would be advantageous for the security and welfare of the empire and had, above all, taken into consideration the service which man owed to the "deity". Therefore they had decided to grant Christians and all others freedom in the exercise of religion. Everyone might follow that religion which he considered the best. They hoped that "the deity enthroned in heaven" would grant favour and protection to the emperors and their subjects. This was in itself quite enough to throw the pagans into the greatest astonishment. When the wording of the edict is carefully examined there is clear evidence of an effort to express the new thought in a manner too unmistakable to leave any doubt. The edict contains more than the belief, to which

Galerius at the end had given voice, that the persecutions were useless, and it granted the Christians freedom of worship, while at the same time it endeavoured not to affront the pagans. Without doubt the term *deity* was deliberately chosen, for it does not exclude a heathen interpretation. The cautious expression probably originated in the imperial chancery, where pagan conceptions and pagan forms of expression still lasted for a long time. Nevertheless the change from the bloody persecution of Christianity to the toleration of it, a step which implied its recognition, may have startled many heathens and may have excited in them the same astonishment that a German would feel if an emperor who was a Social Democrat were to seize the reins of government. The foundations of the State would seem to such a one to rock. The Christians also may have been taken aback. Before this, it is true, it had occurred to Melito of Sardes (Euse-

ARCH OF CONSTANTINE, ROME

bis, *Hist. Eccl.*, IV, xxxiii) that the emperor might some day become a Christian, but Tertullian had thought otherwise, and had written (*Apol.*, xxi) the memorable sentence: "*Sed et Cæsares credidissent super Christo, si aut Cæsares non essent sæculo necessarii, aut si et Christiani potuissent esse Cæsares*" (But the Cæsars also would have believed in Christ, if either the Cæsars had not been necessary to the world or if Christians too could have been Cæsars). The same opinion was held by St. Justin (I, xii; II, xv). That the empire should become Christian seemed to Justin and many others an impossibility, and they were just as little in the wrong as the optimists were in the right. At all events, a happy day now dawned for the Christians. They must have felt as did the persecuted in the time of the French Revolution when Robespierre finally fell and the Reign of Terror was over. The feeling of emancipation from danger is touchingly expressed in the treatise ascribed to Lactantius (*De mortibus persecut.*, in P. L., VII, 52), concerning the ways in which death overtook the persecutors. It says: "We should now give thanks to the Lord, Who has gathered together the flock that was devastated by ravening wolves, Who has exterminated the wild beasts which drove it from the pasture. Where is now the swarming multitude of our enemies, where the hangmen of Diocletian and Maximian? God has swept them from the earth; let us therefore celebrate His triumph with joy; let us observe the victory of the Lord with songs of praise, and honour Him with prayer day and night, so that the peace which we have received again after ten years of misery may be preserved to us." The imprisoned Christians were released from the prisons and mines, and were received by their brethren in the Faith with acclamations of joy; the churches were again filled, and those who had fallen away sought forgiveness.

For a time it seemed as if merely tolerance and equality were to prevail. Constantine showed equal favour to both religious. As pontifex maximus he watched over the heathen worship and protected its rights. The one thing he did was to suppress divination and magic; this the heathen emperors had also at times sought to do. Thus, in 320, the emperor forbade the diviners or haruspices to enter a private house under pain of death. Whoever by entreaty or promise of payment persuaded a haruspex to break this law, that man's property should be confiscated and he himself should be burned to death. Informers were to be rewarded. Whoever desired to practise heathen usages must do so openly. He must go to the public altars and sacred places, and there observe traditional forms of worship. "We do not forbid," said the emperor, "the observance of the old usages in the light of day." And in an ordinance of the same year, intended for the Roman city prefects, Constantine directed that if lightning struck an imperial palace, or a public building, the haruspices were to seek out according to ancient custom what the sign might signify, and their interpretation was to be written down and reported to the emperor. It was also permitted to private individuals to make use of this old custom, but in following this observance they must abstain from the forbidden *sacrificia domestica*. A general prohibition of the family sacrifice cannot be deduced from this, although in 341 Constantine's son Constantius refers to such an interdict by his father (Cod. Theod., XVI, x, 2). A prohibition of this kind would have had the most severe and far-reaching results, for most sacrifices were private ones. And how could it have been carried out while public sacrifices were still customary? In the dedication of Constantinople in 330 a ceremonial half pagan, half Christian was used. The chariot of the sun-god was set in the market-place, and over its head was placed the Cross of Christ, while the Kyrie Eleison was sung. Shortly before his death Constantine confirmed the privileges of the priests of the ancient gods. Many other actions of his have also the appearance of half-measures, as if he himself had wavered and had always held in reality to some form of syncretistic religion. Thus he commanded the heathen troops to make use of a prayer in which any monotheist could join, and which ran thus: "We acknowledge thee alone as god and king, we call upon thee as our helper. From thee have we received the victory, by thee have we overcome the foe. To thee we owe that good which we have received up to now, from thee do we hope for it in the future. To thee we offer our entreaties and implore thee that thou wilt preserve to us our emperor Constantine and his god-fearing sons for many years uninjured and victorious." The emperor went at least one step further when he withdrew his statue from the pagan temples, forbade the repair of temples that had fallen into decay, and suppressed offensive forms of worship. But these measures did not go beyond the syncretistic tendency which Constantine had shown for a long time. Yet he must have perceived more and more clearly that syncretism was impossible.

In the same way religious freedom and tolerance could not continue as a form of equality; the age was not ready for such a conception. It is true that Christian writers defended religious liberty; thus Tertullian said that religion forbids religious compulsion (Non est religionis cogere religionem quæ sponte suscipi debet non vi.—"Ad Scapulam", near the close); and Lactantius, moreover, declared: "In order to defend religion man must be willing to die, but not to kill." Origen also took up the cause of freedom. Most probably oppression and persecution had made men realize that to have one's way of thinking, one's conception of the world and of life, dictated to him was a mischief-working compulsion. In contrast to the

smothering violence of the ancient State, and to the power and custom of public opinion, the Christians were the defenders of freedom, but not of individual subjective freedom, nor of freedom of conscience as understood to-day. And even if the Church had recognized this form of freedom, the State could not have remained tolerant. Without realizing the full import of his actions, Constantine granted the Church one privilege after another. As early as 313 the Church obtained immunity for its ecclesiastics, including freedom from taxation and compulsory service, and from obligatory state offices—such for example as the curial dignity, which was a heavy burden. The Church further obtained the right to inherit property, and Constantine moreover placed Sunday under the protection of the State. It is true that the believers in Mithras also observed Sunday as well as Christmas. Consequently Constantine speaks not of the day of the Lord, but of the everlasting day of the sun. According to Eusebius, the heathen also were obliged on this day to go out into the open country and together raise their hands and repeat the prayer already mentioned, a prayer without any marked Christian character (Vita Const., IV, xx). The emperor granted many privileges to the Church for the reason that it took care of the poor and was active in benevolence. Perhaps he showed his Christian tendencies most pronouncedly in removing the legal disabilities which, since the time of Augustus, had rested on celibacy, leaving in existence only the *leges decimarie*, and in recognizing an extensive ecclesiastical jurisdiction. But it should not be forgotten that the Jewish communities had also their own jurisdiction, exemptions, and immunities, even if in a more limited degree. A law of 318 denied the competence of civil courts if in a suit an appeal was made to the court of a Christian bishop. Even after a suit had begun before the civil court, it would still be permissible for one of the parties to transfer it to the bishop's court. If both parties had been granted a legal hearing, the decision of the bishop was to be binding. A law of 333 commanded the state officials to enforce the decisions of the bishops; a bishop's testimony should be considered sufficient by all judges, and no witness was to be summoned after a bishop had testified. These concessions were so far-reaching that the Church itself felt the great increase of its jurisdiction as a constraint. Later emperors limited this jurisdiction to cases of voluntary submission by both parties to the episcopal court.

Constantine did much for children, slaves, and women, those weaker members of society whom the old Roman law had treated harshly. But in this he only continued what earlier emperors, under the influence of Stoicism, had begun before him, and he left to his successors the actual work of their emancipation. Thus some emperors who reigned before Constantine had forbidden the exposure of children, although without success, as exposed children or foundlings were readily adopted, because they could be used for many purposes. The Christians especially exerted themselves to get possession of such foundlings, and consequently Constantine issued no direct prohibition of exposure, although the Christians regarded exposure as equal to murder; he commanded, instead, that foundlings should belong to the finder, and did not permit the parents to claim the children they had exposed. Those who took such children obtained a property right in them and could make quite an extensive use of this; they were allowed to sell and enslave foundlings, until Justinian prohibited such enslaving under any guise. Even in the time of St. Chrysostom parents mutilated their children for the sake of gain. When suffering from famine or debt, many parents could only obtain relief by selling their children if they did not wish to sell themselves. All later laws against such practices

availed as little as those against emasculation and pandering. St. Ambrose vividly depicts the sad spectacle of children being sold by their fathers, under pressure of creditors, or by the creditors themselves. All the many forms of institutions for feeding and supporting children and the poor were of little avail. Constantine himself established asylums for foundlings; yet he recognized the right of parents to sell their children, and only excepted older children. He ruled that children who had been sold could be bought back, in contradistinction to children who had been exposed; but this ruling was of no avail if the children were taken into a foreign country. Valentinian, therefore, prohibited the traffic in human beings with foreign lands. The laws forbidding such practices continually multiplied, but the greater part of the burden of saving the children fell on the Church.

Constantine was the first to prohibit the abduction of girls. The abductor and those who aided him by influencing the girl were threatened with severe punishment. In harmony with the views of the Church, Constantine rendered divorce more difficult; he made no changes where the divorce was agreed to by both parties, but imposed severe conditions when the demand for separation came from one side only. A man could put away his wife for adultery, poisoning, and pandering, and retain her dowry; but if he discarded her for any other cause, he was to return the dowry and was forbidden to marry again. If, nevertheless, he remarried, the discarded wife had the right to enter his house and take everything which the new wife had brought him. Constantine increased the severity of the earlier law forbidding the concubinage of a free woman with a slave, and the Church did not regard this measure with disfavour. On the other hand, his retention of the distinctions of rank in the marriage law was clearly contrary to the views of the Church. The Church rejected all class distinctions in marriage, and regarded informal marriages (the so-called *concubinatus*) as true marriages, in so far as they were lasting and monogamous. Constantine, however, increased the difficulties of the *concubinatus*, and forbade senators and the higher officials in the State and in the pagan priesthoods to contract such unions with women of lower rank (*femine humiles*), thus making it impossible for them to marry women belonging to the lower classes, although his own mother was of inferior rank. But in other respects the emperor showed his mother, Helena, the greatest deference. Other *concubinatus* besides those mentioned were placed at a disadvantage in regard to property, and the rights of inheritance of the children and the concubines were restricted. Constantine, however, encouraged the emancipation of slaves and enacted that manumission in the church should have the same force as the public manumission before State officials and by will (321). Neither the Christian nor the heathen emperors permitted slaves to seek their freedom without authorization of law; the Christian rulers sought to ameliorate slavery by limiting the power of corporal punishment; the master was allowed only to use a rod or to send a slave to prison, and the owner was not liable to punishment even if the slave died under these circumstances. But if death resulted from the use of clubs, stones, weapons, or instruments of torture, the person who caused the death was to be treated as a murderer. As will be seen below, Constantine was himself obliged to observe this law when he sought to get rid of Licinianus. A criminal was no longer to be branded in the face, but only on the feet, as the human face was fashioned in the likeness of God.

When these laws are compared with the ordinances of those earlier emperors who were of humane disposition, they do not go far beyond the older regulations. In everything not referring to religion Constantine followed in the footsteps of Diocletian. In spite of all

unfortunate experiences, he adhered to the artificial division of the empire, tried for a long time to avoid a breach with Licinius, and divided the empire among his sons. On the other hand, the imperial power was increased by receiving a religious consecration. The Church tolerated the cult of the emperor under many forms. It was permitted to speak of the divinity of the emperor, of the sacred palace, the sacred chamber, and of the altar of the emperor, without being considered on this account an idolater. From this point of view Constantine's religious change was relatively trifling; it consisted of little more than the renunciation of a formality. For what his predecessors had aimed to attain by the use of all their authority, and at the cost of incessant bloodshed, was in truth only the recognition of their own divinity; Constantine gained this end, though he renounced the offering of sacrifices to himself. Some bishops, blinded by the splendour of the court, even went so far as to laud the emperor as an angel of God, as a sacred being, and to prophesy that he would, like the Son of God, reign in heaven. It has consequently been asserted that Constantine favoured Christianity merely from political motives, and he has been regarded as an enlightened despot who made use of religion only to advance his policy. He certainly cannot be acquitted of grasping ambition. Where the policy of the State required, he could be cruel. Even after his conversion he caused the execution of his brother-in-law Licinius, and of the latter's son, as well as of Crispus his own son by his first marriage, and of his wife Fausta. He quarrelled with his colleague Licinius about their religious policy, and in 323 defeated him in a bloody battle; Licinius surrendered on the promise of personal safety; notwithstanding this, half a year later he was strangled by order of Constantine. During the joint reign Licinianus, the son of Licinius, and Crispus, the son of Constantine, had been the two Cæsars. Both were gradually set aside; Crispus was executed on the charge of immorality made against him by Constantine's second wife, Fausta. The charge was false, as Constantine learned from his mother, Helena, after the deed was done. In punishment Fausta was suffocated in a superheated bath. The young Licinianus was flogged to death. Because Licinianus was not the son of his sister, but of a slave-woman, Constantine treated him as a slave. In this way Constantine evaded his own law regarding the mutilation of slaves. After reading these cruelties it is hard to believe that the same emperor could at times have mild and tender impulses; but human nature is full of contradictions.

Constantine was liberal to prodigality, was generous in almsgiving, and adorned the Christian churches magnificently. He paid more attention to literature and art than we might expect from an emperor of this period, although this was partly due to vanity, as is proved by his appreciation of the dedication of literary works to him. It is likely that he practised the fine arts himself, and he frequently preached to those around him. No doubt he was endowed with a strong religious sense, was sincerely pious, and delighted to be represented in an attitude of prayer, with his eyes raised to heaven. In his palace he had a chapel to which he was fond of retiring, and where he read the Bible and prayed. "Every day", Eusebius tells us, "at a fixed hour he shut himself up in the most secluded part of the palace, as if to assist at the Sacred Mysteries, and there commune with God alone, ardently beseeching Him, on bended knees, for his necessities". As a catechumen he was not permitted to assist at the sacred Eucharistic mysteries. He remained a catechumen to the end of his life, but not because he lacked conviction nor because, owing to his passionate disposition, he desired to lead a pagan life. He obeyed as strictly as possible the precepts of Christianity, observing especially the virtue of chastity, which his parents had impressed upon him; he

respected celibacy, freed it from legal disadvantages, sought to elevate morality, and punished with great severity the offences against morals which the pagan worship had encouraged. He brought up his children as Christians. Thus his life became more and more Christian, and thus gradually turned away from the feeble syncretism which at times he seemed to favour. The God of the Christians was indeed a jealous God who tolerated no other gods beside him. The Church could never acknowledge that she stood on the same plane with other religious bodies; she conquered for herself one domain after another.

Constantine himself preferred the company of Christian bishops to that of pagan priests. The emperor frequently invited the bishops to court, gave them the use of the imperial postal service, invited them to his table, called them his brothers, and when they had suffered for the Faith, kissed their scars. While he chose bishops for his counsellors, they, on the other hand, often requested his intervention—e. g. shortly after 313, in the Donatist dispute. For many years he worried himself with the Arian trouble, and in this, it may be said, he went beyond the limits of the allowable, for example, when he dictated whom Athanasius should admit to the Church and whom he was to exclude. Still he avoided any direct interference with dogma, and only sought to carry out what the proper authorities—the synods—decided. When he appeared at an œcumenical council, it was not so much to influence the deliberation and the decision as to show his strong interest and to impress the heathen. He banished bishops only to avoid strife and discord, that is, for reasons of state. He opposed Athanasius because he was led to believe that Athanasius desired to detain the corn-ships which were intended for Constantinople; Constantine's alarm can be understood when we bear in mind how powerful the patriarchs eventually became. When at last he felt the approach of death he received baptism, declaring to the bishops who had assembled around him that, after the example of Christ, he had desired to receive the saving seal in the Jordan, but that God had ordained otherwise, and he would no longer delay baptism. Laying aside the purple, the emperor, in the white robe of a neophyte, peacefully and almost joyfully awaited the end.

Of Constantine's sons the eldest, Constantine II, showed decided leanings to heathenism, and his coins bear many pagan emblems; the second and favourite son, Constantius, was a more pronounced Christian, but it was Arian Christianity to which he adhered. Constantius was an unwavering opponent of paganism; he closed all the temples and forbade sacrifices under pain of death. His maxim was: "Cesset superstitio; sacrificiorum aboleatur insania" (Let superstition cease; let the folly of sacrifices be abolished). Their successors had recourse to religious persecution against heretics and pagans. Their laws (Cod. Theod., XVI, v) had an unfavourable influence on the Middle Ages and were the basis of the much-abused Inquisition. (See PERSECUTIONS; CONSTANTINOPLE; ROMAN EMPIRE.)

Constantinople (Gr. Κωνσταντινούπολις, city of Constantine), capital, formerly of the Byzantine, now of the Ottoman, Empire.

THE MODERN CITY.—It occupies one of the most beautiful and advantageous sites in the world, uniting as it does Europe with Asia and putting in communication the Black Sea and all Southern Russia with the greater part of Europe and Asia, and even with distant America. It is surrounded by water on all sides except the west, which is protected by walls. Its sea front is about eight miles in length. The air is generally pure, and the climate very temperate. Constantinople forms a special district (sanitary cordon) divided into three principal sections, two in Europe and one in Asia. The two European sections are Stamboul (ancient Byzantium), whose suburbs border the Sea of Marmora; Galata and Pera, more or less Europeanized quarters, with many villages rising in rows along the green hills that look down on the Golden Horn and the Bosphorus. The Asiatic section is Scutari (Turk. Uskudar; Chrysopolis) and Kadi-Keui (Chalcedon), with their extensive suburbs on the Asiatic shore of the Bosphorus, the pleasant coasts of the Gulf of Nicomedia, and the Isles of the Princes. The city is divided into ten quarters or circles, each with its own municipality. The population is estimated (1908) at 1,200,000 inhabitants, four-fifths of whom are in Europe. There are about 600,000 Turks or other Mussulmans; the remainder include, in order of numerical importance, Greeks, Armenians, Jews, and foreigners of various nationalities.

The Bosphorus separates Europe from Asia; it is about eighteen miles long and varies in width from about half a mile to a mile and a half. The Golden Horn separates Stamboul from Galata and Pera, extends inland for about four and one-half miles, and ends abruptly at the Valley of the Sweet Waters beyond Eyoub. Two wooden bridges unite Galata with Stamboul, which latter section is mostly inhabited by Turks, and still preserves its ancient ramparts with their towers and gates. The chief monuments of the city are: St. Sophia, the magnificent church built in the first half of the sixth century by the Emperor Justinian, now a mosque; about 2000 other mosques (e. g. the Suleimanieh, the Ahmedieh, the Bayazidieh, Mohammed's mosque, etc.); many ancient churches; beautiful fountains; imposing "türbés", or tombs of sultans and other great personages; the Seraskier or war office, with its enormous tower; the Tcharshi, or bazaar (more than 10,000 merchants); Yedi-Kouleh or the Seven Towers Castle, where ambassadors and other men of note were often imprisoned; the palace of the public debt; the large postoffice; the old seraglio of the sultans. The imperial museum has a remarkable collection of sarcophagi and another of cuneiform texts. In the Galata section the Genoese Tower (over 150 feet) attracts attention, as in Pera the residences of the ambassadors. Beyond, on the European shore of the Bosphorus are the large palaces of Dolma-Baghtché and Tcheragan, also the Yildiz Kiosk, the residence of the reigning sultan. On the Asiatic shore are the palace of Beylerbey, many beautiful mosques, and the great Mussulman cemetery at Scutari, the Selimieh barracks (largest in the world), the magnificent new school of medicine, quite close to which is the little port of Haidar-Pasha, whence starts the railway line to Bagdad.

EARLY HISTORY OF BYZANTIUM.—Constantinople was founded c. 658 B. C. by a Greek colony from Megara; the site was then occupied by the Thracian village of Lygos. The chief of the Megarian expedition was Byzas, after whom the city was naturally called Byzantium (Lat. Byzantium). Despite its perfect situation, the colony did not prosper at first; it suffered much during the Mediæ wars, chiefly from the satraps of Darius and Xerxes. Later on, its control was disputed by Lacedæmonians and Athenians; for

two years (341-339 B. C.) it held out against Philip of Macedon. It succeeded in maintaining its independence even against victorious Rome, was granted the title and rights of an allied city, and its ambassadors were accorded at Rome the same honours as those given to allied kings; it enjoyed, moreover, all transit duties on the Bosphorus. Cicero defended it in the Roman Senate, and put an end to the exactions of Piso. Later on, the Roman emperors entrusted the government of the city to prætors, at once civil and military magistrates, who maintained, however, the earlier democratic forms of government. For a while Vespasian placed it under the Governor of Moesia. The city continued prosperous to the reign of Septimius Severus, when it sided with his rival, Pescennius Niger. After a siege of three years (193-196) Severus razed to the ground its walls and public monuments, and made it subject to Perinthus or Heraclea in Thrace. But he soon forgave this resistance, restored its former privileges, built there the baths of Zeuxippus, and began the hippodrome. It was devastated again by the soldiers of Gallienus in 262, but was rebuilt almost at once. In the long war between Constantine and Licinius (314-323) it embraced the fortunes of the latter, but, after his defeat at Chrysopolis (Scutari), submitted to the victor.

THE CHRISTIAN CITY.—It has quite lately been established that Byzantium received its new name of Constantinople as early as the end of 324 (*Centenaire de la société nationale des antiquaires de France*, Paris, 1904, p. 281 sqq.). Nevertheless, the solemn inauguration of the new city did not occur until 11 May, 330; only after this date did the Court and Government settle permanently in the new capital. It was soon filled with sumptuous edifices like those of Rome; like the latter it was situated on seven hills and divided into fourteen regions; in the matter of privileges also it was similar to Rome. Among the new public buildings were a senate house, forums, a capitol, circuses, porticoes, many churches (particularly that of the Holy Apostles destined to be the burial-place of the emperors). The most beautiful statues of antiquity were gathered from various parts of the empire to adorn its public places. In general the other cities of the Roman world were stripped to embellish the "New Rome", destined henceforth to surpass them all in greatness and magnificence. Traces of Christianity do not appear here before the end of the second or the beginning of the third century. In 212 Tertullian commemorates the joy of the Christians at the defeat of Pescennius Niger (*"Ad Scapulam"*, iii: "Cæcilius Capella in illo exitu Byzantino: Christiani gaudete"). About 190, an Antitrinitarian heretic, Theodotus the Currier, a native of Byzantium, was expelled from the Roman Church (*"Philosophoumena"*, VIII, xxxv; St. Epiphanius, *"Adv. Hær."*, liv). A probably reliable tradition makes the Byzantine Church a suffragan of Heraclea in Thrace at the beginning of the third century. In the fifth century we meet with a spurious document attributed to a certain Dorotheus, Bishop of Tyre at the end of the third century, according to which the Church of Byzantium was founded by the Apostle St. Andrew, its first bishop being his disciple Stachys (cf. *Rom.*, xvi, 9). The intention of the forger is plain: in this way the Church of Rome is made inferior to that of Constantinople, St. Andrew having been chosen an Apostle by Jesus before his brother St. Peter, the founder of the Roman Church.

The first historically known Bishop of Byzantium is St. Metrophanes (306-314), though the see had perhaps been occupied during the third century. It was at first subject to the metropolitan authority of Heraclea, and remained so, at least canonically, until 381, when the Second Œcumenical Council (can. iii) gave the Bishop of Constantinople the first place after the Bishop of Rome. (For the exact meaning of this

canon see Hefele, *Hist. des Councils*, tr., Leclercq, Paris, 1908, II, 24-27.) Fuller details are given in Fischer, *"De patriarcharum Constantinopolitanorum"* catalogis (Leipzig, 1894); Schermann, *"Proppheten- und Apostellegenden nebst Jünger-katalogen des Dorotheus und verwandter Texte"* (Leipzig, 1907); Vailhé, *"Origines de l'Eglise de Constantinople"* in *"Echos d'Orient"* (Paris, 1907), 287-295.

Constantine had chosen this city as the new capital of the Roman Empire, but owing to his wars and the needs of the State, he rarely resided there. His successors were even more frequently absent. Constantius, Julian, Jovian, and Valens are found more habitually on the Danube or the Euphrates than on the Bosphorus; they reside more regularly in Antioch than in New Rome. It was only under Theodosius the Great (379-95) that Constantinople assumed definitive rank as capital of the Eastern Roman Empire. However, its ambitious prelates did not wait so long to forecast the future greatness of the new city. In 339 Eusebius, and in 360 Eudoxius, quitted the great Sees of Nicomedia and Antioch for what was yet, canonically, a simple bishopric. Both the city and its inhabitants suffered much during the Arian controversies; the Arian heretics held possession of the Church for forty years. Honourable mention is due to two of its bishops: St. Alexander, whose resistance and prayers were crowned by the sudden death of Arius in Constantinople; and St. Paul the Confessor, a martyr for the Faith. We must add the eighty martyrs put to death simultaneously by Emperor Valens. St. Gregory of Nazianzus restored religious peace in this Church early in the reign of the aforesaid Theodosius. From the council of 381 may be said to date the ecclesiastical fortunes of Constantinople. Its bishop began thenceforth to claim and to exercise ecclesiastical jurisdiction over the six provinces of Thrace, hitherto subject to Heraclea, and soon over the twenty-two provinces of Asia Minor and Pontus, originally subject to Ephesus and Cæsarea. These rights of supremacy, though usurped, were acknowledged by the twenty-eighth canon of the Council of Chalcedon (451), from which time the bishops of Constantinople ruled over about 420 dioceses. In 431 began an almost continuous conflict with the Roman Church, that was crowned with success in 733, when an Iconoclast emperor withdrew from the jurisdiction of Rome all ecclesiastical Illyricum, i. e. more than a hundred dioceses. About the end of the ninth century, when Photius broke with the Roman Church, his own patriarchate included 624 dioceses (51 metropolitan sees, 51 exempt archbishoprics, and 522 suffragan bishoprics). At that time the Roman Church certainly did not govern so great a number of sees. At this period, moreover, by its missionaries and its political influence, Constantinople attracted to Christianity the Slav nations, Serbs, Russians, Moravians, and Bulgars, and obtained in these northern lands a strong support against the Roman and Frankish West.

This ecclesiastical prosperity coincided with the political and municipal grandeur of the city. At the death of Theodosius the Great (395), when the Roman Empire was divided into two parts, Constantinople remained the centre and capital of the Eastern Empire. The Western Empire was destined soon to fall before the onslaughts of the barbarians. While its provinces were held by uncouth German tribes, Constantinople alone remained to represent Christian civilization and the greatness of the Roman name. Simultaneously the city was enlarged and embellished, particularly under Theodosius II, Justinian, Heraclius, and Basil the Macedonian. In 413 it reached its actual (1908) size on the right bank of the Golden Horn, under the city prefect, Anthemius. In 625 Heraclius added the famous quarter of Blacherna with its venerated church of the Blessed Virgin, whose

image was considered as the palladium of the city. The circumference of the walls was then (and still is) eleven or twelve miles. They were often rebuilt, especially under Tiberius III (c. 700), Anastasius II (714), Leo III (740), Nicephorus I (803), Theophilus (831), Michael VIII (1262), Andronicus II (1316), John VII (between 1431-1444). To protect the territory of Thrace from the invasions of the barbarians, Anastasius I, in the early part of the sixth century, built a great wall about fifty miles in length and about twenty feet in breadth from Silistria to the Lake of Derkoi. The ramparts of Constantinople had many gates: the principal one was the Golden Gate, the terminus of the Triumphal Way. On the Sea of Marmora numerous havens gave shelter to boats and barques; the present unique port of the Golden Horn had not yet been created. The strongly fortified Great Palace was a real town. Other splendid palaces adorned the city (Boucoleon, Chalké, Blachernæ); many graced the European and Asiatic suburbs. Hundreds of churches and monasteries, thousands of clerics, of monks, and nuns, attested an intensely religious life. The church of St. Sophia alone, the glory of Justinian's reign, owned 365 estates. How vast these domains were may be judged from a law of Heraclius (627) that established 625 clerics as the number necessary for the service of St. Sophia. The little church of Blachernæ had 75 endowed clerics. The names of at least 463 churches are known, 64 of which were dedicated to the Blessed Virgin. As early as 536, 68 superiors of local monasteries were present at a council in the city.

So many rich churches and monasteries, imperial or private palaces, not to speak of the luxury of the court and the great imperial dignitaries, naturally excited the covetousness of barbarian peoples. Constantinople had, therefore, to sustain numberless sieges; it was attacked in 378 by the Goths, by the Avars and Persians during the reign of Heraclius (610-41), by the Arabs during the reign of Constantine Pogonatus (668-85), and again by the Arabs under Moslemeh in 717; many times also by Bulgarians, Patzinaks, Russians, and Khazars. But the city always defied its besiegers, thanks to the solidity of its walls, often to the valour of its soldiers, but chiefly to the gold that it distributed in profusion. More grievous, perhaps, were the domestic conflicts that broke out in almost every new reign; the quarrels between the Blue and Green factions that clamoured for imperial favour in the races of the hippodrome; the conflagrations and earthquakes that sometimes levelled the city with the ground, e. g. the conflagration that broke out during the Nika revolt (532), on which occasion Justinian nearly lost his throne, more than 80,000 persons were killed, and fire destroyed the greater part of the city.

HERESY AND SCHISM.—When Photius (d. 891) began the schism consummated by Michael Cærularius in 1054, the Byzantine Church had, since the death of Emperor Constantine in 337, been formally out of communion with the Roman Church during 248 years (55 years on account of Arianism, 11 on account of the condemnation of St. John Chrysostom, 35 on account of Zeno's Henoticon, 41 on account of Monothelism, 90 on account of Iconoclasm, 16 on account of the adulterous marriage of Constantine VI). On the whole, therefore, Constantinople had been out of communion with the Apostolic See one out of every two years. During this period nineteen patriarchs of Constantinople were open heretics, some of them quite famous, e. g. Eusebius of Nicomedia, Eudoxius, Macedonius, Nestorius, Acacius, Sergius, Pyrrhus. On the other hand must be mentioned several orthodox bishops, e. g. St. Gregory of Nazianzus, St. John Chrysostom, St. Flavian, St. Germanus, St. Tarasius, St. Methodius, and St. Ignatius, the opponent of Photius, whose virtues and literary fame compensate

for the scandalous heterodoxy of their confrères. Nor can we omit illustrious monks and hymnographers like St. Romanus (Melodus), the greatest liturgical poet of the Byzantine Church, St. Maximus Confessor, St. Theodore, the noble abbot of the famous monastery of Studium (Stoudion), and many others who suffered martyrdom during the reigns of Iconoclast emperors.

Many councils were held in Constantinople, sometimes against heresies, sometimes in favour of them. Chief among these councils are: the œcumenical councils of 381, 553, 681, and 869; the Trullan Council (692), very important for the history of canonical legislation; the councils of 712 and 878 which ratified, respectively, Monothelism and the revolt of Photius against Rome. The schism of Photius was not at once followed by its worst consequences. The learned but ambitious patriarch was yet living when union with the Roman Church was re-established by Emperor Leo the Wise in 886; he obliged Photius to quit the patriarchal throne. From that time to the patriarchate of Michael Cærularius (1043-1049), in spite of the *Filioque* question, relations with the papacy were generally cordial. There were indeed, at the beginning of the tenth century, some difficulties caused by the emperor's fourth marriage, but in this conflict both the opposing patriarchs attempted to obtain from the Roman Church justification of their conduct. It was only under Michael Cærularius that the schismatic condition was finally confirmed, almost without any apparent motive and only through the bad will of this patriarch. After long and sharp disputes between the two Churches, the pope's legates, with the approbation of the imperial court, deposited, 15 July, 1054, on the altar of St. Sophia the Bull of excommunication against the patriarch. This act resulted in a popular revolution. Five days later Michael Cærularius replied by excommunicating the pope and the "azymite" Latins. The weak-minded and lewd emperor, Constantine Monomachus, dared not resist the all-powerful patriarch. It must be noted, however, that, unhappily, the idea of schism had long been familiar to the minds and hearts of the Greeks. The first period of the schism was coeval, especially at Constantinople, with a remarkable literary revival, inaugurated as early as the tenth century by the Macedonian dynasty and carried to its perfection under the Comneni and the Paleologi. This revival, unfortunately, did not affect favourably the morality of the population, being chiefly an unconscious return to models of antiquity, indeed a kind of neo-paganism. We owe to it, however, beautiful works in literature, architecture, and painting.

IMPERIAL SUCCESSION; CRUSADES; LATIN EMPIRE OF CONSTANTINOPLE.—After the division of the Roman Empire in 395, Constantinople beheld the passage of many great dynasties: that of Theodosius, prolonged by adoption until 602; that of Heraclius, from 610 to 711, with intrusion of several usurpers; that of Leo the Isaurian, from 717 to 802; the Amorium dynasty from 820 to 867; that of Basil the Macedonian from 867 to 1057; finally from 1081 to the Frankish conquest in 1204, that of the Comneni and the Angeli. Succession, of course, was not always regular; even in the legitimate dynasties murder and cruelty, it is well known, often marked the accession of an emperor. Sometimes the streets of the capital were on the same day decked with flowers and drenched with blood. Nevertheless, till the middle of the eleventh century, the empire held its own in Asia Minor against the Arabs. The latter were now gradually supplanted by their coreligionists, the Turks, who, towards the end of that century, occupied most of the Asiatic peninsula and set up their capital at Nicæa, not far from Constantinople. Then began the Crusades, that great overflow of the West towards the East, started by the pious wish of all Christian Europe to deliver the Holy Sepulchre. Con-

stantinople saw the crusaders for the first time in 1096. The contact between the two civilizations was not cordial; the Greeks gave generally to the crusaders an unkindly reception. They looked on them as enemies no less than the Turks, except that the crusaders, marching in the name of Christ and backed by all the strength of the West, appeared much more dangerous than the Mussulman Turks. On the other hand the Franks were only too ready to treat the Greeks as mere unbelievers, and, but for the opposition of the popes, would have begun the Crusades with the capture of Constantinople.

These sad quarrels and the fratricidal conflicts of Christian nations lasted nearly a century, until in 1182 Emperor Andronicus Comnenus, a ferocious tyrant, ordered a general massacre of the Latins in his capital. In 1190 the Greek patriarch, Dositheus, solemnly promised indulgences to any Greek who would murder a Latin. These facts, together with the selfish views of the Venetians and the domestic divisions of the Greeks, were enough to provoke a conflict. The Greek Emperor Alexius III had de-throned his brother and stripped his nephew of all rights (1195); the latter sought a shelter in the West (1201), and, together with his brother-in-law, Emperor Philip of Swabia, with Venice, and Boniface of Montferrat (chief of the projected crusade), he turned aside the Fourth Crusade and directed the knights, first to the siege of Zara in Dalmatia, and afterwards to Constantinople. In spite of the formal veto of Innocent III, the crusaders laid siege to the city, which soon surrendered (17 July, 1203). Emperor Alexius III took flight. His brother, Isaac Angelus, was taken from prison and crowned emperor, with his son Alexius IV. The crusaders had hoped that the new emperors would keep their promises and reunite the two Churches; confident of this they wrote to Innocent III (August, 1203) to justify their behaviour. But the imperial promise was not kept; indeed, it could not be executed. In November, 1205, Alexius IV broke off all relations with the crusaders. Thereupon the hostility between the Greeks and the Latins was in almost daily evidence; brawls and conflagrations were continually taking place. Alexius IV and his father were de-throned and put to death (February, 1204) by a usurper who took the name of Alexius V Murtzuphlos. The latter made haste to put his capital in a state of defence, whereupon the crusaders began a second siege. After several onslaughts the city was taken (12 and 13 April, 1204) amid scenes of great cruelty; the slaughter was followed by an unbridled plunder of the countless treasures heaped up during so many centuries by the Byzantine emperors. The holy relics especially excited the covetousness of the Latin clerics; Villehardouin asserts that there were but few cities in the West that received no sacred booty from this pillage. The official booty alone, according to the same historian, amounted to about eleven millions of dollars whose purchasing power was then of course much greater than at this day. The following 9 May, Baldwin, Count of Flanders, became emperor; Boniface of Montferrat obtained Thessalonica and Macedonia; the knights, various feudal fees; Venice, the islands and those regions of the empire that assured her maritime supremacy. This new Latin Empire, organized according to feudal law, never took deep root. It was unable to hold its own against the Greeks (who had immediately created two empires in Asia, at Nicæa and at Trebizond, a despotate in Epirus and other small States) nor against the Bulgarians, Comans, and Serbs. After a much-disturbed existence it disappeared in 1261, and Constantinople became again the centre of Greek power with Michael Palæologus as emperor.

LATIN PATRIARCHATE.—Together with the Latin Empire a Latin patriarchate had been established in 1204 at Constantinople, on which occasion the Greek

patriarch took refuge at Nicæa. Notwithstanding the missions of Cardinal Benedict a Sancta Susanna (1205–1207) and Pelagius of Albano (1213), negotiations, and even persecutions, the Latins failed to induce all their Greek subjects to acknowledge the authority of the pope. In its best days the Latin patriarchate never numbered more than twenty-two archbishops and fifty-nine suffragan bishoprics, situated in Europe, in the islands, and even in Asia Minor. However, the Latin Patriarchate of Constantinople outlived the Latin Empire, after the fall of which the Latin patriarchs resided in Greece or in Italy. From 1302 the Holy See reserved to itself the appointment to this office and united with the patriarchate first the Archbishopric of Candia, later the Bishopric of Negropont; this was still the situation as late as 1463. A consistorial decree of 1497 reserved this high title to cardinals; the rule, however, was subject to many exceptions. In modern times a contrary practice has prevailed; the Latin titular Patriarch of Constantinople ceases to bear this title only on entrance to the Sacred College. Of course, after the fall of the Latin or Frankish Empire in 1261, the Latin patriarch could not deal directly with the Catholics of Constantinople; they were committed to the care of patriarchal vicars, simple priests chosen usually among the superiors of religious orders resident in the city, Observantine or Conventual Franciscans, and Dominicans. This lasted until 1651, when the Latin patriarch was allowed by the sultan to have in Constantinople a patriarchal suffragan bishop, who was free to administer the diocese in the name of the patriarch. Finally, in 1772, the Holy See suppressed the office of patriarchal suffragan and appointed patriarchal vicars Apostolic, which system is yet in existence.

RESTORATION OF GREEK EMPIRE; EFFORTS AT REUNION OF THE CHURCHES.—Having anticipated a little we may here take up the thread of our narrative. By the recovery of Constantinople in 1261, Michael Palæologus had drawn on himself the enmity of some Western princes, especially of Charles of Anjou, brother of St. Louis and heir to the rights of the aforesaid Latin emperors of Constantinople. To forestall the crusade with which he was threatened the Greek emperor opened negotiations with the pope and accepted the union of the Churches. It was proclaimed at the Œcumenical Council of Lyons in 1274, and was confirmed at Constantinople by several particular councils held under the Greek patriarch, John Beccus, a sincere Catholic. It was not, however, accepted by the Greek people who remained always inimical to the West, and, on the emperor's death in 1282, it was rejected at a council held in the Blachernæ church. Thenceforth the rulers of Constantinople had to reckon with the ambitious claims of Charles of Valois, brother of Philip the Fair, and of other Latin pretenders to the imperial crown. The city itself was rent by the theological disputes of Barlaamites and Palamists arising from Hesychasm (q. v.), also by the domestic dissensions of the imperial family during the reigns of the two Andronici, John Palæologus, and John Cantacuzene. With the aid of Turkish mercenaries John Cantacuzene (the hope of the Palamists) withstood the legitimate emperor and conquered the city.

The Byzantine Empire was now in face of its last and greatest peril. The smaller Greek Empire of Trebizond controlled since 1204 a part of its Asiatic provinces. The Fourth Crusade had caused almost all the islands and a great part of its possessions in Europe to fall into the hands of the Venetians, Genoese, Pisans, and local dynasts. It feared most, however, the new empire of the Osmanlis that was rapidly overflowing all Asia Minor. The Osmanlis were originally a small Turkish tribe of Khorassan; in the thirteenth century they had settled near Dorylæum (Eski-Shehir), whence they gradually annexed all the sul-

tanates and principalities of the Seljuk Turks and others. As early as 1326 Brusa in Bithynia had become the centre of their power. A Genoese fleet soon conveyed their army into Europe, where they took Gallipoli in 1397. Thenceforth, while the popes were especially anxious to save the Greek East and Constantinople, the Byzantines, excited by their priests and monks, appeared daily more hostile to the West and exhausted their opportunities in useless theological disputes. The memorable defeat of the Serbs and Bulgarians at Kossovo in 1389, and that of the crusaders at Nicopolis in 1396, seemed to indicate the hopelessness of the Byzantine cause, when the Mongol invasion of Timur-Leng (Tamerlane) and the defeat of Sultan Bayazid at Angora in 1402 combined to assure another half-century of existence to the doomed empire.

Scarcely had Manuel II heard of the Turkish disaster when he pulled down the mosque in his capital and abandoned his negotiations at Rome, where he had initiated proposals of peace, but only for political reasons. However, the Turkish power had not been destroyed on the plain of Angora. From June to September, 1422, Sultan Murad II laid siege to Constantinople, which he nearly captured. Though finally repulsed, the Turks tightened daily their control over all approaches to the city, which only a new crusade could have relieved. At the Council of Florence, therefore (1439), the Greeks again declared themselves Catholics. This formal reunion, however, imposed by the emperor and again rejected by the Greek nation, could not in the beginning be proclaimed even at Constantinople, in spite of the election of a patriarch favourable to Rome, and of Western promises to help the Greeks with men and money. Mark of Ephesus and after him Gennadius Scholarius were omnipotent with clergy and people, and infused into them fresh hatred of the Latins. Nevertheless, the promised crusade took place under the direction of Cardinal Giuliano Cesarini. János Hunyady and Iskender-Beg (Scanderbeg) performed miracles of valour, but in vain. The crusaders were completely defeated at Varna in 1444, and nothing was left to Constantinople but to perish honourably. The reunion with Rome, as accepted at Florence, was at last proclaimed officially in St. Sophia by Cardinal Isidore, Metropolitan of Kiev (12 Dec., 1452). It was thus fated that Emperor Constantine Dragas, the last heir of the great Constantine, was to die in the Catholic Faith.

FALL OF CONSTANTINOPLE; CAPITAL OF OTTOMAN EMPIRE.—When the tragic hour struck, the emperor had only about 7000 men, including all foreign succour. Since March, 1453, the Turks, to the number of 200,000, had invested the city; the preceding year they had built on the Bosphorus the redoubtable fortress of Rumeli-Hissar. Their fleet also held the entrance to the Dardanelles, but was prevented from entering the Golden Horn by a strong iron chain that barred its mouth. But Mohammed II caused seventy of his ships to slide on greased planks behind Galata; in this way they entered the Golden Horn (22 April). He then cast across it a bridge of boats broad enough to allow the passage of five soldiers abreast, while his troops, constantly renewed, kept up without ceasing their attacks by land. Eventually the defenders were exhausted by the toils of a continuous and hopeless conflict, while their ranks grew steadily thinner through death or wounds. The population gave no help and was content to taunt the Latins, while waiting for the miracle of Heaven that was to save them. Finally, 29 May, 1453, about 4 o'clock in the morning, a furious assault of the Turks broke down the walls and gates of the city, and the besiegers burst in from every side. Emperor Constantine fell like a hero at the gate of St. Romanus. St. Sophia was immediately transformed into a mosque, and during three

days the unhappy city was abandoned to unspeakable excesses of cruelty and debauchery. The next year, at the demand of the sultan himself, Gennadius Scholarius, Rome's haughty adversary, was appointed Patriarch of Constantinople, and soon the Greek Church was re-established, almost in its former position.

Thus was granted the sacrilegious prayer of so many Greeks, blinded by unreasoning hate, that henceforth, not the tiara, but the turban should rule in the city of Constantine. Even the name of the city was changed. The Turks call it officially (in Arabic) *Der-es-Saadet*, Door of Happiness, or (chiefly on coins) *Konstantiniëh*. Their usual name for it is *Stamboul*, or rather *Istamboul*, a corruption of the Greek expression *eis tήν πόλιν* (pronounced *stimboli*), perhaps under the influence of a form, *Islamboul*, which could pass for "the city of Islam". Most of the churches, like St. Sophia, were gradually converted into mosques. This was the fate of SS. Sergius and Bacchus, a beautiful monument built by Justinian, commonly called "the little St. Sophia"; of the church of the monastery of Khora, whose splendid mosaics and pictures, mostly of the fourteenth century, are among the principal curiosities of the city; of the churches of the celebrated Pantocrator and Studium monasteries, etc. Other churches were demolished and replaced by various buildings; thus the church of the Holy Apostles gave way to the great mosque built by the conquering Sultan Mohammed II. The imperial tombs in this church were violated; some of their gigantic red porphyry sarcophagi were taken to the church of St. Irene. The latter is the only church taken from the Greeks that has not been changed into a mosque or demolished; it became, and is yet an arsenal, or rather a museum of ancient weapons.

The sultans in turn endowed their new capital with many beautiful monuments. Mohammed II built the castle of Yedi-Kouleh, the Tchini-Kiosk (now a museum), the mosques of Cheik Bokhari, of the Janizaries, of Kassim-Pasha, of Eyoub, where every sultan at his accession is obliged to be girt with the sword of Othman, etc. Bayazid II built the Bayazidieh (1458). Soliman the Magnificent built the Suleimanieh, the most beautiful Turkish monument in Constantinople. His architect Sinan constructed fifty other mosques in the empire. Ahmed I built (1610) the Ahmedieh on the foundations of the imperial Great Palace, a pretty fountain near St. Sophia, etc. The buildings of the old seraglio at Seraglio Point are also of Turkish origin; nothing is left of the Byzantine imperial palaces that once stood there. The Blachernæ palace has also disappeared; its church was accidentally burned in the seventeenth century. Not far distant are the important ruins of the palace of the Porphyrogenitus. When the Turks took Constantinople, the hippodrome was already in ruinous decay. There remain yet three precious monuments of ancient imperial splendour: the Egyptian obelisk brought thither by Theodosius the Great, the Serpentine Column brought from Delphi by Constantine, and the Byzantine monument known as the Walled-up Column. Near them has been constructed, on the plans and at the expense of the German Emperor, William II, a fountain in Byzantine style. The Turks have also respected some other relics of antiquity, especially the columns of Constantine, Marcian, Theodosius, and Arcadius, the aqueduct of Valens, and many of the great subterranean cisterns.

THE TURKISH CITY.—This is not the place to narrate the later history of the city, so often the scene of sanguinary events, revolts of the Janizaries, palace-revolutions, etc. In 1826 Mahmud II suppressed the redoubtable praetorians, but the tragic domestic revolutions go on as before. In 1807 a

British fleet threatened the city, which was courageously defended by Sultan Selim III and the French ambassador, General Sebastiani. In 1854 Anglo-French armies encamped at Constantinople before and after the Crimean expedition against Russia. In 1878 the Russians advanced to San Stefano, a little village in the European suburbs, and dictated there the treaty of that name. In 1821 the Greek patriarch, Gregory V, with many bishops and laymen, was hanged on the occasion of the outbreak of the Greek War for Independence. In 1895-1896 the capital, as well as the provinces, saw many Armenians massacred by the Kurds, with the complicity, or rather by order of the Government. Even the dreadful physical catastrophes of former times have been renewed; great conflagrations in 1864 and 1870 destroyed entire quarters at Stamboul and Pera. In the latter place many thousands of lives were lost (most of the houses are built of timber). In 1894 an earthquake laid low a great part of the Bazaar and killed several thousand persons. The city is now undergoing a slow process of cleansing; it is lit by gas, and there are some tramways in its streets, most of which are still very narrow and dirty, and are at all times obstructed by vagrant dogs. A cable railway joins Galata to Pera.

NATIONAL AND RELIGIOUS STATISTICS.—The population, we have already said, is (1908) at least 1,000,000, perhaps 1,200,000; Turkish statistics are very uncertain. The Turks seem to form about three-fifths of this population. There are more than 2000 mosques, near which are generally found elementary schools for boys and even for girls; often also *medreses* or Mussulman theological schools. The *tekkes* are Mussulman monasteries for dervishes of various orders. Superior instruction is given at the Lyceum of Galata Seraglio. It has about 1200 pupils (mostly Mussulmans), and instruction is given in both Turkish and French. Efforts are being made to transform this college into a university. There are also about 20 secondary schools; a university of law, a school of medicine, military schools, and other professional and special schools. The libraries annexed to the great mosques contain precious Eastern manuscripts. There are many Turkish hospitals, several of which are in charge of Catholic Sisters of Charity, an asylum for the poor, a Pasteur institute, and other charitable foundations. The Persian Mussulmans, generally Shiites, have their own religious organization, with a hospital at Stamboul, conducted by Sisters of Charity. The Jewish population increases rapidly, and is of two kinds: the Spanish Jews who came to Turkey in the sixteenth century when expelled from Spain, and still speak a bad Spanish; others, who came and still come from Russia, Rumania, Austria, Germany, etc. The latter often obtain good situations; not so the former, whose social status is low and unhappy. There is also among the Jews of the city a diversity of rites, synagogues, schools, and works of beneficence. The Christians seem to number over 300,000. If we except an insignificant body of Jacobites and their bishop, the rest may be divided as Monophysites, Protestants, Orthodox Greeks, and Catholics. The Monophysites are Armenians, who call themselves Gregorians, after their apostle, St. Gregory Illuminator. They number about 100,000, with a patriarch resident at Koum-Kapou (Stamboul), many churches, 53 elementary schools, 2 colleges, a large charitable establishment at Yédi-Kouleh, etc.

Protestantism is represented by English, American, German, and other foreign colonies, also by about one thousand Armenian converts. Its chief institutions, apart from several churches, are the Bible house at Stamboul with its branches (homes for sailors and foreign girls), Robert College at Rumeli-Hissar on the Bosphorus (a large American school founded in

1863, with about 600 pupils), and a high school for girls at Scutari. There are also some elementary Protestant schools and a special mission for the Jews, finally an English and a German hospital. The Schismatic Greeks who call themselves Orthodox, number about 150,000, some thousands of whom are Hellenes, i. e. subjects of the Kingdom of Greece. The œcumenical patriarch, who resides in the Fanar (Greek quarter, along the Golden Horn), is the bishop of the diocese (there are metropolises at Kadi-Keui and at Makri-Keui, the latter with the title of Derki). He is aided in the administration of his office by the Great Protosyncellus. There are 40 parishes, 12 of which are first class, 11 second class, and 17 third class. The principal churches prefer instead of a simple priest, a titular bishop or chorepiscopus: they are five in number. Recent statistics show 72 schools, 64 of which give elementary and middle, and 8 superior teaching. Among the higher schools are included the so-called Great National School in the Fanar (said to date from the Middle Ages), the commercial and theological schools at Halki, etc. The theological school is a seminary for future bishops of the Greek Church. These Greek schools have 398 teachers and 13,217 pupils; the elementary schools have 10,665 pupils, and the superior schools 2562. We may add that many Greek boys and girls, also Armenians, are taught in foreign schools, chiefly in those of the French religious congregations and at Robert College. The Greeks have a large charitable establishment at Balekli and an orphanage. Quite important also are their various associations (*sylogoi*), the principal one being the important learned body known as the Literary Greek Society, with a rich library. The libraries of the Metochion, of the Holy Sepulchre, and the theological school at Halki are also remarkable for their manuscripts. For the general organization of the Greek Schismatics, see GREEK CHURCH. The Russians have at Constantinople 3 monasteries, a school, a hospital, and an archaeological institute, with a rich library. The Serbs and Rumanians have also their national establishments. There are in the capital about 15,000 Bulgarians. They are considered schismatics by the Greek Church, from which they have completely separated. Their exarch, who has jurisdiction over all native Bulgarians and those of European Turkey, resides at Chichli (pronounced *shishli*), where there are also a seminary, a school, and a hospital for Bulgarians. His cathedral is at Balata, Stamboul.

CATHOLIC LIFE AND STATISTICS.—The Catholics include those of the Roman or Latin Rite, and others of Eastern rites often called Uniate. Among the latter, the Catholic Armenians deserve most attention; they number about 5000. Their patriarch resides at Pera, and to their special organization belong: 6 elementary and 3 middle schools, also a large charitable establishment for orphans and for poor or sick people. They have four congregations conducted as follows: The Mechitarists of Vienna have 2 residences, 19 monks; the Mechitarists of Venice, 1 residence, 8 monks; the Antonines, 1 residence, 8 monks; Sisters of the Immaculate Conception, 3 residences, about 100 nuns. The Melchites or Arabic-speaking Syrians of Byzantine Rite have a church with 3 priests, one of whom acts as vicar of his patriarch for all affairs of the "nation" that come before the Sublime Porte. The Catholic patriarchs of the Chaldeans and the Syrians are similarly represented by vicars to whom are subject the few faithful of their rites present in the city. The Catholic Greeks, few in number as yet, are subject to the Apostolic delegate; they have two parishes, at Koum-Kapou (Stamboul) and Kadi-Keui, conducted by the Assumptionists, and a mission at Pera, conducted by the Fathers of the Holy Trinity. The former have also missions for the Greeks at Cæsarea in Cappadocia and at Peramos in the Peninsula of

Cyzicus; the latter at Malgara and Daoudili in Thrace. The Catholic Bulgarians have at Galata their archbishop and one priest. The Catholic Georgians are few and are subject to the Apostolic delegate; most of them belong to the Latin or the Armenian Rite.

The Catholics of the Latin Rite, as already stated, are ruled by an Apostolic vicar. Though a titular archbishop he enjoys ordinary jurisdiction and since 1868 is Apostolic delegate for the Catholics of Eastern Rites. He resides at Pancaldi and has there his pro-cathedral. His authority is not acknowledged by the Sublime Porte and he is obliged to use the French embassy in his relations with the Turkish Government. The limits of his vicariate are: in Europe the Vicariate of Sofia, the Archdioceses of Uscub and Durazzo, and the Apostolic Delegation of Athens; in Asia, the Diocese of Tiraspol, the Apostolic Delegations of Mesopotamia and Aleppo, and the Archbishopric of Smyrna. The Latin Catholics subject to him must number (1908) between 30,000 and 35,000, about 22,000 of whom are at Constantinople. Other principal centres are, in Europe: Salonica, Gallipoli, Cavalla, Monastir, Rodosto, Dede-Aghatch, and Adrianople, with about 6000 souls; in Asia: Brusa, Ismid, Adampol, Zongoul-Dagh, Dardanelles, Eski-Shehir, Angora, Trebizond, Samsoun, and Erzeroum with about 3000 souls. Most Latin Catholics are of foreign nationalities and come from Greece, Italy, France, Austria, etc.

Almost all the religious works of the Apostolic vicariate are conducted by religious orders or congregations. The secular clergy counts only about ten members; they possess the two parishes of Pancaldi (pro-cathedral) and the Dardanelles. There are fourteen parishes (five principal) in Constantinople and its suburbs. Outside the capital, the vicariate comprises 7 other parishes and 23 missionary stations. There are several seminaries, but none for the vicariate itself: a Greek preparatory seminary at Koum-Kapou (Stamboul), a Bulgarian preparatory seminary at Kara-Aghatch (Adrianople), a Greek-Bulgarian theological seminary at Kadi-Keui, conducted by the Assumptionists, with respectively 30, 35, and 10 pupils; the Eastern Seminary, preparatory and theological, founded at Pera in 1889 by French Capuchins for Latin and Eastern Rite pupils of every Eastern diocese, with 45 to 50 pupils; the preparatory Seraphic Seminary conducted since 1894 at San Stefano by Austrian Capuchins, 30 pupils; a Bulgarian preparatory and theological seminary at Zeitenlik (Salonica), conducted by the Lazarists, 58 pupils. Eighty elementary or middle schools are conducted by the aforesaid religious congregations. There are 74 primary and boarding schools, for boys or girls, with 11,400 pupils (7030 girls and 4370 boys), 6 (properly so called) colleges for boys with 1410 pupils and a commercial institute. Moreover, 600 male and female orphans are trained in 6 orphanages. A professional school has just been founded. More than half of these schools are situated in Constantinople or its suburbs. Many of the pupils are not Catholics, and many are Mussulmans or Jews. There is at Feri-Keui a large and beautiful cemetery.

CATHOLIC ORDERS AND CONGREGATIONS.—*Orders of Men.*—Augustinians of the Assumption, 13 residences, 51 priests (including 6 of Greek and 6 of Slav Rite), and 28 students or lay brothers, 3 seminaries, 6 parishes, 7 schools. French Capuchins, 2 residences, 59 monks (25 students and 10 lay brothers), 1 seminary, 1 scholasticate, and the church of St. Louis, parish of the French embassy. Austrian Capuchins, 1 residence, with 1 parish, 1 seminary and 1 novitiate, 10 monks. Italian Capuchins, 3 residences, 8 priests, and 4 lay brothers. Conventuals, 6 residences, 5 parishes, 21 priests, and 10 lay brothers. Franciscans, 4 residences, 2 parishes, with 10 priests and 6 lay brothers. Dominicans, 3 residences, 1 parish, 9

priests, and 3 lay brothers. Georgian Benedictines of the Immaculate Conception, 3 residences, 2 parishes 1 school, with 13 religious (2 priests of Georgian Rite). Jesuits, 6 residences, 42 religious, about 20 priests, 9 schools. Austrian Lazarists, 1 residence, 1 college, 12 religious. French Lazarists, 7 residences, 71 religious (56 priests), 2 colleges, 1 seminary, several schools, 1 parish. Greek Fathers of the Holy Trinity of Pera, 3 residences, 6 priests, 3 schools. Polish Resurrectionists, 3 residences, about 30 religious (12 priests, several of the Slav Rite), 1 college. Brothers of the Christian Schools, 150 brothers, 10 residences, 1 college, 1 commercial and 10 elementary schools. Brothers of Ploermel, 10 brothers, aiding the Assumptionists in their schools. Marist Brothers, 8 residences, 4 schools, 46 brothers, aid other religious in 4 more schools. Italian Salesians of Dom Bosco, 1 technical school.

Orders of Women.—Carmelites, 6 nuns. Dominican Sisters of Mondovì, 2 schools, 14 nuns. Sisters of Charity, 17 establishments, 210 nuns; they conduct among others three Turkish hospitals, the Persian, French, Italian, and Austrian hospitals, 2 asylums, 7 orphanages, 13 schools. Franciscan Sisters of Calais, 1 residence, 10 sisters for care of sick people at home. Franciscan Sisters of Gmona (Italy), 4 residences, 30 sisters, 5 schools. Sisters of the Immaculate Conception of Ivrea (Italy), 3 residences, 35 sisters, 1 hospital, 2 schools. Sisters of the Immaculate Conception of Lourdes, 1 residence, 14 sisters, for the adoration of the Most Blessed Sacrament and care of sick people. Oblates of the Assumption, 8 residences, 94 sisters, 7 schools, 1 hospital, 1 novitiate for native girls. Oblates of the Assumption of Nîmes, 15 sisters, 3 schools. Little Sisters of the Poor, 1 asylum, 16 sisters. Sisters of St. Joseph of the Apparition, 2 residences, 30 sisters, 2 schools. Sisters of St. Joseph of Lyons, 3 residences, 39 sisters, 3 schools, 1 hospital. Sisters of Our Lady of Sion, 120 sisters, 2 residences, 2 boarding, and 2 elementary schools. Georgian Servants of Our Lady, 2 residences, 2 schools, 15 sisters. Bulgarian Eucharistine Sisters, 5 residences with schools, 30 sisters. Resurrectionist Sisters, 5 sisters, 1 school. Missionary Sisters of the Most Holy Heart of Mary, 8 sisters, 1 hospital. Most of these residences have dispensaries, with a physician, where remedies are supplied gratuitously to the poor. To the works of these congregations must be added pious works conducted by lay persons: St. Vincent de Paul Conferences (6 at Constantinople); the Symplia, an association which conducts a school for Catholic Hellenes, with 90 pupils, various associations and brotherhoods, etc.

S. VAILHÉ.

Constantinople, COUNCILS OF.—A. GENERAL COUNCILS.—Four general councils of the Church were held in this city.

I. THE FIRST COUNCIL OF CONSTANTINOPLE (Second General Council) was called in May, 381, by Emperor Theodosius, to provide for a Catholic succession in the patriarchal See of Constantinople, to confirm the Nicene Faith, to reconcile the Semi-Arians with the Church, and to put an end to the Macedonian heresy. Originally it was only a council of the Orient; the arguments of Baronius (ad an. 381, nos. 19, 20) to prove that it was called by Pope Damasus are invalid (Hefele-Leclercq, *Hist. des Conciles*, Paris, 1908, II, 4). It was attended by 150 Catholic and 36 heretical (Semi-Arian, Macedonian) bishops, and was presided over by Meletius of Antioch; after his death, by the successive Patriarchs of Constantinople, St. Gregory Nazianzen and Nectarius. Its first measure was to confirm St. Gregory Nazianzen as Bishop of Constantinople. The Acts of the council have almost entirely disappeared, and its proceedings are known chiefly through the accounts of the ecclesiastical historians Socrates, Sozomen, and Theodoret. There is good reason to believe that it drew up a formal treatise (*tomos*) on the Catholic doctrine of the Trinity, also against Apollinarianism; this important document has been lost, with the exception of the first canon of the council and its famous creed (Niceno-Constantinopolitanum). The latter is traditionally held to be an enlargement of the Nicene Creed, with emphasis on the Divinity of the Holy Spirit. It seems, however, to be of earlier origin, and was probably composed (369-73) by St. Cyril of Jerusalem as an expression of the faith of that Church (Bois), though its adoption by this council gave it special authority, both as a baptismal creed and as a theological formula. Recently Harnack (*Realencyclopädie für prot. Theol. und Kirche*, 3rd ed., XI, 12-28) has maintained, on apparently inconclusive grounds, that not till after the Council of Chalcedon (451) was this creed (a Jerusalem formula with Nicene additions) attributed to the Fathers of this council. At Chalcedon, indeed, it was twice recited and appears twice in the Acts of that council; it was also read and accepted at the Sixth General Council, held at Constantinople in 680 (see below). The very ancient Latin version of its text (Mansi, *Coll. Conc.*, III, 567) is by Dionysius Exiguus.

The Greeks recognize seven canons, but the oldest Latin versions have only four; the other three are very probably (Hefele) later additions. The first canon is an important dogmatic condemnation of all shades of Arianism, also of Macedonianism, and Apollinarianism. The second canon renews the Nicene legislation imposing upon the bishops the observance of diocesan and patriarchal limits. The fourth canon declares invalid the consecration of Maximus, the Cynic philosopher and rival of St. Gregory of Nazianzus, as Bishop of Constantinople. The famous third canon declares that because Constantinople is New

Rome the bishop of that city should have a pre-eminence of honour after the Bishop of Old Rome. Baronius wrongly maintained the non-authenticity of this canon, while some medieval Greeks maintained (an equally erroneous thesis) that it declared the bishop of the royal city in all things the equal of the pope. The purely human reason of Rome's ancient authority, suggested by this canon, was never admitted by the Apostolic See, which always based its claim to supremacy on the succession of St. Peter. Nor did Rome easily acknowledge this unjustifiable reordering of rank among the ancient patriarchates of the East. It was rejected by the papal legates at Chalcedon. St. Leo the Great (Ep. cvi in P. L., LIV, 1003, 1005) declared that this canon had never been submitted to the Apostolic See and that it was a violation of the Nicene order. At the Eighth General Council in 869 the Roman legates (Mansi, XVI, 174) acknowledged Constantinople as second in patriarchal rank. In 1215, at the Fourth Lateran Council (op. cit., XXII, 991), this was formally admitted for the new Latin patriarch, and in 1439, at the Council of Florence, for the Greek patriarch (Hefele-Leclercq, *Hist. des Conciles*, II, 25-27). The Roman *correctores* of Gratian (1582), at dist. xxii, c. 3, insert the words: "canon hic ex iis est quos apostolica Romana sedes a principio et longo post tempore non recipit."

At the close of the council Emperor Theodosius issued an imperial decree (30 July) declaring that the churches should be restored to those bishops who confessed the equal Divinity of the Father, the Son, and the Holy Spirit, and who held communion with Nectarius of Constantinople and other important Oriental prelates whom he named. The oecumenical character of this council seems to date, among the Greeks, from the Council of Chalcedon (451). According to Photius (Mansi, III, 596) Pope Damasus approved it, but if any part of the council were approved by this pope it could have been only the aforesaid creed. In the latter half of the fifth century the successors of Leo the Great are silent as to this council. Its mention in the so-called "Decretum Gelasilii", towards the end of the fifth century, is not original but a later insertion in that text (Hefele). Gregory the Great, following the example of Vigilius and Pelagius II, recognized it as one of the four general councils, but only in its dogmatic utterances (P. G., LXXVII, 468, 893). (See SEMI-ARIANISM; MACEDONIANS; GREGORY OF NAZIANZUS, SAINT; LEO I, SAINT, POPE; THEODOSIUS THE GREAT.)

HEFELE, *Conciliengesch.* (Freiburg, 1875), II, 1-33; Eng. tr. (Edinburgh, 1876), vol. II; and LECLERCQ'S Fr. tr. (Paris, 1908), II, 1-48. Non-Catholic: BURN, *Introduction to the Creeds and The Te Deum* (London, 1899); HORT, *Two Dissertations*, etc. (London, 1876); II, *The Constantinopolitan Creed and Other Creeds of the Fourth Century* (London, 1876); BRIGHT, *Canons of the First Four General Councils* (Oxford, 1892); BETHUNE, *The Homoeousios in the Constantinopolitan Creed* (London, 1905).

II. THE SECOND COUNCIL OF CONSTANTINOPLE (Fifth General Council) was held at Constantinople (5 May-2 June, 553), having been called by Emperor Justinian. It was attended mostly by Oriental bishops; only six Western (African) bishops were present. The president was Eutychius, Patriarch of Constantinople. This assembly was in reality only the last phase of the long and violent conflict inaugurated by the edict of Justinian in 543 against Origenism (P. G., LXXXVI, 945-90). The emperor was persuaded that Nestorianism continued to draw its strength from the writings of Theodore of Mopsuestia (d. 428), Theodoret of Cyrus (d. 457), and Ibas of Edessa (d. 457), also from the personal esteem in which the first two of these ecclesiastical writers were yet held by many. The events which led to this council will be narrated more fully in the articles VIGILIUS, POPE and in THREE CHAPTERS; only a brief account will be given here.

From 25 Jan., 547, Pope Vigilius was forcibly de-

tained in the royal city; he had originally refused to participate in the condemnation of the Three Chapters (i. e. brief statements of anathema upon Theodore of Mopsuestia and his writings, upon Theodoret of Cyrus and his writings against St. Cyril of Alexandria and the Council of Ephesus, and upon the letter written by Ibas of Edessa to Maris, Bishop of Hardaschir in Persia). Later (by his "Judicatum", 11 April, 548) Vigilius had condemned the Three Chapters (the doctrine in question being really censurable), but he expressly maintained the authority of the Council of Chalcedon (451) wherein Theodoret and Ibas—but after the condemnation of Nestorius—had been restored to their places; in the West much discontent was called forth by this step which seemed a weakening before the civil power in purely ecclesiastical matters and an injustice to men long dead and judged by God; it was all the more objectionable as the Western mind had no accurate knowledge of the theological situation among the Greeks of that day. In consequence of this Vigilius had persuaded Justinian to return the aforesaid papal document and to proclaim a truce on all sides until a general council could be called to decide these controversies. Both the emperor and the Greek bishops violated this promise of neutrality; the former, in particular, publishing (551) his famous edict, *Ὁμολογία τῆς πίστεως*, condemning anew the Three Chapters, and refusing to withdraw the same.

For his dignified protest Vigilius thereupon suffered various personal indignities at the hands of the civil authority and nearly lost his life; he retired finally to Chalcedon, in the very church of St. Euphemia where the great council had been held, whence he informed the Christian world of the state of affairs. Soon the Oriental bishops sought reconciliation with him, induced him to return to the city, and withdrew all that had hitherto been done against the Three Chapters; the new patriarch, Eutychius, successor to Mennas, whose weakness and subserviency were the immediate cause of all this violence and confusion, presented (6 Jan., 553) his profession of faith to Vigilius and, in union with other Oriental bishops, urged the calling of a general council under the presidency of the pope. Vigilius was willing, but proposed that it should be held either in Italy or in Sicily, in order to secure the attendance of Western bishops. To this Justinian would not agree, but proposed, instead, a kind of commission made up of delegates from each of the great patriarchates; Vigilius suggested that an equal number be chosen from the East and the West; but this was not acceptable to the emperor, who thereupon opened the council by his own authority on the date and in the manner mentioned above. Vigilius refused to participate, not only on account of the overwhelming proportion of Oriental bishops, but also from fear of violence; moreover, none of his predecessors had ever taken part personally in an Oriental council. To this decision he was faithful, though he expressed his willingness to give an independent judgment on the matters at issue. Eight sessions were held, the result of which was the final condemnation of the Three Chapters by the 165 bishops present at the last session (2 June, 553), in fourteen anathematisms similar to the thirteen previously issued by Justinian.

In the meantime Vigilius had sent to the emperor (14 May) a document known as the first "Constitutum" (Mansi, IX, 61-106), signed by himself and sixteen, mostly Western, bishops, in which sixty heretical propositions of Theodore of Mopsuestia were condemned, and, in five anathematisms, his Christological teachings repudiated; it was forbidden, however, to condemn his person, or to proceed further in condemnation of the writings or the person of Theodoret, or of the letter of Ibas. It seemed indeed, under the circumstances, no easy task to denounce

fittingly the certain errors of the great Antiochene theologian and his followers and yet uphold the reputation and authority of the Council of Chalcedon, which had been content with obtaining the essentials of submission from all sympathizers with Nestorius, but for that very reason had never been forgiven by the Monophysite opponents of Nestorius and his heresy, who were now in league with the numerous enemies of Origen, and until the death (548) of Theodora had enjoyed the support of that influential empress.

The decisions of the council were executed with a violence in keeping with its conduct, though the ardently hoped-for reconciliation of the Monophysites did not follow. Vigilius, together with other opponents of the imperial will, as registered by the subservient court-prelates, seems to have been banished (Hefele, II, 905), together with the faithful bishops and ecclesiastics of his suite, either to Upper Egypt or to an island in the Propontis. Already in the seventh session of the council Justinian caused the name of Vigilius to be stricken from the diptychs, without prejudice, however, it was said, to communion with the Apostolic See. Soon the Roman clergy and people, now freed by Narses from the Gothic yoke, requested the emperor to permit the return of the pope, which Justinian agreed to on condition that Vigilius would recognize the late council. This Vigilius finally agreed to do, and in two documents (a letter to Eutychius of Constantinople, 8 Dec., 553, and a second "Constitutum" of 23 Feb., 554, probably addressed to the Western episcopate) condemned, at last, the Three Chapters (Mansi, IX, 414-20, 457-88; cf. Hefele, II, 905-11), independently, however, and without mention of the council. His opposition had never been based on doctrinal grounds but on the decency and opportuneness of the measures proposed, the wrongful imperial violence, and a delicate fear of injury to the authority of the Council of Chalcedon, especially in the West. Here, indeed, despite the additional recognition of it by Pelagius I (555-60), the Fifth General Council only gradually acquired in public opinion an oecumenical character. In Northern Italy the ecclesiastical provinces of Milan and Aquileia broke off communion with the Apostolic See; the former yielding only towards the end of the sixth century, whereas the latter (Aquileia-Grado) protracted its resistance to about 700 (Hefele, op. cit., II, 911-27). (For an equitable appreciation of the conduct of Vigilius see, besides the article VIGILIUS, the judgment of Bois, in *Dict. de théol. cath.*, II, 1238-39.) The pope was always correct as to the doctrine involved, and yielded, for the sake of peace, only when he was satisfied that there was no fear for the authority of Chalcedon, which he at first, with the entire West, deemed in peril from the machinations of the Monophysites.

The original Greek Acts of the council are lost, but there is extant a very old Latin version, probably contemporary and made for the use of Vigilius, certainly quoted by his successor Pelagius I. The Baluze edition is reprinted in Mansi, "Coll. Conc.", IX, 163 sqq. In the next General Council of Constantinople (680) it was found that the original Acts of the Fifth Council had been tampered with (Hefele, op. cit., II, 855-58) in favour of Monothelism; nor is it certain that in their present shape we have them in their original completeness (*ibid.*, pp. 859-60). This has a bearing on the much disputed question concerning the condemnation of Origenism at this council. Hefele, moved by the antiquity and persistency of the reports of Origen's condemnation, maintains (p. 861) with Cardinal Noris, that in it Origen was condemned, but only *en passant*, and that his name in the eleventh anathema is not an interpolation.

The chief sources are the writings of the contemporary Western (African) FACUNDUS OF HERMIANE, *Pro defens. trium capit.*;

Liber contra Mulianum; and *Epist. fidei cath.*—all in *P. L.*, LXVII, 527 sqq.; and the Carthaginian deacon FULGENTIUS FERRANDUS, *Epist. ad Pelagium et Anatol.* in *P. L.*, LXVII, 921 sqq. See PUNKES, *Papst Vigilius und der Dreikapitelstreit* (Munich, 1864); VINCENTI, *In S. Greg. Nyss. et Origen. scripta et doctr. nova recensio*, cum. append. de actis Vacum. concilii (Rome, 1865); DUCHESNE, *Vigile et Pélage* in *Revue des quest. hist.* (Louvain, 1884), XXXVI, 369, with reply of CHAMARD, *ibid.*, XXXVII, 540, and the counter-reply of DUCHESNE, *ibid.*, XLV, 187; LÉVÉQUE, *Étude sur le pape Vigile* (Amiens, 1887); KNIECHT, *Die Religionspolitik Kaiser Justinians I.* (Würzburg, 1896); DIEKAMP, *Die origenistischen Streitigkeiten im VI. Jahrhundert* (Münster, 1899).

III. THE THIRD COUNCIL OF CONSTANTINOPLE (Sixth General Council) was summoned in 678 by Emperor Constantine Pogonatus, with a view of restoring between East and West the religious harmony that had been troubled by the Monothelistic controversies, and particularly by the violence of his predecessor Constans II, whose imperial edict, known as the "Typos" (648-49) was a practical suppression of the orthodox truth. Owing to the desire of Pope Agatho to obtain the adhesion of his Western brethren, the papal legates did not arrive at Constantinople until late in 680. The council, attended in the beginning by 100 bishops, later by 174, was opened 7 Nov., 680, in a domed hall (*trullus*) of the imperial palace and was presided over by the (three) papal legates who brought to the council a long dogmatic letter of Pope Agatho and another of similar import from a Roman synod held in the spring of 680. They were read in the second session. Both letters, the pope's in particular, insist on the faith of the Apostolic See as the living and stainless tradition of the Apostles of Christ, assured by the promises of Christ, witnessed by all the popes in their capacity of successors to the Petrine privilege of confirming the brethren, and therefore finally authoritative for the Universal Church.

The greater part of the eighteen sessions was devoted to an examination of the Scriptural and patristic passages bearing on the question of one or two wills, one or two operations, in Christ. George, Patriarch of Constantinople, soon yielded to the evidence of the orthodox teaching concerning the two wills and two operations in Christ, but Macarius of Antioch, "almost the only certain representative of Monothelism since the nine propositions of Cyrus of Alexandria" (Chapman), resisted to the end, and was finally anathematized and deposed for "not consenting to the tenor of the orthodox letters sent by Agatho the most holy pope of Rome", i. e., that in each of the two natures (human and Divine) of Christ there is a perfect operation and a perfect will, against which the Monothelites had taught that there was but one operation and one will (*μία ἐνέργεια θεανθρώπου*) quite in consonance with the Monophysite confusion of the two natures in Christ. In the thirteenth session (28 March, 681) after anathematizing the chief Monothelite heretics mentioned in the aforesaid letter of Pope Agatho, i. e. Sergius of Constantinople, Cyrus of Alexandria, Pyrrhus, Paul, and Peter of Constantinople, and Theodore of Pharan, the council added: "And in addition to these we decide that Honorius also, who was Pope of Elder Rome, be with them cast out of the Holy Church of God, and be anathematized with them, because we have found by his letter to Sergius that he followed his opinion in all things and confirmed his wicked dogmas." A similar condemnation of Pope Honorius occurs in the dogmatic decree of the final session (16 Sept., 681), which was signed by the legates and the emperor. Reference is here made to the famous letter of Honorius to Sergius of Constantinople about 634, around which has arisen (especially before and during the Vatican Council) so large a controversial literature. It had been invoked three times in previous sessions of the council in question by the stubborn Monothelite Macarius of Antioch, and had been publicly read in the twelfth session together with the letter of Sergius to which it replied. On that occasion a second letter of Honorius to Sergius was also

read, of which only a fragment has survived. (For the question of this pope's orthodoxy, see HONORIUS I; INFALLIBILITY; MONOTHELITES.)

There has been in the past, owing to Gallicanism and the opponents of papal infallibility, much controversy concerning the proper sense of this council's condemnation of Pope Honorius, the theory (Baronius, Damberger) of a falsification of the Acts being now quite abandoned (Hefele, III, 299-313). Some have maintained, with Pennacchi, that he was indeed condemned as a heretic, but that the Oriental bishops of the council misunderstood the thoroughly orthodox (and dogmatic) letter of Honorius; others, with Hefele, that the council condemned the heretically sounding expressions of the pope (though his doctrine was really orthodox); others finally, with Chapman (see below), that he was condemned "because he did not, as he should have done, declare authoritatively the Petrine tradition of the Roman Church. To that tradition he had made no appeal but had merely approved and enlarged upon the half-hearted compromise of Sergius. . . . Neither the pope nor the council consider that Honorius had compromised the purity of the Roman tradition, for he had never claimed to represent it. Therefore, just as to-day we judge the letters of Pope Honorius by the Vatican definition and deny them to be *ex cathedra*, because they do not define any doctrine and impose it upon the whole Church, so the Christians of the seventh century judged the same letters by the custom of their day, and saw that they did not claim what papal letters were wont to claim, viz., to speak with the mouth of Peter in the name of Roman tradition" (Chapman).

The letter of the council to Pope Leo, asking, after the traditional manner, for confirmation of its Acts, while including again the name of Honorius among the condemned Monothelites, lays a remarkable stress on the magisterial office of the Roman Church, as, in general, the documents of the Sixth General Council favour strongly the inerrancy of the See of Peter. "The Council", says Dom Chapman, "accepts the letter in which the Pope defined the faith. It deposes those who refused to accept it. It asks [the pope] to confirm its decisions. The Bishops and Emperor declare that they have seen the letter to contain the doctrine of the Fathers. Agatho speaks with the voice of Peter himself; from Rome the law had gone forth as out of Sion; Peter had kept the faith unaltered." Pope Agatho died during the council and was succeeded by Leo II, who confirmed (683) the decrees against Monothelism, and expressed himself even more harshly than the council towards the memory of Honorius (Hefele, Chapman), though he laid stress chiefly on the neglect of that pope to set forth the traditional teaching of the Apostolic See, whose spotless faith he treasonably tried to overthrow (or, as the Greek may be translated, permitted to be overthrown).

The Acts of the Council are in the eleventh volume of MANSI, *Coll. Conc.* The most complete presentation of its history is in HEFELE, *Concilien Geschichte* (2nd ed., Freiburg, 1877), III, 249-313, see also the English tr. (Edinburgh, 1876—), and for the later bibliography the French tr. of LECLERCQ (Paris 1907); SCHNEEMAN, *Studien über die Honoriusfrage* (Freiburg, 1864); PENNACCHI, *De Honorio I Rom. Pontif. causâ in Conc. VI* (Rome, 1870); HERGENROTHER-KIRSCH, *Kirchen-gesch.* (4th ed., Freiburg, 1904), I, 633-38; MARSHALL, *Honorius and Liberius in Am. Cath. Quarterly Rev.* (Philadelphia, 1894), XIX, 82-92; BOTTALIA, *Pope Honorius before the Tribunal of Reason and History* (London, 1864); DÖLLINGER (Old Catholic), *Fables respecting the Popes in the Middle Ages*, American ed. of the *Papstfabeln* (New York, 1872), 223-48; CHAPMAN, *The Condemnation of Pope Honorius in Dublin Review* for 1907, and reprinted by the LONDON CATH. TRUTH SOCIETY, 1907; GRISAR in *Kirchenlex.*, VI, 230 sqq. For the extensive Honorius literature, see CHEVALIER, *Bio-bibl.*, s.v.

IV. THE FOURTH COUNCIL OF CONSTANTINOPLE (Eighth General Council) was opened, 5 Oct., 869, in the Cathedral of Saint Sophia, under the presidency of the legates of Adrian II. During the preceding decade grave irregularities had occurred at Constantinople, among them the deposition of the Patriarch

Ignatius and the intrusion of Photius, whose violent measures against the Roman Church culminated in the attempted deposition (867) of Nicholas I. The accession in that year of a new emperor, Basil the Macedonian, changed the situation, political and ecclesiastical. Photius was interned in a monastery; Ignatius was recalled, and friendly relations were resumed with the Apostolic See. Both Ignatius and Basil sent representatives to Rome asking for a general council. After holding a Roman synod (June, 869) in which Photius was again condemned, the pope sent to Constantinople three legates to preside in his name over the council. Besides the Patriarch of Constantinople there were present the representatives of the Patriarchs of Antioch and Jerusalem and, towards the end, also the representatives of the Patriarch of Alexandria. The attendance of Ignatian bishops was small enough in the beginning; indeed there were never more than 102 bishops present.

The legates were asked to exhibit their commission, which they did; then they presented to the members of the council the famous formula (*libellus*) of Pope Hormisdas (514-23), binding its signatories "to follow in everything the Apostolic See of Rome and teach all its laws . . . in which communion is the whole, real, and perfect solidity of the Christian religion". The Fathers of the council were required to sign this document, which had originally been drawn up to close the Acacian schism. The earlier sessions were occupied with the reading of important documents, the reconciliation of Ignatian bishops who had fallen away to Photius, the exclusion of some Photian prelates, and the refutation of the false statements of two former envoys of Photius to Rome. In the fifth session Photius himself unwillingly appeared, but when questioned observed a deep silence or answered only in a few brief words, pretending blasphemously to imitate the attitude and speech of Christ before Caiaphas and Pilate. Through his representatives he was given another hearing in the next session; they appealed to the canons as above the pope. In the seventh session he appeared again, this time with his consecrator George Asbestas. They appealed, as before, to the ancient canons, refused to recognize the presence or authority of the Roman legates, and rejected the authority of the Roman Church, though they offered to render an account to the emperor. As Photius would not renounce his usurped claim and recognize the rightful patriarch Ignatius, the former Roman excommunications of him were renewed by the council, and he was banished to a monastery on the Bosphorus, whence he did not cease to denounce the council as a triumph of lying and impiety, and by a very active correspondence kept up the courage of his followers, until in 877 the death of Ignatius opened the way for his return to power. Iconoclasm, in its last remnants, and the interference of the civil authority in ecclesiastical affairs were denounced by the council. The tenth and last session was held in the presence of the emperor, his son Constantine, the Bulgarian king, Michael, and the ambassadors of Emperor Louis II.

The twenty-seven canons of this council deal partly with the situation created by Photius and partly with general points of discipline or abuses. The decrees of Nicholas I and Adrian II against Photius and in favour of Ignatius were read and confirmed, the Photian clerics deposed, and those ordained by Photius reduced to lay communion. The council issued an Encyclical to all the faithful, and wrote to the pope requesting his confirmation of its Acts. The papal legates signed its decrees, but with reservation of the papal action. Here, for the first time, Rome recognized the ancient claim of Constantinople to the second place among the five great patriarchates. Greek pride, however, was offended by the compulsory signature of the aforesaid Roman formulary of reconciliation, and in a subsequent conference of Greek

ecclesiastical and civil authorities the newly-converted Bulgarians were declared subject to the Patriarchate of Constantinople and not to Rome. Though restored by the Apostolic See, Ignatius proved ungrateful, and in this important matter sided with the other Eastern patriarchs in consummating, for political reasons, a notable injustice; the territory henceforth known as Bulgaria was in reality part of the ancient Illyria that had always belonged to the Roman patriarchate until the Iconoclast Leo III (718-41) violently withdrew it and made it subject to Constantinople. Ignatius very soon consecrated an archbishop for the Bulgarians and sent thither many Greek missionaries, whereupon the Latin bishops and priests were obliged to retire. On their way home the papal legates were plundered and imprisoned; they had, however, given to the care of Anastasius, Librarian of the Roman Church (present as a member of the Frankish embassy) most of the submission-signatures of the Greek bishops. We owe to him the Latin version of these documents and a copy of the Greek Acts of the council which he also translated and to which is due most of our documentary knowledge of the proceedings. It was in vain that Adrian II and his successor threatened Ignatius with severe penalties if he did not withdraw from Bulgaria his Greek bishops and priests. The Roman Church never regained the vast regions she then lost. (See PHOTIUS; IGNATIUS OF CONSTANTINOPLE; NICHOLAS I.)

HERGENRÖTHER, *Photius* (Ratisbon, 1867-69), I, 373 sqq., 505 sqq., and vol. II; IDEM, *Monumenta Graeca ad Photium ejusque historiam pertinentia* (Ratisbon, 1869); TOSTI, *Storia dell' origine dello scisma greco* (Florence, 1856); HEFELE, *Concilien-gesch.* (2nd ed., Freiburg, 1877), IV, 436 sqq.; MILMAN (Protestant), *History of Latin Christianity*, Bk. V, ch. iv; NORDEN (Protestant), *Papsttum und Byzanz* (Berlin, 1903); FORTESCU, *The Orthodox Eastern Church* (London, 1907), 156-61.

B. PARTICULAR COUNCILS OF CONSTANTINOPLE.—I. In the summer of 382 a council of the Oriental bishops, convoked by Theodosius, met in the imperial city. We still have its important profession of faith, often wrongly attributed to the Second General Council (i. e. at Constantinople in the preceding year), exhibiting the doctrinal agreement of all the Christian churches; also two canons (v and vi) wrongly put among the canons of the Second General Council (Hefele-Leclercq, *Hist. des Conciles*, Paris, 1907, II (i), 53-56). In the summer of the next year (383) Theodosius convoked another council, with the hope of uniting all factions and parties among the Christians on the basis of a general acceptance of the teachings of the Ante-Nicene Fathers. He met with a qualified success (Socrates, V, 10; Hefele-Leclercq, op. cit., 63-65); among the most stubborn of those who resisted was Eunomius (see EUNOMIANISM).

II. The council, held in 692, under Justinian II is generally known as the Council in *Trullo*, because it was held in the same domed hall where the Sixth General Council had met (see above). Both the Fifth and the Sixth General Councils had omitted to draw up disciplinary canons, and as this council was intended to complete both in this respect, it also took the name of Quinisext (Concilium Quinisextum, *Συνόδος πενθέκτη*), i. e. Fifth-Sixth. It was attended by 215 bishops, all Orientals. Basil of Gortyna in Illyria, however, belonged to the Roman patriarchate and called himself papal legate, though no evidence is extant of his right to use a title that in the East served to clothe the decrees with Roman authority. In fact, the West never recognized the 102 disciplinary canons of this council, in large measure reaffirmations of earlier canons. Most of the new canons exhibit an inimical attitude towards Churches not in disciplinary accord with Constantinople, especially the Western Churches. Their customs are anathematized and "every little detail of difference is remembered to be condemned" (Fortescue). Canon iii of Constantinople (381) and canon xxviii of Chalcedon (451) are

renewed, the heresy of Honorius is again condemned (can. i), and marriage with a heretic is invalid because Rome says it is merely unlawful; Rome had recognized fifty of the Apostolic Canons; therefore the other thirty-five obtain recognition from this council, and as inspired teaching (see CANONS, APOSTOLIC).

In the matter of celibacy the Greek prelates are not content to let the Roman Church follow its own discipline, but insist on making a rule (for the whole Church) that all clerics except bishops may continue in wedlock, while they excommunicate anyone who tries to separate a priest or deacon from his wife, and any cleric who leaves his wife because he is ordained (can. iii, vi, xii, xiii, xlviii). The Orthodox Greek Church holds this council an oecumenical one, and adds its canons to the decrees of the Fifth and Sixth Councils. In the West St. Bede calls it (De sextâ mundi ætate) a reprobate synod, and Paul the Deacon (Hist. Lang., VI, p. 11) an erratic one. Dr. Fortescue rightly says (op. cit. below, p. 96) that intolerance of all other customs with the wish to make the whole Christian world conform to its own local practices has always been and still is a characteristic note of the Byzantine Church. For the attitude of the popes, substantially identical, in face of the various attempts to obtain their approval of these canons, see Hefele, "Conciliengesch." (III, 345-48).

III. In 754 the Iconoclast Emperor Constantine V called in the imperial city a council of 338 bishops. Through cowardice and servility they approved the heretical attitude of the emperor and his father Leo III, also the arguments of the Iconoclast party and their measures against the defenders of the sacred images. They anathematized St. Germanus of Constantinople and St. John Damascene, and denounced the orthodox as idolaters, etc.; at the same time they resented the spoliation of the churches under pretext of destroying images (see ICONOCLASM).

IV. For the three Photian synods of 861 (deposition of Ignatius), 867 (attempted deposition of Nicholas I), and 879 (recognition of Photius as lawful patriarch), recognized by the Greeks as Eighth General Council in opposition to the council of 869-70, which they continue to abominate, see PHOTIUS.

V. In 1639 and 1672 councils were held by the Orthodox Greeks at Constantinople condemnatory of the Calvinistic confession of Cyril Lucaris and his followers. [See Semnoz, "Les dernières années du patr. Cyrille Lucar" in "Echos d'Orient" (1903), VI, 97-117; and Fortescue, "Orthodox Eastern Church" (London, 1907), 267].

THOMAS J. SHAHAN

Constantinople, CREED OF. See NICENE CREED.

Constantinople, THE RITE OF (or BYZANTINE RITE), the Liturgies, Divine Office, forms for the administration of sacraments and for various blessings, sacramentals, and exorcisms, of the Church of Constantinople, which is now, after the Roman Rite, by far the most widely spread in the world. With one insignificant exception—the Liturgy of St. James is used once a year at Jerusalem and Zakynthos (Zacynthus)—it is followed exclusively by all Orthodox Churches, by the Melkites (Melchites) in Syria and Egypt, the Uniates in the Balkans and the Italo-Greeks in Calabria, Apulia, Sicily, and Corsica. So that more than a hundred millions of Christians perform their devotions according to the Rite of Constantinople.

I. HISTORY.—This is not one of the original parent-rites. It is derived from that of Antioch. Even apart from the external evidence a comparison of the two liturgies will show that Constantinople follows Antioch in the disposition of the parts. There are two original Eastern types of liturgy: that of Alexandria, in which the great Intercession comes before the Consecration, and that of Antioch, in which it follows after the Epiklesis. The Byzantine use in both its Litur-

gies (of St. Basil and St. John Chrysostom) follows exactly the order of Antioch. A number of other parallels make the fact of this derivation clear from internal evidence, as it is from external witness. The tradition of the Church of Constantinople ascribes the oldest of its two Liturgies to St. Basil the Great (d. 379), Metropolitan of Cæsarea in Cappadocia. This tradition is confirmed by contemporary evidence. It is certain that St. Basil made a reformation of the Liturgy of his Church, and that the Byzantine service called after him represents his reformed Liturgy in its chief parts, although it has undergone further modification since his time. St. Basil himself speaks on several occasions of the changes he made in the services of Cæsarea. He writes to the clergy of Neo-Cæsarea in Pontus to complain of opposition against himself on account of the new way of singing psalms introduced by his authority (Ep. Basilii, cvii, Patr. Gr., XXXII, 763). St. Gregory of Nazianzus (Nazianzen, d. 390) says that Basil had reformed the order of prayers (*εὐχῶν διάταξις*—Orat. xx, P. G., XXXV, 761). Gregory of Nyssa (died c. 395) compares his brother Basil with Samuel because he "carefully arranged the form of the Service" (*ἱερουργία*, in laudem fr. Bas., P. G., XLVI, 808). Proklos (Proclus) of Constantinople (d. 446) writes: "When the great Basil . . . saw the carelessness and degeneracy of men who feared the length of the Liturgy—not as if he thought it too long—he shortened its form, so as to remove the weariness of the clergy and assistants" (De traditione divinæ Missæ, P. G., XLV, 849). The first question that presents itself is: What rite was it that Basil modified and shortened? Certainly it was that used at Cæsarea before his time. And this was a local form of the great Antiochene use, doubtless with many local variations and additions. That the original rite that stands at the head of this line of development is that of Antioch is proved from the disposition of the present Liturgy of St. Basil, to which we have already referred; from the fact that, before the rise of the Patriarchate of Constantinople, Antioch was the head of the Churches of Asia Minor as well as of Syria (and invariably in the East the patriarchal see gives the norm in liturgical matters, followed and then gradually modified by its suffragan Churches); and lastly by the absence of any other source. At the head of all Eastern rites stand the uses of Antioch and Alexandria. Lesser and later Churches do not invent an entirely new service for themselves, but form their practice on the model of one of these two. Syria, Palestine, and Asia Minor in liturgical matters derive from Antioch, just as Egypt, Abyssinia, and Nubia do from Alexandria. The two Antiochene Liturgies now extant are (1) that of the Eighth Book of the Apostolic Constitutions and (2), parallel to it in every way, the Greek Liturgy of St. James (see ANTIOCHENE LITURGY). These are the starting-points of the development we can follow. But it is not to be supposed that St. Basil had before him either of these services, as they now stand, when he made the changes in question. In the first place, his source is rather the Liturgy of St. James than that of the Apostolic Constitutions. There are parallels to both in the Basilian Rite; but the likeness is much greater to that of St. James. From the beginning of the Eucharistic prayer (*Vere dignum et iustum est*, our Preface) to the dismissal, Basil's order is almost exactly that of James. But the now extant Liturgy of St. James (in Brightman, "Liturgies Eastern and Western", 31-68) has itself been considerably modified in later years. Its earlier part especially (the Liturgy of the Catechumens and the Offertory) is certainly later than the time of St. Basil. In any case, then, we must go back to the original Antiochene Rite as the source. But neither was this the immediate origin of the reform. It must be remembered that all living rites are subject to gradual modification through use. The

outline and frame remain; into this frame new prayers are fitted. As a general rule liturgies keep the disposition of their parts, but tend to change the text of the prayers. St. Basil took as the basis of his reform the use of Cæsarea in the fourth century. There is reason to believe that that use, while retaining the essential order of the original Antiochene service, had already considerably modified various parts, especially the actual prayers. We have seen, for instance, that Basil shortened the Liturgy. But the service that bears his name is not at all shorter than the present one of St. James. We may, then, suppose that by his time the Liturgy of Cæsarea had been considerably lengthened by additional prayers (this is the common development of Liturgies). When we say, then, that the rite of Constantinople that bears his name is the Liturgy of St. James as modified by St. Basil, it must be understood that Basil is rather the chief turning-point in its development than the only author of the change. It had already passed through a period of development before his time, and it has developed further since. Nevertheless, St. Basil and his reform of the rite of his own city are the starting-point of the special use of Constantinople.

A comparison of the present Liturgy of St. Basil with earlier allusions shows that in its chief parts it is really the service composed by him. Peter the Deacon, who was sent by the Scythian monks to Pope Hormisdas to defend a famous formula they had drawn up ("One of the Trinity was crucified") about the year 512, writes: "The blessed Basil, Bishop of Cæsarea, says in the prayer of the holy altar which is used by nearly the whole East: Give, oh Lord, strength and protection; make the bad good, we pray, keep the good in their virtue; for Thou canst do all things, and no one can withstand Thee; Thou dost save whom Thou wilt and no one can hinder Thy will" (Petri diac. Ep. ad Fulgent, vii, 25, in P. L., LXV, 449). This is a compilation of three texts in the Basilian Liturgy: Keep the good in their virtue; *make the bad good by thy mercy* (Brightman, op. cit., pp. 333-334); the words: *Give, O Lord, strength and protection* come several times at the beginning of prayers; and the last words are an acclamation made by the choir or people at the end of several (Renaudot, I, p. xxxvii). The Life of St. Basil ascribed to Amphilochios (P. G., XXIX, 301, 302) quotes as composed by him the beginning of the Introduction-prayer and that of the Elevation exactly as they are in the existing Liturgy (Brightman, 319, 341). The Second Council of Nicea (787) says: "As all priests of the holy Liturgy know, Basil says in the prayer of the Divine Anaphora: We approach with confidence to the holy altar . . .". The prayer is the one that follows the Anamnesis in St. Basil's Liturgy (Brightman, p. 329. Cf. Hardouin, IV, p. 371).

From these and similar indications we conclude that the Liturgy of St. Basil in its oldest extant form is substantially authentic, namely, from the beginning of the Anaphora to the Communion. The Mass of the Catechumens and the Offertory prayers have developed since his death. St. Gregory Nazianzen, in describing the saint's famous encounter with Valens at Cæsarea, in 372, describes the Offertory as a simpler rite, accompanied with psalms sung by the people but without an audible Offertory prayer (Greg. Naz., Or., xliii, 52, P. G., XXXVI, 561). This oldest form of the Basilian Liturgy is contained in a manuscript of the Barberini Library of about the year 800 (MS., III, 55, reprinted in Brightman, 309-344). The Liturgy of St. Basil now used in the Orthodox and Melkite (or Melchite) Churches (Euchologion, Venice, 1898, pp. 75-97; Brightman, 400-411) is printed after that of St. Chrysostom and differs from it only in the prayers said by the priest, chiefly in the Anaphora; it has received further unimportant modifications. It is probable that even before the time of St. John Chrysos-

tom the Liturgy of Basil was used at Constantinople. We have seen that Peter the Deacon mentions that it was "used by nearly the whole East". It would seem that the importance of the See of Cæsarea (even beyond its own exarchy), the fame of St. Basil, and the practical convenience of this short Liturgy led to its adoption by many Churches in Asia and Syria. The "East" in Peter the Deacon's remark would probably mean the Roman Prefecture of the East (*Præfectura Orientis*) that included Thrace. Moreover, when St. Gregory of Nazianzos came to Constantinople to administer that diocese (381) he found in use there a Liturgy that was practically the same as the one he had known at home in Cappadocia. His Sixth Oration (P. G., XXXV, 721 sq.) was held in Cappadocia, his Thirty-eighth (P. G., XXXVI, 311) at Constantinople. In both he refers to and quotes the Eucharistic prayer that his hearers know. A comparison of the two texts shows that the prayer is the same. This proves that, at any rate in its most important element, the liturgy used at the capital was that of Cappadocia—the one that St. Basil used as a basis of his reform. It would therefore be most natural that the reform too should in time be adopted at Constantinople. But it would seem that before Chrysostom this Basilian Rite (according to the universal rule) had received further development and additions at Constantinople. It has been suggested that the oldest form of the Nestorian Liturgy is the original Byzantine Rite, the one that St. Chrysostom found in use when he became patriarch (Probst, "Lit. des IV. Jahrhts.", 413).

The next epoch in the history of the Byzantine Rite is the reform of St. John Chrysostom (d. 407). He not only further modified the Rite of Basil, but left both his own reformed Liturgy and the unreformed Basilian one itself, as the exclusive uses of Constantinople. St. John became Patriarch of Constantinople in 397; he reigned there till 403, was then banished, but came back in the same year; was banished again in 404, and died in exile in 407. The tradition of his Church says that during the time of his patriarchate he composed from the Basilian Liturgy a shorter form that is the one still in common use throughout the Orthodox Church. The same text of Proklos (Proclus) quoted above continues: "Not long afterwards our father, John Chrysostom, zealous for the salvation of his flock as a shepherd should be, considering the carelessness of human nature, thoroughly rooted up every diabolical objection. He therefore left out a great part and shortened all the forms lest anyone . . . stay away from this Apostolic and Divine Institution", etc. He would, then, have treated St. Basil's rite exactly as Basil treated the older rite of Cæsarea. There is no reason to doubt this tradition in the main issue. A comparison of the Liturgy of Chrysostom with that of Basil will show that it follows the same order and is shortened considerably in the text of the prayers; a further comparison of its text with the numerous allusions to the rite of the Holy Eucharist in Chrysostom's homilies will show that the oldest form we have of the Liturgy agrees substantially with the one he describes (Brightman, 530-534). But it is also certain that the modern Liturgy of St. Chrysostom has received considerable modifications and additions since his time. In order to reconstruct the rite used by him we must take away from the present Liturgy all the Preparation of the Offerings (*Προσκομιδή*), the ritual of the Little and Great Entrances, and the Creed. The service began with the bishop's greeting, "Peace to all", and the answer, "And with thy spirit." The lessons followed from the Prophets and Apostles, and the deacon read the Gospel. After the Gospel the bishop or a priest preached a homily, and the prayer over the catechumens was said. Originally it had been followed by a prayer over penitents, but Nektarios (381-397) had abolished the discipline

of public penance, so in St. Chrysostom's Liturgy this prayer is left out. Then came a prayer for the faithful (baptized) and the dismissal of the catechumens. St. Chrysostom mentions a new ritual for the Offertory: the choir accompanied the bishop and formed a solemn procession to bring the bread and wine from the prothesis to the altar (Hom. xxxvi, in I Cor., vi, P. G., LXL, 313). Nevertheless the present ceremonies and the Cherubic Chant that accompany the Great Entrance are a later development (Brightman, op. cit., 530). The Kiss of Peace apparently preceded the Offertory in Chrysostom's time (Brightman, op. cit., 522, Probst, op. cit., 208). The Eucharistic prayer began, as everywhere, with the dialogue: "Lift up your hearts" etc. This prayer, which is clearly an abbreviated form of that in the Basilian Rite, is certainly authentically of St. Chrysostom. It is apparently chiefly in reference to it that Proklos says that he has shortened the older rite. The Sanctus was sung by the people as now. The ceremonies performed by the deacon at the words of Institution are a later addition. Probst thinks that the original Epiklesis of St. Chrysostom ended at the words "Send thy Holy Spirit down on us and on these gifts spread before us" (Brightman, op. cit., 386), and that the continuation (especially the disconnected interruption: *God be merciful to me a sinner*, now inserted into the Epiklesis; Maltzew, "Die Liturgien" etc., Berlin, 1894, p. 88) are a later addition (op. cit., 414). The Intercession followed at once, beginning with a memory of the saints. The prayer for the dead came before that for the living (ibid., 216-415). The Eucharistic prayer ended with a doxology to which the people answered, Amen; and then the bishop greeted them with the text, "The mercy of our great God and Saviour Jesus Christ be with all of you" (Tit., ii, 13), to which they answered: "And with thy spirit", as usual. The Lord's Prayer followed, introduced by a short litany spoken by the deacon and followed by the well-known doxology: "For thine is the kingdom" etc. This ending was added to the Our Father in the Codex of the New Testament used by St. Chrysostom (cf. Hom. xix in P. G., LVII, 282). Another greeting (Peace to all) with its answer introduced the manual acts, first an Elevation with the words "Holy things for the holy" etc., the Breaking of Bread and the Communion under both kinds. In Chrysostom's time it seems that people received either kind separately, drinking from the chalice. A short prayer of thanksgiving ended the Liturgy. That is the rite as we see it in the saint's homilies (cf. Probst., op. cit., 156-202, 202-226). It is true that most of these homilies were preached at Antioch (387-397) before he went to Constantinople. It would seem, then, that the Liturgy of St. Chrysostom was in great part that of his time at Antioch, and that he introduced it at the capital when he became patriarch. We have seen from Peter the Deacon that St. Basil's Rite was used by "nearly the whole East". There is, then, no difficulty in supposing that it had penetrated to Antioch and was already abridged there into the "Liturgy of Chrysostom" before that saint brought this abridged form to Constantinople.

It was this Chrysostom Liturgy that gradually became the common Eucharistic service of Constantinople, and that spread throughout the Orthodox world, as the city that had adopted it became more and more the acknowledged head of Eastern Christendom. It did not completely displace the older rite of St. Basil, but reduced its use to a very few days in the year on which it is still said (see below, under II). Meanwhile the Liturgy of St. Chrysostom itself underwent further modification. The oldest form of it now extant is in the same manuscript of the Barberini Library that contains St. Basil's Liturgy. In this the elaborate rite of the Proskomide has not yet been added, but it has already received additions since the

time of the saint whose name it bears. The Trisagion (Holy God, Holy Strong One, Holy Immortal One, have mercy on us) at the Little Entrance is said to have been revealed to Proklos of Constantinople (434-47, St. John Dam., De Fide Orth., III, 10); this probably gives the date of its insertion into the Liturgy. The Cherubikon that accompanies the Great Entrance was apparently added by Justin II (565-78, Brightman, op. cit., 532), and the Creed that follows, just before the beginning of the Anaphora, is also ascribed to him (Joannis Biclarensis Chronicon, P. L., LXXII, 863). Since the Barberini Euchologion (ninth cent.) the Preparation of the Offerings (*προσκομιδή*) at the credence-table (called prothesis) gradually developed into the elaborate rite that now accompanies it. Brightman (op. cit., 539-552) gives a series of documents from which the evolution of this rite may be traced from the ninth to the sixteenth century.

These are the two Liturgies of Constantinople, the older one of St. Basil, now said on only a few days, and the later shortened one of St. Chrysostom that is in common use. There remains the third, the Liturgy of the Presanctified (*τῶν προσευχισμένων*). This service, that in the Latin Church now occurs only on Good Friday, was at one time used on the aliturgical days of Lent everywhere (see ALITURGICAL DAYS and Duchesne, Origines, 222, 238). This is still the practice of the Eastern Churches. The Paschal Chronicle (see CHRONICON PASCHALE) of the year 645 (P. G., XCII) mentions the Presanctified Liturgy, and the fifty-second canon of the Second Trullan Council (692) orders: "On all days of the fast of forty days, except Saturdays and Sundays and the day of the Holy Annunciation, the Liturgy of the Presanctified shall be celebrated." The essence of this Liturgy is simply that the Blessed Sacrament that has been consecrated on the preceding Sunday, and is reserved in the tabernacle (*ἀποθήκη*) under both kinds, is taken out and distributed as Communion. It is now always celebrated at the end of Vespers (*ἐσπερινός*), which form its first part. The lessons are read as usual, and the litanies sung; the catechumens are dismissed, and then, the whole Anaphora being naturally omitted, Communion is given; the blessing and dismissal follow. A great part of the rite is simply taken from the corresponding parts of St. Chrysostom's Liturgy. The present form, then, is a comparatively late one that supposes the normal Liturgies of Constantinople. It has been attributed to various persons—St. James, St. Peter, St. Basil, St. Germanos I of Constantinople (715-30), and so on (Brightman, op. cit., p. xciii). But in the service books it is now officially ascribed to St. Gregory Dialogos (Pope Gregory I). It is impossible to say how this certainly mistaken ascription began. The Greek legend is that, when he was apocrisarius at Constantinople (578), seeing that the Greeks had no fixed rite for this Communion-service, he composed this one for them.

The origin of the Divine Office and of the rites for sacraments and sacramentals in the Byzantine Church is more difficult to trace. Here too we have now the result of a long and gradual development; and the starting-point of that development is certainly the use of Antioch. But there are no names that stand out as clearly as do those of St. Basil and St. Chrysostom in the history of the Liturgy. We may perhaps find the trace of a similar action on their part in the case of the Office. The new way of singing psalms introduced by St. Basil (Ep. cvii, see above) would in the first place affect the canonical Hours. It was the manner of singing psalms antiphonally, that is alternately by two choirs, to which we are accustomed, that had already been introduced at Antioch in the time of the Patriarch Leontios (Leontius, 344-57; Theodoret, H. E., II, xxiv). We find one or two other allusions to reforms in various rites among the works of St. Chrysostom; thus he desires people to accompany funerals

by singing psalms (Hom. iv, in Ep. ad Hebr., P. G., LXIII, 43) etc.

With regard to the Divine Office especially, it has the same general principles in East and West from a very early age (see BREVIARY). Essentially it consists in psalm-singing. Its first and most important part is the Night-watch (*παραυχίς*, our Nocturns); at dawn the *ὕμνος* (Lauds) was sung; during the day the people met again at the third, sixth, and ninth hours, and at sunset for the *ἐσπερινός* (Vespers). Besides the psalms these Offices contained lessons from the Bible and collects. A peculiarity of the Antiochene use was the "Gloria in excelsis" sung at the Orthros (Ps.-Athanasius, *De Virg.*, xx, P. G., XXVIII, 276); the evening hymn, *Φῶς Ἰλαρόν*, still sung in the Byzantine Rite at the Hesperinos and attributed to Athenogenes (in the second cent.), is quoted by St. Basil (De Spirit. Sancto, lxxiii, P. G., XXXII, 205). Egeria of Aquitaine, the pilgrim to Jerusalem, gives a vivid description of the Office as sung there according to Antioch in the fourth century ["S. Silviae (sic) peregrin.", ed. Gamurrini, Rome, 1887]. To this series of Hours two were added in the fourth century. John Cassian (Institut., III, iv) describes the addition of Prime by the monks of Palestine, and St. Basil refers (loc. cit.) to Complin (*ἀποδευπνόν*) as the monks' evening prayer. Prime and Complin, then, were originally private prayers said by monks in addition to the official Hours. The Antiochene manner of keeping this Office was famous all over the East. Flavian of Antioch in 387 softened the heart of Theodosius (after the outrage to the statues) by making his clerks sing to him "the suppliant chants of Antioch" (Sozomen, H. E., VII, xxiii). And St. John Chrysostom, as soon as he comes to Constantinople, introduces the methods of Antioch in keeping the canonical Hours (16, VIII, 8). Eventually the Eastern Office admits short services (*μεσώβια*) between the day Hours, and between Vespers and Complin. Into this frame a number of famous poets have fitted a long succession of canons (unmetrical hymns); of these poets St. Romanos the singer (sixth cent.), St. Cosmas the singer (eighth cent.), St. John Damascene (c. 780), St. Theodore of Studion (d. 826), etc., are the most famous (see BYZANTINE LITERATURE, sub-title IV. Ecclesiastical etc.). St. Sabas (d. 532) and St. John Damascene eventually arranged the Office for the whole year, though, like the Liturgy, it has undergone further development since, till it acquired its present form (see below).

II. THE BYZANTINE RITE AT THE PRESENT TIME.—The Rite of Constantinople now used throughout the Orthodox Church does not maintain any principle of uniformity in language. In various countries the same prayers and forms are translated (with unimportant variations) into what is supposed to be more or less the vulgar tongue. As a matter of fact, however, it is only in Rumania that the liturgical language is the same as that of the people. Greek (from which all the others are translated) is used at Constantinople, in Macedonia (by the Patriarchists), Greece, by Greek monks in Palestine and Syria, by nearly all Orthodox in Egypt; Arabic in parts of Syria, Palestine, and by a few churches in Egypt; Old Slavonic throughout Russia, in Bulgaria, and by all Exarchists, in Czernagora, Servia, and by the Orthodox in Austria and Hungary; and Rumanian by the Church of that country. These four are the principal languages. Later Russian missions use Esthonian, Lettish, and German in the Baltic provinces, Finnish and Tatar in Finland and Siberia, Chinese, and Japanese. (Brightman, op. cit., LXXXI-LXXXII). Although the Liturgy has been translated into English (see Hapgood, op. cit. in bibliography), a translation is never used in any church of the Greek Rite. The Uniates use Greek at Constantinople, in Italy, and partially in Syria and Egypt, Arabic chiefly in these countries, Old Slavonic in Slav lands, and Rumanian in Rumania.

It is curious to note that in spite of this great diversity of languages the ordinary Orthodox layman no more understands his Liturgy than if it were in Greek. Old Slavonic and the semi-classical Arabic in which it is sung are dead languages.

The Calendar.—It is well known that the Orthodox still use the Julian Calendar (Old Style). By this time (1908) they are thirteen days behind us. Their liturgical year begins on 1 September, "the beginning of the Indict, that is of the new year". On 15 November begins the first of their four great fasts, the "fast of Christ's birth" that lasts till Christmas (25 December). The fast of Easter begins on the Monday after the sixth Sunday before Easter, and they abstain from flesh-meat after the seventh Sunday before the feast (our Sexagesima). The fast of the Apostles lasts from the day after the first Sunday after Pentecost (their All Saints' Day) till 28 June, the fast of the Mother of God from 1 August to 14 August. Throughout this year fall a great number of feasts. The great cycles are the same as ours—Christmas, followed by a Memory of the Mother of God on 26 December, then St. Stephen on 27 December, etc. Easter, Ascension Day, and Whitsunday follow as with us. Many of the other feasts are the same as ours, though often with different names. They divide them into three categories, feasts of our Lord (*ἱστορία δεσποτικά*), of the Mother of God (*θεομητρικά*), and of the saints (*τῶν ἁγίων*). They count the "Holy meeting" (with St. Simeon, 2 February), the Annunciation (25 March), the Awakening of Lazarus (Saturday before Palm Sunday), etc., as feasts of Our Lord. The chief feasts of Our Lady are her birthday (8 September), Presentation in the Temple (21 November), Conception (9 December), Falling-asleep (*κοιμήσις*, 15 August), and the Keeping of her Robe at the Blachernæ (at Constantinople, 2 July). Feasts are further divided according to their solemnity into three classes: great, middle, and less days. Easter of course stands alone as greatest of all. It is "The Feast" (*ἡ ἑορτή, αἰ-ῖδα*); there are twelve other very great days and twelve great ones. Certain chief saints (the Apostles, the three holy hierarchs—Sts. Basil, Gregory of Nazianzus, and John Chrysostom—30 January, the holy and equal-to-the-Apostles Sovereigns, Constantine and Helen, etc.) have middle feasts; all the others are lesser ones. The Sundays are named after the subject of their Gospel; the first Sunday of Lent is the feast of Orthodoxy (after Iconoclasm), the Saturdays before Meatless Sunday (our Sexagesima) and Whitsunday are All Souls' days. Our Trinity Sunday is their All Saints. Wednesdays and Fridays throughout the year are days of abstinence (Fortescue, "Orth. Eastern Church", 398-401).

Service-books.—The Byzantine Rite has no such compendiums as our Missal and Breviary; it is contained in a number of loosely arranged books. They are: the Typikon (*τυπικόν*), a perpetual calendar containing full directions for all feasts and all possible coincidences. The Euchologion (*εὐχολόγιον*) contains the priest's part of the Hesperinos, Orthros, the three Liturgies, and other sacraments and sacramentals. The Triodion (*τριώδιον*) contains the variable parts of the Liturgy and Divine Office (except the psalms, Epistles, and Gospels) for the movable days from the tenth Sunday before Easter to Holy Saturday. The Pentekostarion (*πεντηκοστήριον*) continues the Triodion from Easter Day to the first Sunday after Pentecost (All Saints' Sunday). The Oktoechos (*ὀκτώηχος*) gives the Offices of the Sundays for the rest of the year (arranged according to the eight modes to which they are sung—*ὀκτώ ἤχοι*) and the Parakletike (*παράκλητική*) is for the weekdays. The twelve Menaia (*μηναῖα*), one for each month, contain the Proper of Saints; the Menologion (*μηνολόγιον*) is a shortened version of the Menaia, and the Horologion (*ὠρολόγιον*) contains the choir's part of the day Hours. The

Psalter (ψαλτήριον), Gospel (εὐαγγέλιον), and Apostle (ἀπόστολος—Epistles and Acts) contain the parts of the Bible read (Fortescue, "Orth. E. Ch.," 401-402; Nilles, "Kal. Man.," XLIV-LVI; Kattenbusch, "Confessionskunde," I, 478-486).

The altar, vestments and sacred vessels.—A church of the Byzantine Rite should have only one altar. In a very large one there are side-chapels with altars, and the Uniats sometimes copy the Latin multitude of altars in one church; this is an abuse (at is not consistent with their rite. The altar (ἡ ἅγια τράπεζα) stands in the middle of the sanctuary (ιερατεῖον); it is covered to the ground with a linen cloth over which is laid a silk or velvet covering. The Euchologion, a folded antimension, and perhaps one or two other instruments used in the Liturgy are laid on it; nothing else. [See ALTAR (IN THE GREEK CHURCH).] Behind the altar, round the apse, are seats for priests with the bishop's throne in the middle (in every church). On the north side of the altar stands a large credence-table (πρόθεσις); the first part of the Liturgy is said here. On the south side is the diakonikon, a sort of sacristy where vessels and vestments are kept; but it is in no way walled off from the rest of the sanctuary. The sanctuary is divided from the rest of the church by the ikonostasis (εικονόστασις, picture-screen), a great screen stretching across the whole width and reaching high up to the roof (see sub-title *The Ikonostasis* s. v. ALTAR, HISTORY OF THE CHRISTIAN). On the outside it is covered with a great number of pictures of Christ and the saints, arranged in a more or less determined order (Christ always to the right of the royal doors and the Bl. Virgin on the left), before which rows of lamps are hung. The ikonostasis has three doors, the "royal door" in the middle, the deacon's door to the south (right hand as one enters the church), and another door to the north. Between the royal door and the deacon's door the bishop has another throne facing the people. Immediately outside the ikonostasis is the choir. A great part of the services take place here. In the body of the church the people stand (there are no seats as a rule); then comes the narthex, a passage across the church at the west end, from which one enters by doors into the nave. Most of the funeral rites and other services take place in the narthex. Churches are roofed as a rule by a succession of low cupolas, often five (if the church is cross-shaped). In Russia there is generally a belfry. The vestments were once the same as the Latin ones, though now they look very different. It is a curious case of parallel evolution. The bishop wears over his cassock the sticharion (στιχάριον) our alb; it is often of silk and coloured; then the epitrachelion (ἐπιτραχήλιον), a stole of which the two ends are sewn together and hang straight down in front, with a loop through which the head is passed. The sticharion and epitrachelion are held together by the zone (ζώνη, girdle), a narrow belt of stuff with clasps. Over the wrists he wears the epimanikia (ἐπιμανίκια), cuffs or gloves with the part for the hand cut off. From the girdle the epigonation (ἐπιγονάτιον), a diamond-shaped piece of stuff, stiffened with cardboard, hangs down to the right knee. Lastly, he wears over all the sakkos (σάκκος), a vestment like our dalmatic. Over the sakkos comes the omophorion (ὠμοφόριον). This is a great pallium of silk embroidered with crosses. There is also a smaller omophorion for some rites. He has a pectoral cross, an enkolpion (ἐγκόλπιον, a medal containing a relic), a mitre formed of metal and shaped like an imperial crown, and a dikanikion (δικανίκιον), or crossier, shorter than ours and ending in two serpents between which is a cross. To give his blessing in the Liturgy he uses the trikerion (τρικέρριον) in his right and the dikerion (δικέρριον) in his left hand. These are a triple and double candlestick with candles. The priest wears the sticharion, epitrachelion, zone, and epimanikia. If he is a dignitary he wears the epigonation and

(in Russia) the mitre also. Instead of a sakkos he has a phainolion (φαινόλιον), our chasuble, but reaching to the feet behind and at the sides, and cut away in front (see CHASUBLE and illustrations). The deacon wears the sticharion and epimanikia, but no girdle. His stole is called an orarion (ὠράριον), it is pinned to the left shoulder and hangs straight down, except that he winds it around his body and over the right shoulder at the Communion. It is embroidered with the word "ΑΓΙΟΣ" three times. A very common abuse (among Melkites too) is for other servers to wear the orarion. This is expressly forbidden by the Council of Laodicea (c. 360, can. xxii). The Byzantine Rite has no sequence of liturgical colours. They generally use black for funerals, otherwise any colours for any day. The vessels used for the holy Liturgy are the chalice and paten (δίσκος), which latter is much larger than ours and has a foot to stand it (it is never put on the chalice), the asteriskos (ἀστερίσκος) a cross of bent metal that stands over the paten to prevent the veil from touching the holy bread, the spoon (λάβας) for giving Communion, the spear (λογχὴ) to cut up the bread, and the fan (ἀντρίδιον) which the deacon waves over the Blessed Sacrament—this is a flat piece of metal shaped like an angel's head with six wings and a handle. The antimension (ἀντιμήρισον) is a kind of corporal containing relics that is spread out at the beginning of the Liturgy. It is really a portable altar. The *Holy Bread* (always leavened of course) is made as a flat loaf marked in squares to be cut up during the Proskomide with the letters IC. XC. NI. KA. (Ἰησοῦς Χριστός νικᾷ). In the diakonikon a vessel is kept with hot water for the Liturgy (Fortescue, op. cit., 403-409; "Echos d'Orient," V, 129-139; R. Storr, "Die griech. Liturg.", 13-14).

Church music.—The singing in the Byzantine Rite is always unaccompanied. No musical instrument of any kind may be used in their churches. They have a plain chant of eight modes that correspond to ours, except that they are numbered differently; the four authentic modes (Doric, Phrygian, Lydian, and Mixolydian—our 1st, 3rd, 5th, and 7th) come first, then the Plagal modes (our 2nd, 4th, 6th, and 8th). But their scales are different. Whereas our plainsong is strictly diatonic, theirs is enharmonic with variable intervals. They always sing in unison and frequently change the mode in the middle of a chant. One singer (generally a boy) sings the dominant (τὸ τσόν) of the mode to the sound of A continuously, while the rest execute their elaborate pneumas (see PLAIN CHANT). The result is generally—to our ears—unmelodious and strange, though in some cases a carefully trained choir produces a fine effect. One of the best is that of St. Anne's (Melkite) College at Jerusalem, trained by the French Pères Blancs. One of these, Père Rebours, has written an exhaustive and practical treatise of their chant ("Traité de psaltique" etc.; see bibliography). In Russia and lately, to some extent, in the metropolitan church of Athens they sing figured music in parts of a very stately and beautiful kind. It is probably the most beautiful and suitable church music in the world.

The Holy Liturgy.—The present use of the Byzantine Rite confines the older Liturgy of St. Basil to the Sundays in Lent (except Palm Sunday), Maundy Thursday, and Holy Saturday, also the eves of Christmas and the Epiphany, and St. Basil's feast (1 January). On all other days on which the Liturgy is celebrated they use that of St. Chrysostom. But on the weekdays in Lent (except Saturdays) they may not consecrate, so they use for them the Liturgy of the Presanctified. An Orthodox priest does not celebrate every day, but as a rule only on Sundays and feast-days. The Uniats, however, in this, as in many other ways, imitate the Latin custom. They also have a curious principle that the altar as well as the celebrant must be fasting, that is to say that it must not have

been used already on the same day. So there is only one Liturgy a day in an Orthodox Church. Where many priests are present they concelebrate, all saying the Anaphora together over the same offerings. This happens nearly always when a bishop celebrates; he is surrounded by his priests, who celebrate with him. The Liturgy of St. Chrysostom, as being the one commonly used, is always printed first in the Euchologia. It is the framework into which the others are fitted; and the greater part of the Liturgy is always said according to this form. After it are printed the prayers of St. Basil (always much longer) which are substituted for some of the usual ones when his rite is used, and then the variants of the Liturgy of the Presanctified. The Liturgies of Basil and Chrysostom, then, differing only in a certain number of the prayers, may be described together.

The first rubric directs that the celebrant must be reconciled to all men, keep his heart from evil thoughts, and be fasting since midnight. At the appointed hour (usually immediately after None) the celebrant and deacon (who communicates and must therefore also be fasting) say the preparatory prayers before the ikonostasis (Brightman, op. cit., 353-354), kiss the holy ikons, and go into the diakonikon. Here they vest, the celebrant blessing each vestment as it is put on, say certain prayers, and wash their hands, saying verses 6-12 of Ps. xxv ("Lavabo inter innocentes" etc., op. cit., 354-356). Then the first part of the Liturgy, the *Preparation of the Offering* (προσκομιδή) begins at the credence table (πρόθεσις). The loaves of bread (generally five) are marked in divisions as described above under the caption *Altar*, etc. The celebrant cuts away with the holy lance the parts marked IC. XC. NI. KΑ., and says: "The Lamb of God is sacrificed." These parts are then called the Lamb. The deacon pours wine and warm water into the chalice. Other parts of the bread are cut away in honour of the All-holy Theotokos, nine for various saints, and others for the bishop, Orthodox clergy, and various people for whom he wishes to pray. This rite is accompanied by many prayers, the particles (προσφορά) are arranged on the disks (paten) by the Lamb (that of the Theotokos on the right, because of the verse "The Queen stands at thy right hand"). A long rubric explains all this, covered with the asteriskos and veils, and the offerings are repeatedly incensed. The deacon then incenses the prothesis, altar, sanctuary, nave, and the celebrant. (A detailed account of the now elaborate rite of the Proskomide is given in the "Echos d'Orient", III, 65-78.) They then go to the altar, kiss the Gospel on it and the deacon holding up his oration says: It is time to sacrifice to the Lord. Here begin the *Litanies* (ἐκτεναὶ or συναπτὰ). The doors of the ikonostasis are opened, and the deacon goes out through the north door. Standing before the royal doors he chants the Great Litany, praying for peace, the Church, the patriarch or synod (in Orthodox countries for the sovereign and his family), the city, travellers, etc., etc. To each clause the choir answer "Kyrie eleison". Then follows the first antiphon (on Sundays Ps. cii), and the celebrant at the altar says a prayer. The Short Litany is sung in the same way (the clauses are different, Brightman, op. cit., 362-375) with an antiphon and prayer, and then a third litany; on Sundays the third antiphon is the Beatitudes.

Here follows the *Little Entrance*. The deacon has gone back to the celebrant's side. They come out through the north door in procession, the deacon holding the book of the Gospels, with acolytes bearing candles. The troparia (short hymns) are sung, ending with the Trisagion: "Holy God, Holy Strong One, Holy Immortal One, have mercy on us" (three times); then "Glory be to the Father", etc.—"As it was in the beginning", etc.—and again "Holy God", etc. Meanwhile the celebrant says other prayers. A reader

sings the Epistle; a Gradual is sung; the deacon sings the Gospel, having incensed the book; more prayers follow. Then come prayers for the catechumens, and they are dismissed by the deacon: "All catechumens go out. Catechumens go out. All catechumens go away. Not one of the catechumens [shall stay]."—Of course nowadays there are no catechumens.—The prayers for the catechumens bring us to the first variant between the two Liturgies. The one said by the celebrant is different (and, as an exception, shorter) in St. Basil's rite (Brightman, op. cit., 374 and 401). The deacon says, "All the faithful again and again pray to the Lord in peace", and repeats several times the curious exclamation "Wisdom!" (σοφία) that occurs repeatedly in the Byzantine Rite—before the Gospel he says "Wisdom! Upright!"—σοφία, ὀρθοί, meaning that the people should stand up.

The *Liturgy of the Faithful* begins here. Prayers for the faithful follow (different in the two rites, Brightman, op. cit., 375-377 and 400-401); and then comes the dramatic moment of the Liturgy, the *Great Entrance*. The celebrant and deacon go to the prothesis, the offerings are incensed. The deacon covers his shoulders with the great veil (see AER) and takes the disks (paten) with the bread; the thurible hangs from his hand; the celebrant follows with the chalice. Acolytes go in front and form a solemn procession. Meanwhile the choir sings the Cherubic Hymn (Χερουβικός ὕμνος): "Let us, who mystically represent the Cherubim, and who sing to the Life-giving Trinity the thrice holy hymn, put away all earthly cares so as to receive the King of all things [here the procession comes out through the north door] escorted by the army of angels. Alleluia, alleluia, alleluia." The procession goes meanwhile all round the church and enters the sanctuary by the royal doors. The Cherubic Hymn has a very elaborate and effective melody (Rebours, op. cit., 156-164) with almost endless pneumas. This ceremony, with its allusion to the entrance of the "King of all things" before the offerings are consecrated, is a curious instance of a dramatic representation that anticipates the real moment of the Consecration. After some more prayers at the altar, different in the two liturgies, the deacon cries out, "The doors! The doors! Let us attend in wisdom", and the doors of the ikonostasis are shut. The Creed is then sung.

Here begins the *Anaphora* (Canon). There is first a dialogue, "Lift up your hearts" etc., as with us, and the celebrant begins the Eucharistic prayer: "It is meet and just to sing to Thee, to bless Thee, praise Thee and give thanks to Thee in all places. . . ." The form in St. Basil's Rite is much longer. It is not said aloud, but at the end he lifts up his voice and says: "Crying, singing, proclaiming the hymn of victory and saying:"—and the choir sings "Holy, Holy, Holy" etc., as in our Mass. Very soon, after a short prayer (considerably longer in St. Basil's Rite) the celebrant comes to the words of Institution. He lifts up his voice and sings: "Take and eat: this is my Body that is broken for you for the forgiveness of sins"; and through the Ikonostasis the choir answers "Amen". Then: "Drink ye all of this, this is my Blood of the New Testament that is shed for you and for many for the forgiveness of sins." R. Amen—as before. The Orthodox, as is known, do not believe that these words consecrate, so they go straight on to the Anamnesis, and a special rubric in their Euchologion (ed. Venice, 1898, p. 63) warns them not to make any reverence here. The Uniat, on the other hand, make a profound reverence after each form. The Anamnesis (our "Unde et memores") again is longer in the Basilian Liturgy. The Epiklesis follows. The deacon invites the celebrant in each case: "Bless, sir, the holy bread [or wine]." The two forms (of Basil and Chrysostom) may stand as specimens of the principle of abbreviation that distinguishes the later rite. In St.

Basil's Liturgy it is: "We pray and beseech thee, O Holy of Holy ones, that according to the mercy of thy favour thy Holy Spirit come down on us and on these present gifts to bless them, sanctify them and to make. . . ." (Chrysostom: "Send down thy Holy Spirit on us and on these present gifts. . ."). Then, after an irrelevant interpolation, with two verses from Ps. 1 about the celebrant's own soul, he continues (Basil): "this bread the precious Body itself of our Lord and God and Saviour Jesus Christ" (Chrys.: "and make this bread the precious Body of thy Christ"). Deacon: "Amen. Bless, Sir, the holy chalice." Celebrant (Basil): "But this chalice the Precious Blood itself of our God and Saviour Jesus Christ" (Chrys.: "And what it is in th's Chalice the precious Blood of Thy Christ"). Deacon: "Amen. Bless, Sir, both." Celebrant (Basil): "That was shed for the life and salvation of the world" (Chrys.: "Changing it by thy Holy Spirit"). Deacon: "Amen. Amen. Amen." Both then make a deep prostration, and the deacon waves the ripidion (fan) over the Blessed Sacrament. This ceremony, now interpreted mystically as a symbol of adoring angels, was certainly once a practical precaution. They have no pall over the chalice and there is a danger of flies. The waving of the ripidion occurs several times during the Liturgy.

In the Byzantine Rite, as in all the Antiochene family of liturgies, the Intercession follows at this point. First comes a memory of saints; the deacon then reads the Diptychs of the Dead, and the celebrant says a prayer into which he may introduce the names of any of the faithful departed for whom he wishes to pray. Prayers for the living follow (in Russia for the second time occur the names of "Our Orthodox and Christ-loving Lord Nicholas, Czar and Autocrat of all the Russias" and of all his "right-believing and God-fearing" family), with the names of the patriarch (or Synod) and metropolitan, and the ending: "and all [masc.] and all [fem.]" *καὶ πάντων καὶ πασῶν*. The deacon then reads the Diptychs of the Living; more prayers for them follow. Here ends the Anaphora. The celebrant blesses the people: "The mercy of our great God and Saviour Jesus Christ be with all of you." Choir: "And with thy spirit." And the deacon goes out to his place before the ikonostasis and reads a litany, praying for various spiritual and temporal favours, to each clause of which the choir answers: "Kyrie eleison", and at the last clause—"Having prayed in the union of faith and in the communion of the Holy Ghost, let us commend ourselves and one another and our whole life to Christ, our God." To Thee, O Lord (*Σοι, Κύριε*).—Meanwhile the celebrant says a long prayer silently. The people sing the Lord's Prayer, and the celebrant adds the clause: For Thine is the Kingdom" etc. The Inclination follows. The deacon says, "Bow your heads to the Lord" (our "Humiliate capita vestra Domino"); they answer, "To Thee, O Lord", and the celebrant says the Prayer of Inclination (different in the two Liturgies). The preparation for Communion begins here. The deacon winds his orarion (stole) around his body, the curtain of the royal doors (they have besides the doors a curtain that is continually drawn backward and forward during the Liturgy) is drawn back, and the celebrant elevates the Holy Eucharist saying, "Holy things for the holy", to which the answer is: "One only is holy, one only is Lord, Jesus Christ in the glory of God the Father. Amen." The Communion hymn (*κοινωνικόν*) of the day is sung, and the Communion begins. While the clergy Communicate in the Sanctuary a sermon is sometimes preached. The celebrant breaks the Holy Bread into four parts, as it is marked, and arranges them on the diskos thus:—

I Σ
N I K A
X Σ

He puts the fraction marked ΙΣ into the chalice, and

the deacon again pours into it a little warm water (the use of warm water is a very old peculiarity of this rite). The part marked ΧΣ is divided into as many parts as there are priests and deacons to Communicate. Meanwhile, prayers are said; those about to Communicate ask pardon of their offences against each other. The celebrant says, "Behold I draw near to our immortal King" etc., and receives Holy Communion in the form of bread, saying: The precious and all-holy Body of Our Lord and Saviour Jesus Christ is given to me N. priest [or bishop] for the forgiveness of my sins and for life everlasting." Then he says, "Deacon, approach", and gives him Communion with the same form (To thee N. deacon etc.). The celebrant then drinks of the chalice with a corresponding form—The precious and all-holy Blood—and communicates the deacon as before. After Communion each says silently a very beautiful prayer—I believe, Lord, and I confess that Thou art in very truth Christ, the Son of the living God etc. (Brightman, op. cit., 394.) The rest of the clergy are Communicated from the portion marked ΙΣ, that has been put into the chalice and is therefore soaked in the consecrated wine, with one form (The precious and all-holy Body and Blood). The celebrant divides the portions marked NI and KA, and the deacon puts them into the chalice with a sponge. The doors are opened and the deacon says, "Draw near in the fear of God and with faith". The celebrant comes down to the doors with the chalice and the spoon and communicates the people with the Holy Bread dipped in the chalice, and with one form, as before. The people stand to receive Communion (the Byzantine Rite knows practically no kneeling at all). Finally, the deacon puts all the remaining particles into the chalice and carries it back to the prothesis. Those other particles (prosphora) originally cut off from the bread have lain on the diskos (paten) since the proskomide. It has been a great question whether they are consecrated or not. The Orthodox now say that they are not, and the deacon puts them into the chalice after the Communion. It is obviously a question of the celebrant's intention. The Uniat priests are told to consecrate them too, and in their Liturgy the people receive them in Communion (Fortescue, op. cit., 417; "Echos d'Orient", III, 71-73).

Here begins the *Dismissal*. The deacon unwinds his orarion, goes back to the choir before the ikonostasis, and says a short litany again with the choir. He then goes to the prothesis and consumes all that is left of the Holy Eucharist with the prosphora. Meanwhile, some of the bread originally cut up at the Prothesis has remained there all the time. This is now brought to the celebrant, blessed by him, and given to the people as a sacramental (the French *pain bénit*—see ANTIDORON). After some more prayers the celebrant and deacon go to the diakonikon, the doors are shut, they take off their vestments, and the Liturgy is over. The whole service is very much longer than our Mass. It lasts about two hours. It should be noted that all the time that the choir are singing or litanies being said the priest is saying other prayers silently (*μυστικῶς*). The Byzantine Rite has no provision for low Mass. As they say the Liturgy only on Sundays and feast-days, they have less need for such a rite. In cases of necessity, where there is no deacon, the celebrant supplies his part as best he can. The Uniat, who have begun to celebrate every day, have evolved a kind of low Liturgy; and at the Greek College at Rome they have a number of little manuscript books containing an arrangement for celebrating with a priest and one lay server only. But in the Levant, at any rate, the Liturgy is always sung, and incense is always used; so that the minimum of persons required for the Liturgy is a celebrant, server, and one other man who forms the choir.

The *Liturgy of the Presanctified* is fitted into the general framework of St. Chrysostom's Rite. It is usu-

ally celebrated on Wednesdays and Fridays in the first six weeks of Lent, and on all the days of Holy Week, except Maundy Thursday and Easter Eve which have the real Liturgy (of St. Basil). On other days in Lent there is no liturgical service at all. On the Sunday before more loaves (*προσφορά*) are used than otherwise. The same rite of preparation is made over all. After the Elevation the celebrant dips the other prosphoras into the chalice with the spoon, and places it in another chalice in the tabernacle (*ἀρτοφόριον*) kept for this purpose. The Liturgy of the Presanctified is said after Vespers (*ἐσπερινός*), which forms its first part. There is of course no further Proskomide, but the preparatory prayers are said by celebrant and deacon as usual. The Great Litany is introduced into the middle of Vespers. The hymn *ὡς Ἰαβὼρ* (see below) is sung as usual, and the lessons are read. The prayers for catechumens and their dismissal follow. The Great Entrance is made with the already consecrated offerings, and a changed form of the Cherubic Hymn is sung (Maltzew, "Die Liturgien", 149). The curtain of the royal doors is half-drawn across, the whole Anaphora is omitted, and they go on at once to the Short Litany before the Lord's Prayer. The Lord's Prayer, Inclination, and Elevation with the form: "The presanctified Holy Things to the holy" follow. Wine and warm water are poured into the chalice, but not, of course, consecrated. Communion is given with one form only. The Blessed Sacrament already dipped in consecrated wine is now dipped in unconsecrated wine. The celebrant drinks of this wine after his Communion without any prayer. The Liturgy ends as usual (with different forms in some parts), and the deacon consumes what is left of the Holy Eucharist (unless some of it is again reserved for the next Presanctified Liturgy and the wine in the Chalice. This is the merest outline of the rite. Its earlier part is inextricably joined to the Vespers (Maltzew, op. cit., 121-158).

The *Divine Office* is very long and complicated. When sung in choir it lasts about eight hours. It is said entirely only by monks. Secular priests say part of it, as their devotion dictates. The Uniate frequently apply to Rome to know what to do, and the answer is always: *Servetur consuetudo*, by which is meant that their secular clergy should say as much of the Office as is customary. It is impossible for them to say it all. The Office is divided into the hours named above (under *Service-books*) which correspond to ours, with additional short hours (*μεσώρια*) intermediate between Prime, Terce, Sext, None, and Vespers. It is made up of psalms, lessons, prayers, and especially of a great number of hymns in rhythmical prose. The Psalter is divided into twenty parts called *καθίσματα*, each of which is made up of three sections (*στάσεις*). The whole Psalter is sung every week. The most important of the many kinds of hymns are the following: A canon (*κανών*) is made up of nine odes corresponding to the nine canticles (of Moses, Ex., xv, 1-19; Deut., xxxii, 1-43; of Anna, I Kings, ii, 1-10; Hab., iii, 2-19; Is., xxvi, 9-20; Jonas, ii, 2-10; the Benedictic, Magnificat, and Benedictus) sung at Lauds. Of these canticles the second is sung only in Lent; therefore most canons have no second ode. Each ode (*ὥδη*) is supposed to correspond more or less to its canticle. Thus the sixth ode will generally contain a reference to Jona's whale. Otherwise the canon is always about the feast on which it is sung, and much ingenuity is expended in forcing some connexion between the event of the day and the allusions in the canticles. The odes are further divided into a *heirmos* (*εἰρμός*) and *troparia* (*τροπάρια*) of any number, from three to twenty or more. The *heirmos* sets the tune for each ode (see PLAIN CHANT), and the *troparia* follow it. The last troparion of each ode always refers to Our Lady and is called *θεοτόκιον*. The odes often make an acrostic in their initial letters; sometimes they are alphabetic. In long canons a poem is

intercalated in the middle during which people may sit (they stand for nearly the whole Office); it is called *κάθισμα*. Three troparia form an *oikos* ("house", cf. Italian *stanza*). The canons for the weekdays are in the *Oktoechos*, those for immovable feasts in the *Menaias*, for movable ones in the *Triodion* and *Pentekostarion* (see above under *Service-books*). One of the most famous of all is St. John Damascene's Golden Canon for Easter Day (translated by Dr. J. M. Neale in his "Hymns of the Eastern Church", 4th ed., London, pp. 30-44). Other kinds of chant are the *kontakion* (*κοντάκιον*), a short poem about the feast, the *stichos* (*στίχος*) a versicle, generally from a psalm (like our antiphons), which introduces a *sticheron* (*στιχηρόν*), or hymn sung at Matins and Vespers. An *idiomelon* (*ιδιόμελον*) is a troparion that has its own melody, instead of following a *heirmos* (for other kinds of chant see Nilles, "Kalend. Man.", pp. lvii-lxix, and the example he gives from the feast of the Transfiguration, 6 August). The Great Doxology (*δοξολογία*) is our "Gloria in excelsis", the small one our "Gloria Patri". The *Hymnos Akathistos* (*ὕμνος ἀκάθιστος*, standing hymn) is a complete Office in honour of Our Lady and of her Annunciation (see ACATHISTUS). It has all the Hours and is made up of psalms, odes, etc., like other Offices. It is sung very solemnly on the Saturday before the second Sunday before Easter; and they sing parts of it every Friday evening and Saturday morning in Lent. It is always sung standing. The *Hymnos Akathistos* is printed at the end of the *Horologion*. P. de Meester, O.S.B., has edited it with an Italian translation "Ἀκολουθία τοῦ ἀκαθίστου ὕμνου.—Officio dell' inno acatisto, Rome, 1903). At the end of Vespers every day is sung the famous *ὡς Ἰαβὼρ*, as the evening light disappears, and the lamps are lit:—

Hail, gladdening Light, of his pure glory poured
Who is the immortal Father, heavenly, blest,
Holist of Holies, Jesus Christ, Our Lord.
Now we are come to the sun's hour of rest,
The lights of evening round us shine,
We hymn the Father, Son and Holy Spirit divine,
Worthiest art Thou at all times to be sung
With undefiled tongue,
Son of our God, giver of life alone.
Therefore in all the world, thy glories, Lord,
they own.

—Kebles' translation in the "Hymns, Ancient and Modern", No. 18.

There are, lastly, services for the administration of the Seven Great Mysteries (the Seven Sacraments) that are printed in the *Euchologion* after the liturgies (ed. cit., pp. 136-288). *Baptism* is always conferred by immersion (the Orthodox have grave doubts as to the validity of baptism by infusion.—See Fortescue, Orth. E. Church, p. 420). The child is anointed all over its body and dipped three times with its face towards the east. The form is: "The servant of God N. is baptized in the name of the Father, Amen, and of the Son, Amen, and of the Holy Ghost, Amen." *Confirmation* follows at once and is conferred by priests (the Holy See recognizes this confirmation as valid and neither rebaptizes nor reconfirms converts from Orthodoxy). The whole body is again anointed with *chrism* (*τὸ ἅγιον μύρον*) prepared very elaborately with fifty-five various substances by the oecumenical patriarch on Maundy Thursday (Fortescue, op. cit., 425-426). The form is: "The seal of the gift of the Holy Ghost" (Euch., 136-144). The Orthodox never rebaptize when they are sure of the validity of former baptism; but they reconfirm continually. Confirmation has become the usual rite of admittance into their Church, even in the case of apostates who have already been confirmed orthodoxly. The pious Orthodox layman Communicates as a rule only four times a year, at Christmas, Easter, Whitsunday, and the Falling Asleep of the Mother of God (15 August). The Blessed

Sacrament is reserved for the sick in the *ἀροφώριον*, (or *ιεροφυλάκιον*) under both kinds more or less, that is to say it has been dipped into the chalice and allowed to dry. It is given to the sick with a spoon and with the usual form (see above under *Holy Liturgy*). They have no tradition of reverence for the reserved Eucharist. *Penance* (*μετάνοια*) is administered rarely, usually on the same occasions as Holy Communion. They have no confessionals. The ghostly father (*πνευματικός*) sits before the ikonostasis under the picture of Our Lord, the penitent kneels before him (one of the rare cases of kneeling is in this rite), and several prayers are said, to which the choir answers "Kyrie eleison". The "choir" is always the penitent himself. Then the ghostly father is directed to say "in a cheerful voice: Brother, be not ashamed that you come before God and before me, for you do not confess to me but to God who is present here." He asks the penitent his sins, says that only God can forgive him, but that Christ gave this power to his Apostles saying: "Whose sins ye shall forgive", etc., and absolves him with a deprecatory form in a long prayer in which occur the words: "May this same God, through me a sinner, forgive you all now and for ever." (Euch., pp. 221-223.) *Holy Order* (*χειροτονία*) is given by laying on the right hand only. The form is (for deacons): "The grace of God, that always strengthens the weak and fills the empty, appoints the most religious sub-deacon N. to be deacon. Let us then pray for him that the grace of the Holy Ghost may come to him." Long prayers follow, with allusions to St. Stephen and the diaconate; the bishop vests the new deacon, giving him an orarion and a ripidion. For priests and bishops there is the same form, with the obvious variants, "the most religious deacon N. to be priest", or "the most religious elect N. to be Metropolitan of the holy Metropolis N." (nearly all their bishops have the title *Metropolitan*), and the subjects receive their vestments and instruments. Priests and bishops consecrate at once with the ordainer (Euch., 160-181). The Orthodox believe that the grace of Holy orders may perish through heresy or schism, so they generally reordain converts (the Russian Church has officially refused to do this, Fortescue, op. cit., 423-424). *Matrimony* (*γάμος*) is often called the "crowning" (*σφράγιση*) from the practice of crowning the spouses (Euch., 238-252). They wear these crowns for a week, and have a special service for taking them off again (Euch., 252). The *Anointing of the Sick* (*ἐχέλαιον*) is administered (when possible) by seven priests. The oil contains as a rule wine, in memory of the Good Samaritan. It is blessed by a priest just before it is used. They use a very long form invoking the all-holy Theotokos, the "moneyless physicians" Sts. Cosmas and Damian, and other saints. They anoint the forehead, chin, cheeks, hands, nostrils, and breast with a brush. Each priest present does the same (Euch., 260-288). The service is, as usual, very long. They anoint people who are only slightly ill, (they very much resent our name: *Extreme Unction*), and in Russia on Maundy Thursday the Metropolitans of Moscow and Novgorod anoint everyone who presents himself, as a preparation for Holy Communion (Echos d'Orient, II, 193-203).

There are many *Sacramentals*. People are sometimes anointed with the oil taken from a lamp that burns before a holy icon (occasionally with the form for confirmation: "The seal of the gift of the Holy Ghost"). They have besides the antidoron another kind of blessed bread—the *kolyba* (*κόλυβα*) eaten in honour of some saint or in memory of the dead. On the Epiphany ("The Holy Lights"—*τὰ ἅγια φῶτα*) there is a solemn blessing of the waters. They have a great number of exorcisms, very stern laws of fasting (involving abstinence from many things besides flesh meat), and blessings for all manner of things. These are to be found in the Euchologion. Preaching was

till lately almost a lost art in the Orthodox Church; now a revival of it has begun (Gelzer, Geistliches u. Weltliches, etc., 76-82). There is a long funeral service (Euch., ed. cit., 393-470). For all these rites (except the Liturgy) a priest does not wear all his vestments but (over his cassock) the epitrachelion and phainolion. The high black hat without a brim (*καλημαύκιον*) worn by all priests of this rite is well known. It is worn with vestments as well as in ordinary life. Bishops and dignitaries have a black veil over it. All clerks wear long hair and a beard. For a more detailed account of all these rites see "Orth. Eastern Church", pp. 418-428.

The Orthodox Service-books in Greek are published at their official press (ὁ βούκις) at Venice (various dates: the *Euchologion* quoted here, 1898); the Uniat ones at Rome (Propaganda). There is also an Athenian edition; and the Churches that use translations have published their versions. PROVOST ALEXIOS MALTZEV (of the Russian Embassy church at Berlin) has edited all the books in Old Slavonic with a parallel German translation and notes (Berlin, 1892); RENAUDOT, *Liturgiarum orientalium collectio* (2d ed., 2 vols., Frankfurt, 1847); NEALE, *The Liturgies of St. Mark, St. James, St. Clement, St. Chrysostom, St. Basil* (London, 1875, in Greek); another volume contains *The Translations of the Primitive Liturgies of St. Mark, etc.*; ROBERTSON, *The Divine Liturgies of Our Fathers among the Saints John Chrysostom, Basil the Great and that of the Presanctified* (Greek and English, London, 1894); DE MEESTER, *La divine liturgie de S. Jean Chrysostome* (Greek and French, Paris, 1907); 'H θεία λειτουργία, περιέχουσα τὸν ἑσπέρικον, κ. τ. λ. (Athens, 1894); CHARON, *Les saintes et divines Liturgies*, etc. (Beirut, 1904); STORFF, *Die griechischen Liturgien*, XLI of THALHOFER, *Bibliothek der Kirchenväter* (Kempten, 1877); *Kiṭāb al-liturgiāt al-islāhiyyeh* (Melchite Use in Arabic, Beirut, 1899); GOAR, *Euchologion, sive Rituale Græcorum* (2d ed., Venice, 1720); PROBST, *Liturgie der drei ersten christlichen Jahrhunderte* (Tübingen, 1870); ANON., *Liturgie des vierten Jahrhunderts und deren Reform* (Münster, 1893); KATTENBUSCH, *Lehrbuch der vergleichenden Konfessionskunde: Die orthodoxe anatolische Kirche* (Freiburg im Br., 1892); NILLES, *Kalendarium manuale utriusque ecclesie* (2nd ed., Innsbruck, 1896-97); PRINCE MAX OF SAXONY, *Prolektiones de Liturgiis orientalibus* (Freiburg im Br., 1908); I; HARGOOD, *Service-Book of the Holy Orthodox Catholic Apostolic (Grecco-Russian) Church* (Boston and New York, 1906); ALLATIS, *De libris et rebus eccl. Græcorum* (Cologne, 1646); CLUGNET, *Dictionnaire grec-français des noms liturgiques en usage dans l'Eglise grecque* (Paris, 1895); ARCHATZIKAKI, *Etudes sur les principales Fêtes chrétiennes dans l'ancienne Eglise d'Orient* (Geneva, 1904); DE MEESTER, *Officio dell' anno eccl. (Greek and Italian, Rome, 1903)*; GELZER, *Geistliches und Weltliches aus dem türkisch-griechischen Orient* (Leipzig, 1900); GAISER, *Le système musical de l'Eglise grecque* (Maredsous, 1901); REYNOLDS, *Traité de psalmodie. Constitutionnists. See JANSENISTS.

Constitutions, ECCLESIASTICAL.—The term *constitution* denotes, in general, the make-up of a body, either physical or moral. Used in reference to civil or religious societies, the word, in the singular, signifies the fundamental law determining their governing, legislative, and executive organism; in the plural it denotes the enactments, ordinances, and laws issued by the supreme authority to further the object of the society. In legal language the term *constitutiones* denotes only church ordinances, civil ordinances being termed *leges*, laws. The *constitutiones ecclesiasticæ* have in common with the *leges civiles* the binding power derived from the authority of their framers, but they differ from them as the Church differs from civil society, viz. in their origin, object, and sanction. Civil laws are enactments of a power directly human and only Divine in its first cause; their primary object is the furtherance of temporal welfare; and their sanction, temporal penalties. Ecclesiastical constitutions, on the other hand, emanate from an authority directly of Divine institution; their ultimate object is to promote the salvation of souls in the Kingdom of God on earth; their sanction consists in spiritual penalties.

In the total complex of laws bearing on matters spiritual, ecclesiastical constitutions stand midway between the Divine and the natural law. The Divine law is contained in the Scriptures interpreted by living, authoritative tradition, e. g. the Ten Commandments, the constitutions of the Church, the adminis-

tration of the sacraments. Natural law rests on the dictates of human reason, e. g. the law of self-preservation, obedience to authority, Divine worship. Both the Divine and the natural laws are often insufficiently determined; the Church expounds them and adapts them to particular times, places, and persons. Chief among ecclesiastical constitutions are the ordinances emanating from general councils (see COUNCILS, GENERAL, X, XI) and from the Apostolic See (see CONSTITUTIONS, PAPAL); these are the *constitutiones ecclesiasticae* in the strictest sense of the term. Episcopal constitutions are issued by bishops either singly or assembled in synods, e. g. the constitutions of the ten provincial and three plenary councils of Baltimore, which have adapted the ancient constitutions of the Universal Church to the peculiar national and political situation of the United States of America.

J. WILHELM.

Constitutions, PAPAL (Lat. *constituere*, to establish, to decree), ordinances issued by the Roman pontiffs and binding those for whom they are issued, whether they be for all the faithful or for special classes or individuals. From the earliest times, the Christians of the whole world have consulted the popes on all matters pertaining to faith, morals, and discipline. The earliest instance is the well-known appeal from Corinth to Pope Clement I, during the lifetime of St. John the Apostle, in the first century of the Christian Era. From that time on, requests for decisions on various ecclesiastical matters were addressed to the Holy See from all parts of the known world, and the answers that were received were revered as proceeding from the mouth of Christ's chief Apostle and His vicar on earth. The fact that the decrees of Church councils, whether general, provincial, or even diocesan, were anciently as a rule forwarded to the pope for his revision or confirmation, gave occasion for many papal constitutions during the early ages. After the time of Constantine the Great, owing to the greater liberty allowed to the Church, such intercourse with the Apostolic See became more frequent and more open. St. Jerome, in the fourth century (Ep. cxxiii), testifies to the number of responses requested of the sovereign pontiff from both the Eastern and the Western Church during the time he acted as secretary to Pope Damasus. That these papal responses soon began to constitute an important section of canon law, is evident from statements in the letters of various Roman pontiffs. The *decretalia* and *constituta* of the Apostolic See were recognized as laws or as interpretations of existing canons binding the particular Churches to their observance. The fact that oecumenical councils required the papal confirmation before their decrees were valid (a principle expressly admitted by the early councils themselves) tended not a little to direct the attention of all Christians to the fullness of jurisdiction residing in the successor of St. Peter. Hence the professions of faith sent to the popes by newly elected bishops and by emperors on their succession to the throne.

Turning to the strictly canonical aspect of the case, the word *constitution* is derived from *con* (cum) and *statuendo*, and therefore means a common statute. It is consequently synonymous in most respects with law. In fact, a papal constitution is a legal enactment of the ruler of the Church, just as a civil law is a decree emanating from a secular prince. Reiffenstuel declares that the difference of name between ecclesiastical and civil statutes is very proper, since a secular ruler derives his authority immediately from the people, and hence it is really the people who make the laws, while the pope receives his power immediately from God and is himself the source whence all Church regulations proceed. As a matter of fact, however, while it is true that ecclesiastical laws are generally denominated "constitutions", yet they are occa-

sionally designated as "laws" in canonical jurisprudence (e. g. Can. Leges Ecclesiae, 3, Q. 6). It must not be supposed, however, that even in ecclesiastical usage the word *constitution* is restricted to papal ordinances; it is also employed for conciliar, synodal, and episcopal mandates, though more rarely in later times. The name *canon* is generally, though not exclusively, given to conciliar decrees (see CANONS, ECCLESIASTICAL). Letters emanating from the pope, though all designated constitutions, receive more specific names according to their form and their subject matter. As to their form, pontifical constitutions may be either Bulls or Briefs. The former are used for the more important and permanent decrees and begin: *Pius* (or name of pope) *Episcopus, Servus servorum Dei*; the latter are headed by the name of the ruling pontiff: *Pius PP. X.* Pope Leo XIII (29 Dec., 1878) made some changes in the exterior form of papal Bulls (see BULLS AND BRIEFS). As to subject-matter, the term *constitution*, if used in a restricted sense, denotes some statute which the Vicar of Christ issues in solemn form either to the whole Christian world or to part of it, with the intention of permanently binding those to whom it is addressed. When the papal letters are addressed to the bishops of the entire Church, they are denominated Encyclicals. This is the most usual form employed by the popes for treating questions of doctrine and discipline. When pontifical enactments take the form of responses they are called decretal epistles. If they be issued *motu proprio* (that is without a request having been made to the Holy See), they are called *decreta*, though this name has also a more general significance (see DECREES). Ordinances issued to individuals concerning matters of minor or transient importance are called Rescripts (see RESCRIPTS, PAPAL).

Before issuing constitutions the pope usually takes counsel with his advisers. These counsellors have varied in the different stages of church history. During the first eleven centuries, the Roman presbyterate and the suburbicarian bishops were formed into councils by the pope whenever he wished to investigate matters of doctrine or discipline. The synodal letters, or constitutions, issuing from these assemblies owed their importance and binding force to the primate jurisdiction of the throne of Peter, for these gatherings were not oecumenical councils in any sense of the word. History records a long list of these Roman councils from the second to the eleventh century. The papal constitutions issued at the close of their celebration were as various as the subject-matter of the councils. The paschal question, the baptism of heretics, the heresies of Sabellius, Nestorius, Eutyches, and others, the restoration of patriarchs and bishops to their sees, ordinances concerning the monastic state, the election of the pope, the right of investiture—all found treatment and decision in these Roman councils and gave occasion to important pontifical constitutions. These rulings were revered as law throughout the Universal Church, East and West, and constitute an important witness to the primacy of the Bishop of Rome. After the eleventh century, these Roman councils grew more infrequent and finally ceased altogether. This was owing to the importance gradually accruing to the cardinals, who succeeded the Roman presbyterate as the senate of the pope. Consistories of the cardinal-bishops, -priests, and -deacons were held twice and then thrice a week in the Apostolic Palace; and to these consistories the pontiff proposed the questions submitted to the Holy See before he drew up his constitution deciding them. The consistory was the ordinary tribunal and audience of the pope for the transaction of all the business of the Universal Church. (See CONSISTORY.) From the sixteenth century to our own time, a third period in the methods of government and counsel is to be distinguished. The rise of the Sacred Roman Congrega-

tions, with their separate tribunals, their consultors, and trained officials, has brought about a change in the preparation of papal constitutions. It is to these congregations that the pope looks for aid in preparing the subject-matter of his letters to the Church. (See ROMAN CONGREGATIONS.)

The binding force of pontifical constitutions, even without the acceptance of the Church, is beyond question. The primacy of jurisdiction possessed by the successor of Peter comes immediately and directly from Christ. That this includes the power of making obligatory laws is evident. Moreover, that the popes have the intention of binding the faithful directly and immediately is plain from the mandatory form of their constitutions. Bishops, therefore, are not at liberty to accept or refuse papal enactments because, in their judgment, they are ill-suited to the times. Still less can the lower clergy or the civil power (see EXEQUATUR; PLACET) possess any authority to declare pontifical constitutions invalid or prevent their due promulgation. The Gallican opinions to the contrary are no longer tenable after the decrees of the Council of the Vatican (Sess. IV, ch. iii). If a papal constitution, published in Rome for the whole Church, were not formally promulgated in a particular region, the faithful would nevertheless be bound by it, if it concerned faith or morals. If it referred to matters of discipline only, its observance would not be urgent, not because of any defect in its binding force, but solely because in such circumstances the pope is presumed to have suspended the obligation for the time being. This leads to the question of the proper promulgation (q. v.) of papal laws (see LAW). The common teaching now is that promulgation in Rome makes them obligatory for the whole world. The method employed is to affix the decrees at the portals of St. Peter's, or St. John Lateran, of the Apostolic Chancery, and in the Piazza de' Fiori

Constitutions of the French Clergy. See FRENCH REVOLUTION.

Consubstantiation.—This heretical doctrine is an attempt to hold the Real Presence of Christ in the Holy Eucharist without admitting Transubstantiation. According to it, the substance of Christ's Body exists together with the substance of bread, and in like manner the substance of His Blood together with the substance of wine. Hence the word *Consubstantiation*. How the two substances can co-exist is variously explained. The most subtle theory is that, just as God the Son took to Himself a human body without in any way destroying its substance, so does He in the Blessed Sacrament assume the nature of bread. Hence the theory is also called "Impanation", a term founded on the analogy of Incarnation.

The subject cannot be treated adequately except in connexion with the general doctrine of the Holy Eucharist (q. v.). Here it will be sufficient to trace briefly the history of the heresy. In the earliest ages of the Church Christ's words, "This is my body", were understood by the faithful in their simple, natural sense. In the course of time discussion arose as to whether they were to be taken literally or figuratively; and when it was settled that they were to be taken literally in the sense that Christ is really and truly present, the question of the manner of this presence began to be agitated. The controversy lasted from the ninth to the twelfth century, after which time the doctrine of Transubstantiation, which teaches that Christ is present in the Eucharist by the change of the entire substance of bread and wine into

His Body and Blood, was fully indicated as Catholic dogma. In its first phase it turned on the question, whether the Body was the historical body of Christ, the very body which was born, crucified, and risen. This was maintained by Paschasius Radbert and denied by Ratramnus in the middle of the ninth century. What concerns us here more closely is the next stage of the controversy, when Berengarius (1000-1088) denied, if not the Real Presence, at least any change of the substance of the bread and wine into the substance of the Body and Blood. He maintained that "the consecrated Bread, retaining its substance, is the Body of Christ, that is, not losing anything which it was, but assuming something which it was not" (*panis sacratus in altari, salvâ suâ substantiâ, est corpus Christi, non amittens quod erat sed assumens quod non erat*—Cf. Martene and Durand, "Thesaurus Novus Anecl.", IV, col. 105). It is clear that he rejected Transubstantiation; but what sort of presence he admitted would seem to have varied at different periods of his long career. His opinions were condemned in various councils held at Rome (1050, 1059, 1078, 1079), Vercelli (1050), Poitiers (1074), though both Pope Alexander II and St. Gregory VII treated him with marked consideration. His principal opponents were Lanfranc, afterwards Archbishop of Canterbury (*De Corpore et Sanguine Domini adversus Berengarium Turonensem*), Durandus of Troarn (q. v.), Guilmundus of Aversa, and Hugh of Langres. Although it cannot be said that Berengarius found many adherents during his lifetime, yet his heresy did not die with him. It was maintained by Wyclif (Trialog, IV, 6, 10) and Luther (Walch, XX, 1228), and is the view of the High Church party among the Anglicans at the present time. Besides the councils above-mentioned, it was condemned by the Fourth Lateran Council (1215), the Council of Constance (1418)—"The substance of the material bread and in like manner the substance of the material wine remain in the Sacrament of the altar", the first of the condemned propositions of Wyclif, and the Council of Trent (1551).

Berengarius and his modern followers have appealed chiefly to reason and the Fathers in support of their opinions. That Transubstantiation is not contrary to reason, and was at least implicitly taught by the Fathers, is shown in the article TRANSUBSTANTIATION. In the discussions of the Fathers about the two natures in the one Person the analogy between the Incarnation and the Eucharist was frequently referred to, and this led to the expression of views favouring Impanation. But after the definitive victory of St. Cyril's doctrine, the analogy was seen to be deceptive. (See Batiffol, *Etudes d'histoire*, etc., 2nd series, p. 319 sqq.) The great Schoolmen unanimously rejected Consubstantiation, but they differed in their reasons for doing so. Albertus Magnus, St. Thomas, and St. Bonaventure maintained that the words, "This is my body", disproved it; while Alexander of Hales, Scotus, Durandus, Occam, and Pierre d'Ailly declared that it was not inconsistent with Scripture, and could only be disproved by the authority of the Fathers and the teaching of the Church (Turnel, *Hist. de la théol. posit.*, I, 313 sqq.). This line of argument has been a stumbling-block to Anglican writers, who have quoted some of the Schoolmen in support of their erroneous opinions on the Eucharist; e.g. Pusey, "The Doctrine of the Real Presence" (1855).

In addition to the works mentioned, see HARPER, *Peace through the Truth* (London, 1866), I; FRÄNZELIN, *De SS. Euch.* (Rome, 1873), thes. xiv; SCHWABE, *Dogmengeschichte* (Freiburg im Br., 1882), III; VERNET in *Dict. de théol. cath.* s.v. *Béranger de Tours*; STREBER in *Kirchenlex.* s.v. *Consubstantiation*; HEDLEY, *The Holy Eucharist* (1907); WAGGETT, *The Holy Eucharist* (Anglican, London, 1906); GORE, *The Body of Christ* (London, 1907).

T. B. SCANNELL.

Consultors, DIOCESAN, a certain number of priests in each diocese of the United States who act as official advisers of the bishop in certain matters pertaining to the administration of the diocese. As a body they take the place of the cathedral chapter as established elsewhere by the general law of the Church. Their appointment was recommended (1866) by the Second Plenary Council of Baltimore. The Third Plenary Council (1884) decreed that they should be constituted a diocesan council, and defined their particular rights and duties.

MANNER OF APPOINTMENT.—The diocesan consultors, it was decreed (n. 18), should be six, or at least four, in number. Where neither number is possible, there should be at least two. They hold office for three years; but they may be reappointed or selected at the expiration of each term. The manner of their election consists in the appointment by the bishop alone of half of their number, and of the other half by the bishop also, after having taken the vote of the clergy. All the clergy exercising the sacred ministry in the diocese send, in writing, to the bishop three names for every consultor to be elected. From the names thus proposed the bishop selects those whom he judges most fit for the office. At stated periods they are convened and presided over by the bishop, four times, or at least twice, a year, and, as occasion requires, monthly. In case of the death, resignation, or removal of a consultor, the bishop appoints his successor with the advice of the other consultors.

RIGHTS AND DUTIES.—The diocesan council has certain rights and duties (A) when the see is *filled*, and (B) when it is *vacant*.—(A) When the see is *filled*, the bishop is bound to ask the advice of the diocesan consultors: (1) For convoking and promulgating a diocesan synod; (2) for dividing missions or parishes; (3) for giving over a mission or parish to a religious community; (4) for appointing deputies for the diocesan seminary; (5) for appointing a new diocesan consultor and synodal examiners to conduct the examination for vacant parishes; (6) for alienating church property, when the sum exceeds five thousand dollars; (7) for determining what missions are to be made parishes with irremovable rectors and appointing the first irremovable rectors in the diocese; (8) for fixing the pension of an irremovable rector who has resigned or who has been removed for cause; (9) for determining, out of synod, the salary of rectors. In all these cases the consultors give their opinion collectively, i. e. in a body, and by secret ballot if they deem proper. The bishop, however, although bound to seek their advice in these matters, is not obliged to follow it.

(B) When the see is *vacant*: (1) the administrator must follow the same procedure, i. e. he must ask the opinion of the diocesan consultors in the above-stated cases. (2) The expiration of the three-year term of the consultors within the period of the vacancy does not affect their tenure of office. They remain in office until the accession of the new bishop who, within six months from his consecration, should hold a new election of diocesan consultors. (3) In the election of a new bishop the council of 1884 conceded a voice to the consultors, as representatives of the clergy of the diocese. Together with the irremovable rectors they meet within thirty days after the vacancy occurs under the presidency of the archbishop of the province, or, if he be hindered, of a suffragan deputed by him. If the vacancy be that of the archbishopric the senior suffragan presides, or one deputed by him. The voting is by secret ballot. Three candidates are selected whose names are sent to the S. Cong. de Propaganda Fide, and to the other bishops of the province, who meet, within ten days, to approve or disapprove of the candidates presented by the consultors and irremovable rectors. The bishops send their

own list to Rome. The pope may reject both lists and appoint as bishop some one who is on neither. (4) When there is a question of selecting a coadjutor with the right of succession the consultors with the irremovable rectors have a voice just as in the election of a new bishop. (5) This is also the case where a new diocese is formed out of one or more existing dioceses. In that case, only the irremovable rectors within the limits of the new diocese join with the consultors of the older diocese or dioceses. (See BALTIMORE, PLENARY COUNCILS OF.)

JOSEPH F. MOONEY.

Consultors, ROMAN. See ROMAN CONGREGATIONS.

Contant de la Molette, PHILIPPE DU, theologian and Biblical scholar, born at Côte-Saint-André, in Dauphiné, France, 29 August, 1737; died on the scaffold during The Terror, 1793. He studied at the Sorbonne, and, in 1765, defended a thesis on Job, in six languages. Louis XV was so well pleased that he allowed him to pass the examinations for the licentiate without the required delays, a privilege, however, which de la Molette did not use. Later on, he became Vicar-General of the Diocese of Vienne, France. As a Biblical author, he shows great erudition and is well versed in the Oriental languages, but he lacks originality, and his criticism is often misleading. His works, all published in Paris, are the following: "Essai sur l'Ecriture Sainte, ou Tableau historique des avantages que l'on peut tirer des langues orientales pour la parfaite intelligence des Livres Saints" (1775); "Nouvelle méthode pour entrer dans le vrai sens de l'Ecriture sainte" (1777); "La Genèse expliquée d'après les textes primitifs", etc. (1777), 3 vols., a work intended especially as a refutation of Voltaire; "L'Exode expliqué", 3 vols. (1780); the thesis that he had defended in 1765 is printed in the beginning of this work; "Les Psaumes expliqués", etc., 3 vols. (1781); "Traité sur la poésie et la musique des Hébreux" (1781), a continuation of the preceding; "Le Lévitique expliqué", 2 vols. (1785). He had also done considerable work as a preparation for a "Nouvelle Bible polyglotte", but it is doubtful whether he ever published it.

R. BUTIN.

Contarini, GASPARO, Venetian statesman and cardinal, b. 16 October, 1483, of an ancient and noble family in Venice; d. at Bologna, 24 August, 1542. He received his elementary training in his native city; and afterwards, from 1501 to 1509, he frequented the University of Padua, where he studied Greek, mathematics, Aristotelean philosophy, and theology. He was a close student and acquired the reputation of a great philosopher. After his return to Venice he became, like all the sons of patrician families, a member of the Great Council, and afterwards was named to a commission which administered the debt of the republic. In September, 1520, he was appointed orator or ambassador to the court of the Emperor Charles V (1519-56), with instructions to defend the alliance of his Government with Francis I of France (1515-47), and to prevent all hostile measures of the emperor. In Worms, where he arrived in April, 1521, he heard much about Luther and his errors; but, not being concerned with the matter, he refrained from all interference, and never saw Luther nor spoke to him. From Worms he went with the imperial court to the Netherlands, thence to England, and finally to Spain. In August, 1525, he returned to Venice. A report of his expe-

riences was presented to the Senate 16 November following. During his absence he was named "Savio di terra ferma", i. e. president of a commission charged with the affairs of the Continental possessions of Venice, and he assumed the duties of this office. In 1527 he represented the Republic of Venice in the Congress of Ferrara, where the Duke of Ferrara joined the league, formed against the Emperor Charles V, between France and several states of Italy. In 1528 he was sent as ambassador to the court of Clement VII (1523-34), with instructions to retain the pope in the above-mentioned league, and to defend the action of the republic in withholding from the pope the cities of Ravenna and Cervia, seized during the late invasion of the Constable Bourbon. Contarini failed in both objects. Venice was forced not only to surrender the aforesaid cities, but also to make peace with the emperor; it was concluded through Contarini in January, 1530, at Bologna. On 24 February following, Contarini assisted at the solemn coronation of Charles V in Bologna, and then returned to Venice, where he presented the usual report to the Senate on 9 March. In compensation for his services he was appointed to several high positions in the government of the republic, and ultimately became a member of the Senate.

Contarini was created cardinal by Paul III in 1535. He accepted the honour and went to Rome (Oct., 1535). He used his influence with the pope to suppress abuses in the papal government and to secure virtuous men for the Sacred College. Contarini was the president of a commission appointed by the pope in 1536 to submit plans for a reform of evils in the Roman Curia or in other parts of the Church. It was largely due to him that, early in 1537, the commission could present its programme, the "*Consilium de emendandâ ecclesiâ*". He advised the pope not to abuse the great jurisdiction placed in his hands; and encouraged his friends among the bishops to take appropriate measures for discipline and good order in their dioceses, setting an example in his own Diocese of Cividale di Belluno, to which he was appointed in October, 1536. St. Ignatius acknowledged that Contarini was largely responsible for the papal approbation of his society (1540). At the desire of Charles V, Contarini was sent as papal legate to Germany in 1541, and took part in the conference held at Ratisbon between Catholics and Protestants in hope of conciliating the latter. As it gradually became evident that the differences in doctrine could not be bridged over, the conference was broken off; Contarini remitted the final decision of all articles of faith to the pope, and returned to Rome. In January, 1542, he was appointed cardinal legate at Bologna, where, after a few months, death put an end to his career. His remains were interred, first in the church of San Petronio, then transferred to the church of the monastery of San Proculo, and finally, in December, 1565, to the family tomb in a chapel of the church of Santa Maria dell'Orto in Venice.

Contarini's principal works are the following: (1) "*Libri duo de immortalitate animæ*"; (2) "*De officio episcopi libri duo*"; (3) "*De magistratibus et republicâ Venetorum libri V*"; (4) "*Compendii primæ philosophiæ libri VIII*"; (5) "*De potestate Pontificis*"; (6) "*De elementis libri V*"; (7) "*Confutatio articulorum seu questionum Lutheri*"; (8) "*De libero arbitrio*"; (9) "*Conciliorum magis illustrium summa*"; (10) "*De Sacramentis christianæ legis et catholicæ ecclesiæ libri IV*"; (11) "*De justificatione*"; (12) "*Catechismus*"; (13) "*De Prædestinatione*"; (14) "*Scholia in epistolas divi Pauli*". In many of these writings Contarini touched upon the questions raised by Luther and other reformers; in stating the Catholic view, however, he was not always fortunate. Thus, in describing the process of justification, he attributes the result largely to faith—not to faith with incipient charity in the Catholic

sense, but to faith in the sense of confidence. However, he departs again from the Protestant view by including in the preparatory stage a real breaking away from sin and turning to good, a repentance and detestation of sin. Thus also, in describing the essence or the *causa formalis* of justification, he requires not only the supernatural quality inherent in the soul, by which man is constituted just, but, in addition to that, the outward imputation of the merits of Christ, believed to be necessary owing to the deficiency of our nature. It would be unjust, nevertheless, to class Contarini among the partisans of the Reformation. The above-mentioned views were taken only in part from the teaching of the Protestants; as yet the Church had given no definite decision on these matters. Moreover, Contarini wished always to remain a Catholic; at the Conference of Ratisbon he protested repeatedly, that he would sanction nothing contrary to the Catholic teaching, and he left the final decision of all matters of faith to the pope.

FRANCIS J. SCHAEFER.

Contarini, GIOVANNI, Italian painter of the Venetian School, b. at Venice about 1549; d. in 1605. Contarini was a contemporary of Jacopo Palma called Palma Giovine. He was a great student of the works of Tintoretto and Titian and is declared to have been an exact imitator of Titian. According to an old story he was so extremely accurate in his portraits that on "sending home one he had taken of Marco Dolce his dogs began to fawn upon it mistaking it for their master". Contarini's work is extremely mannered, soft and sweet, but distinguished by beautiful, rich colouring and executed very much on the lines of Titian's painting. His finest picture is in the Louvre, having been removed from the ducal palace at Venice, and represents the Virgin and Child with St. Mark and St. Sebastian, and the Doge of Venice, Marino Grimani, kneeling before them. Other paintings of his are in the galleries at Berlin, Florence, Milan, and Vienna, and in many of the churches at Venice. He painted easel-pictures of mythological subjects, which are treated with propriety and discretion but are peculiarly lacking in force and strength; in many of the palaces in Venice he decorated ceilings. Some years of his life were passed at the court of the Emperor Rudolf II, with whom he was a great favourite and by whom he was knighted. His work has been described by one writer as a "combination of sugar, cream, mulberry juice, sunbeam and velvet"; but the criticism is a little unjust and one or two of his works, for example the "Resurrection" in the church of San Francesco di Paolo at Venice, can claim to be masterly. This picture is certainly a fine piece of colouring, well composed and well carried out.

GEORGE CHARLES WILLIAMSON.

Contemplation.—The idea of contemplation is so intimately connected with that of mystical theology that the one cannot be clearly explained independently of the other; hence we shall here set forth what mystical theology is.

PRELIMINARY DEFINITIONS.—Those supernatural acts or states which no effort or labour on our part can succeed in producing, even in the slightest degree or for a single instant, are called mystical. The making of an act of contrition and the reciting of a Hail Mary are supernatural acts, but when one wishes to produce them grace is never refused; hence they are not mystical acts. But to see one's guardian angel, which does not in the least depend on one's own efforts, is a mystical act. To have very ardent sentiments of Divine

love is not, in itself, proof that one is in a mystical state, because such love can be produced, at least feebly and for an instant, by our own efforts. The preceding definition is equivalent to that given by St. Teresa in the beginning of her second letter to Father Rodriguez Alvarez. Mystical theology is the science that studies mystical states; it is above all a science based on observation. Mystical theology is frequently confounded with ascetic theology; the latter, however, treats of the virtues. Ascetical writers discuss also the subject of prayer, but they confine themselves to prayer that is not mystical.

Mystical states are called, first, *supernatural* or *infused*, by which we mean manifestly supernatural or infused; secondly, *extraordinary*, indicating that the intellect operates in a new way, one which our efforts cannot bring about; thirdly, *passive*, to show that the soul receives something and is conscious of receiving it. The exact term would be *passivo-active*, since our activity responds to this reception just as it does in the exercise of our bodily senses. By way of distinction ordinary prayer is called *active*. The word *mystical* has been much abused. It has at length come to be applied to all religious sentiments that are somewhat ardent and, indeed, even to simple poetic sentiments. The foregoing definition gives the restricted and theological sense of the word.

First of all, a word as to ordinary prayer, which comprises these four degrees: first, vocal prayer; second, meditation, also called methodical prayer, or prayer of reflection, in which may be included meditative reading; third, affective prayer; fourth, prayer of simplicity, or of simple gaze. Only the last two degrees (also called prayers of the heart) will be considered, as they border on the mystical states. Mental prayer in which the affective acts are numerous, and which consists much more largely of them than of reflections and reasoning, is called affective. Prayer of simplicity is mental prayer in which, first, reasoning is largely replaced by intuition; second, affections and resolutions, though not absent, are only slightly varied and expressed in a few words. To say that the multiplicity of acts has entirely disappeared would be a harmful exaggeration, for they are only notably diminished. In both of these states, but especially in the second, there is one dominant thought or sentiment which recurs constantly and easily (although with little or no development) amid many other thoughts, beneficial or otherwise. This main thought is not continuous but keeps returning frequently and spontaneously. A like fact may be observed in the natural order. The mother who watches over the cradle of her child thinks lovingly of him and does so without reflection and amid interruptions. These prayers differ from meditation only as greater from lesser and are applied to the same subjects. Nevertheless the prayer of simplicity often has a tendency to simplify itself, even in respect to its object. It leads one to think chiefly of God and of His presence, but in a confused manner. This particular state, which is nearer than others to the mystical states, is called the prayer of amorous attention to God. Those who bring the charge of idleness against these different states always have an exaggerated idea of them. The prayer of simplicity is not to meditation what inaction is to action, though it might appear to be at times, but what uniformity is to variety and intuition to reasoning.

A soul is known to be called to one of these degrees when it succeeds therein, and does so with ease, and when it derives profit from it. The call of God becomes even clearer if this soul have first, a persistent attraction for this kind of prayer; second, a want of facility and distaste for meditation. Three rules of conduct for those who show these signs are admitted by all authors: (a) When, during prayer, one feels neither a relish nor facility for certain acts one should

not force oneself to produce them, but be content with affective prayer or the prayer of simplicity (which, by hypothesis, can succeed); to do otherwise would be to thwart the Divine action. (b) If, on the contrary, during prayer, one feels a facility for certain acts, one should yield to this inclination instead of obstinately striving to remain immovable like the Quietists. Indeed, even the full use of our faculties is not superfluous in helping us to reach God. (c) Outside of prayer, properly so called, one should profit on all occasions either to get instruction or to arouse the will and thus make up what prayer itself may lack. Many texts relative to the prayer of simplicity are found in the works of St. Jane de Chantal, who, together with St. Francis of Sales, founded the Order of the Visitation. She complained of the opposition that many well-disposed minds offered to this kind of prayer. By ancient writers the prayer of simplicity is called acquired, active, or ordinary contemplation. St. Alphonsus Liguori, echoing his predecessors, defines it thus: "At the end of a certain time ordinary meditation produces what is called acquired contemplation, which consists in seeing at a simple glance the truths which could previously be discovered only through prolonged discourse" (*Homo apostolicus*, Appendix I, no. 7).

To distinguish it from acquired contemplation mystical union is called intuitive, passive, extraordinary, or higher contemplation. St. Teresa designates it simply as contemplation, without any qualification. Mystical graces may be divided into two groups, according to the nature of the object contemplated. The states of the first group are characterized by the fact that it is God, and God only, who manifests Himself; these are called mystical union. In the second group the manifestation is of a created object, as, for example, when one beholds the humanity of Christ or an angel or a future event, etc. These are visions (of created things) and revelations. To these belong miraculous bodily phenomena which are sometimes observed in ecstasies. There are four degrees or stages of mystical union. They are here taken just as St. Teresa has described them with the greatest clearness in her "Life" and principally in her "Interior Castle": first, incomplete mystical union, or the prayer of quiet (from the Latin *quies*, quiet; which expresses the impression experienced in this state); second, the full, or semi-ecstatic, union, which St. Teresa sometimes calls the prayer of union (in her "Life" she also makes use of the term *entire union*, *entera unión*, ch. xvii); third, ecstatic union, or ecstasy; and fourth, transforming or deifying union, or spiritual marriage (properly) of the soul with God. The first three are states of the same grace, viz. the weak, medium, and the energetic. It will be seen that the transforming union differs from these specifically and not merely in intensity.

The preceding ideas may be more precisely stated by indicating the easily discernible lines of demarcation. Mystical union will be called (a) spiritual quiet when the Divine action is still too weak to prevent distractions: in a word, when the imagination still retains a certain liberty; (b) full union when its strength is so great that the soul is fully occupied with the Divine object, whilst, on the other hand, the senses continue to act (under these conditions, by making a greater or less effort, one can cease from prayer); (c) ecstasy when communications with the external world are severed or nearly so (in this event one can no longer make voluntary movements nor emerge from the state at will). Between these well-defined types there are imperceptible transitions as between the colours blue, green, and yellow. Mystics use many other appellations: silence, supernatural sleep, spiritual inebriation, etc. These are not real degrees, but rather ways of being in the four preceding degrees. St. Teresa sometimes designates the weak prayer of

quiet as supernatural recollection. As regards transforming union, or spiritual marriage, it is here sufficient to say that it consists in the habitual consciousness of a mysterious grace which all shall possess in heaven: the participation of the Divine nature. The soul is conscious of the Divine assistance in its superior supernatural operations, those of the intellect and the will. Spiritual marriage differs from spiritual espousals inasmuch as the first of these states is permanent and the second only transitory.

CHARACTERS OF MYSTICAL UNION.—The different states of mystical union possess twelve characters. The first two are the most important; the first because it denotes the basis of this grace, the other because it represents its physiognomy.

First character: the presence felt.—(a) The real difference between mystical union and the recollection of ordinary prayer is that, in the former, God is not satisfied with helping us to think of Him and reminding us of His presence; He gives us an intellectual experimental knowledge of that presence. (b) However, in the lower degrees (spiritual quiet) God does this in a rather obscure way. The more elevated the order of the union the clearer the manifestation. The obscurity just mentioned is a source of interior suffering to beginners. During the period of spiritual quiet they instinctively believe in the preceding doctrine, but afterwards, because of their preconceived ideas, they begin to reason and relapse into hesitation and the fear of going astray. The remedy lies in providing them with a learned director or a book that treats these matters clearly. By experimental knowledge is understood that which comes from the object itself and makes it known not only as possible but as existing, and in such and such conditions. This is the case with mystical union: God is therein perceived as well as conceived. Hence, in mystical union, we have experimental knowledge of God and of His presence, but it does not at all follow that this knowledge is of the same nature as the Beatific Vision. The angels, the souls of the departed, and devils know one another experimentally but in an inferior way to that in which God will be manifested to us in heaven. Theologians express this principle by saying that it is a knowledge by impressed or intelligible species.

Second character: interior possession.—(a) In states inferior to ecstasy one cannot say that he sees God, unless indeed in exceptional cases. Nor is one instinctively led to use the word *see*. (b) On the contrary, what constitutes the common basis of all the degrees of mystical union is that the spiritual impression by which God manifests His presence makes that presence felt in the way of an *interior* something with which the soul is penetrated; it is a *sensation* of absorption, of fusion, of immersion. (c) For the sake of greater clearness the sensation one experiences may be designated as interior touch. This very clear expression of spiritual sensation is used by Scaramelli (*Directoire mystique*, Tr. iii, no. 26) and had already been resorted to by Father de la Reguera (*Praxis theologiæ mysticæ*, vol. I, no. 735). The following comparison will aid us in forming an exact idea of the physiognomy of mystical union. We may say that it is in a precisely similar way that we feel the presence of our body when we remain perfectly immobile and close our eyes. If we know that our body is present, it is not because we see it or have been told of the fact. It is the result of a special sensation (*cenæsthesis*), an interior impression, very simple and yet impossible to analyse. Thus it is that in mystical union we feel God within us and in a very simple way. The soul absorbed in mystical union that is not too elevated may be said to resemble a man placed near one of his friends in an impenetrably dark place and in utter silence. He neither sees nor hears his friend whose hand he holds within his own, but through means of touch, he feels his presence. He thus remains think-

ing of his friend and loving him, although amid distractions.

The foregoing statements concerning the first two characters always appear unquestionably true to those who have received mystical graces, but, on the contrary, they are often a source of amazement to the profane. For those who will admit them, at least provisionally, the difficulties of mystical union are overcome and what is to follow will not be very mysterious. The ten characters remaining are the consequences or concomitants of the first two.

Third character.—Mystical union cannot be produced at will. It is this character that was useful above in defining all mystical states. It may also be added that these states cannot be augmented nor their manner of being changed. By remaining immobile and being content with interior acts of the will one cannot cause these graces to cease. It will be seen farther on that the only means to this end lies in resuming bodily activity.

Fourth character.—The knowledge of God in mystical union is obscure and confused; hence the expression to enter into Divine obscurity or into Divine darkness. In ecstasy one has intellectual visions of the Divinity, and the loftier these become, the more they surpass our understanding. Then is reached blinding contemplation, a mixture of light and darkness. The great darkness is the name given to the contemplation of such Divine attributes as are never shared by any creature, for instance, infinity, eternity, immutability, etc.

Fifth character.—Like all else that borders on the Divine nature this mode of communication is only half comprehensible and it is called mystical because it indicates a mystery. This character and the preceding one are a source of anxiety to beginners, as they imagine that no state is Divine and certain unless they understand it perfectly and without anyone's help.

Sixth character.—In mystical union the contemplation of God is produced neither by reasoning nor by the consideration of creatures nor still by interior images of the sensible order. We have seen that it has an altogether different cause. In the natural state our thinking is always accompanied by images, and it is the same in ordinary prayer, because supernatural operations of an ordinary character resemble those of nature. But in mystical contemplation a change takes place. St. John of the Cross is constantly reverting to this point. It has been said that the acts of the imagination are not the cause of contemplation; however, they may at least accompany it. Most frequently it is in distractions that the imagination manifests itself, and St. Teresa declared that for this evil she found no remedy (*Life*, ch. xvii). We shall designate as constitutive acts of mystical union those which necessarily belong to this state, such as thinking of God, relishing Him and loving Him; and by way of distinction we shall denote as additional acts such acts, other than distractions, as are not proper to mystical union, that is to say, are neither its cause nor its consequences. This term indicates that an addition, whether voluntary or not, is made to Divine action. Thus, to recite a Hail Mary during spiritual quiet or to give oneself up to a consideration of death would be to perform additional acts, because they are not essential to the existence of spiritual quiet. These definitions will prove useful later on. But even now they will permit us to explain certain abbreviations of language, often indulged in by mystics, of which many erroneous interpretations have been made, misunderstanding having resulted from what was left unexpressed. Thus it has been said: "Often in supernatural prayer there are no more acts"; or, "One must not fear therein to suppress all acts"; whereas what should have been said was this: "There are no more additional acts". Taken literally, these abridged phrases do not differ from those of

the Quietists. St. Teresa was suddenly enlightened in her way of perfection by reading in a book this phrase, though it is inaccurate: "In spiritual quiet one can think of nothing" (Life, ch. xxiii). But others would not have discerned the true value of the expression. In like manner it was said: "The will only is united"; by which was meant that the mind adds no further reasoning and that thenceforth it makes itself forgotten or else that it retains the liberty of producing additional acts; then it seems as if it were not united. But in future these expressions that require long explanations will be avoided.

Seventh character.—There are continual fluctuations. Mystical union does not retain the same degree of intensity for five minutes, but its average intensity may be the same for a notable length of time.

Eighth character.—Mystical union demands much less labour than meditation, and the more elevated the state the less the effort required, in ecstasy there being none whatever. St. Teresa compares the soul that progresses in these states to a gardener who takes less and less trouble to water his garden (Life, ch. xi). In the prayer of quiet the labour does not consist in procuring the prayer itself; God alone can give that, but first in combating distractions; second, in occasionally producing additional acts; third, if the quiet be weak, in suppressing the ennui caused by incomplete absorption which very often one is disinclined to perfect by something else.

Ninth character.—Mystical union is accompanied by sentiments of love, tranquillity, and pleasure. In spiritual quiet these sentiments are not always very ardent although sometimes the reverse is the case and there is spiritual jubilation and inebriation.

Tenth character.—Mystical union is accompanied, and often in a very visible manner, by an impulse towards the different virtues. This fact (which St. Teresa constantly repeats) is the more sensible in proportion as the prayer is more elevated. In private, far from leading to pride these graces always produce humility.

Eleventh character.—Mystical union acts upon the body. This fact is evident in ecstasy (q. v.) and enters into its definition. First, in this state the senses have little or no action; second, the members of the body are usually motionless; third, respiration almost ceases; fourth, vital heat seems to disappear, especially from the extremities. In a word, all is as if the soul loses in vital force and motor activity all that it gains on the side of Divine union. The law of continuity shows us that these phenomena must occur, although in a lesser degree, in those states that are inferior to ecstasy. At what moment do they begin? Often during spiritual quiet, and this seems to be the case mainly with persons of weak temperament. Since this spiritual quiet is somewhat opposed to bodily movements the latter must react reciprocally in order to diminish this quiet. Experience confirms this conjecture. If one begins to walk, read, or look to right and left, one feels the Divine action diminishing; therefore to resume bodily activity is a practical means of ending the mystical union.

Twelfth character.—Mystical union to some extent hinders the production of some interior acts which, in ordinary prayer, could be produced at will. This is what is known as the suspension of the powers of the soul. In ecstasy this fact is most evident and is also experienced in actual quiet, one of those states inferior to ecstasy, being one of the phenomena that have most occupied mystics and been the cause of the greatest anxiety to beginners. Those acts which have been termed additional, and which would likewise be voluntary, are what are hampered by this suspension, hence it is usually an obstacle to vocal prayers and pious reflections.

To sum up: as a general rule, the mystical state has a tendency to exclude all that is foreign to it and espe-

cially whatever proceeds from our own assiduity, our own effort. Sometimes, however, God makes exceptions. Concerning suspension there are three rules of conduct identical with those already given for the prayer of simplicity (see above). If a director suspects that a person has attained unto the prayer of quiet he can most frequently decide the case by questioning him on the twelve characters just enumerated.

THE TWO NIGHTS OF THE SOUL.—There is an intermediate state not yet mentioned, a frequent transition between ordinary prayer and spiritual quiet. St. John of the Cross, who was the first to describe it clearly, called it the night of sense or first night of the soul. If we abide by appearances, that is to say, by what we immediately observe in ourselves, this state is a prayer of simplicity but with characteristics, two especially, which make it a thing apart. It is bitter, and it is almost solely upon God that the simple gaze is incessantly riveted. Five elements are included in this distressing state: there is first, an habitual aridity; second, an undeveloped, confused idea of God, recurring with singular persistency and independently of the will; third, the sad and constant need of a closer union with God; fourth, a continual action of God's grace to detach us from all sensible things and impart a distaste for them, whence the name, "night of sense" (the soul may struggle against this action of grace); fifth, there is a hidden element which consists in this: God begins to exercise over the soul the action characteristic of the prayer of quiet, but He does it so gently that one may be unconscious of it. Hence it is spiritual quiet in the latent, disguised state, and it is only by verifying the analogy of effects that one comes to know it. St. John of the Cross speaks of the second night of the soul as the night of the mind. It is nothing more than the union of the mystical states inferior to spiritual marriage but regarded as including the element of gloom and therefore as producing suffering.

We can now form a compact idea of the development of mystical union in the soul. It is a tree the seed of which is first concealed in the earth and the roots that are secretly put forth in darkness constitute the night of sense. From these a frail stem springs up into the light and this is spiritual quiet. The tree grows and becomes successively full union and ecstasy. Finally, in spiritual marriage it attains the end of its development and then especially it bears flowers and fruit. This harmony existing between the states of mystical union is a fact of noteworthy importance.

REVELATIONS AND VISIONS (OF CREATURES).—There are three kinds of speech: exterior, which is received by the ear, and interior, which is subdivided into imaginative and intellectual. The last is a communication of thoughts without words.

There are three similar kinds of visions. Many details of these different graces will be found in the works of St. Teresa. What are known as private and particular revelations are those contained neither in the Bible nor in the deposit of Apostolic tradition. The Church does not oblige us to believe in them, but it is prudent not to reject them lightly when they are affirmed by saints. Nevertheless it is certain that many saints were deceived and that their revelations contradict one another. What follows will explain the reason of this. Revelations and visions are subject to many illusions which shall be briefly set forth. First, like Jonas at Ninive, the seer may regard as absolute a prediction that was only conditional, or commit some other error in interpreting it. Second, when the vision represents a scene from the life or Passion of Christ, historic accuracy is often only approximate; otherwise God would lower Himself to the rank of a professor of history and archaeology. He wishes to sanctify the soul, not to satisfy our curiosity. The seer, however, may believe that the reproduction is exact; hence the want of agreement between revela-

tions concerning the life of Jesus Christ. Third, during the vision personal activity may be so mingled with the Divine action that answers in the sense desired seem to be received. In fact, during prayer vivid imaginations may go so far as to produce revelations and visions out of whole cloth without any evil intent. Fourth, sometimes, in his desire to explain it, the seer afterwards unconsciously alters a genuine revelation; Fifth, amanuenses and editors take deplorable liberties in revising, so that the text is not always authentic. Some revelations are even absolutely false because: first, in describing their prayer, certain persons lie most audaciously; second, amongst those afflicted with neuropathy there are inventors who, in perfectly good faith, imagine to be real facts things that have never occurred; third, the devil may to a certain degree, counterfeit Divine visions; fourth, amongst writers there are genuine forgers who are responsible for political prophecies, hence the profusion of absurd predictions.

Illusions in the matter of revelations often have a serious consequence, as they usually instigate to exterior acts, such as teaching a doctrine, propagating a new devotion, prophesying, launching into an enterprise that entails expense. There would be no evil to fear if these impulses came from God, but it is entirely otherwise when they do not come from God, which is much more frequently the case and is difficult of discernment. On the contrary there is naught to fear from mystical union. It impels solely towards Divine love and the practice of solid virtue. There would be equal security in the impossible supposition that the state of prayer was only an imitation of mystical union, for then the tendencies would be exactly the same. This supposition is called impossible because St. Teresa and St. John of the Cross keep repeating that the devil cannot imitate nor even understand mystical union. Neither can our mind and imagination reproduce the combination of the twelve characters described above.

What has been said shows us the importance of not confounding mystical union with revelations. Not only are these states of a different nature but they must also be differently estimated. Because ignorant of this distinction many persons fall into one of these two extremes: first, if they know the danger of revelations, they extend their severe judgment to mystical union and thus turn certain souls from an excellent path; second, if on the contrary, they are reasonably persuaded of the security and tranquillity of mystical union, they wrongfully extend this favourable judgment to revelations and drive certain souls into a dangerous path.

When God so wills He can impart to him who receives a revelation the full certainty that it is real and wholly Divine. Otherwise one would not have had the right to believe the Prophets of the Old Testament. Scripture ordained that they be distinguished from false prophets. For instance, the envoys of God performed miracles or uttered prophecies the realization of which was verified. In order to judge private revelations in a more or less probable way, two kinds of information must be obtained. First, one should ascertain the qualities or defects, from a natural, ascetic, or mystical point of view, of the person having revelations. When the one in question has been canonized the investigation has already been made by the Church. Second, one should be acquainted with the qualities or defects of the revelation itself and with its various circumstances, favourable or otherwise. To judge of ecstasies one should be actuated by the same principles, the two chief points to settle being: first, in what the soul is absorbed whilst thus deprived of the senses, and whether it is captivated by knowledge of a higher order and transported by an immense love; second, what degree of virtue it possessed before reaching this state and

what great progress it made afterwards. If the result of the investigation be favourable the probabilities are on the side of Divine ecstasy, as neither the devil nor disease can work the imagination up to this pitch.

There are several rules of conduct in connexion with revelations but we shall give only the two most important. The first relates to the director. If the revelation or the vision has for its sole effect the augmenting of the love of the seer for God, Christ, or the saints, nothing prevents these facts from being provisionally considered Divine; but if, on the contrary, the seer be impelled to certain undertakings or if he wish that his prediction should be firmly believed, the utmost distrust must be shown, but with the greatest kindness. If the seer be dissatisfied with this prudent attitude and insist upon being believed, he should be told: "You must admit that you cannot be believed simply upon your word, consequently give signs that your revelations come from God and from Him alone." As a rule this request remains unanswered. Note the prudence of the Church in regard to certain feasts or devotions which she has instituted in consequence of private revelations. The revelation was only the occasion of the measure taken. The Church declares that such a devotion is reasonable but she does not guarantee the revelation that suggested it. The second rule concerns the seer. In the beginning, at least, he is gently to do his utmost to repulse the revelations and to turn his thoughts away from them. He is to accept them only after a prudent director will have decided that he may place a certain amount of confidence in them. This doctrine, which seems severe, is nevertheless taught forcibly by many saints, such as St. Ignatius (*Acta SS.*, 31 July, *Préliminaires*, no. 614), St. Philip Neri (*ibid.*, 26 May, 2nd life, no. 375), St. John of the Cross (*Assent*, Bk. II, ch. xi, xvi, xvii, and xxiv), St. Teresa, and St. Alphonsus Liguori (*Homo Apost.*, Appendix I, no. 23), for the reason that there is danger of illusions. With even greater reason, revelations and visions (of created objects) should be neither desired nor requested. On the other hand many passages in St. Teresa and other mystics prove that mystical union may be desired and asked for, provided it be done humbly and with resignation to God's will. The reason is that this union has no disadvantages but presents great advantages for sanctification (see *THEOLOGY*, under sub-title *Mystical*; *QUIETISM*).

St. Teresa far excels all writers that preceded her on the subject of contemplation. In their descriptions those prior to her confined themselves to generalities. Exception must be made in favour of Blessed Angela de Foligno, Ruysbroeck and the Venerable Marina d'Escobar as regards the subject of ecstasies. St. Teresa was likewise the first to give a clear, accurate, and detailed classification. Before her time hardly anything was described except ecstasies and revelations. The lower degrees required more delicate observation than had been devoted to them before her day. After St. Teresa the first place for careful observation of these matters belongs to St. John of the Cross. But his classifications are confused. St. Teresa and St. John of the Cross are also greatly superior to subsequent authors who have been satisfied to repeat them, with comments.

AUG. POULAIN.

Contemplative Life, a life ordered in view of contemplation; a way of living especially adapted to lead to and facilitate contemplation, while it excludes all other preoccupations and intents. To seek to know and love God more and more is a duty incumbent on every Christian and should be his chief pursuit, and in this wide sense the Christian and the contemplative lives are synonymous. This duty, however, admits of various degrees in its fulfilment. Many give to it only a part of their time and attention, either from lack of piety or because of other duties; others attempt to blend harmoniously the contemplative life with active ministry, i. e. the care of souls, which, undertaken from a motive of supernatural charity, can be made compatible with the inner life. Others again, who have the will and the means, aim at accomplishing the duty of contemplation to the utmost perfection, and give up all occupations inconsistent with it, or which, on account of man's limited abilities, of their nature would impede it. The custom has prevailed of applying the term "contemplative" only to the life led by the latter.

Contemplation, the object of contemplative life, is defined as the complacent, loving gaze of the soul on Divine truth already known and apprehended by the intellect assisted and enlightened by Divine grace. This definition shows the two chief differences between the contemplation of the Christian ascetic and the merely scientific research of the theologian. The contemplative, in his investigation of Divine things, is actuated by love for those things, and to increase this love is his ultimate purpose, as well as the firstfruits of his contemplation; in other words the theological virtue of charity is the mainspring as well as the outcome of the act of contemplation. Again, the contemplative does not rely on the natural powers of his intellect in his endeavours to gain cognizance of the truth, but, knowing that human reason is limited and weak, especially when inquiring into things supernatural, he seeks aid from above by prayer, and by the practice of all Christian virtues strives to fit his soul for the grace he desires. The act of contemplation, imperfect as it needs must be, is of all human acts one of the most sublime, one of those which render greatest honour to God, bring the greatest good to the soul, and enable it most efficaciously to become a means of salvation and of manifold blessing to others. According to St. Bernard (*De Consider.*, lib. I, c. vii), it is the highest form of human worship, as it is essentially an act of adoration and of utter self-surrender of man's whole being. The soul in contemplation is a soul lying prostrate before God, convinced of and confessing its own nothingness and His worthiness to receive all love and glory and honour and blessings from those He has created. It is a soul lost in admiration and love of the Eternal Beauty, the sight of which though but a feeble reflection, fill it with a joy naught else in the world can give—a joy which, far more eloquently than speech, testifies that the soul rates that Beauty above all other beauties, and finds in It the completion of all its desires. It is the jubilant worship of the whole heart, mind, and soul, the worship "in spirit and in truth" of the "true adorers", such as the Father seeks to adore in Him (John, iv, 23).

By contemplative life, however, is not meant a life passed entirely in contemplation. On earth an act of contemplation cannot be of long duration, except in the case of an extraordinary privilege granted by Divine power. The weakness of our bodily senses

and the natural instability of our minds and hearts, together with the exigencies of life, render it impossible for us to fix our attention for long on one object. This is true with regard to earthly or material things; it is still more true in matters pertaining to the supernatural order. Only in Heaven shall the understanding be strengthened so as to waver no more, but adhere unceasingly to Him Who made it.

Hence it is rare to find souls capable of leading a life of contemplation without occasionally engaging their mental or physical activity in earthy or material things. The combination, however, of the two lives, of which Catholic hagiology affords such striking and glorious examples, is, as a general rule and for persons of ordinary attainments, a matter of considerable difficulty. Exterior action, with the solicitude and cares attendant on it, tends naturally to absorb the attention; the soul is thereby hampered in its efforts to ascend to the higher regions of contemplation, as its energy, capacity, and power of application are usually too limited to allow it to carry on together such different pursuits with success. If this is true with regard to those even who are working for God and are engaged in enterprises undertaken for the furtherance of His interests, it is all the more true of those who are toiling with no other direct end than to procure their subsistence and their temporal well-being. This is why those who have wished to give themselves up to contemplation and reach an eminent degree of mystical union with God have habitually withdrawn from the crowd and have abandoned all other pursuits, to lead a retired life entirely consecrated to the purpose of contemplation. It is evident that such a life can be led nowhere so safely and so easily as in those monastic orders which make it their special object. The rules of those orders supply their members with every means necessary and useful for the purpose, and safeguard them from all exterior obstacles. Foremost among these means must be reckoned the vows, which are barriers raised against the inroads of the three great evils devastating the world (I John, ii, 16). Poverty frees the contemplative from the cares inherent to the possession and administration of temporal goods, from the moral dangers that follow in the wake of wealth, and from that insatiable greed for gain which so lowers and materializes the mind. Chastity frees him from the bondage of married life with its solicitude so "dividing" to the heart and mind, to use the Apostle's expression (I Cor., vii, 33), and so apt to confine man's sympathy and action within a narrow circle. By the same virtue also he obtains that cleanness of heart which enables him to see God (Matth., v, 8). Obedience, without which community-life is impossible, frees him from the anxiety of having to determine what course to take amidst the ever-shifting circumstances of life. The stability which the vow gives to the contemplative's purpose by placing him in a fixed state with set duties and obligations is also an inestimable advantage, as it saves him from natural inconstancy, the blight of so many undertakings.

Silence is of course the proper element of the contemplative soul, since to converse with God and men at the same time is hardly possible. Moreover, conversing unnecessarily is apt to give rise to numberless thoughts, fancies, and desires alien to the duties and purpose of contemplative life, which assail the soul at the hour of prayer and distract it from God. It is no wonder, then, that monastic legislators and guardians of regular discipline should have always laid such stress on the practice of silence, strenuously enforcing its observance and punishing transgression with special severity. This silence, if not perpetual, must embrace at least the greatest part of the contemplative's life. Solitude is the home of silence, and its surest safeguard. Moreover, it cuts to the root one of the strongest of man's selfish propensities, the desire to make a figure before the world, to win admiration and

applause, or at least to attract attention, to be thought and spoken of. "Manifest thyself to the world" (John, vii, 4) says the demon of vainglory; but the Spirit of God holds another language (Matt., vi). Solitude may be twofold: the seclusion of the cloister, which implies restriction of intercourse with the outer world; and the eremitic confinement of the cell, a practice which varies in different orders.

Religious life, being essentially a life of self-denial and self-sacrifice, must provide an effectual antidote to every form of self-seeking, and the rules of contemplative orders especially are admirably framed so as to thwart and mortify every selfish instinct; vigils, fasts, austerity in food, clothing, etc., and often manual labour tame the flesh, and thus help the soul to keep in subjection its worst enemy. Contemplatives, in short, forgo many transient pleasures, many satisfactions sweet to nature, all that the world holds most dear; but they gain in return a liberty for the soul which enables it to rise without hindrance to the thought and love of God. Though God Himself is the chief object of their study and meditation, He is not the only one. His works, His dealings with men, all that reveals Him in the province of grace or of nature is lawfully open to the contemplative's investigation. The development of the Divine plan in the growth of the Church and in the history of nations, the wondrous workings of grace and the guidance of Providence in the lives of individual souls, the marvels and beauty of creation, the writings of the saints and sages of Christendom, and above all, the Holy Scriptures form an inexhaustible store-house, whence the contemplative can draw food for contemplation.

The great function assumed by contemplatives, as has already been said, is the worship of God. When living in community, they perform this sacred office in a public, official way, assembling at stated hours of the day and night to offer to the Almighty "the sacrifice of praise" (Ps. xlix, 14, 23; see OFFICE, DIVINE). Their chief work then is what St. Benedict (Rule, xliii) calls emphatically God's work (*opus Dei*), i. e. the solemn chanting of Divine praise, in which the tongue gives utterance to the admiration of the intellect and to the love of the heart. And this is done in the name of the Church and of all mankind. Not only does contemplation glorify God, but it is most beneficial to the soul itself. Nothing brings the soul into such close union with God, and union with God is the source of all saintliness. Never so well as when contemplating the perfections of God and the grandeur of His works does man see his own imperfections and failings, the vileness of sin, the paltriness and futility of so many of his labours and undertakings: and thus nothing so grounds him in humility, the prop and the bulwark of every other virtue.

Love for God necessarily breeds love for our fellow-men, all children of the same Father; and the two loves keep pace with each other in their growth. Hence it follows that contemplative life is eminently conducive to increase of charity for others. The heart is enlarged, affection is deepened, sympathy becomes more keen, because the mind is enlightened as to the worth of an immortal soul in God's eyes. And although of the two great commandments given by Christ (Matt., xxii, 37 sq.)—love for God and love for our neighbour—the first is exemplified more markedly in contemplative orders, and the second in active orders, contemplatives, nevertheless, not only must and do have in their hearts a strong and true love for others, but they realize that love in their deeds. The principal means contemplatives have of proving their love for others are prayer and penance. By prayer they draw down from Heaven on struggling and suffering humanity manifold graces, light, strength, courage, and comfort, blessings for time and for eternity. By penance they strive to atone for the offences of sinful humanity, to appease God's wrath

and ward off its direful effects, by giving vicarious satisfaction to the demands of His justice. Their lives of perpetual abnegation and privation, of hardship cheerfully endured, of self-inflicted suffering, joined to the sufferings of their Divine Master and Model help to repair the evil men do and to obtain God's mercy for the evildoers. They plead and make reparation for all men. This twofold ministry carried on within the narrow precincts of a monastery knows no other limits to its effects than the bounds of the earth and the needs of mankind. Or rather that ministry extends further still its sphere of action, for the dead as well as the living benefit by it. (See CONTEMPLATION, PRAYER OF; MONASTICISM.)

EDMUND GURDON.

Contenson, VINCENT, Dominican theologian and preacher, b. at Altivillare (Gers), Diocese of Condon, France, 1641; d. Creil-sur-Oise, 26 Dec., 1674. His epitaph in the church of that place described him as "in years a youth, mature in wisdom and in virtue venerable". Despite his short life, he gave proof in his writings of considerable learning and won remarkable popularity by his pulpit utterances. He was seventeen years old when he entered the Order of Preachers. After teaching philosophy for a time at Albi, and theology at Toulouse, he began a career of preaching as brilliant as it was brief. He was stricken in the pulpit at Creil, where he was giving a mission. His reputation as a theologian rests on a work entitled "Theologia Mentis et Cordis", published posthumously at Lyons in nine volumes, 1681; second edition, 1687. His life is found in the fifth volume of the "Histoire des hommes illustres de l'ordre de Saint Dominique", by Père Tournon. The peculiar merit of his theology consists in an attempt to get away from the prevailing dry reasoning of Scholasticism and, while retaining the accuracy and solidity of its method, to embellish it with illustrations and images borrowed from the Fathers, that appeal to the heart as well as the mind. This pious and learned compilation has not yet lost its value and utility for students and preachers.

JOHN H. STAPLETON.

Continance.—Continance may be defined as abstinence from even the licit gratifications of marriage. It is a form of the virtue of temperance, though Aristotle did not accord it this high character since it involved a conflict with wrong desires—an element, in the mind of the philosopher, foreign to the content of a virtue in the strict sense. Continance, it is seen, has a more restricted significance than chastity, since the latter finds place in the condition of marriage. The abstinence we are discussing, then, belongs to the state of celibacy, though clearly the notion of this latter does not necessarily involve that of continance.

PRACTICE.—In considering its practice we regard continance as a state of life. Though among savages and barbarians every one, as a rule, seeks to contract an early marriage, yet even among these peoples continance is frequently practised by those who discharge the public duties of religion. Thus, according to authorities cited by Westermarck, the male wizards of Patagonia embraced a life of continance, as did the priests of the Mosquito Islands and of ancient Mexico. According to Chinese law such condition of abstinence is made obligatory upon all priests, Buddhist or Taoist. Among the Greeks continance was required of several orders of priests and priestesses, as it was of the vestals among the Romans. The continance extensively observed among the Essenes, the Mani-

chæans, and some of the Gnostics, though not confined to a priestly class, was reckoned the means to a greater sanctification. Such widespread practice offers evidence of an instinctive feeling that the indulgence of our sensual nature is in a measure degrading, and that it is particularly incompatible with the perfect purity that should characterize one consecrated to the worship of the All Holy. That the attitude of a number of sects towards the lower side of human nature has taken on a character of unreasonable, and even absurd, severity is clear. This is observed especially in the case of the Manichæans and branches of the Gnostics in the past, and of the Shakers and other unimportant communities in our time. The law of the Catholic Church imposing a state of continence upon its ministers and upon its religious orders of men and women is set forth in the articles CELIBACY OF THE CLERGY; RELIGIOUS ORDERS; and VIRGINITY.

Two general objections are frequently urged against the state of continence. First, it is said that the condition of continence is detrimental to the well-being of the individual. In such a statement, it will be frequently found, continence is understood as an unchaste celibacy, and such surely is not only a moral but a physical evil most pernicious. Certain it is, however, that the self-sacrifice and control involved in true continence finds fruitage in a greater measure of moral power. The words of Jesus Christ (Matt., xix, 12) may be here appealed to. Moreover, the abstinence of which we speak is a condition of increased physical vigour and energy. Of this many savages are not unmindful; for among a number of these continence is imposed upon the braves during times of war as a means of fostering and strengthening their daring and courage. A second objection rests upon considerations of the social good. It is contended that a state of continence means failure to discharge the social obligation of conserving the species. But such an obligation falls, not upon every member of the community, but upon society at large, and is amply discharged though there be individual exceptions. Indeed the non-fulfilment of this duty is never threatened by a too general observance of sexual abstinence. On the contrary it is only the unlawful gratification of carnal passion that can menace the due growth of population. But it may be said that the practice of continence withdraws from the function of reproduction the worthier members of society—those whose possible offspring would be the most desirable citizens of the State. This contention, however, overlooks the social service of the example set by such observance—a service which, in view of the duty incumbent upon every individual of society of observing absolute chastity for periods of greater or less duration, is of highest value.

JOHN WEBSTER MELODY.

Contingent (Lat. *contingere*, to happen).—Aside from its secondary and more obvious meaning (as, for instance, its qualification of the predicable accident, of a class of modal propositions, and so on), the primary and technically philosophical use of the term is for one of the supreme divisions of being, that is, contingent being, as distinguished from necessary being. In this connexion the meaning of the term may be considered objectively, and the genesis of the idea subjectively.

Objectively (ontologically) the contingent may be viewed: (1) in the purely ideal or possible order, and it is then the conceptual note or notes between which and existence in the actual order there is no contra-

diction, and which consequently admits of, though it does not demand, actualization. It is thus coextensive with possible being and is called the absolutely contingent. (2) Considered in the order of actual existence, the contingent is that being whose essence, as such, does not include existence and which, therefore, does not, as such, demand existence but is indifferent to be or not to be. This is called relatively contingent and the term is usually employed in this sense. Every finite existent being is thus contingent, though likewise hypothetically necessary, in that having existence it cannot at the same time and under the same aspect not have it; inasmuch, too, as it is determined by proximately, and hence relatively, necessitated antecedents. (3) In regard to its subject—be this substance or accident—contingency may relate to action as well as to existence, and it then signifies that the subject (agent) is as yet undetermined, either intrinsically, as in the free agent, or extrinsically, as are necessitated causes. (4) Since the essence of the contingent does not contain the reason of its existence, that reason must be sought in an outside efficient cause, which cause, if in turn contingent, must show reason for its existence in some other antecedent cause, and so on until ultimately a being is reached whose essence includes existence, a first cause whose existence is underrived, a being which is necessary and absolute.

This argument from contingent to the necessary being is not, as Kant maintained, the well-known ontological argument formulated by St. Anselm and others to prove the existence of God. The latter argument passes illogically from the ideal concept of the infinite to the objective actual existence of the infinite, while the argument from contingent (finite) to the necessary (infinite) being, proceeds from the objective actual contingent (dependent, conditioned) to the existence of an adequate cause thereof. The inference is based on an objective application of the principle of causality and involves no leap from a subjective phenomenon (idea) to an objective realized content. The argument supposes, it is true, the real existence of contingent being and that existence is denied by many thinkers, notably by pantheists, materialists, and determinists generally. Kant reduces both contingency and necessity to mere mental forms or categories under which the mind views the world of phenomena but which it has no means of knowing to be objective. Necessary being, therefore, ontologically and objectively precedes the contingent, since the latter has the sole ultimate reason both of its intrinsic consistency (possibility) and of its actual existence in the former—*actus absolute precedit potentiam*. In the order, however, of man's knowledge, the contingent falls primarily under experience.

Subjectively.—Like every other concept, that of the contingent is originally derived from external and internal experience. Adverting to the changes occurring in the world of sensuous phenomena and to the interdependencies thereof, the intellect easily, almost intuitively, discerns that, while the given events are the necessitated consequences of similarly necessitated antecedents, each number of the series, by the very fact of its being thus conditioned, does not contain within itself the adequate ground of its existence. The intellect having spontaneously abstracted this note of dependence and ontologically reflecting thereon sees its application to every finite subject not only existent but likewise possible; sees, at least by an easy process of reasoning, that no such subject contains within itself the reason why it exists, under the precise limitations of substance and accidents which it actually possesses. However, to assure this concept and to discern precisely and explicitly the contingency of the finite and the consequent indifference of its essence to exist or not to exist, the sciences, physical and biological, are called to testify; and each declares the dependence and conditionality of its respective

object-sphere and attests that all things observed and searched into have a borrowed existence. This idea of contingency is then further assured by the witness of consciousness to the conditioned, and hence contingent, character of its own states, a testimony which is reconfirmed by the facts of birth and death.

Against this statement of the genesis of the contingency-concept it may be objected that experience does not extend beyond the field of sensuous phenomena. On the other hand, however, the intellect, motivated by the principle of sufficient reason, discerns the underlying noumenon, or essence of things material, Kant to the contrary notwithstanding, at least sufficiently to pronounce with certitude on their essential conditionateness and contingency. But it is urged by materialistic monists that the underlying substrate of the sensuous world is one homogeneous, eternal, necessary being, essentially involving existence. To this objection it may be answered that no finite thing, much less a finite material being, can contain the ultimate reason of its existence. The definite limitations, spatial, integral, positional, etc., and the inertia of the hypothetical primordial matter shows that it is conditioned by some limiting and determining cause, while its passage from the homogeneous to the heterogeneous state, into which it is supposed to have evolved in the actual universe, equally demands an extraneous active agency. It should, however, be noted that the argument from contingent to necessary being does not explicitly prove the existence of God. A further analysis of the objective concept is necessarily required in order to show that the latter concept includes that of underivedness (*aseitas*) and that this in turn includes completeness, absence of any potentiality for further perfection (*actus purus*), hence infinitude. The failure to note this limitation of the argument seems to have led Kant to deny its validity.

F. P. SIEGFRIED.

Contract (Lat. *contractus*; Old Fr. *contract*; Mod. Fr. *contrat*; Ital. *contratto*).—I. THE CANONICAL AND MORALIST DOCTRINE on this subject is a development of that contained in the Roman civil law. In Roman law a mere agreement between two parties to give, do, or refrain from doing something was a nude pact (*pactum nudum*) which gave rise to no civil obligation, and no action lay to enforce it. It needed to be clothed in some investitive fact which the law recognized in order to give rise to a civil obligation which should be enforced at law. Not that the nude pact was considered to be destitute of all binding force; it gave rise to a natural obligation, and it might afford ground for a legal exception. A man of honour would keep his engagements even if he knew that the law could not be invoked to compel him to do so. Moral theology, being the science of Christian conduct, could not be satisfied with the mere legal view of the effect of an agreement. If the agreement had all other requisites for a valid contract, moral theology must necessarily consider it to be binding, even though it was a nude pact and could not be enforced in the courts of law. Canon law made this moral attitude its own. In the Decretals of Gregory IX it is expressly laid down that pacts, however nude, must be kept, and that a strenuous endeavour must be made to put in execution what one has promised. It thus came to pass that nude pacts could be enforced in the Christian courts, and the Church's legislation served eventually to break down the rigid formalism of Roman law, and to prepare the way for the more equitable law of contract which all Christian nations now possess.

In the canonical and moral doctrine there is hardly

room for the distinction between a nude pact, or mere agreement, and a contract. The Roman jurist's definition of the former is frequently used by canonists to define contract. They say that a contract is the consent of two or more persons to the same proposal; or, bringing out a little more definitely the effect and object of a contract, they define it to be an agreement by which two or more persons mutually bind themselves to give, do, or abstain from something. From the moralist's point of view, then, every agreement seriously entered into by those who are capable of contracting with reference to some lawful object is a contract, whether such agreement can be enforced in the civil courts or not. The intention of the parties is looked at, and if they seriously intended to bind themselves, there is a contractual relation between them. This doctrine, however, gives rise to a question of some importance. The Church fully admits and defends the right of the State to make laws for the temporal well-being of its citizens. All States require certain formalities for the validity of certain actions. Last wills and testaments are a familiar example, and although they are not strictly contracts, yet the principle is the same and they will serve for an example of what is meant. A deed, the only formal contract of English law, is another example. A will destitute of the requisite formalities is null and void at law; but what is the effect of such a voiding law in the forum of conscience? This question has been much debated among moralists. Some have maintained that such a law is binding in the internal as well as in the external forum, so that a formal contract, destitute of the formalities required by law, is null and void in conscience as it is in law. Others adopted the contrary opinion, and held that the want of formality only affected the external forum of civil law, and left intact the natural obligation arising from a contract. The common opinion takes a middle course. It holds that the want of formality, though it makes the contract void in the eyes of the law, renders it only voidable in the forum of conscience; so that, until one of the parties moves to set the contract aside, it remains valid, and anyone deriving benefit under it may enjoy his benefit in peace. If, however, the party interested moves to set it aside, and does so effectively, by having recourse to the court of law if necessary, both must then abide by the law which makes the contract void and of no effect.

There are four essential elements in a contract: consent of the parties, contractual capacity in them, determinate and lawful subject-matter, and a lawful consideration. The contract is formed by the mutual consent of the parties, which must be real, not feigned, and manifested so that each may know that the other party consents. There is no difficulty about the outward manifestation of consent when the parties enter into the contract in each other's presence. But when the parties are not present to each other, and the contract is made by letter or telegraph, it sometimes becomes a question of importance as to when and how the contract is effected. Is the contract entered into when the offeree signifies his consent by posting a letter of acceptance to the offeror, or is the knowledge of his acceptance required to complete the contract? All that is required by the nature of a contract is that there should be mutually manifested agreement of the two wills. There will be such agreement when one of the parties makes an offer to the other, and this one manifests his acceptance of the offer by posting a letter or by sending a telegram. There is then consent of two wills to the proposal, and so there is a contract. Mutual consent to the same proposal may be hindered by a mistake of one of the parties. Such mistakes are not infrequently caused by the fraud or misrepresentation of the other party. If the mistake is substantial, so that at least one of the parties thinks that the subject-matter of the contract is quite other

than it really is, there will be no true consent, and no contract. Similarly, if there be a mistake about the nature of the contract proposed (as, if one party intends to sell while the other only means to borrow) there is no agreement of wills. Mistake about the mere quality of the subject-matter of the contract is accidental, not substantial, and in spite of it there may be substantial agreement between the parties. If, however, such a mistake has been caused by the fraud or misrepresentation of the other party to the contract, and the party deceived would not otherwise have entered into it, it is only fair that the deceived party should be able to protect himself from injury by retiring from the agreement. Contracts, then, entered into because of accidental mistake which was induced by the fraud or misrepresentation of the other party, will be rescindable at the option of the party deceived.

The consent of the parties must be deliberate and free, for a perfect and grave obligation cannot arise from consent which is not deliberate or free. Hence we must see what the influence of fear is upon the validity of a contract. If the fear goes to the length of depriving one of the parties of the use of reason, he cannot, while in that state, give a valid consent, and the contract will be null and void. Fear, however, does not ordinarily produce such extreme effects; it leaves a man with the natural use of his reason and capable of consenting or withholding his consent. Even grave fear, then, does not of itself invalidate a contract, but if it is unjustly caused by the other party to the contract with a view to forcing him who is under its influence to consent, the injured party may withdraw from the contract. Some contracts, such as marriage, thus entered into under the influence of grave fear unjustly caused by the other party to the contract with the intention of compelling consent, are made invalid by canon law. Some authorities even hold that all such contracts are invalid by natural law, but the opinion is at most only probable. A person must have the use of reason in order to give valid consent to a contract, and his contractual capacity must not have been taken away by law. Those who have not yet attained the use of reason, imbeciles, and those who are perfectly drunk so that they do not know what they are doing, are incapable of contracting by the law of nature. Minors are to a certain extent restricted in their contractual capacity by English and American law. Practically, their contracts are voidable except those for necessities. Married women were formerly incapable of entering into a valid contract, but in England since 1882 their disability has been removed, and in most of the States of the Union the same doctrine begins to prevail. Religious persons are to a greater or less extent, according as they are under solemn or simple vows, incapable of entering into a binding contract. Corporations and companies are limited in their contractual capacity by their nature or by the articles of association.

The subject-matter of a contract must be definite and certain, it must be possible, and it must be honest. A contract cannot be a bond of iniquity, and so an agreement to commit sin is null and void. Some theologians maintain that when, in execution of a contract, a sinful action has been performed, a right is acquired to receive the price agreed upon. The opinion seems at any rate probable. If the contract is not sinful in itself, but voided by positive law, it will be valid until it is set aside by the party interested, as was said above concerning informal contracts. When persons enter into a contract, each party promises to give, do, or forbear something in favour of the other. The benefit which thus immediately arises from the contract, and which is the cause of it, is called the *consideration* in English law. It is a necessary element in a contract, and if it is wanting the contract is null on account of the failure of a necessary condi-

tion in the agreement. The courts of civil law will not enforce a simple contract unless there be a valuable consideration in it; mere motives of affection or moral duty will not suffice. This rule, however, only affects legal obligations; it has nothing to do with obligations in conscience. A valid contract imposes on the contracting parties an obligation of justice to act conscientiously according to the terms of the agreement. They will be bound to perform not only what they expressly agreed to do, but whatever the law, or custom, or usage prescribes in the circumstances. The obligation arising from a contract will cease when the contract has been executed, when a new one has been substituted for the old one by the free consent of the parties, when the parties mutually and freely withdraw from the contract. When one of the parties fails in what he promised, the other will, as a rule, be free. A contract may be concluded not absolutely but conditionally on the happening of some uncertain and future event. In this case the conditional contract imposes on the parties the obligation of waiting for the event, and in case it happens the contract becomes binding on them without renewal of consent. On the other hand, a contract is sometimes entered into and begins to bind at once; but the parties agree that it shall cease to bind on the happening of a certain event. This is called a condition subsequent, while the former is a condition precedent.

Corpus Juris canonici, ed. FRIEDBERG (Leipzig, 1881); *Corpus Juris civilis* (Leipzig, 1865). Among the canonists RUPERTUS, *Jus canonicum* (Rome, 1831), and among the moralists LUGO, *De Justitiâ et Jure* (Paris, 1869), may be consulted. See also POLLOCK and MAITLAND, *History of English Law* (Cambridge, Eng., 1895).

T. SLATER.

II. IN CIVIL JURISPRUDENCE, a contract has been defined to be "the union of several persons in a co-incident expression of will by which their legal relations are determined" (Holland, "Elements of Jurisprudence", 10th ed., Oxford and New York, 1906, 209). This "co-incident expression" consists of an agreement and promise enforceable in law, and "on the face of the matter capable of having legal effects", "an act in the law" "whereby two or more persons capable of contracting", "of doing acts in the law", "declare their consent as to any act or thing to be done or forborne by some or one of those persons for the use of the others or other of them" (Pollock, "Principles of Contract", 3rd Amer. ed., New York, 1906, 58, 1, 2, 3), the intention implied by the consent being that from the agreement and promise shall arise "duties and rights which can be dealt with by a court of justice" (*ibid.*). Thus, while every contract is an agreement, not every agreement is a contract. A mutual consent of two persons to walk out together, or to dine together, would be an agreement, and yet not what in jurisprudence is known as a contract. For such consent contemplates the producing of no legal right, or of any duty which is a legal obligation. Subject only to these or similar explanations may be properly adopted the time-honoured definition of contract as understood in English law, a definition commended by Chancellor Kent ("Commentaries on American Law", II, 449, note b) for its "neatness and precision", namely, "an agreement of two or more persons upon sufficient consideration to do or not to do a particular thing".

KINDS OF CONTRACT.—The Roman civil law defined contracts as real (*re*), verbal (*verbis*), literal (*litteris*), or consensual (*consensu*). A real contract was one, such as loan or pledge, which was not perfected until something had passed from one of the parties to the other. A verbal contract (*verborum obligatio*), or stipulation, was perfected by a spoken formula. This formula consisted of a question by one of the parties and an exactly corresponding answer by the other. Thus: *Quinque aureos mihi dare spondes? Spondeo, or Promittis? Promitto*, i. e. Dost thou agree (or promise)

to give me five pieces of gold. I agree, or I promise. The similarity may be noted of this to the modern form for administering an affidavit or for taking the acknowledgment of a written legal instrument. A literal contract was perfected by a written acknowledgment of debt and was used chiefly in the instance of a loan of money. Consensual contracts were those of which sale would be an example, which might be perfected by consent, and to which no particular form was essential (Mackenzie, "Studies in Roman Law", Edinburgh and London, 1898, 211, 215-256). In the English law the principal division of contracts is into those by writing under seal (called specialties), and those known as simple contracts; and there are also "contracts by matter of record", such as a recognition or judgment by confession, contracts in court, which need no further description. Simple contracts include all contracts written, but not under seal or of record, and all verbal contracts.

A person may contract in person or by an agent. "The tendency of modern times", remarks Holland (op. cit., 118), "is towards the fullest recognition of the principles proclaimed in the canon law, *potest quis per alium quod potest facere per se ipsum, qui facit per alium est perinde ac si faciat per se ipsum*", i. e. one may do through another whatever one is free to do by himself, or an act done through another is equivalent to an act done by oneself.

REQUISITES OF CONTRACT.—According to Roman law, such a contract as that of sale required a *justa causa*, namely, a good legal reason (Leage, "Roman Private Law," London, 1906, 131; Poste, "Gail Institutiones", 4th ed., Oxford, 1904, 138). According to English law, simple contracts require a valuable consideration, in like manner as by Roman law there was needed a *justa causa*. By that law, informal contracts which had no *justa causa* were ineffectual (Poste, op. cit., 334). Stipulations irregular in form were termed *nuda pacta*, i. e. mere agreements, to which the ancient law (Leage, op. cit., p. 273, 308) attached no obligation. The translator of Pothier cites a civil-law authority to the effect that the Roman jurisprudence let some engagements rest on the mere integrity of the parties who contracted them, thinking it more conducive to the cultivation of virtue to leave some things to the good faith and probity of mankind than to subject everything to the compulsory authority of the law (Pothier, "A Treatise on the Law of Obligations", tr. Evans, Philadelphia, 1826, Appendix, 11, 17).

As the civil-law jurist admitted the moral obligation of good faith and probity, so an eminent English judge concedes that "by the law of nature" every man ought to fulfil his engagements. But it is equally true", he continues, "that the law of this country supplies no means nor affords any remedy to compel the performance of any agreement made without sufficient consideration." "Such agreement", he adds, "is *nudum pactum ex quo non oritur actio*", a mere agreement giving rise to no action at law, the learned judge conceding that this understanding of the maxim may (as it certainly does) differ from its sense in the Roman law (J. W. Smith, "The Law of Contracts", 7th Amer. ed., Philadelphia, 1885, 103). A moral consideration has been said to be "nothing in law" (Smith, op. cit., 203). The moral obligation of a contract is of "an imperfect kind", to quote an eminent American jurist, "addressed to the conscience of the parties under the solemn admonitions of accountability to the Supreme Being" (Story, "Commentaries on the Constitution of the United States", 5th ed., Boston, 1891, Section 1380), but not to an earthly court of justice. With these doctrines of the Roman and of the English law we may compare the Scotch law, according to which no consideration is essential to a legal obligation, "an obligation undertaken deliberately though gratuitously being binding". "This",

adds Mackenzie (op. cit., 233) "is in conformity with the canon law by which every paction produceth action *et omne verbum de ore fidelis cadit in debitum*", i. e. every word of a faithful man is equivalent to a debt.

In the Roman law fulfilment of the legal solemnities of the verbal contract was deemed to indicate such "serious intention of contracting a valid and effectual obligation" (Pothier, op. cit., Appendix II) as to dispense with proof of any *justa causa* (Poste, op. cit., 334). In the English law it is not any verbal formality, but the solemnity of writing and sealing (Pothier, *ibid.*) which dispenses with proof of that valuable consideration in modern English law analogous to the old Roman *justa causa*, and, as a general proposition, essential to the validity of simple contracts, although in the exceptional instance of negotiable paper always presumed, and in favour of certain holders conclusively (Smith, op. cit., 181). This consideration is described generally as "the matter accepted or agreed upon as the equivalent for which the promise is made" (Leage, "Principles of the Law of Contracts", 4th ed., London, 1902, 425). And one promise would be a legal consideration for another (Smith's "Leading Cases", 9th Amer. ed., Philadelphia, 1889, 302). But the English law infers what a man chooses to bargain for to be of some value to him, and therefore does not allow the adequacy of the consideration to be inquired into (Pollock, op. cit., 193). The consideration must, however, "be of some value in contemplation of law". A promise, for instance, to abstain from doing what the promisor has no right to do, is a promise of no value, and therefore no consideration for a contract (Smith, op. cit., 181). No obligation can by English law result from an agreement "immoral in a legal sense". By this is meant "not only that it is morally wrong, but that according to the common understanding of reasonable men it would be a scandal for a court of justice to treat it as lawful or indifferent, though it may not come within any positive prohibition or penalty" (Pollock, op. cit., 410). The civil-law authority, Pothier, instances a promise by an officer to pay a soldier for fighting "a soldier of another regiment". If the officer pay, he has no legal claim for recovery of this consideration given and received for a wrongful act, and, on the other hand, the soldier, if he fight before receiving the agreed consideration, acquires no legal claim for it against the officer (Pothier, op. cit., 23). No one is under a legal duty to fulfil a promise to do an act opposed to the policy of the law (Smith, op. cit., 241, 243). But there are not wanting instances of contracts opposed to the policy of the law which yet conflict with no moral law (Smith, op. cit., 213).

A contract induced by what in law is deemed to be fraud may be rescinded at the election of the party defrauded. But "general fraudulent conduct", or "general dishonesty of purpose", or mere "intention and design to deceive" is not sufficient unless these evil acts and qualities have been connected with a particular transaction, were the ground on which it took place, and gave rise to the contract (Smith, op. cit., 248, editor's note). In the instance of a sale, the seller was, by the Roman civil law, held to an implied warranty that the thing sold was "free from such defects as made it unfit for the use for which it was intended" (Mackenzie, op. cit., 236). By the English law there is, if the thing be sold for a fair price and be at the time of sale in the possession of the seller, an implied warranty of title, but of quality there is no implied warranty, except as to food sold for domestic use (Kent, op. cit., II, 478). "The writers of the moral law," observes Chancellor Kent, "hold it to be the duty of the seller to disclose the defects which are within his knowledge. But the common law is not quite so strict. If the defects in the article sold be open equally to the observation of both parties, the law does not require the

vendor to aid and assist the observation of the vendee" (Kent, op. cit., II, 484).

Respecting what may be termed generally "motives and inducements" (ibid., 487) of a contract, the same authority cites Pothier as in accord with the doctrine of English law, "that though misrepresentation or fraud will invalidate the contract of sale, the mere concealment of material knowledge which the one party has touching the thing sold and which the other does not possess, may affect the conscience, but will not destroy the contract, for that would unduly restrict the freedom of commerce; and parties must at their own risk inform themselves of the commodities they deal in" (op. cit., 491). In a note, Cicero is referred to as favouring the view that conscience forbids the concealment, the commentator adding, "It is a little singular, however, that some of the best ethical writers, under the Christian Dispensation should complain of the moral lessons of Cicero, as being too austere in their texture, and too sublime in speculation for actual use" (ibid., note d). As fraud, so coercion, termed in English law *duress*, or the threat of it, constitutes a valid defence to fulfilment of a contract (Smith, op. cit., 230; Pollock, op. cit., 728 sq.).

STATUTORY RESTRICTIONS.—A certain French *ordonnance* of 1667 (Pothier, op. cit., 448, Appendix, 168) has been thought to have, perhaps, suggested the English statute of 1689, which recites its purpose to be "prevention of many fraudulent practices which are commonly endeavoured to be upheld by perjury and subornation of perjury". Accordingly, the statute requires that certain contracts be in writing, and those for sales of "goods, wares or merchandise of over ten pounds price" in writing, or that there be a part-delivery or part-payment. This enactment, known as the Statute of Frauds, has, with numerous variations, been embodied in statutes in the United States (except in Louisiana), carrying, to quote from the American commentator, "its influence through the whole body of our civil jurisprudence" (Kent, op. cit., 494, note a).

By the early Roman law many contracts were enforceable by legal action after any lapse of time however long. But, to quote the Institutes, "*Sacra constitutiones . . . actionibus certos fines dede-runt*" (the imperial constitutions assigned fixed limits to actions), so that, after certain prescribed periods, no legal remedy would be provided to enforce the obligation of contracts ("The Institutes of Justinian", tr. Sandars, London, 1898, Bk. IV, tit. xii; Bk. II, tit. vi). Such positive restrictions on the legal remedy are in English law contained in enactments known as Statutes of Limitation (Blackstone, op. cit., Bk. III, 307). One ancient English statute fixed for limitation of certain actions the time of the coming of King John from Ireland, another statute the coronation of Henry III (Blackstone, op. cit., Bk. III, 188). But modern statutes, as well in England as throughout the United States, limit the remedy to certain periods from the time of entering into contracts, adopting the manner of the Roman constitutions. The legal maxim *Leges vigilantibus non dormientibus subveniunt* (the laws aid the vigilant, not the careless) is applicable to private suitors (Blackstone, op. cit.). But *nullum tempus occurrit regi* (no time runs against the king), and therefore, unless specially mentioned, the Government is not included within the restrictions of a statute of limitations. According to ancient English legal conceptions these statutes ought not to bind the king, for the reason that he "is always busied for the public good, and therefore has not leisure to assert his right within the times limited to subjects" (ibid., Bk. I, 247).

INVIOABILITY OF CONTRACTS.—To secure inviolability of contracts, the Constitution of the United States (Art. 1, Sect. 10) provides that no State shall

pass a "law impairing the obligation of contracts". By *obligation* is meant that legal obligation which exists "wherever the municipal law recognizes an absolute duty to perform a contract". And the word *contract* being used in this clause of the Constitution without qualification, the protection of the Constitution is not confined to executory contracts, but embraces also executed contracts (Story, op. cit., Sect. 1376-1392), such as a grant which, because it amounts to an extinguishment of the right of the party, implies a contract not to reassert the right. And the Constitution also protects even state charters granted to private persons for private purposes, whether these be literary, charitable, religious, or commercial (Kent, op. cit., I, 413-424; Story, op. cit., Sect. 1376-1392). See also DONATION.

PARSONS, *The Law of Contracts* (9th ed., Boston, 1904); WOOD, *A Treatise on the Statute of Frauds* (New York and Albany, 1884); IDEM, *A Treatise on the Limitation of Actions*, etc. (3rd ed., Boston, 1901).

CHARLES W. SLOANE.

Contract, THE SOCIAL.—"Du Contrat Social, ou Principes du droit politique", is the title of a work written by J.-J. Rousseau and published in 1762. From the time of his stay at Venice, about 1741, Rousseau had in mind a large treatise dealing with "Les institutions politiques". The "Contrat Social" is but a fragment of this treatise which, as a whole, has never been published.

The "Contrat Social" is divided into four books. The first treats of the formation of societies and the social contract. Social order is a sacred right which is at the foundation of all other rights. It does not come from nature. The family is the most ancient and the most natural of all societies; but this association of parents and children, necessary as long as these cannot provide for themselves, is maintained afterwards only by convention. Some philosophers have said that among men some are born for slavery, others for domination; but they confound cause and effect; if some are slaves by nature, it is because there have been slaves against nature. Again, social order is not based on force, for the strongest is not strong enough to retain at all times his supremacy unless he transforms force into right, and obedience into duty. But in that case right would change places with force. If it is necessary to obey because of force, there is no need of obeying because of duty; and if one is not forced to obey there is no longer any obligation.

All legitimate authority among men is based on an agreement. This argument, according to Grotius, has its foundation in the right of a people to alienate its freedom. But to alienate is to give or to sell. A man does not give himself; at most he sells himself for a living; but for what should a people sell itself. To give itself gratuitously would be an act of folly and therefore null and void. Moreover, even if a man has the right to give himself, he has no right to give his children who are born men and free. Grotius, again, in order to legitimize slavery, appeals to the right of the conqueror to kill the conquered or to spare his life at the price of his freedom. But war is a relation between State and State, and not between man and man. It gives the right to kill soldiers so long as they are armed, but, once they have laid down their arms, there remain only men and no one has the right to kill them; besides, no one has the right to enslave men. The words *slavery* and *right* are contradictory.

The social order originates in an altogether primitive and unanimous agreement. When men in the state of nature have reached that stage where the individual is unable to cope with adverse forces, they are compelled to change their way of living. They cannot create new forces, but they can unite their individual energies and thus overcome the obstacles to life. The fundamental problem is, then, "to find a

form of association which defends and protects with the whole common energy, the person and property of each associate, and by which each individual associate, uniting himself to all, still obeys only himself and remains as free as before". The solution is a contract by which each one puts in common his person and all his forces under the supreme direction of the "general will". There results a moral and collective body formed of as many members as there are persons in the community. In this body the condition is equal for all, since each gives himself wholly; the union is perfect, since each gives himself unreservedly; and finally, each, giving himself to all, gives himself to nobody. This body is called the "State or Sovereign"; the members, who, taken together, form "the people" are the "citizens" as participating in the supreme authority, and "subjects" as subjected to the laws. By this contract man passes from the natural to the civil state, from instinct to morality and justice. He loses his natural freedom and his unlimited right to all that he attempts or is able to do, but he gains civil liberty and the ownership of all that he possesses by becoming the acknowledged trustee of a part of the public property.

The second book deals with sovereignty and its rights. Sovereignty, or the general will, is inalienable, for the will cannot be transmitted; it is indivisible, since it is essentially general; it is infallible and always right. It is determined and limited in its power by the common interest; it acts through laws. Law is the decision of the general will in regard to some object of common interest. But though the general will is always right and always desires what is good, its judgment is not always enlightened, and consequently does not always see wherein the common good lies; hence the necessity of the legislator. But the legislator has, of himself, no authority; he is only a guide. He drafts and proposes laws, but the people alone (that is, the sovereign or general will) has authority to make and impose them.

The third book treats of government and its exercise. In the State it is not sufficient to make laws, it is also necessary to enforce them. Although the sovereign or general will has the legislative power, it cannot exercise by itself the executive power. It needs a special agent, intermediary between the subjects and the sovereign, which applies the laws under the direction of the general will. This is precisely the part of the Government which is the minister of the sovereign and not sovereign itself. The one or the several magistrates who form the Government are only the trustees of the executive powers; they are the officers of the sovereign, and their office is not the result of a contract, but a charge laid upon them; they receive from the sovereign the orders which they transmit to the people, and the sovereign can at will limit, modify, or revoke this power.

The three principal forms of government are: democracy, a government by the whole, or the greater part, of the people; aristocracy, government by a few; monarchy, government by one. Democracy is in practice impossible. It demands conditions too numerous and virtues too difficult for the whole people. "If there were a people of gods, its government would be democratic, so perfect a government is not for men." Aristocracy may be natural, hereditary, or elective. The first is found only among simple and primitive people; the second is the worst of all governments; the third, where the power is given to the wisest, to those who have more time for public affairs, is the best and the most natural of all governments whenever it is certain that those who wield power will use it for the public welfare and not for their own interest. No government is more vigorous than monarchy; but it presents great dangers; if the end is not the public welfare, the whole energy of the administration is concentrated for the detriment of

the State. Kings seek to be absolute, and offices are given to intriguers. Theoretically, a government simple and pure in form is the best; practically, it must be combined with, and controlled by, elements borrowed from other forms. Also, it is to be remarked that not every form of government is equally suitable to every country; but the government of each country must be adapted to the character of its people. "All things being equal, the best form of government for a country is the one under which the citizens, without any outside means, without naturalization or colonies, increase and multiply." In order to prevent any usurpation on the part of the government, some fixed and periodical meetings of the people must be determined by law, during which all executive power is suspended, and all authority is in the hands of the people. In these meetings the people will decide two questions: "Whether it pleases the sovereign to preserve the present form of government, and whether it pleases the people to continue the administration in the hands of those who are actually in charge." Intermediary between the sovereign authority and the Government there is sometimes another power, that of the deputies or representatives. The general will, however, cannot be represented any more than it can be alienated; the deputies are not representatives of the people, but its commissioners; they cannot decide anything definitively; hence, any law which is not ratified by the people is null. The institution of the Government, therefore, is not based on a contract between the people and the magistrates; it is a law. Those who hold power are the officers, not the masters, of the people; they have not to make a contract, but to obey; by fulfilling their functions they simply discharge their duties as citizens.

In the fourth book, Rousseau speaks of certain social institutions. The general will is indestructible; it expresses itself through elections. As to different modes of elections and institutions, such as tribunate, dictatorship, censure, etc., the history of the ancient republics of Rome and Greece, of Sparta especially, can teach us something about their value. Religion is at the very foundation of the State. At all times it has occupied a large place in the life of the people. The Christianity of the Gospel is a holy religion, but by teaching detachment from earthly things it conflicts with the social spirit. It produces men who fulfil their duties with indifference, and soldiers who know how to die rather than how to win. It is important for the State that each citizen should have a religion that will help him to love his duty; but the dogmas of this religion are of no concern to the State except in so far as they are related to morality or duties towards others. There must be, therefore, in the State a religion of which the sovereign shall determine the articles, not as dogmas of religion, but as sentiments of sociability. Whosoever does not accept them may be banished, not as impious, but as unsociable; and whosoever, after having accepted them, will not act according to them shall be punished by death. These articles shall be few and precise; existence of the Divinity, powerful, intelligent, good, and provident; future life, happiness of the just; chastisement of the wicked; sanctity of the social contract and the laws; these are the positive dogmas. There is also one negative dogma: Whosoever shall say, "Outside of the Church there is no salvation", ought to be banished from the State.

The influence of this book was immense. Rousseau owes much indeed to Hobbes and Locke, and to Montesquieu's "Esprit des lois", published fourteen years before; but, by the extreme prominence given to the ideas of popular sovereignty, of liberty and equality, and especially by his highly coloured style, his short and concise formulæ, he put within the common reach principles and concepts which had hitherto been confined to scientific exposition. The

book gave expression to ideas and feelings which, at a time of political and social unrest, were growing in the popular mind. It would be interesting to determine how far Rousseau influenced the framing of various modern constitutions; at any rate, he furnished the French Revolution with its philosophy, and his principles direct the actual political life of France. His book, says Mallet du Pan, was "the Koran of the Revolutionists", and Carlyle rightly calls Rousseau "the Evangelist of the French Revolution". The orators of the Constituante quoted its sentences and formulae, and if it may be believed that Rousseau would have condemned the massacres and violences of 1793, the Jacobins, nevertheless, looked to his principles for the justification of their acts.

It is quite intelligible that the "Contrat Social" should have come to be considered by some as the gospel of freedom and democracy, by others as the code of revolution and anarchy. That it contains serious contradictions is undeniable. For instance, Rousseau assigns as the essential basis of the general will the unanimous consent of the people, yet he assumes that this general will is expressed in the plurality of suffrages; he affirms that parents have no right to engage their children by a contract, and yet children from their birth will be subject to the primitive contract; he affirms that a man has no right to alienate himself, yet he bases the social contract essentially on the total alienation of personal rights and personality in favour of the community. If there are some true considerations and reflections in this book—as, for instance, on slavery and the dignity of man, on the adaptation of the divers forms of government to the character of the people, etc.—its fundamental principles—the origin of society, absolute freedom and absolute equality of all—are false and unnatural.

He bases society on a convention, ignoring the fact and truth so clearly shown both by psychology and history that man is a being essentially social, and that, as Bonald says, the "law of sociability is as natural to man as the law of gravitation to physical bodies". He affirms as a first principle that all men are born free. He calls the natural state a state of instinct, and he defines natural freedom as the unlimited right of each to do whatever he can. He opposes to this natural state and freedom the civil state which he calls the state of justice and morality, and civil liberty, which is freedom limited by the general will. This evidently implies that man is born an animal with force as its power and instinct as its guide, and not an intelligent and free being. Rousseau forgets that, if natural freedom is power to act, it is at the same time an activity subjected to a rule and discipline determined by the very object and conditions of human life; that if all men are born with a right to freedom, they are also born with a duty to direct this freedom; that, if all are born equally free—in the fundamental sense that all have the same essential right to live a human life and to attain human perfection—still, this very right is determined in its mode of exercise for each individual by special laws and conditions; in a word, that the natural state of man is both freedom and discipline in the individual as well as in the social life. Rousseau's conception of freedom leads him directly to an individualism and a naturalism which have no limits save those of brute force itself.

Again, he declares that all men are born naturally equal. Now this principle is true if it is understood in the sense of a specific equality, the foundation of human dignity. Every man has the right, equal in all, to be treated as a man, to be respected in his personal dignity as a man, to be protected and helped by authority in his effort towards perfection. But the principle is fundamentally false, if, as interpreted by Rousseau, it means individual equality. The son is not individually equal to his father, nor the infant to the adult,

nor the dull to the intelligent, nor the poor to the rich, in individual needs, rights, or special duties. The natural relations between individual men, their reciprocal duties and rights, involve both equality and hierarchy. The basis of social relations is not absolute individual independence and arbitrary will, but freedom exercised with respect for authority. By his interpretation of this principle, Rousseau leads to a false individualism which ends in anarchy.

Rousseau maintains that society arises through the total alienation of the personality and rights of each associate; hence, for the absolute individualism of nature he substitutes an absolute socialism in the civil state. It is the general will which is the ultimate source and supreme criterion of justice, morality, property, and religion. Then we have, in spite of all the explanations advanced by Rousseau, the suppression of personality, the reign of force and caprice, the tyranny of the multitude, the despotism of the crowd, the destruction of true freedom, morality, and society. The French Revolution was the realization of these principles. Society has not its foundation in the free alienation of personality and rights, but in the natural union of all personalities, or, rather, families, with a view to reach their perfection. Society is not the source of duties and rights of families or individuals, but the protector and helper of families and individuals in the fulfilment of their duties and rights; its existence is commanded, its authority is limited, by this very end. Society is not formed from elements all individually equal, but is organized from graduated elements. These degrees of authority, however, in the social organization are not by nature the exclusive possession of anybody, but accessible to the capacities and the efforts of all. Society is made up of authority and subjects; and this authority, while it may be determined in its subject and manner of exercise by the people, has not its foundation in their will, but in human nature itself as God created it.

G. M. SAUVAGE.

Contrition (Lat. *contritio*—a breaking of something hardened).—In Holy Writ nothing is more common than exhortations to repentance: "I desire not the death of the wicked, but that the wicked turn from his way and live" (Ezech., xxxiii, 11); "Except you do penance you shall all likewise perish" (Luke, xiii, 5; cf. Matt., xii, 41). At times this repentance includes exterior acts of satisfaction (Ps. vi, 7 sqq.); it always implies a recognition of wrong done to God, a detestation of the evil wrought, and a desire to turn from evil and do good. This is clearly expressed in Ps. l (5–14): "For I know my iniquity. . . . To thee only have I sinned, and have done evil before thee. . . . Turn away thy face from my sins, and blot out all my iniquities. Create a clean heart in me", etc. More clearly does this appear in the parable of the Pharisee and the publican (Luke, xviii, 13), and more clearly still in the story of the prodigal (Luke, xv, 11–32): "Father, I have sinned against heaven and before thee: I am not worthy to be called thy son".

NATURE OF CONTRITION.—This interior repentance has been called by theologians "contrition". It is defined explicitly by the Council of Trent (Sess. XIV, ch. iv de Contritione): "a sorrow of soul and a hatred of sin committed, with a firm purpose of not sinning in

the future". The word *contrition* itself in a moral sense is not of frequent occurrence in Scripture (cf. Ps. 1, 19). Etymologically it implies a breaking of something that has become hardened. St. Thomas Aquinas in his Commentary on the Master of the Sentences thus explains its peculiar use: "Since it is requisite for the remission of sin that a man cast away entirely the liking for sin which implies a sort of continuity and solidity in his mind, the act which obtains forgiveness is termed by a figure of speech 'contrition'" (In Lib. Sent. IV, dist. xvii; cf. Supplem. III, Q. i, a. 1). This sorrow of soul is not merely speculative sorrow for wrong done, remorse of conscience, or a resolve to amend; it is a real pain and bitterness of soul together with a hatred and horror for sin committed; and this hatred for sin leads to the resolve to sin no more. The early Christian writers in speaking of the nature of contrition sometimes insist on the feeling of sorrow, sometimes on the detestation of the wrong committed (Augustine in P. L., XXXVII, 1901, 1902; Chrysostom, P. G., XLVII, 409, 410). Augustine includes both when writing: "Compunctus corde non solet dici nisi stimulus peccatorum in dolore penitendi" (P. L., Vol. VI of Augustine, col. 1440). Nearly all the medieval theologians hold that contrition is based principally on the detestation of sin. This detestation presupposes a knowledge of the heinousness of sin, and this knowledge begets sorrow and pain of soul. "As sin is committed by the consent, so it is blotted out by the dissent of the rational will; hence contrition is essentially sorrow. But it should be noted that *sorrow* has a twofold signification—dissent of the will and the consequent feeling; the former is of the essence of contrition, the latter is its effect" (Bonaventure, In Lib. Sent. IV, dist. xvi, Pt. I, art. 1). [See also St. Thomas Aquinas, Comment. in Lib. Sent. IV; Billuart (De Sac. Penit., Diss. iv, art. 1) seems to hold the opposite opinion.]

NECESSITY OF CONTRITION.—Until the time of the Reformation no theologian ever thought of denying the necessity of contrition for the forgiveness of sin. But with the coming of Luther and his doctrine of justification by faith alone the absolute necessity of contrition was excluded as by a natural consequence. Leo X in the famous Bull "Exsurge" [Denzinger, no. 751 (635)] condemned the following Lutheran position: "By no means believe that you are forgiven on account of your contrition, but because of Christ's words, 'Whatsoever thou shalt loose', etc. On this account I say, that if you receive the priest's absolution, believe firmly that you are absolved, and truly absolved you will be, let the contrition be as it may." Luther could not deny that in every true conversion there was grief of soul, but he asserted that this was the result of the grace of God poured into the soul at the time of justification, etc. (For this discussion see Vacant, Dict. de théol. cath., s. v. Contrition.) Catholic writers have always taught the necessity of contrition for the forgiveness of sin, and they have insisted that such necessity arises (a) from the very nature of repentance as well as (b) from the positive command of God. (a) They point out that the sentence of Christ in Luke, xiii, 5, is final: "Except you do penance", etc., and from the Fathers they cite passages such as the following from Cyprian, "De Lapsis", no. 32: "Do penance in full, give proof of the sorrow that comes from a grieving and lamenting soul . . . they who do away with repentance for sin, close the door to satisfaction." The Scholastic doctors laid down the principle, "No one can begin a new life who does not repent him of the old" (Bonaventure, In Lib. Sent. IV, dist. xvi, Pt. II, art. I, Q. ii, also *ex professo*, ibid., Pt. I, art. I, Q. iii), and when asked the reason why, they point out the absolute incongruity of turning to God and clinging to sin, which is hostile to God's law. The Council of Trent, mindful of the tradition of the ages, defined (Sess. XIV, ch. iv de Contritione) that

"contrition has always been necessary for obtaining forgiveness of sin". (b) The positive command of God is also clear in the premises. The Baptist sounded the note of preparation for the coming of the Messiah: "Make straight his paths"; and, as a consequence, "they went out to him and were baptized confessing their sins". The first preaching of Jesus is described in the words: "Do penance, for the kingdom of heaven is at hand"; and the Apostles, in their first sermons to the people, warn them to "do penance and be baptized for the remission of their sins" (Acts, ii, 38). The Fathers followed up with like exhortation (Clement in P. G., I, 341; Hermas in P. G., II, 894; Tertullian in P. L., II).

PERFECT AND IMPERFECT CONTRITION.—Catholic teaching distinguishes a twofold hatred of sin; one, perfect contrition, springs from the love of God Who has been grievously offended; the other, imperfect contrition, arises principally from some other motives, such as loss of heaven, fear of hell, the heinousness of sin, etc. (Council of Trent, Sess. XIV, ch. iv de Contritione). For the doctrine of imperfect contrition see ATTRITION.

QUALITIES.—In accord with Catholic tradition contrition, whether it be perfect or imperfect, must be at once (a) interior, (b) supernatural, (c) universal, and (d) sovereign.

(a) *Interior.*—Contrition must be real and sincere sorrow of heart, and not merely an external manifestation of repentance. The Old-Testament Prophets laid particular stress on the necessity of hearty repentance. The Psalmist says that God despises not the "contrite heart" (Ps. 1, 19), and the call to Israel was, "Be converted to me with all your heart . . . and rend your hearts, and not your garments" (Joel, ii, 12 sq.). Holy Job did penance in sackcloth and ashes because he reprimanded himself in sorrow of soul (Job, xlii, 6). The contrition adjudged necessary by Christ and his Apostles was no mere formality, but the sincere expression of the sorrowing soul (Luke, xv, 11–32; Luke, xviii, 13); and the grief of the woman in the house of the Pharisee merited forgiveness because "she loved much". The exhortations to penance found everywhere in the Fathers have no uncertain sound (Cyprian, De Lapsis, P. L., IV; Chrysostom, De compunctione, P. G., XLVII, 393 sqq.), and the Scholastic doctors from Peter Lombard on insist on the same sincerity in repentance (Peter Lombard, Lib. Sent. IV, dist. xvi, no. 1).

(b) *Supernatural.*—In accordance with Catholic teaching contrition ought to be prompted by God's grace and aroused by motives which spring from faith, as opposed to merely natural motives, such as loss of honour, fortune, and the like (Chemnitz, Exam. Concil. Trid., Pt. II, De Penit.). In the Old Testament it is God who gives a "new heart" and who puts a "new spirit" into the children of Israel (Ezech., xxxvi, 25–29); and for a clean heart the Psalmist prays in the Miserere (Ps. 1, 11 sqq.). St. Peter told those to whom he preached in the first days after Pentecost that God the Father had raised up Christ "to give repentance to Israel" (Acts, v, 30 sq.). St. Paul in advising Timothy insists on dealing gently and kindly with those who resist the truth, "if peradventure God may give them repentance" (II Tim., ii, 24–25). In the days of the Pelagian heresy Augustine insists on the supernaturalness of contrition, when he writes: "That we turn away from God is our doing, and this is the bad will; but to turn back to God we are unable unless He arouse and help us, and this is the good will." Some of the Scholastic doctors, notably Scotus, Cajetan, and after them Suarez (De Penit., Disp. iii, sect. vi), asked speculatively whether man left to himself could elicit a true act of contrition, but no theologian ever taught that repentance which makes for forgiveness of sin in the present economy of God could be inspired by merely natural motives. On the

contrary, all the doctors have insisted on the absolute necessity of grace for contrition that disposes to forgiveness (Bonaventure, In Lib. Sent. IV, dist. xiv, Pt. I, art. II, Q. iii; also dist. xvii, Pt. I, art. I, Q. iii; cf. St. Thomas, In Lib. Sent. IV). In keeping with this teaching of the Scriptures and the doctors, the Council of Trent defined: "If anyone say that without the inspiration of the Holy Spirit and without His aid a man can repent in the way that is necessary for obtaining the grace of justification, let him be anathema."

(c) *Universal*.—The Council of Trent defined that real contrition includes "a firm purpose of not sinning in the future"; consequently he who repents must resolve to avoid all sin. This doctrine is intimately bound up with the Catholic teaching concerning grace and repentance. There is no forgiveness without sorrow of soul, and forgiveness is always accompanied by God's grace; grace cannot coexist with sin; and, as a consequence, one sin cannot be forgiven while another remains for which there is no repentance. This is the clear teaching of the Bible. The Prophet urged men to turn to God with their whole heart (Joel, ii, 12 sq.), and Christ tells the doctor of the law that we must love God with our whole mind, our whole strength (Luke, x, 27). Ezekiel insists that a man must "turn from all his evil ways" if he wish to live. The Scholastics inquired rather subtly into this question when they asked whether or not there must be a special act of contrition for every serious sin, and whether, in order to be forgiven, one must remember at the moment all his grievous transgressions. To both questions they answered in the negative, judging that an act of sorrow which implicitly included all his sins would be sufficient.

(d) *Sovereign*.—The Council of Trent insists that true contrition includes the firm will never to sin again, so that no matter what evil may come, such evil must be preferred to sin. This doctrine is surely Christ's: "What shall it profit a man if he gain the whole world and suffer the loss of his soul?" Theologians have discussed at great length whether or not contrition which must be sovereign *appetitive*, i. e. in regarding sin as the greatest possible evil, must also be sovereign in degree and in intensity. The decision has generally been that sorrow need not be sovereign "intensively", for intensity makes no change in the substance of an act (Ballerini, Opus Morale: De Contritione; Bonaventure, In Lib. Sent. IV, dist. xxi, Pt. I, art. II, Q. i).

CONTRITION IN THE SACRAMENT OF PENANCE.—Contrition is not only a moral virtue, but the Council of Trent defined that it is a "part", nay more, *quasi materia*, in the Sacrament of Penance. "The (quasi) matter of this sacrament consists of the acts of the penitent himself, namely, contrition, confession, and satisfaction. These, inasmuch as they are by God's institution required in the penitent for the integrity of the sacrament and for the full and perfect remission of sin, are for this reason called parts of penance." In consequence of this decree of Trent theologians teach that sorrow for sin must be in some sense sacramental. La Croix went so far as to say that sorrow must be aroused with a view of going to confession, but this seems to be asking too much; most theologians think with Schieler-Heuser (Theory and Practice of Confession, p. 113) that it is sufficient if the sorrow coexist in any way with the confession and is referred to it. Hence the precept of the Roman Ritual, "After the confessor has heard the confession he should try by earnest exhortation to move the penitent to contrition" (Schieler-Heuser, op. cit., p. 111 sqq.).

PERFECT CONTRITION WITHOUT THE SACRAMENT.—Regarding that contrition which has for its motive the love of God, the Council of Trent declares: "The Council further teaches that, though contrition may

sometimes be made perfect by charity and may reconcile men to God before the actual reception of this sacrament, still the reconciliation is not to be ascribed to the contrition apart from the desire for the sacrament which it includes." The following proposition (no. 32) taken from Baius was condemned by Gregory XIII: "That charity which is the fullness of the law is not always conjoined with forgiveness of sins." Perfect contrition, with the desire of receiving the Sacrament of Penance, restores the sinner to grace at once. This is certainly the unanimous teaching of the Scholastic doctors (Peter Lombard in P. L., CXCII, 885; St. Thomas, In Lib. Sent. IV, ibid.; St. Bonaventure, In Lib. Sent. IV, ibid.). This doctrine they derived from Holy Writ. Scripture certainly ascribes to charity and the love of God the power to take away sin: "He that loveth me shall be loved by My Father"; "Many sins are forgiven her because she hath loved much". Since the act of perfect contrition implies necessarily this same love of God, theologians have ascribed to perfect contrition what Scripture teaches belongs to charity. Nor is this strange, for in the Old Covenant there was some way of recovering God's grace once man had sinned. God will not the death of the wicked, but that the wicked turn from his way and live (Ezech., xxxiii, 11). This total turning to God corresponds to our idea of perfect contrition; and if under the Old Law love sufficed for the pardon of the sinner, surely the coming of Christ and the institution of the Sacrament of Penance cannot be supposed to have increased the difficulty of obtaining forgiveness. That the earlier Fathers taught the efficacy of sorrow for the remission of sins is very clear (Clement in P. G., I, 341 sqq.; Hermas in P. G., II, 894 sqq.; Chrysostom in P. G., XLIX, 285 sqq.), and this is particularly noticeable in all the commentaries on Luke, vii, 47. The Venerable Bede writes (P. L., XCII, 425): "What is love but fire; what is sin but rust? Hence it is said, many sins are forgiven her because she hath loved much, as though to say, she hath burned away entirely the rust of sin, because she is inflamed with the fire of love." Theologians have inquired with much learning as to the kind of love that justifies without the Sacrament of Penance. All are agreed that pure, or disinterested, love (*amor benevolentia*, *amor amicitia*) suffices; when there is question of interested, or selfish, love (*amor concupiscentia*) theologians hold that purely selfish love is not sufficient. When one furthermore asks what must be the formal motive in perfect love, there seems to be no real unanimity among the doctors. Some say that where there is perfect love God is loved for His great goodness alone; others, basing their contention on Scripture, think that the love of gratitude (*amor gratitudinis*) is quite sufficient, because God's benevolence and love towards men are intimately united, nay, inseparable from His Divine perfections (Hurter, Theol. Dog., Thesis cxcv, Scholion iii, no. 3; Schieler-Heuser, op. cit., pp. 77 sq.).

OBLIGATION OF ELICITING THE ACT OF CONTRITION.—In the very nature of things the sinner must repent before he can be reconciled with God (Sess. XIV, ch. iv, de Contritione, *Fruit quovis tempore*, etc.). Therefore he who has fallen into grievous sin must either make an act of perfect contrition or supplement the imperfect contrition by receiving the Sacrament of Penance; otherwise reconciliation with God is impossible. This obligation urges under pain of sin when there is danger of death. In danger of death, therefore, if a priest be not at hand to administer the sacrament, the sinner must make an effort to elicit an act of perfect contrition. The obligation of perfect contrition is also urgent whensoever one has to exercise some act for which a state of grace is necessary and the Sacrament of Penance is not accessible. Theologians have questioned how long a man may remain in the state of sin, without making an effort to

elicit an act of perfect contrition. They seem agreed that such neglect must have extended over considerable time, but what constitutes a considerable time they find it hard to determine (Schieler-Heuser, op. cit., pp. 83 sqq.). Probably the rule of St. Alphonsus Liguori will aid the solution: "The duty of making an act of contrition is urgent when one is obliged to make an act of love" (Sabetti, *Theologia Moralis: de necess. contritionis*, no. 731; Ballerini, *Opus Morale: de contritione*).

EDWARD J. HANNA.

Contumacy (IN CANON LAW), or contempt of court, is an obstinate disobedience of the lawful orders of a court. Simple disobedience does not constitute contumacy. Such crime springs only from unequivocal and stubborn resistance to the reiterated or peremptory orders of a legitimate court, and implies contempt or denial of its authority. The general law of the Church demands that the citation, or order to appear, be repeated three times (in the United States twice) before proceedings declaratory of contumacy take place. A peremptory citation, stating that the one replaces the three, satisfies the law. Contumacy may arise not only from disobedience to the citation proper, but also from contempt of any order of a lawful court. Contumacy is commonly divided into true and presumptive. True contumacy takes place when it is certain that the citation was served, and the defendant without just cause fails to obey the terms of such citation. Presumptive contumacy occurs when there is a strong presumption, though it is not certain, that the citation was served. The law holds this presumption equivalent to a moral certitude of service of citation. The defendant becomes guilty of contumacy if, when lawfully cited, he fails to appear before the judge, or if he secludes himself, or in any way prevents the service of citation. The plaintiff incurs the guilt of contumacy by failure to appear before the court at the specified time. And the defendant or plaintiff may be proceeded against on the charge of contempt, if either rashly withdraws from the trial, or disobeys a special precept of the judge, or refuses to answer the charges of the other party. A witness becomes guilty of contumacy by disobeying the summons or by refusal to testify in the cause at issue.

All causes excusing appearance in court exempt from contempt of court. The following, among others, produce such effects: (1) ill-health; (2) absence on public affairs; (3) summons to a higher court; (4) inclement weather; (5) unsafety of place to which cited. These and like causes, if known to the judge, render null and void any sentence pronounced by him in such circumstances. But if they be unknown to the judge at the time of sentence, the condemned, on motion, must be reinstated in the position held by him prior to the sentence. Contumacy should never be held equivalent to a juridical confession of guilt. It cannot therefore dispense with the trial, but only makes it lawful to proceed in the absence of the party guilty of contumacy as though he were present (Third Plenary Council of Baltimore, no. 313). Contempt of court, being an act of resistance to legitimate authority, is a crime, and therefore punishable. The chief penalties are: (1) The trial proceeds in the absence of the contumacious person, and presumably to his detriment; (2) presumption of guilt, but not sufficient for conviction; (3) a pecuniary fine at the discretion of the judge; (4) suspension; (5) excommuni-

cation may be inflicted, and if the contumacious party be not absolved within one year he may be proceeded against as suspected of heresy (Council of Trent, Sess. XXV, ch. iii de Ref.); (6) loss of the right of appeal from a definitive sentence, in all cases of true contumacy. Presumptive contumacy does not carry this penalty. Before inflicting penalties the guilt of contumacy must be established by legal proof. The accused must be cited to answer the charge of contumacy, which must be prosecuted according to the procedure established and laid down in the law.

JAMES H. DRISCOLL.

Contzen, ADAM, economist and exegete, b. in 1573 (according to Sommervogel in 1575), at Montjoie in the Duchy of Jülich, which is now part of the Rhine Province of Prussia; d. 19 June, 1635, at Munich. He entered the Society of Jesus at Trier in 1595, was professor of philosophy in the University of Würzburg in 1606, and was transferred to the University of Mainz in 1610, where he occupied the chair of Holy Scripture for more than ten years. He had a share in the organization of the University of Molsheim, in Alsace, of which he was chancellor in 1622-23. Contzen was a learned and versatile writer in theological controversy, in political economy, and in the interpretation of the Scriptures. He defended the controversial works of Cardinal Bellarmine against the attacks of Professor Pareus of Heidelberg, and when the latter sought to unite the Calvinists and the Lutherans against the Catholics, Contzen demonstrated the impractical nature of the project in his work, "De unione et synodo Evangelicorum", and showed the only way of restoring peace to the German nation in his important work, "De Pace Germaniæ libri duo, prior de falsâ, alter de verâ" (Mainz, 1616). This work was twice reprinted at Cologne, in 1642 and in 1685. His ideas on the restoration of peace were further developed in the works occasioned by the centenary of the Reformation, one of which, "Jubilum Jubilorum", was published (1618) in Latin and in German. His most interesting work, which marks him as a thinker in advance of his age, "Politicorum lib. X", was published at Mainz in 1621 and 1629. The book has been called an "Anti-Machiavelli" because the author describes the ruler of a Christian commonwealth in accordance with the principles of Revelation. In the questions of political and national economy which he discusses he advocates a reform of taxation, the freeing of the soil from excessive burdens, state ownership of certain industries for the purpose of revenue, indirect taxation of objects of luxury, a combination of the protective system with free-trade, and state aid for popular associations. The Elector Maximilian of Bavaria was so impressed by the ability shown in this work that he chose Contzen for his confessor. During his residence in Munich, which began in 1623, he completed and published his commentaries on the Four Gospels, and on the Epistles of St. Paul to the Romans, the Corinthians, and the Galatians. He also wrote a political novel, "Methodus doctrinæ civilis, seu Abissini Regis Historia", in which he showed the practical working of his political theories.

B. GULDNER.

Convent (Lat. *conventus*) originally signified an assembly of Roman citizens in the provinces for purposes of administration and justice. In the history of monasticism the word has two distinct technical meanings: (1) A religious community of either sex

when spoken of in its corporate capacity. The word was first used in this sense when the eremitical life began to be combined with the cenobitical. The hermits of an Eastern *laura*, living in separate cells grouped around that of their common superior, when spoken of collectively, were called a *conventus*. In Western monasticism the term came into general use from the very beginning, and the technical phrase *abbas et conventus* signifies to this day the entire community of a monastic establishment. (2) The buildings in which resides a community of either sex. In this sense the word denotes more properly the home of a strictly monastic order, and is not correctly used to designate the home of what is called a "congregation". In addition to these technical meanings, the word has also a popular signification at the present day, by which it is made to mean in particular the abode of female religious, just as "monastery" denotes that of men, though in reality the two words are interchangeable. In the present article the word is taken chiefly in its popular sense. The treatment, moreover, is limited to those features which are common to all, or nearly all, convents, while peculiarities due to the special purpose, rule, or occupation of each religious order are explained in the pertinent article.

CONVENT LIFE.—The life lived by the inmates of a convent naturally varies in its details, according to the particular object for which it has been founded, or the special circumstances of time and place by which it is affected. Convents are often roughly divided into two classes, strictly enclosed and unenclosed, but with regard to the convents existing at the present day this division, though correct as far as it goes, is not a very satisfactory one, because both classes are capable of subdivision, and, on account of the varied kinds of work undertaken by the nuns, these subdivisions overlap one another. Thus, of the strictly enclosed communities, some are purely contemplative, others mainly active (i. e. engaged in educational or rescue work), while others again combine the two. Similarly, of the unenclosed orders, some are purely active (i. e. undertaking educational, parochial, hospital, or other work), and others unite the contemplative with the active life, without, however, being strictly enclosed. As a general deduction it may be stated that the contemplative life, in which women were actuated by a desire to save their own souls and the souls of others by their lives of prayer, seclusion, and mortification, was the idea of the older orders, while the distinctive note of the more modern congregations is that of active work amongst others and the relief of their bodily wants.

With regard to the educational work of the convents, it may here be stated that this includes the teaching of both elementary and secondary schools, as well as the training of teachers for such schools and higher education. The hospital and nursing work comprises the management of hospitals, both general and for special classes of patients, as well as the nursing of both rich and poor in their own homes. Rescue work includes the conduct of penitentiaries, orphanages, and homes for the aged poor. A few convents make special provision for the reception of guests, for retreats and other spiritual purposes, and a large proportion of them receive boarders at moderate charges. Some, mostly of enclosed communities, have undertaken the work of Perpetual Adoration, while others devote themselves to ecclesiastical embroidery and the making of church vestments. This particular kind of work has always been characteristic of English nuns, whose embroidery, known as the *opus anglicanum*, was famous in medieval times (Matthew Paris, *Rolls* ed., IV, *an.* 1246). The ordinary routine of life in a nunnery has always corresponded approximately with that of a monastery. The nun's day is divided between the choir, the workroom, the school-room, the refectory, the recreation-room, the cell,

and, with the active orders, the outside work, in periodical rotation. Idleness or lack of occupation is never permitted. The earliest rules for nuns, as well as the most modern, all prescribe labour of some useful kind. The medieval nuns could always read and write Latin, and they also employed themselves in transcribing and illuminating sacred books, and in many of the fine arts, the cultivation of which they consecrated to the service of God. The convents thus were always homes of industry, and just as formerly they played no small part in the spread of civilization, so now they are almost indispensable handmaids to the cause of the Catholic Church.

UNFOUNDED CALUMNIES.—It is not necessary here to refute the many base and vile charges that have from time to time been brought against the conventual system; a mere general reference to them is sufficient, for the evidence of the salutary work done by convents and the fruits of the lives of the nuns are in themselves ample refutation. In the past there have been "anti-convent" and "convent-inspection" societies, as well as the lectures of "escaped nuns" and literature in abundance of the "Maria Monk" type, and they may be expected to crop up again periodically in the future. These may and do for a time hamper the work of the nuns and cause a certain amount of disquietude in some quarters, but it is a significant fact that, whatever excitement they may raise for the time being, the agitation always dies down again as suddenly as it arises, and its harmful effects never appear to leave behind them any lasting results, except perhaps an increased interest in, and respect for, the conventual life that has been vilified.

LEGISLATION AS TO CONVENTS.—Canon law contains a large and important section relating to the establishment and government of convents. The privileges of such as are exempt from episcopal jurisdiction, the appointment of confessors for the nuns, and the duties of the same, the regulations of the Church concerning enclosure, and the admission and testing of candidates, the nature and obligations of the vows, the limits of the powers of superiors, and the conditions regarding the erection of new convents are among the many points of detail legislated for. One or two points may be alluded to here. The law of the Church requires that no new convent be established, whether it be one that is exempt from episcopal jurisdiction or not, without the consent of the bishop of the diocese; for what is technically called "canonical erection" further formalities, including approbation from Rome, have to be complied with. All confessors for nuns must be specially approved by the bishop, even those of convents that are exempt from his ordinary jurisdiction, and the bishop has also to provide that all nuns can have access two or three times in the year to an "extraordinary" confessor, other than their usual one. The bishop also is obliged periodically to visit and inspect all the convents in his diocese, excepting those that are exempt, at the time of which visitation every nun must be free to see him privately in order to make any complaints or suggestions that she may wish. With regard to the admission of postulants the law provides for every precaution being taken, on the one hand, to prevent coercion and, on the other, to safeguard the community from being obliged to receive those about whose vocation there may be any doubt. Physical fitness on the part of a candidate is in most orders an indispensable condition, though there are some which admit women of delicate health; but, once admitted and professed, the contract becomes reciprocal, and while the nun undertakes to keep her vows, the convent, on its side, is bound to provide her with lodging, food, and clothing, and to maintain her in sickness or in health (see *NOVIATE*; *VOW*).

DOWRY.—With regard to the dowry required of a nun, the customs and rules of the different orders vary

much according to circumstances. Some convents, on account of their poverty, are obliged to insist upon it, and, generally speaking, most expect their members to bring some contribution to the general fund. A convent that is rich will often dispense with the dowry in the case of a highly promising candidate, but it must always depend upon particular circumstances. The minimum amount of the dowry required is generally fixed by the rule or constitutions of the convent or order.

OFFICE.—In most of the older contemplative orders the choir nuns are bound to recite the whole Divine Office in choir. In only a very few of the English convents, e. g. Cistercians, Dominicans, and Poor Clares, do the nuns rise in the night for Matins and Lauds; in the others these Offices are generally said in the evening "by anticipation". In some there are other additional offices recited daily; thus the Cistercians and Poor Clares say the Office of Our Lady and that of the Dead every day, and the Brigittines say the latter thrice in the week, as well as an Office of the Holy Ghost. Almost all the active orders, both enclosed and unenclosed, use the Office of Our Lady, but some, like the Sisters of Charity, are not bound to the recitation of any Office at all.

LAY SISTERS.—In most orders the nuns are divided into choir sisters and lay sisters. The latter are usually employed in the household duties and other manual work. They take the usual vows and are as truly religious as the choir nuns, but they are not bound to the choir Office, though they often attend the choir at the time of Office and recite certain prayers in the vernacular. There is always a distinction between their habit and that of the choir nuns, sometimes very slight and sometimes strongly marked. In some orders where the choir sisters are enclosed the lay sisters are not; but in others they are as strictly enclosed as the choir nuns. Several orders have, by their rule, no lay sisters, among them being the Sisters of Notre Dame, the Sisters of Charity, the Sisters of Bon Secours, the Little Sisters of the Poor, and the Poor Servants of the Mother of God.

CONVENTUAL BUILDINGS.—The internal arrangement of a properly constituted convent is, for the most part, similar to that of a monastery for men (see ABBEY and MONASTERY), but from poverty and other obvious causes, many convents have had to be established in already-existing ordinary dwelling-houses, which do not always lend themselves to ideal adaptation. (See CLOISTER; DOWER OF RELIGIOUS; NUN; OFFICE; SCHOOLS.)

Conventicle Act. See PENAL LAWS.

Convent Schools (GREAT BRITAIN).—Convent education is treated here not historically but as it is at the present day, and, by way of introduction, it may be briefly stated that the idea of including the education of the young amongst the occupations of a religious community is practically as old as that of the religious life for women itself. From the earliest times it was customary in England for children to be educated in convents, and we know that the nuns who went forth from Wimborne in the eighth century to help St. Boniface in his work of evangelizing Saxony, established convent schools wherever they went, in which a very high standard of scholarship was attained. Stray remarks in Chaucer and other mediæval writers likewise reveal the fact that the English

convent schools of the Middle Ages compared favourably with schools for the other sex. But all this came to an end at the Reformation, so far as England was concerned; and, save for one notable exception, English convent education had practically to start afresh in the nineteenth century. The exception referred to was the Bar Convent at York, belonging to the Institute of the Blessed Virgin Mary, whose foundress, Mary Ward, was the pioneer of religious congregations devoted to the education of English girls. The Bar Convent was established in 1686, and in spite of penal laws, Protestant persecution, no-popery riots, and even, on more than one occasion, the imprisonment of the nuns for their faith, the work of the convent has continued from that day to this, and with its hundred and eighty houses in different parts of the English-speaking world, the Institute of the B. V. M. has long held a foremost place amongst the teaching orders of the Church.

The opening of numerous convents in England during the latter half of the nineteenth century has produced correspondingly numerous convent schools, in many of which, be it noted, Protestant as well as Catholic girls (especially in day and elementary schools) have been and are still being educated. The foundation of training colleges for Catholic teachers, the demand for teachers with academic qualifications, the move in favour of Government inspection with the consequent official recognition of convent schools, and the more recent advance in the way of higher education for Catholic women, have all combined to raise the standard of convent education; and the leading teaching orders have proved equal to the demand made upon their capabilities and energy. The convents stand foremost in the work they have done for religion and education, and they have turned out hundreds of girls, not only educated in the highest sense of the word but also truly religious.

Although in its widest sense the term "Convent Schools" may be taken to include all those, of whatever kind, in which the work of education is undertaken by female religious—such as primary or elementary schools (whether mixed or for girls only), reformatory and industrial schools—it is only proposed in this article to deal with secondary schools, i. e. day or boarding schools for the upper and middle classes, training colleges for Catholic schoolmistresses, and colleges for the higher education of women, these being more closely connected with convent life itself.

SECONDARY EDUCATION.—Almost all convent secondary schools are under Government inspection. This gives them the status of being "recognized" by the Board of Education, regulates their course of studies, and ensures unity of method and efficiency. Some are also in receipt of a State aid-grant, which places certain restrictions upon their methods of management. Where no grant is accepted the nuns are more independent as regards the admission and refusal of pupils. The aim of all religious orders engaged in secondary education for girls is, whilst making every effort to keep abreast of modern requirements with regard to scholastic efficiency, to give also the additional advantage of a thorough religious training, so that parents may have no reason to fear that by securing the latter for their children they are sacrificing the greater temporal advantages that might be obtained at a Protestant school. The system of Government inspection and recognition by the Board of Education, with or without the State aid-grant, secures the necessary degree of efficiency, whilst the general character and reputation of the various communities by which the schools are conducted sufficiently guarantees the religious side of their educational work. Government inspectors and public examiners have frequently testified to the excellent moral tone and atmosphere of convent schools and to the cordial relations existing between

teachers and pupils, no less than to the high teaching ability of the nuns themselves. The fact that education in its truest sense means something more than mere book-learning is nowhere more fully realized than in the convent school, and results all tend to prove that the religious and moral training imparted in such establishments has in no way acted as a hindrance to the more technical side of educational work. It has sometimes been said that the standard of scholarship attained is not so high in Catholic as in non-Catholic schools of the same class, but however true this may have been in the past, the general levelling up that has taken place during the last ten or twenty years has rendered the reproach an idle one now. The public examination lists of recent years afford ample proof that the leading convent schools are equal in efficiency to all others.

The range of studies pursued in convent secondary schools is a wide one. It includes religious knowledge, English in all its branches, French, Latin, mathematics, science, drawing, needlework, class-singing, and drilling, while such subjects as music, singing, dancing, Greek, German, Italian, elocution, shorthand, book-keeping, dressmaking, cooking, etc., are generally taught as optional extras. Pupils are entered for the Oxford and Cambridge Local Examinations, the Higher Locals, the Higher and Lower Certificates of the Oxford and Cambridge Joint Examination Board, the Matriculation Examinations of the London and Liverpool Universities, as well as for those of the College of Preceptors, the Incorporated Society of Musicians, the Royal Academy of Music, and the South Kensington School of Art. School buildings and accommodations are of the most up-to-date pattern—one of the necessary conditions for Government recognition. Physical development is provided for by means of hockey, croquet, tennis, cycling, swimming, and gymnastics, according to the particular circumstances of each school.

All the leading educational communities make a special point of having their teachers properly trained and fully qualified. This again is a *sine quâ non* for official recognition, and the Order in Council of 1902, concerning the registration of secondary teachers, gave fresh impetus to the work of training teachers for convent schools. The principal teaching orders send their subjects usually to one or other of the two Catholic training colleges for secondary teachers (St. Mary's Hall, Liverpool, and Cavendish Square, London), or else have them qualify by obtaining one or more of the following: the teaching diploma of the Cambridge Teachers' Training Syndicate, the Oxford diploma for teachers, Women's Honours in Modern Languages (Oxford), the Women's diploma for the Oxford B. A. degree, the L.L.A. diploma of St. Andrew's University, the Licentiate of the College of Preceptors, the Higher Certificate of the Oxford and Cambridge Joint Board, the Higher Local Certificate of Oxford or Cambridge, or a degree at one of the universities that grant degrees to women, e. g. London, Liverpool, or Dublin. Foreign languages are in most cases taught by natives, and in the teaching of many of the special subjects the religious are assisted by extern professors holding the highest qualifications. From these few facts it will be evident that the convent schools of England are adequately keeping pace with the times and that in point of efficiency they are in no way behind non-Catholic schools of the same class, while the facilities that have been recently brought into existence for the advanced education of Catholic women, religious as well as secular, at the Universities of Oxford and Cambridge point to a still higher degree of efficiency for the future.

There are at the present over two hundred Catholic secondary schools in England under the care of representatives of about sixty different religious orders. Chief among these may be mentioned the English

Institute of the B. V. M., with six such schools, the Sisters of the Holy Child Jesus (eight schools), the Faithful Companions of Jesus (fourteen), the Sisters of Notre Dame of Namur (eighteen), the Religious of St. Andrew (one), the Religious of the Sacred Heart (eight), the Sisters of Mercy (eleven), the Servites (three), and the Ursulines of different congregations (twenty-three). Some of the best known and most successful of these schools are those at York and Cambridge (Inst. of B. V. M.); Mayfield, St. Leonard's, Preston, Harrogate, and Cavendish Square, London (Sisters of the Holy Child Jesus); Isleworth, Liverpool, Birkenhead, and Clarendon Square, London (Faithful Companions); Liverpool (Mount Pleasant), Northampton, and Norwich (Notre Dame); Streatham (St. Andrew's); Stamford Hill (Servites); and St. Ursula's, Oxford. Many of these secondary schools have attached to them pupil teachers' centres, where valuable preliminary work in the training of elementary schoolmistresses is done, and many of them serve also as "practising schools" in which the students of Catholic and other training colleges give their model lessons in the presence of their instructors and the Government inspectors. The pass and honours lists of the various public examinations in recent years show a very high percentage of candidates from the convent schools and prove conclusively that as far as results go they are fully equal to the best secondary schools under non-Catholic management.

TRAINING COLLEGES.—The training colleges are of two kinds—those for the training of primary or elementary schoolmistresses, and those for teachers in secondary schools. Both kinds are under the care of the religious orders. All the Catholic training colleges are recognized by Government, and in those for primary teachers the students whose expenses are assisted by a Government grant are known as "King's Scholars", their selection as such being dependent upon a competitive examination under Government auspices. There are six recognized training colleges for primary teachers, Mount Pleasant, Liverpool (under the Sisters of Notre Dame); St. Charles' Square, London, and Newcastle-on-Tyne (Religious of the Sacred Heart); Southampton (Nuns of La Sainte Union); Salford (Faithful Companions); and Hull (Sisters of Mercy). In all of these the Government syllabus is followed and the Board of Education certificate is granted after two years' successful teaching in one school, subsequent to the completion of the course at the college. An important part of the training consists in the "criticism lessons", which are given by the students in some secondary school connected with the training college under the direction of the "Mistress of Method", and which are criticized then and there by her as well as by the other students in turn. The best known and largest of these training colleges, which was also the first to be established, is that of Mount Pleasant, Liverpool, under the Sisters of Notre Dame of Namur. It was opened in 1856 with twenty-one students and now numbers one hundred and sixty King's Scholars. It has been (1905) officially affiliated to the Liverpool University and a limited number of its students are allowed to follow the arts or science degree course of the university after the usual two years' Government course has been completed. The whole of the preliminary and certain subjects of the intermediate course can be done at Mount Pleasant under the sisters, which reduces the time of residence required for obtaining the degree. Although this is quite an innovation, it speaks well for the college that five out of the first six sent in obtained the B. A. degree in the minimum period of time.

The training colleges for secondary teachers are St. Mary's Hall, Liverpool, attached to Notre Dame, Mount Pleasant, and established in 1898; and Cavendish Square, London, under the Sisters of the Holy Child Jesus, opened in 1895. Both of these are recog-

nized by the Board of Education as well as by the Teachers' Syndicate of the Cambridge University; and the teachers' diploma of that university, necessary for "registration", is granted to successful students at the end of the course. Many of the other teaching orders send their subjects to these colleges, where while following the usual course with other students, special arrangements are made for them to carry out the duties of their religious life and to follow their own rule as far as possible. The theoretical studies include history and methods of education, logic, psychology, ethics, school management, and hygiene, tested by a written examination; and the practical work, taken in the secondary schools attached to the two colleges, is awarded the diploma after one year's practice and a test lesson given before a Government inspector. The syllabus of the Cambridge Syndicate is followed in all subjects except philosophy, for which a course of Catholic philosophy is allowed to be substituted.

Hitherto only Catholic students have been admitted to these colleges, but regulations issued by the Board of Education (which came into force September, 1908) require that no qualified student applying for admission may be rejected, if there is room, on the score of religion. The Catholic hierarchy have protested against this and memorialized the prime minister, but the authorities adhere to their decision and rule that no training college failing to comply with these regulations will in future be recognized. The Catholic training colleges had therefore to face the alternative of the introduction of non-Catholic students to the exclusion of Catholics, where numbers are limited, or serious monetary loss through the withdrawal of the State-aided King's Scholars.

HIGHER EDUCATION FOR WOMEN.—The higher education of women, in connexion with convents, is hardly out of the experimental stage. The university class in the Notre Dame Training College and its affiliation to the Liverpool University have already been mentioned. Up to 1895 Catholics were prohibited (by ecclesiastical authority) from entering the older residential universities of Oxford and Cambridge, and the removal in that year of the prohibition favoured men only. Women had to wait still longer; but this restriction was taken away in June 1907, by a decree from Rome, which sanctions under certain conditions the opening of houses for women, both secular and religious, at Oxford and Cambridge, to enable them to secure the advantages of a university education. The Sisters of the Holy Child Jesus were the first community to avail themselves of this concession. They have opened a convent at Oxford, recognized and licensed by the University authorities, where twenty secular students and an unlimited number of religious may reside whilst following the university course. St. Ursula's Convent, also at Oxford, likewise receives ladies and religious desirous of reading for honours in modern languages or for the B. A. degree examination, which they may do either by attending the university lectures, or by means of private tuition in the convent itself. Women are not eligible for degrees, either at Oxford or at Cambridge, but they are allowed to attend almost all the university lectures and to sit for the degree examinations, receiving if successful a diploma instead of the degree itself. It is proposed to establish at Cambridge a college for Catholic women, similar to those of Newnham and Girton, which will probably, in accordance with the desires of Propaganda, be placed under the charge of one of the principal teaching orders. A committee to carry out the project has the Archbishop of Westminster at its head.

SECONDARY EDUCATION IN IRELAND AND SCOTLAND.—The convent schools of Ireland and Scotland compare favourably with those of England, and their general character, scope, and conditions being prac-

tically similar, they need no further description here. There are in Scotland about ten different orders engaged in secondary education, with upwards of twenty schools under their care, besides two training colleges—one at Glasgow for primary teachers, under the Sisters of Notre Dame, and the other at Edinburgh for secondary teachers, conducted by the Sisters of Mercy. In Ireland the chief teaching orders are the Institute of the B. V. M. (with thirteen convent schools), the Faithful Companions of Jesus (with three schools), the Dominicans, Ursulines, and the St. Louis Nuns, each with several prominent secondary schools. The equivalent in Ireland of recognition and inspection by the Board of Education is the "Intermediate System", introduced in 1878, which produces practically the same results and has been adopted by most of the religious institutes engaged in secondary education. This system arranges examinations and awards medals, money prizes, and exhibitions. Catholic girls wishing to pursue a higher course after completing that of the Intermediate System, have had to take the examinations and degrees of the "Royal University of Ireland". To meet the demand several orders have colleges under their care in Dublin, the most prominent and successful being Loreto College, belonging to the Institute of the B. V. M., and the Dominican College. The Irish educational authorities do not insist on the formal training of secondary teachers; consequently each religious institute is responsible for the training of its own members. The results, however, of their work prove that this is no less thorough and efficient than that obtainable at one of the recognized English training colleges.

There is very little published literature on this subject, but scattered information can be had in ECKHART, *Woman under Monasticism* (Cambridge, 1896), for the educational work of medieval convents, and STEELE, *The Convents of Great Britain* (London, 1902), for particulars as to the teaching orders of the present day. Some information may also be found in various articles in *The Crucible* (Oxford, quarterly, 1905-08) and in the *Catholic Directory* (London, 1908). The foregoing article has been compiled chiefly from unpublished information supplied by the superiors of the principal teaching orders working in England.

G. CYPRIAN ALSTON.

Conventuals, ORDER OF FRIARS MINOR.—This is one of the three separate bodies, forming with the Friars Minor and the Capuchins what is commonly called the First Order of St. Francis. All three bodies to-day follow the rule of the Friars Minor, but whereas the Friars Minor and the Capuchins profess this rule pure and simple, differing only accidentally in their particular constitutions, the Conventuals observe it with certain dispensations lawfully accorded.

There has been some difference of opinion as to the origin of the name "Conventual". Innocent IV decreed (Bull "Cum tamquam veri", 5 April, 1250) that Franciscan churches where convents existed might be called Conventual churches, and some have maintained that the name "Conventual" was first given to the religious residing in such convents. Others, however, assert that the word *Conventualis* was used to distinguish the inmates of large convents from those who lived more after the manner of hermits. In any event it seems safe to assert that the term *Conventual* was not used to signify a distinct section of the Order of Friars Minor in any official document prior to 1431. Since that time, and more especially since 1517, this term has been employed to designate that branch of the Franciscan Order which has accepted dispensations from the substantial observance of the rule in regard to poverty. It may be noted, however, that the name "Conventual" has not been restricted to the Franciscan Order. Thus the statutes of the Camaldolese approved by Leo X distinguish between the Conventuals and the Observants in that order, and St. Pius V (Bull "Superioribus mensibus", 16 April, 1567) says: "That

which we have decreed for the Conventuals of the Order of St. Francis we decree likewise for the Conventuals of other orders".

Although all the religious professing the rule of the Friars Minor continued to form one body under the same head for over three hundred years (1209-10 to 1517), it is well known that even during the lifetime of St. Francis a division had shown itself in the ranks of the friars, some favouring a relaxation in the rigour of the rule, especially as regards the observance of poverty, and others desiring to adhere to its literal strictness. The tendency towards relaxation became more marked after the death of the Seraphic founder (1226), and was encouraged by his successor, Brother Elias. The latter, a man of great ability, but whose religious ideals differed vastly from those of St. Francis, even opposed such as opposed his views. The long and deplorable controversy which followed—a controversy which called forth a mass of remarkable writings and even affected imperial politics—resulted in two parties being formed within the order, the *Zelanti*, who were zealous for the strict observance of the rule and who were afterwards named Observants, and the *fratres de communitate* who had adopted certain mitigations and who gradually came to be called Conventuals. In spite of the fact that a cleavage had been gradually developing between these two branches from at least the middle of the fourteenth century, it was only in 1415 at the Council of Constance that the Church authoritatively recognized this division in the order. Hence the Holy See decreed that all the friars who died before that council may not be termed either Observants or Conventuals, but simply Friars Minor (see Decrees of 25 Sept., 1723; 11 Dec., 1723; and 26 Feb., 1737). Notwithstanding this division of the order formally sanctioned in 1415 by the Council of Constance, both Observants and Conventuals continued to form one body under the same head until 1517.

In the latter year Leo X called a general chapter of the whole order at Rome, with a view to effecting a complete reunion between the Observants and Conventuals. The former acceded to the wish of the sovereign pontiff but requested permission to observe the rule without any dispensation; the latter declared they did not wish for the union if it entailed their renouncing the dispensations they had received from the Holy See. Leo X thereupon incorporated with the Observants (Bull "Ite et vos in vineam meam", 29 May, 1517) all the Franciscan friars who wished to observe the rule without dispensation, abolishing the different denominations of Clareni, Colletani, etc.; he decreed that the members of the great family thus united should be called simply Friars Minor of St. Francis, or Friars Minor of the Regular Observance, and should have precedence over the Conventuals; he moreover conferred upon them the right of electing the minister general, who was to bear the title of Minister General of the Whole Order of Friars Minor, and to have the exclusive use of the ancient seal of the order as the legitimate successor of St. Francis. On the other hand, those who continued to live under dispensations were constituted a separate body with the name of Conventuals (Bulls "Omnipotens Deus", 12 June, 1517, and "Licet Alias", 6 Dec., 1517) and given the right to elect a master general of their own, whose election, however, had to be confirmed by the Minister General of the Friars Minor. The latter appears never to have availed himself of this right, and the Conventuals may be regarded as an entirely independent order from 1517, but it was not until 1580 that they obtained a special cardinal protector of their own. Some years later the masters general of the order began to call themselves "Ministers General". Father Evangelist Pelleo, elected fifteenth master general in 1587, was the first to take this title, which has been generally accorded to

his forty-nine successors even in Apostolic letters, though the ordinance of Leo X was never formally revoked. Under Sixtus V (1587) the Conventuals attempted to dispute the right of the Minister General of the Friars Minor to the title "Minister General of the Whole Order", but were unsuccessful. They renewed their efforts under Clement VIII (1593 and 1602) but with no greater success. In 1625 they again reopened the question, which was discussed for nearly six years. On 22 March, 1631, the right of the Minister General of the Friars Minor to the title in dispute was solemnly confirmed by the Sacred Congregation of Rules, and Benedict XIII by a Bull of 21 July, 1728, imposed perpetual silence upon the contestants.

In 1565 the Conventuals accepted the Tridentine indulgent allowing mendicant orders to own property corporately, and their chapter held at Florence in that year drew up statutes containing several important reforms which Pius IV subsequently approved (Bull "Sedis Apostolicæ", 17 Sept., 1565). Three years later St. Pius V (Bull "Ad Extirpandos", 8 June, 1568) sought to enforce a stricter observance of the vow of poverty and of the community life among the Conventuals, and the superiors of the order immediately enacted statutes conformable to his desires, which the pope approved (Bull "Illa nos cura", 23 July, 1568). In 1625 new constitutions were adopted by the Conventuals which superseded all preceding ones. These constitutions, which were subsequently promulgated by Urban VIII (Bull "Milittantes Ecclesiæ", 5 May, 1628), are known as the "Constitutiones Urbanæ" and are of primary importance, since at their profession the Conventuals vow to observe the Rule of St. Francis in accordance with them, that is to say, by admitting the duly authorized dispensations therein set forth (see "Constitutiones Urbanæ ordinis fratrum Minorum Sti. Francisci Conventualium, Assisi, 1803). It would therefore be no less false than unjust to regard the Conventuals as less observant of the obligations contracted by their profession than the Friars Minor and Capuchins, since they are not bound by all the obligations assumed by either of the latter. The institution of several communities and even provinces of Reformed Conventuals, more especially between 1562 and 1668 (see "Costituzioni generali de' frati riformati de' Minori Conventuali da osservarsi per tutta la riforma, fatte per ordine del Capitolo generale de' Minori Conventuali celebrato in Orvieto l'anno 1611"), affords interesting proof of the vitality of the order, which for the rest has possessed many men of eminent virtue and has rendered important services to the Church.

St. Joseph of Cupertino (d. 1663), one of the greatest saints of the seventeenth century, and Bl. Bonaventura of Potenza (d. 1711) were both Conventuals, and the beatification of several other members of the order is now under way. The Conventuals have, moreover, given three popes to the Church: Sixtus IV (1471-84), Sixtus V (1585-90), and Clement XIV (1769-74), besides a number of cardinals and other distinguished prelates. Among the eminent theologians and scholars the order has produced, the names of Mastrius, Pagi, Brancati, Papini, Sbaralea, and Eubel are perhaps most familiar. The Conventuals enjoy the privilege of guarding the tomb of St. Francis at Assisi and that of St. Anthony at Padua, and they furnish the penitentiaries to the Vatican Basilica and to the sanctuary at Loreto. At Rome they possess the famous church and convent of the Twelve Apostles, and it is here that their general resides. The habit of the Conventuals which was formerly gray is now black—whence they are sometimes called by the people the "Black Franciscans", in contrast to the Friars Minor and Capuchins, whose habit is brown; it consists of a serge tunic fastened around the waist with a thin white cord with three

knots; to the large cape, which is round in front and pointed behind, a small hood is attached. Unlike the Friars Minor and the Capuchins, the Conventuals wear birettas and shoes.

In 1517 the Conventuals formed only about a sixth part of the order. After their separation from the Friars Minor, the number of Conventuals diminished considerably. In Spain Cardinal Ximenes was instrumental in depriving them of their convents, which were given to the Friars Minor. Clement VII, 22 June, 1524, ordered the Provincial of the Friars Minor at Burgos to bring back to the Regular Observance all the Conventuals in the Kingdom of Navarre, and St. Pius V, 16 April, 1567, commanded all the Conventuals in Spain to embrace the Regular Observance. Like measures were adopted, 30 October, 1567, in regard to Portugal, where as in Flanders and in Denmark all the Conventuals gradually passed over to the Friars Minor. In France all their provinces save three joined the main branch of the order. Nevertheless the Conventuals continued to prosper in other countries. In Italy and Germany they suffered fewer losses than elsewhere. During the seventeenth and eighteenth centuries they increased very much, for in 1770 they possessed some 31 provinces with 966 convents. In France alone they had 48 convents and numbered 330 religious. In 1771, 8 convents in France including the great convent in Paris, which had since 1517 been subject to the Minister General of the Friars Minor, passed over to the Conventuals, giving them a total of 2620 religious in France alone, but twenty years later their number there had fallen to 1544. Since the revolutionary epoch the order lost more than 1000 houses, principally in France, Italy, Switzerland, and Germany. At present (1907) it is divided into 26 provinces. Of these 12 are in Italy, the others being those of Malta; Galicia; Russia and Lithuania; Strasburg, comprising Bavaria and Switzerland; Liège, comprising Belgium and Holland; Austria and Styria; Bohemia, with Moravia and Silesia; Hungary and Transylvania; Spain; the United States; Rumania, with the mission of Moldavia; and the Orient, with the mission of Constantinople. The mission of Moldavia, which is one of the oldest in the Seraphic Order, comprises 10 convents with parishes, in which there are 28 missionaries governed by an archbishop belonging to the order. There are also 10 convents and 28 missionaries connected with the mission at Constantinople, where the Apostolic delegate is a Conventual. The order has recently made new foundations in England and Denmark. According to the latest available official statistics (1899), the Conventuals numbered in all some 1500 religious.

At least two Conventual missionaries were labouring in the United States in the early forties, but the establishment of the order there may be said to date from 1850. In 1907 there were two flourishing provinces of the order in the United States, the province of the Immaculate Conception which numbers thirteen convents and houses, those at Syracuse, Louisville, Trenton, Camden, Hoboken, Albany, and Terre Haute being the most important; and the province of St. Anthony of Padua, the members of which are Poles, and which has ten convents and houses in the Dioceses of Baltimore, Brooklyn, Buffalo, Detroit, Harrisburg, Hartford, and Springfield.

The Conventuals were not affected by the Apostolic Constitution "Felicitate quâdam" of Leo XIII (4 Oct., 1897) by which the different special reforms into which the Observants had become divided since 1517 were reunited under the name of Friars Minor, but like the Capuchins (who were constituted a separate body in 1619) they still remain an independent order. Leo XIII, however, expressly confirmed the right of precedence accorded to the Friars Minor by Leo X.

PASCHAL ROBINSON.

Conversano, DIOCESE OF (CUPERSANENSIS), suffragan to Bari. Conversano, situated in the province of Bari, in Apulia (Southern Italy), is the ancient *Cupersanum*, a city of the Peucetians. Its history is practically that of Apulia. After the invasion of the Normans, it was for a while the seat of a duchy; later, however, it became a fief of the dukes of Atri. The first bishop whose date is certain was Hilarius, present at the Roman synod of 501. Local tradition, however, preserves the name of a previous bishop, Simplicius, who died in 492. No other names are recorded up to the episcopate of Leo, mentioned in a document of 1088. Other bishops worthy of mention were: the Cistercian Stefano (c. 1266); Giovanni de Gropi (c. 1283); Antonio Guidotti (d. 1433); Paolo de Tocoli, who died in the odour of sanctity in 1482; Romolo de Valenti (d. 1579); Giuseppe Palermo (who was appointed 1658); Andrea Brancaccia (1681). The diocese has a population of 95,521, with 7 parishes, 130 churches and chapels, 132 secular and 8 regular priests, 2 religious houses of men and 8 of women.

U. BENIGNI.

Conversi, lay brothers in a religious order. The term was originally applied to those who, in adult life, voluntarily renounced the world and entered a religious order to do penance and to lead a life of greater perfection. The renouncing of the world was known as the *conversio a seculo*, which had as its object a reform or change of life, the *conversio morum*, hence *conversi* or the "converted". The conversi were thus distinguished from the oblati or those who, as children, were presented or offered (*oblati*) by their parents to the religious life and were placed in a monastery to receive proper religious instruction and to be educated in profane knowledge. In the eleventh century St. John Gualbert, founder of the Benedictine congregation known as the Vallisumbrosani, introduced for the first time a distinction between the *fratres conversi*, or lay brothers, and priests, or choir religious. For among the conversi there were not seldom those who were either entirely illiterate, or who in the world had led a life of public scandal, or had been notorious criminals, and while on the one hand it was unjust that such should be debarred from the means of doing penance in the cloister and from the other benefits of the religious life, they were at the same time hardly to be considered fit subjects for the reception of Sacred orders. They were thus received into the order for the purpose of engaging in manual labour and occasionally for directing the temporal affairs of the monastery. In modern canonical usage the term *conversus* is synonymous, or nearly so, with that of *lay brother*. What has been said of religious orders of men can, in general, be applied equally to those of women, though the distinction between *converse*, or lay sisters, and choir religious does not appear to have been introduced before the twelfth century. As a rule, the conversi wear a habit different from that of the choir religious; but the essential obligations of the vows and of the monastic life in general are alike for all. (See LAY BROTHER and OBLATI.)

KAULEN in *Kirchenlex.*, s. v. For the large share of these *conversi*, or lay brothers, in the development of medieval agriculture, monastic administration, etc. see HOFFMANN, *Das Konverseninstitut des Oesterzienserordens* (Freiburg, Switzerland, 1905).

STEPHEN M. DONOVAN.

Conversion (from the classical Latin *converto*, depon. *convertere*, whence *conversio*, change, etc.), in the Latin Vulgate (Acts, xv, 3), in patristic (St. Augustine, *Civ. Dei*, VIII, xxiv), and in later ecclesiastical Latin, a moral change, a turning or returning to God, to the true religion, in which sense it has passed into our modern languages: the conversion of St. Paul, of Constantine the Great, of St. Augustine. In the Middle Ages the word *conversion* was often used in the sense of forsaking the world to enter the religious state. Thus St. Bernard speaks of his conversion. The return of the sinner to a life of virtue is also called a conversion. More commonly do we speak of the conversion of an infidel to the true religion, and most commonly of the conversion of a schismatic or heretic to the Catholic Church.

Every man is bound by the natural law to seek the true religion, embrace it when found, and conform his life to its principles and precepts. And it is a dogma of the Church defined by the Vatican Council that man is able by the natural light of reason to arrive at the certain knowledge of the existence of the one true God, our Creator and Lord. The same council teaches that faith is a gift of God necessary for salvation, that it is an act of the intellect commanded by the will, and that it is a supernatural act. The act of faith then is an act of the understanding, whereby we firmly hold as true whatever God has revealed, not because of its intrinsic truth perceived by the natural light of reason, but because God, who can neither deceive nor be deceived, has revealed it. It is in itself an act of the understanding, but it requires the influence of the will which moves the intellect to assent. For many of the truths of revelation, being mysteries, are to some extent obscure. Yet, it is not a blind act, since the fact that God has spoken is not merely probable but certain. The evidences for the fact of revelation are not, however, the motive of faith; they are the grounds which render revelation credible, that is to say, they make it certain that God has spoken. And since faith is necessary for salvation, that we may comply with the duty of embracing the true Faith and persevering in it, God by His only-begotten Son has instituted the Church and has adorned it with obvious marks so that it may be known by all men as the guardian and teacher of revealed truth. These marks (or notes) of credibility belong to the Catholic Church alone. Nay, the Church itself by its admirable propagation, sublime sanctity, and inexhaustible fecundity, by its Catholic unity and invincible stability, is a great and perpetual motive of credibility and irrefragable testimony of its Divine mission (see Conc. Vatic., *De Fide*, cap. 3).

The first step, therefore, in the normal process of conversion is the investigation and examination of the credentials of the Church, which often is a painful labour lasting for years. The external grace which draws a man's attention to the Church and causes him to begin his inquiry is as various and manifold as there are individual inquirers. It may even be something to one's temporal advantage, which was the case with Henry IV of France. It may be the interest aroused in a great historical personage, such as Innocent III, in the case of Friedrich von Hurter. Whatever may have been the initial motive, if the study be pursued with an open mind, we hold that it will lead to the knowledge of the true Church, i. e. to this certain conclusion: The Catholic Church is the true Church. This intellectual conviction, however, is not yet the act of faith. One may hesitate, or refuse to take the next step, which is the "good will to believe" (*pious*

credulitatis affectus). And this leads to the third and final act, the act of faith itself: I believe what the Church teaches because God has revealed it. These three acts, especially the last, are, in accordance with Catholic teaching, supernatural acts. Then follows baptism by which the believer is formally received into the body of the Church. (See BAPTISM, VII, VIII.)

Since the duty of embracing the true religion is of natural and positive Divine right, it is evident that no civil law can forbid the fulfilling of this duty, nor should any temporal considerations be allowed to interfere with a duty on which depends the soul's salvation. And because all are bound to enter the Church, it follows that the Church has a right to receive all who apply for reception, of whatever age, sex, or condition they may be. Nay, in virtue of the Divine command to preach the Gospel to every creature, the Church is strictly bound to receive them, and no earthly authority can forbid the exercise of this duty. To the Church alone it belongs to lay down the conditions for reception and to inquire into the interior dispositions of him who presents himself for admission into her bosom. The conditions are, knowledge and profession of the Catholic Faith and the resolve to live in accordance with it. The right to admit converts into the Church belongs strictly speaking to the bishop. Usually all priests exercising the sacred ministry receive faculties for reconciling heretics. When conditional baptism is administered, sacramental confession is also required from the convert. It is the law clearly laid down in the Acts of the Second Plenary Council of Baltimore. The order of proceedings is as follows: first, abjuration of heresy or profession of faith; second, conditional baptism; third, sacramental confession and conditional absolution. (Tit. V, Cap. II, n. 240.)

Force, violence, or fraud may not be employed to bring about the conversion of an unbeliever. Such means would be sinful. The natural law, the law of Christ, the nature of faith, the teaching and practice of the Church forbid such means. *Credere voluntatis est*, to believe depends upon the free will, says St. Thomas (II-II, Q. x, a. 8), and the minister of baptism, before administering the sacrament, is obliged to ask the question, "Wilt thou be baptized?" And only after having received the answer, "I will", may he proceed with the sacred rite. The Church also forbids the baptism of children of unbaptized parents without the consent of the latter, unless the children have been cast away by their parents, or are in imminent danger of death. For the Church has no jurisdiction over the unbaptized, nor does the State possess the power of using temporal means in spiritual things. The punishments formerly decreed against apostates were not intended to coerce men to accept outwardly what they did not believe in their hearts, but to atone for a crime (see the article of St. Thomas, loc. cit.). The medieval legislation, both ecclesiastical and secular, clearly distinguished between the punishment to be inflicted for the crime of apostasy and the means of instruction to be used in order to bring about the resipiscence of the apostate. As Bishop von Ketteler says, "The punishment inflicted by the Church upon heretics in comparatively few cases was not based upon the false principle that conviction could be forced upon the mind by external means, but upon the truth that by baptism the Christian has assumed obligations the fulfillment of which could be insisted upon. This punishment was only inflicted in particular cases and upon public and formal heretics." Convert parents like other Catholics are obliged to have their children baptized and educated in the Catholic religion.

The Constitution of the United States of America proclaims complete separation of Church and State and guarantees full liberty of conscience. In consequence the laws of these States place no hindrance whatever in the way of conversions. It may also be

said that on the whole the American people are socially tolerant towards converts. No wonder that in this country conversions are comparatively more numerous than in any other. In the British Empire too, since the days of Catholic Emancipation in 1829, liberty of conscience prevails in theory as well as in practice, although there exists both in England and Scotland an established Church. Catholic disabilities have been almost entirely removed. Catholics are only excluded from the throne and from a few of the highest offices of the State. In Germany after the Reformation the tyrannical principle *cujus regio, illius religio* was proclaimed, in virtue of which the sovereign for the time being could impose his religion upon his subjects. He exercised the power both to forbid conversions to the Catholic Church, and to compel apostasy from it. In the present German Empire, where nearly two-thirds of the population is Protestant, liberty of conscience is the law of the land. And although union of Church and State exists, conversion does not involve any disabilities or the loss of any civil or political rights. In some of the States, however, the rights guaranteed by the empire are somewhat restricted by State laws. Most of the States prescribe the age before which conversions are not lawful, which is either fourteen or sixteen, or even eighteen. In Saxony, Brunswick, and Mecklenburg, the public exercise of the Catholic religion is subjected to vexatious interference. In Russia the Greek-Orthodox is the State religion, other denominations are only tolerated. For long conversion from the Orthodox Church to Catholicism was followed by grievous disabilities. By the ukase of 1905 certain rights and liberties were granted to other denominations. The publication of the ukase was immediately followed by the return to the Catholic Church of many Uniates who had been forced into schism by persecution. The Scandinavian countries were very intolerant till about the middle of the nineteenth century. Denmark gave liberty to the Catholic Church in 1849, Sweden and Norway in 1860.

B. GULDNER.

Conversion of St. Paul, FEAST OF. See PAUL, SAINT.

Converts. See COUNTER-REFORMATION; OXFORD MOVEMENT; ROMAN EMPIRE; STATISTICS.

Convocation of the English Clergy, the technical name given in the Church of England to what corresponds in some respects to a provincial synod, though in other respects it differs widely from it. The two ecclesiastical provinces of Canterbury and York have each their Convocation, but that of Canterbury is the more important, and is spoken of as "Convocation" *par excellence*. The history of its external constitution is continuous down to the present time and is bound up with the development of English constitutional history; its powers and independence, however, were lost at the Reformation; its organization, retained as a mere form for many years, has been utilized of late to give expression to the opinions entertained by the clergy as a body upon questions of the day. Thus it exercises influence, but has no power. The authority of the Crown asserted at the Reformation is still supreme and intact.

The history of Convocation may be divided into five periods: (1) Before 1295; (2) From 1295 until the Reformation; (3) The Reformation period; (4) The post-Reformation period; (5) Modern times.

(1) *Before 1295.*—Previous to 1295 the Church in England had assembled in diocesan and provincial synods to regulate disciplinary and other matters interesting the body of the clergy. Moreover the archbishops, bishops, abbots, and priors used to take their place in the national council on account of the estates they held in chief (*in capite*) of the Crown. But

the beneficed clergy took no part in it. The increasing frequency of royal appeals for money grants and the unwillingness of the bishops to be responsible for allowing them had brought Stephen Langton, as early as 1225, to summon proctors of cathedral, collegiate, and conventual churches to attend his provincial synod, and gradually that representative principle became part of the system of Convocation. The failure of the irregular attempt of Edward I to convoke the clergy at Northampton led him to issue (1283) a writ to the archbishop with a view to Convocation meeting in London in that same year, and at that meeting a "benevolence" was duly voted. The form of writ used in 1283 is the same in form as that still in use, and the instructions issued on that occasion by the Archbishop of Canterbury, John Peckham, still embody the existing constitution of Convocation, so that, with the exception of the disappearance of the monastic representatives, the external organization of Convocation remains unchanged.

(2) *After 1295.*—In addition to the Baronage and Commons of the realm we find, after 1295, a representative body of the beneficed clergy summoned to attend personally in Parliament, the summons being conveyed by the insertion, in the bishop's writ of summons to Parliament, of the *præmunientes* clause. That summons was the beginning of a new phase in the long struggle waged by the Crown on the subject of the taxation of the clergy. It was to facilitate the obtaining of money grants that Edward I endeavoured once more to unite representatives of the clergy and laity in one deliberative assembly, composed on the basis of temporal property. To have countenanced the attempt would have been to recognize the Crown's claim to tax church property, and the clergy insisted upon their constitutional right of making their money grants in Convocation. The struggle between the Crown and the clergy continued until 1337, when the Crown gave way, though retaining the *præmunientes* clause in the bishop's writ of summons. Authorities differ as to whether the Parliamentary proctors of the clergy sat in the Lower House or in the Upper House; most probably they sat and voted in the Lower House.

The question of the exact relation of Convocation to the newer Parliamentary representatives of the clergy is obscure; nor is the obscurity lessened by the fact that the proctors of the clergy for Convocation were frequently the same persons as the proctors of the clergy for Parliament. Two opinions have found defenders: the first, that the older ecclesiastical council fused with the Parliamentary representatives of the clergy; the other, that by the process of gradual decay of Parliamentary representation of the clergy, part of their rights passed to the ecclesiastical councils, thus giving rise to the historical connexion between the Convocations and Parliament. The latter view, ably advocated by Stubbs, at present holds the field.

The division of Convocation into an Upper and a Lower House came about gradually, and was not formed, as is sometimes supposed, on the model of the two Houses of Parliament. In 1296 the members of Convocation resolved themselves for deliberative purposes into four groups: bishops, monastic representatives, dignitaries, and proctors of the clergy. Eventually Convocation came to open with a joint session presided over by the archbishop, after which the bishops and abbots remained to deliberate as the Upper House, while the rest withdrew to deliberate as the Lower House.

The objection of the clergy to sitting in Parliament lessened indeed their influence over that body; at the same time they secured the right of meeting when Parliament met, and that right of meeting involved the right of petitioning and to some extent

of legislating for themselves. That idea of Convocation as the clerical parliament had important consequences; the right to tax church property was successfully maintained; but the clergy could neither elect nor be elected to the House of Commons, and to this day a person in Holy orders is ineligible for Parliament. At the same time the legislation of Convocation was binding on the clergy only and not upon the laity.

(3) *The Reformation Period.*—Convocation lost its independence and most of its powers by the Act of Submission [25 Hen. VIII (1533-4), c. 19], which enacts that Convocation can only meet by royal command, and that without royal leave and licence no new canons, constitutions, or ordinances may be made. This act was repealed in Queen Mary's reign, but revived by 1 Eliz. (1558-9), and still remains in full force. The climax of Convocation's degradation was reached when, after the Act of Supremacy (1534), Thomas Cromwell, the representative of Henry VIII, though a layman, asserted his right to preside, a right never subsequently exercised.

(4) *Post-Reformation Period.*—The Act of Submission of Henry VIII was stringently interpreted by the judges at a committee before the Lords in Parliament (in 8 Jac., 1) as forbidding, even after obtaining royal assent, any canon (a) against the prerogative of the king; (b) against common law; (c) against any statute law; or (d) against any custom of the realm. The loss of legislative independence paved the way for the loss of taxing powers, which were finally renounced in 1665, the right of voting at Parliamentary elections being obtained in return. The power of Convocation of dealing with cases of heresy has been exercised but rarely, and then to no purpose. It continued to be convoked at the beginning of each Parliament, but its sittings were interrupted from 1640 to 1660, to be resumed after the Restoration. In 1689, in view of the opposition of the clergy to the Toleration Act of William and Mary, no summons was issued to Convocation. The Commons, however, protested against the innovation, and their petition had its effect; at the same time Archbishop Tillotson, and to some extent his successor Tenison, met the difficulties of the situation by refusing to allow any deliberations. Convocation was summoned, met, and was prorogued. Parties were formed, and claims were made, insisting upon the independence of the Lower House on the analogy of the House of Commons. Atterbury led the malcontents; Wake, afterwards Archbishop of Canterbury, Kennet, Hoadley, and Gibson led the defence. The question was really a political one. Toryism dominated the Lower House; Liberalism, alike in politics and theology, pervaded the Upper House. Permission to deliberate led to trouble in 1701, and prorogation followed. The Bangorian Controversy arising out of Hoadley's sermon led to similar results in 1717. The opposition of the Lower House was worn out by repeated prorogations immediately following the opening session, and with the exception of the discussions allowed in 1741 and 1742, Convocation ceased to be a deliberative body until 1854.

(5) *Modern Times.*—The old organization had survived, and many earnest Anglicans of the early nineteenth century, anxious to revive the synodal life of the Anglican Church, sought and obtained the relaxation of the customary immediate prorogation. A brief session was authorized in 1854. (The example was followed by York in 1859.) The action of Convocation as a deliberative body began in 1861, when, at its own request, the Crown licensed it to amend the twenty-ninth of the canons of 1603 on the subject of sponsors, and although no result followed, new canons were passed in 1865, 1887, and again in 1892.

Apart from such general authorizations the Crown also possesses the right to submit definite business to the consideration of Convocation. This is done by "Special Letters of Business"; a method used in 1872, and again in 1907, in submitting the reports of the ritual commissioners to its consideration.

The House of Laymen, which first met in connexion with the Convocation of Canterbury in 1886 (York, 1892), is an assembly unknown to law. As at present constituted the two Convocations of Canterbury and York are summoned by the archbishops on the instruction of the king when Parliament is summoned. Each possesses an Upper and a Lower House; the Upper House, presided over by the archbishops, consists of the diocesan bishops; the Lower House is composed of deans, archdeacons, a proctor for each chapter, and proctors for the beneficed clergy, two from each diocese in the province of Canterbury, two from each archdeaconry in the province of York. The Lower House elects a prolocutor who, on being presented to the archbishop and approved by him, presides over the deliberations of the Lower House, and communicates the results to the Upper House. The stately ceremonial of Catholic days has been preserved for the opening session of Convocation, together with the use of the Latin tongue.

EDWARD MYERS.

Conwell, HENRY, second Bishop of Philadelphia, U. S. A., b. at Moneymore, County Derry, Ireland, in 1745; d. at Philadelphia, 22 April, 1842. After the death of Bishop Egan, in 1814, the Bishopric of Philadelphia was offered successively to the Rev. Ambrose Marechal and to the Very Rev. Louis de Barth, the administrator, but both these clergymen, deterred by the contumacious attitude of the trustees of St. Mary's church, returned the Bulls; whereupon the Holy See appointed (26 Nov., 1819) Henry Conwell, parish priest of Dungannon and Vicar-General of Armagh, Ireland, who imprudently accepted a task too heavy for his seventy four years. He had made his studies in the Irish College at Paris, where his family had founded a bursary. He was universally beloved by his people and the clergy, and an ineffectual attempt was made to retain him in Ireland. He was consecrated in London by Bishop Poynter, 24 Aug., 1820, and arrived in Philadelphia, 2 Dec., bringing with him a young priest named Keenan, subsequently for many years pastor at Lancaster. The seeds of future troubles had been sown during the vacancy, when the administrator, without demanding credentials, stationed at St. Mary's the brilliant but demagogic and unpriestly Rev. William Hogan, who had so ingratiated himself with the board of trustees that when, on 12 Dec., the bishop revoked his faculties, a schism ensued which lasted for many years. For details of the quarrel, the reader is referred to J. Gilmary Shea's "History of the Catholic Church in the United States" (see below). Bishop Conwell conducted the controversy with dignity, but in the course of it, through desire of peace, committed two errors of judgment. The first was the recalling to the diocese and appointing as vicar-general of William Vincent Harold, a Dominican whom his predecessor had dis-

missed. Contrary to the bishop's expectation, the return of Harold complicated the situation. It was a more serious mistake than on 9 Oct., 1826, he capitulated to the trustees, yielding to them the right of determining salaries and of vetoing his appointments. Highly displeased at this surrender of episcopal rights, the Holy See appointed an administrator and summoned the bishop to Rome. His explanations were pronounced unsatisfactory and he was forbidden to return to his see. He did return to Philadelphia and received permission to perform episcopal functions, without interfering in matters of administration. In 1830 Francis Patrick Kenrick arrived as coadjutor and administrator, and Bishop Conwell spent his remaining years in seclusion and prayer.

SHEA, *History of the Catholic Church in the U. S.* (New York, 1890) III; FINOTTI, *Bibl. Cath. Americana* (New York, 1872), gives an extensive list of the literature of the Hagan Schism.

JAMES F. LOUGHLIN.

Conza, ARCHDIOCESE OF (COMPSANA), with the perpetual administration of Campagna (*Campaniensis*). Conza, a city of the province of Avellino, Southern Italy, on the River Ofanto (the ancient Aufidus), was formerly called Compsa, and belonged to the Hirpini, allies of the Samnites during their wars with the Romans. It was captured in 213 B. C. by Fabius Maximus and was made a Roman colony. During the Second Punic War it was betrayed to Hannibal (214 B. C.) and opened the way to Capua. The city was twice destroyed by earthquakes (980, 1694), and was at one time nearly abandoned. The first known Bishop of Conza is Pelagius, who was present at the Roman synod of 743 held under Pope Zachary. The see was raised to the rank of an archbishopric under Alexander II or Gregory VII (i. e. between 1061 and 1085), having previously been a suffragan of Salerno. Among the bishops worthy of mention is the Blessed Erberto (1169). The bishops resided either in their feudal stronghold of San Menna, at Campagna, or at Sant' Angelo de' Lombardi, the present episcopal residence. The Diocese of Campagna was erected by Clement VII, 19 June, 1525; the see was vacant from 1793 to 1818, when it was placed under Conza. The dioceses together have a population of 123,000, with 37 parishes, 230 churches and chapels, 232 secular and 10 regular priests, 3 religious houses of men and 5 of women.

U. BENIGNI.

Cooktown, VICARIATE APOSTOLIC OF, comprises North Queensland, Australia, from 16° 30' south latitude to Cape York, and from the Pacific Coast to the boundary of Northern Territory. It was formed out of the Diocese of Brisbane, as a pro-vicariate in 1876, was first entrusted to Italian priests, who subsequently withdrew, and, in 1882, to the Irish Augustinians (Father John Hutchinson, Pro-Vicar). In 1887 the mission was created a vicariate apostolic, and Dr. Hutchinson was appointed its first vicar. He died 28 October, 1897, and was succeeded by the Right Rev. James D. Murray, consecrated 3 July, 1898. The administrative centre of the vicariate is at Cairns.

Statistics to close of 1907.—Parochial districts, 7; stations, 32; churches, 18; regular priests, 11; nuns, 24; boarding school, 1; primary schools, 3; children attending Catholic schools, 470; Catholic population, about 6000.

HENRY W. CLEARY.

Coombes, WILLIAM HENRY, b. 8 May, 1767; d. 15 November, 1850. He passed his early years at Meadgate, Somersetshire, England, the property and for many years the residence of his uncle, Rev. William

Coombes (d. 18 April, 1822), of Douai College, Grand-Vicar of the Western District. Young Coombes went to Douai at the age of twelve, was ordained in 1791, and during the French Revolution escaped (October, 1793) from Dourlens to England. He was a doctor of theology and co-operated earnestly with Bishop Douglass at Old Hall seminary as professor and vice-president. From 1810 he served the mission of Shepton Mallet till 1849, when he retired to Downside monastery, where he died. He is described as a spiritual and self-denying priest, an eminent scholar and theologian. His chief works are: "Sacred Eloquence; being Discourses from the Writings of Sts. Basil and Chrysostom, with the Letters of St. Eucherius of Lyons" (London, 1798); "Escape from France; with an account of the English Poor Clares from Aire, and a narrative of the sufferings and death of Pius VI" (London, 1799); "Life of St. Francis de Sales, from the French of Marsollier" (Shepton Mallet, 1812); "Spiritual Entertainments of St. Francis de Sales" (Taunton, 1814); "The Essence of Religious Controversy" (1827); "Life of St. Jane Frances de Chantal" (London, 1830). There survive certain other writings by Coombes on religious and political themes.

PATRICK RYAN.

Copacavana (also called COPACABANA), a village of about four hundred people, Indians chiefly, on the shore of Lake Titicaca, province of Omasuyos, in northern Bolivia. It is the location of a famous sanctuary dedicated to Our Lady of Carmel, and of a convent of Franciscan Recollects. During the wars of independence it was despoiled of most of its rich ornaments and gifts, and ruthless plundering by faithless custodians in the course of political disturbances has further contributed to impoverish it. The edifices, originally very handsome, are in a state of sad neglect. It is a shrine for pilgrims from Bolivia and southern Peru, and on 6 August the feast of its patron saint is frequented by thousands. Before 1534 Copacavana was an outpost of Inca occupation and perhaps the only one on Bolivian soil of any prominence. The Incas held it as the key to the very ancient shrine and oracle on the Island of Titicaca, which they had adopted as a place of worship, yielding to the veneration in which it stood among the Aymará from time almost immemorial. There were at Copacavana minor shrines, in which the ceremonial of the Incas was observed with that of the original inhabitants. When the Spaniards first visited the Islands of Titicaca and Koati, in 1534 and 1538, the primitive cults were abandoned and the Dominicans made Copacavana the centre of their missions. Secular priests then replaced them at the instigation of the Viceroy Francisco de Toledo, and finally the mission and its annexes were entrusted to the Augustinians in 1589.

In 1582 an Indian from Copacavana, struck by the sight of the statues of the Blessed Virgin which he saw in some of the churches at La Paz, tried to make one himself, and after many failures, succeeded in producing one of fair workmanship for an untrained native, and it was placed at Copacavana as the statue of the tutelary protectress of the community. Many miracles have been attributed to it, and its fame has spread far beyond the limits of its surroundings. It is kept in a special chapel, where the Indians are uniting in their devotions. The jewels with which it is adorned are perhaps the only ones in the church that have not been replaced by modern imitations. During the uprising of the Indians in 1781, while the church itself was desecrated, the "Camarin", as the chapel is called, remained untouched and exempt from spoliation. Copacavana is the scene of often repulsively boisterous Indian celebrations. On the

THE SYON COPE—XIII CENTURY
SOUTH KENSINGTON MUSEUM, LONDON

2d of February and 6th of August, Church festivals furnish the pretext for Indian dances that the clergy have not yet been able entirely to reform. The mixture of the old Pagan with the Christian is interesting, although a source of mortification to the Bolivian clergy, who are as yet unable to modify it. Copacavana is surrounded by pre-Columbian ruins of considerable interest.

Mention is made of Copacavana in the earlier documents touching what is now Bolivia, as, for instance, *Documentos inéditos para la Historia de Chile* (1568); RAMOS, *Hist. del Santuario de Copacavana* (Lima, 1621); OLIVA, *Historia del Perú, Etc.* (Lima, s. d., written c. 1636); JAQUE DE LOS RÍOS DE MANCANED, *Voyage aux Indes orientales et occidentales* (*Archives des Voyages*, tr. French, 1696); CALANCHA, *Corónica moralizada*, II; ANDRÉS DE S. NICOLÁS, *Ymágen de N. S. de Copacavana* (Madrid, 1663); MARACCI, *De diva virgine, Copacavana, in peruano novi mundi Regno celeberrima* (Rome, 1656).
AD. F. BANDELIER.

Cope (known in Latin as *pluviale* or *cappa*), a vestment which may most conveniently be described as a long liturgical mantle, open in front and fastened at the breast with a band or clasp. As existing monuments show, whether we look at pictorial representations or at the copes of early date which still survive, there has been remarkably little change in the character of the vestment from the earliest ages. Then as now it was made of a piece of silk or cloth of semicircular shape, and, as it is important to note, it differed from the earlier form of chasuble only in this, that in the chasuble the straight edges were sewn together in front while in the cope they were left open. The most conspicuous external modification which the cope has undergone, during the past thousand years and more, lies in a certain divergence in the shape of the hood, a feature which, after all, is not in any way an essential part of the vestment. In some early examples we find only a little triangular hood, which was no doubt intended to be of practical utility in covering the head in processions, etc. But with the lapse of time the hood has developed into a mere ornamental appendage, and it is now quite commonly represented by a sort of shield of rich embroidery, artificially stiffened and sometimes adorned with a fringe, the whole being fastened by buttons or by some other device to the back of the cope below the broad orphrey which usually forms an upper border to the whole. The fact that in many early chasubles, as depicted in the drawings of the eighth and ninth centuries, we see clear traces of a primitive hood, thus bearing out the explicit statement upon the point of Isidore of Seville, strongly confirms the view that in their origin cope and chasuble were identical, the chasuble being only a cope with its front edges sewn together.

History.—The earliest mention of a *cappa* seems to meet us in Gregory of Tours, and in the "Miracula" of St. Furseus, where it seems to mean a cloak with a hood. So from a letter written in 787 by Theodemar, Abbot of Monte Cassino, in answer to a question of Charlemagne about the dress of the monks (see Mon. Germ. Hist.: Epist. Carol., II, 512) we learn that what in Gaul was styled *cuculla* (cow) was known to the Cassinese monks as *cappa*. Moreover the word occurs more than once in Alcuin's correspondence, apparently as denoting a garment for everyday wear. When Alcuin twice observes about a *casula* which was sent him, that he meant to wear it always at Mass, we may probably infer that such garments at this date were not distinctively liturgical owing to anything in their material or construction, but that they were set aside for the use of the altar at the choice of the owner, who might equally well have used them as part of his ordinary attire. In the case of the chasuble the process of liturgical specialization, if we may so call it, was completed at a comparatively early date, and before the end of the ninth century the maker of a *casula* probably knew quite well in most cases whether he intended his handiwork for a Mass vestment or for an everyday

outer garment. But in the case of a *cappa*, or cope, this period of specialization seems to have been delayed until much later. The two hundred *cappæ* of which we read in a Saint-Riquier inventory in the year 801, a number increased to 377 by the year 831, were, we believe, mere cloaks, for the most part of rude material and destined for common wear. It may be that their use in choir was believed to add to the decorum and solemnity of the Divine Office, especially in the winter season. In 831 one of the Saint-Riquier copes is specially mentioned as being of chestnut colour and embroidered with gold. This, no doubt, implies use by a dignitary, but it does not prove that it was as yet regarded as a sacred vestment. In fact, if we follow the conclusions of Mr. Edmund Bishop (Dublin Review, Jan., 1897), who was the first to sift the evidence thoroughly, it was not until the twelfth century that the cope, made of rich material, was in general use in the ceremonies of the Church, at which time it had come to be regarded as the special vestment of cantors. Still, an ornamental cope was even then considered a vestment that might be used by any member of the clergy from the highest to the lowest, in fact even by one who was only about to be tonsured. Amongst monks it was the practice to vest the whole community, except, of course, the celebrant and the sacred ministers, in copes at high Mass on the greatest festivals, whereas on feasts of somewhat lower grade, the community were usually vested in albs. In this movement the Netherlands, France, and Germany had taken the lead, as we learn from extant inventories. For example, already in 870, in the Abbey of Saint-Trond we find "thirty-three precious copes of silk" as against only twelve chasubles, and it was clearly the Cluny practice in the latter part of the tenth century to vest all the monks in copes during high Mass on the great feasts, though in England the regulations of St. Dunstan and St. Æthelwold show no signs of any such observance. The custom spread to the secular canons of such cathedrals as Rouen, and cantors nearly everywhere used copes of silk as their own peculiar adornment in the exercise of their functions.

Meanwhile the old *cappa nigra*, or *cappa choralis*, a choir cope of black stuff, open or partly open in front, and commonly provided with a hood, still continued in use. It was worn at Divine Office by the clergy of cathedral and collegiate churches and also by many religious, as, for example, it is retained by the Dominicans during the winter months down to the present day. (See COSTUME, CLERICAL.) No doubt the "copes" of the friars, to which we find so many references in the Wycliffite literature and in the writings of Chaucer and Langland, designate their open mantles, which were, we may say, part of their full dress, though not always black in colour. On the other hand we may note that the *cappa clausa*, or close cope, was simply a cope or cape sewn up in front for common outdoor use. "The wearing of this", says Mr. Bishop, (loc. cit., p. 24), "instead of the 'cappa scissa', the same cope not sewn up, is again and again enjoined on the clergy by synods and statutes during the late Middle Ages." The *cappa magna*, now worn according to Roman usage by cardinals, bishops, and certain specially privileged prelates on occasions of ceremony, is not strictly a liturgical vestment, but is only a glorified *cappa choralis*, or choir cope. Its colour for cardinals is ordinarily red, and for bishops violet. It is ample in volume and provided with a long train and a disproportionately large hood, the lining of which last, ermine in winter and silk in summer, is made to show like a tippet across the breast. Further we must note the papal *mantum*, which differs little from an ordinary cope except that it is red in colour and somewhat longer. In the eleventh and twelfth centuries the *immantatio*, or bestowal of the *mantum* on the newly elected pope, was regarded as specially symbolical of investiture with papal authority. "Investio te de

papatu romano ut præsidi urbi et orbi" were the words used in conferring it (I invest thee with the Roman papacy, that thou rule over the city and the world).

Modern Use.—Under all these different forms the cope has not substantially changed its character or shape. It was a vestment for processions, and one worn by all ranks of the clergy when assisting at a function, but never employed by the priest and his sacred ministers in offering the Holy Sacrifice. At the present day it is still, as the "Cæremoniales" directs, worn by cantors on certain festal occasions in the solemn Office; but it is also the vestment assigned to the celebrant, whether priest or bishop, in almost all functions in which the chasuble is not used, for example in processions, in the greater blessings and consecrations, at solemn Vespers and Lauds, in giving Benediction of the Blessed Sacrament, at the absolutions and burial of the dead, at the Asperges before Mass, etc. At a pontifical high Mass it is worn by the assistant priest who especially attends upon the bishop. As regards colour the cope follows that of the day, and it may be made of any rich or becoming material. Owing to its ample dimensions and unvarying shape, ancient copes are preserved to us in proportionately greater numbers than other vestments and provide the finest specimens of medieval embroidery we possess. Among these the Syon Cope in the South Kensington Museum, London, and the Ascoli Cope are remarkable as representing the highest excellence of that specially English thirteenth-century embroidery known as the *opus anglicanum*. We are also indebted to the use of copes for some magnificent specimens of the jeweller's craft. The brooch or clasp, meant to fasten the cope in front, and variously called *morse*, *pectoral*, *bottone*, etc., was an object often in the highest degree precious and costly. The work which was the foundation of all the fortunes of Benvenuto Cellini was the magnificent morse which he made for Pope Clement VII. (See CELLINI, BENVENUTO.) Some admirable examples of these clasps still survive.

Besides the minor articles which are devoted to this subject in the ecclesiastical encyclopedias and works on archaeology, we may note the exhaustive work of BRAUN, *Die liturgische Gewandung* (Freiburg, 1907), 306-358, also the very thorough discussion of EDMUND BISHOP in *Dublin Review* (Jan., 1897), 17-38; and THALHOFFER, *Liturgik*, I, 887. For some magnificent illustrations of copes, see especially DE FARCY, *La Broderie* (Angers, 1890), and also ROHAULT DE FLEURY, *La Messe* (Paris, 1889), VIII, 1-17.

HERBERT THURSTON.

Copenhagen, UNIVERSITY OF.—It was founded by a Bull which Sixtus IV issued 19 June, 1475, at the request of King Christian I. This Bull authorized the primate, the Archbishop of Lund, to establish a university in any place selected by the king; and the latter, by letters patent of 4 Oct., 1478, laid the foundation at Copenhagen. The Bishop, Dean, and Provost of Roskilde and the Dean of Copenhagen were appointed conservators. The statutes, drawn up by the Archbishop of Lund and promulgated 28 Nov., 1479, followed closely those of Cologne. From Cologne also the new university received its first professors. The most distinguished among these, before the Reformation, was the Carmelite, Povel Helgesen (Paul Helia, q. v.) writer of important controversial and historical works. Both he and Bishop Lage Urne, chancellor of the university, vigorously opposed the advances of Protestantism in Denmark. The university suffered severely during the religious upheaval, but was reorganized under King Christian III by the Lutheran theologian, Johann Bugenhagen (1539), called for that purpose from Wittenberg. In the conflagration of 1728 the university buildings were almost totally destroyed, but were at once restored by King Christian VI (1732). Notable among the professors during the modern period are Holberg, Oehlenschläger, Rask, Madvig, and Oersted. The university comprises at present the faculties of theology, law, medicine, philosophy, and sciences, with

97 professors and about 2000 students. The library contains 350,000 volumes and 6500 manuscripts.

E. A. PAGE.

Copernicus, NICOLAUS, latinized form of NICLAS KOPERNIGK, the name of the founder of the heliocentric planetary theory; b. at Thorn, 19 Feb., 1473, d. at Frauenburg, 24 May, 1543, both places being in what is now Prussian territory. Whether the family came originally from Silesia or from Poland, certain it is that his father Niclas, a merchant, emigrated from Krakow to Thorn, and married the sister of Lucas Watzelrode, later Prince-Bishop of Ermland. Of the four children the oldest and youngest, Andreas and Nicolaus, adopted the clerical career, while the older girl became a Cistercian nun and Abbess of Culm, and the younger married. The whole family belonged to the Third Order of St. Dominic. Nicolaus was hardly ten years old when his father died. His uncle, Lucas, however, took charge of the children and gave the boys a university training.

NICOLAUS COPERNICUS

Nicolaus Nicolai de Thorunia was matriculated in Krakow in 1491, where he studied classics, mathematics, drawings, and perspective. Professor Blar, who represented astronomy, belonged to the school of Ptolemy. The bishop, himself a former student of Bologna, sent the boys to Italy. In 1497 Nicolaus was enrolled in the University of Bologna as of German nationality and a student in canon law. He also studied Greek and became a disciple of Novara, then professor of astronomy. To obtain for his nephews the necessary support, the bishop procured their election as canons by the chapter of Frauenburg (1497-1498). In the spring of 1500 the brothers went from Bologna to Rome for the jubilee. According to George Joachim, surnamed "Rheticus" (because a native of Feldkirch, in ancient Rætia) and his friend Achilles Gasser, Copernicus gave astronomical lectures in the Eternal City, and it was there that he awoke to his vocation of founding a new astronomy. The brothers obtained from the chapter of Frauenburg a two years' leave of absence to continue their studies. From 1501 to 1503 Nicolaus was in Padua and Ferrara studying medicine and jurisprudence. In Ferrara he took his degree of Doctor of Canon Law; but no document is found of his graduating in medicine. His proficiency in that profession was, however, later evinced by his renown as a physician at the episcopal court of Heilsberg, where his uncle resided. After his university studies Copernicus practised medicine for six years (1506-1512) at Heilsberg, being sought by bishops and princes, but especially by the poor, whom he served gratis. There is no document to show that Copernicus ever received higher orders. His medical practice, which was only private, would not speak against him being a priest; and the fact that in 1537 King Sigismund of Poland put his name on the list of four candidates for the vacant episcopal seat of

Ermland, makes it probable that, at least in later life, he had entered the priesthood. After the death of his uncle, in 1512, Copernicus went to Frauenburg for the election of the new bishop, and remained there until 1516, when he was nominated administrator of the diocesan castle of Allenstein. His term of four years being over, he returned to the chapter in Frauenburg. Three years later the bishop died, and Copernicus became administrator of the diocese. While the quiet life at Heilsberg had left him enough leisure to publish a Latin translation of the Greek letters of Theophylactus (1509), his public offices gradually drew him into the study of finance. In 1522 he wrote a memorandum on monetary reforms, which five years later grew into a Latin treatise. It was so highly thought of that the King of Poland substantially accepted it (1528), and Copernicus was nominated deputy counsellor on the financial regulations of Prussia (1522-29).

These various offices, however, could not distract the genius of Copernicus from the main thought of his life. The towers of Heilsberg, of Allenstein, and of Frauenburg became so many observatories, and his great work "On the Revolutions of the Celestial Bodies" bears testimony to his unremitting observations of sun, moon, and planets. His reputation was such that as early as 1514 the Lateran Council, convoked by Leo X, asked through Bishop Paul of Fosombrone, for his opinion on the reform of the ecclesiastical calendar. His answer was, that the length of the year and of the months and the motions of the sun and moon were not yet sufficiently known to attempt a reform. The incident, however, spurred him on as he himself writes to Paul III, to make more accurate observations; and these actually served, seventy years later, as a basis for the working out of the Gregorian calendar. Twenty-five years after his university career, he had finished his great work, at least in his own mind, but hesitated a long time, whether to publish it or to imitate the Pythagoreans, who transmitted the mysteries of their philosophy only orally to their own disciples for fear of exposing them to the contempt of the multitude. His friends who had become interested in the new theory prevailed on him to write at least an abstract for them, manuscript copies of which have been discovered in Vienna (1873) and Stockholm (1878). In this commentary Copernicus stated his theory in the form of seven axioms, reserving the mathematical part for the principal work. This was in 1531, or twelve years before his death. From this on the doctrine of the heliocentric system began to spread. In 1533 Albert Widmanstadt lectured before Pope Clement VII on the Copernican solar system. His reward consisted in a Greek codex which is preserved in the State library of Munich. Three years later Copernicus was urged by Cardinal Schönberg, then Archbishop of Capua, in a letter, dated at Rome, 1 November, 1536, to publish his discovery, or at least to have a copy made at the cardinal's expense. But all the urging of friends was in vain, until a younger man was providentially sent to his side.

It was George Joachim Rheticus who quitted his chair of mathematics in Wittenberg in order to spend two years at the feet of the new master (1539-41). Hardly ten weeks after his arrival in Frauenburg he sent a "First Narration" of the new solar system to his scientific friend Schöner in Nuremberg, in the form of a letter of sixty-six pages, which was soon after printed in Danzig (1540) and Basle (1541). Rheticus next obtained for publication the manuscript of a preliminary chapter of the great work on plane and spherical trigonometry. Finally Copernicus, feeling the weight of his sixty-eight years, yielded, as he writes to Paul III, to the entreaties of Cardinal Schönberg, of Bishop Giese of Culm, and of other learned men to surrender his manuscripts for publica-

tion. Bishop Giese charged Rheticus, as the ablest disciple of the great master, with the task of editing the work. The intention of the latter was to take the manuscript to Wittenberg and have it published at the university; but owing to the hostility prevailing there against the Copernican system, only the chapter on trigonometry was printed (1542). The two copies of the "First Narration" and of the treatise on trigonometry, which Rheticus presented to his friend Dr. Gasser, then practising medicine in Feldkirch, may be seen in the Vatican Library (Palat. IV, 585). Rheticus then turned to Schöner in Nuremberg, who, together with Oslander, accepted the charge and engaged the printing-house of Petreius in the same city. In the meanwhile Rheticus tried to resume his chair in Wittenberg, but on account of his Copernican views had to resign (1542) and turned to Leipzig (1543). He was thus prevented from giving his personal attention to the edition, nor was the author himself able to superintend it. Copernicus became paralyzed on the right side and weakened in memory and mind many days before his death. The first copy of the "Six Books on the Revolutions of the Celestial Orbits" was handed to him the very day he died. Fortunately for him, he could not see what Oslander had done. This reformer, knowing the attitude of Luther and Melancthon against the heliocentric system, introduced the word "Hypothesis" on the title page, and without adding his own name, replaced the preface of Copernicus by another strongly contrasting in spirit with that of Copernicus. The preface of Oslander warns the reader not to expect anything certain from astronomy, nor to accept its hypothesis as true, *ne stultior ab hac disciplina discedat, quam accesserit*. The dedication to Pope Paul III was, however, retained, and the text of the work remained intact, as was ascertained later when access was had to the original manuscript, now in the family library of the Counts Nostitz in Prague.

Opposition was first raised against the Copernican system by Protestant theologians for Biblical reasons, and strange to say it has continued, at least sporadically, to our own days. A list of many of their pamphlets is enumerated by Beckmann. On the Catholic side opposition only commenced seventy-three years later, when it was occasioned by Galileo. On 5 March, 1616, the work of Copernicus was forbidden by the Congregation of the Index "until corrected", and in 1620 these corrections were indicated. Nine sentences, by which the heliocentric system was represented as certain, had to be either omitted or changed. This done, the reading of the book was allowed. In 1758 the book of Copernicus disappeared from the revised Index of Benedict XIV. New editions were issued in Basle (1566) by Rheticus; in Amsterdam (1617) by Müller of Göttingen; in Warsaw (1854) an édition de luxe with Polish translation and the real preface of Copernicus; and the latest (5th) in Thorn (1873) by the Copernicus Society, on the four hundredth anniversary of the author's birthday, with all the corrections of the text, made by Copernicus, given as foot-notes. A monument by Thorwaldsen was erected to Copernicus in Warsaw (1830), and another by Tieck at Thorn (1853). Rheticus, Clavius, and others called Copernicus the second Ptolemy, and his book the second "Almagest". His genius appears in the fact that he grasped the truth centuries before it could be proved. If he had precursors, they are to be compared to those of Columbus. What is most significant in the character of Copernicus is this, that while he did not shrink from demolishing a scientific system consecrated by a thousand years' universal acceptance, he set his face against the reformers of religion. For supplementary information see the article GALILEO.

J. G. HAGEN.

Coppée, François Edouard Joachim, poet, dramatist and novelist, b. at Paris, 26 January, 1842; d. 23 May, 1908. His father, a clerk in the war department, gave him the example of a true Christian life. He studied for a few years at the Lycée Saint-Louis, but his family being in straightened circumstances, he left the school before graduating to aid in their support. He completed his education by private study,

FRANÇOIS COPPÉE

spending long hours in the library Ste-Geneviève, after a hard day's work. In 1863, he joined the group of poets later celebrated under the name of the "Parnassiens", and three years later published his first collection of verses, "Le Reliquaire", soon followed by "Intimités". His first play "Le Passant", was produced in 1869. Through the influence of Princesse Mathilde, he was appointed assistant-librarian at the senate, a sinecure which allowed him to devote himself to literature. From 1871 to 1885 he was librarian at the Comédie Française. In 1876 he received the cross of the Legion of Honour, and was elected to the French Academy in 1884, succeeding Laprade, another poet whose talent did no little honour to the Catholic Faith. The works of Coppée come under four classes: narrative poems, dramas, novels and short stories. The narrative poems, including "Le Reliquaire" (1866), "Intimités" (1868), "Les Humbles" (1872), "Contes en Vers" (1880), and "Les Poèmes Modernes" (1867-1869), present picturesque studies of contemporary life, the sentimental realism of which is entirely free from coarseness or triviality. He wrote a great number of plays in verse, chief among which are: "Le Passant" (1869), "Le Luthier de Crémone" (1876), "Severo Torelli" (1883), which is regarded as his dramatic masterpiece, "Les Jacobites" (1885), "Pour La Couronne" (1895), "Fais ce que Dois" (1871), and "Le Pater", a play dealing with an episode of the Commune; long forbidden by the Government, it obtained a great success in 1890. His drama is remarkable for its lofty and generous ideals, while its technique shows a constant effort to combine the theory of romanticism with the demands of modern theories. His works in prose comprise several novels: "Henriette" (1889); "Une idylle pendant le siège" (1874); "Les vrais riches" (1898); "Rivalet" (1893); "le Coupable" (1897), and many short stories "Contes en prose" (1882); "Vingt contes nouveaux" (1883); "Contes rapides" (1889). The short stories are the most popular part of his works. Simplicity, truth and vividness in the portrayal of familiar scenes, constitute the charm that has so endeared the author to readers the world over. In "La Bonne Souffrance", written in 1898, after a serious illness that

brought him back to the religious faith of his childhood, there are elements of great strength and sweetness. The last years of his life were saddened by cruel sufferings endured with patience. He was a modest man and led a quiet simple life. He was always ready to help those who struggle through life in obscurity. He gave to the French Academy, in 1907, a sum yielding \$200 annually to be used as a prize for young poets.

Coptic Church. See EGYPT.

Coptic Versions of the Bible. See VERSIONS OF THE BIBLE.

Coptos, a titular see of Upper Egypt. It was the chief town of the Nomos of Harawi (Two Hawks), and was once politically important, but under the eleventh dynasty it was overshadowed by Thebes. Its principal god was Manou, with an Isis and an Horus infant; the remains of their temple were explored by Flinders Petrie in 1894. Coptos was at the starting-point of the two great routes leading to the coast of the Red Sea, the one towards the port Tââou (Myos Hormos), the other more southerly, towards the port of Shashir (Berenice). Under the Pharaohs the whole trade of southern Egypt with the Red Sea passed over these two roads; under the Ptolemies, and in Roman and Byzantine times, merchants followed the same roads for purposes of barter with the coasts of Zanzibar, Southern Arabia, India, and the Far East. Coptos was most prosperous under the Antonines; it was captured in 292 by Diocletian after a long siege, but soon recovered its former standing. In the sixth century it was called Justinianopolis. The see was suffragan of Ptolemais in Thebais Secunda. Five bishops are known (Lequien, II, 607): Theodorus, a partisan of Meletius; Phœbammôn in 431; Sabinus in 451; Vincent, author of the "Canonical Solutions", preserved in an Arabic translation and highly esteemed by the Copts; Moyses, who wrote the panegyric of Vincent. Under the caliphs and the sultans Koptos remained one of the chief cities of Said. In 1176 its Christian inhabitants raised the standard of revolt against the Mussulmans, but were promptly suppressed by El Adel, brother of Saleh ed-Din (Saladin), who hanged nearly 3000 on the trees around the city. In the thirteenth century there were still in this region numerous monasteries. Coptos was ruined in the sixteenth century by the Turkish conquest. It is to-day a village called Keft, or Keft, with about 2500 inhabitants, subject to the mudirîh of Kenek: it is situated near the right bank of the Nile, between Denderah (Tynteris) and Karnak (Thebes), about 620 miles from Cairo.

Coquart, Claude-Godefroi, missionary and army chaplain, b. in Pays de Caux, France, 20 February, 1706; d. at Chicoutimi, Canada, 4 July, 1765. He began his novitiate in the Jesuit College at Paris, 20 May, 1726, studied at the College of Louis le Grand and at La Flèche, and was professor at Arras and Hesdin. In 1740 he set out for Canada and, in the following year, journeyed with Verendrye to Fort La Reine. He probably returned with Verendrye when that explorer was compelled to resign his position as commandant in the North-West. From 1746 to 1757 Father Coquart laboured on the Saguenay mission and later at Quebec. After the conquest of Canada he attempted to settle a few Jesuits in Acadia, but the English authorities forced them to leave. He then resumed his labours in the Saguenay region, where he

closed his missionary career. He has left an Abnaki grammar and dictionary. In the Jesuit Relations (Thwaites ed., LXIX) is a memoir written by him for the Intendant of Canada, in which he describes the so-called "King's Posts" of Eastern Canada, with practical observations and suggestions that make it a valuable document for economic study.

EDWARD P. SPILLANE.

Coracesium, a titular see of Asia Minor. According to Ptolemy (V, 5, 3), this town was not in Cilicia Tracheia, but in Roman Pamphylia. It had belonged to Isauria according to the pre-Roman ethnic system, and from A. D. 74 was probably included in Lycia-Pamphylia. Its port was the chief centre of the famous Cilician pirates: there Diodorus Tryphon was killed by Antiochus VII, and the pirates utterly destroyed by Pompey, who levelled their fortress. Coracesium became a suffragan of Side, metropolis of Pamphylia Prima. Lequien (I, 1007) mentions only four bishops, the first having been present at the Council of Constantinople (381), the last at the Council of Constantinople in 681; but the see is still mentioned in the "Notitia episcopatum" as late as the twelfth or thirteenth century. Coracesium is now a little town with about 2000 inhabitants (500 Greeks), the chief centre of a *caza* in the *vilayet* of Konia. Its Turkish name is Alaya. The Armenians have completely disappeared, though the town was a very important one in the time of the Rupens. There are curious ruins, walls, ancient tombs, and other remains of antiquity, and many romantic stories are associated with it.

Corbett, JAMES. See SALE, DIOCESE OF.

Corbie (CORBY or CORBINGTON), AMBROSE, b. near Durham, 7 Dec., 1604; d. at Rome, 11 April, 1649. He was the fourth son of Gerard Corbie and his wife Isabella Richardson, exiles for the Faith. Of their children, Ambrose, Ralph, and Robert, having become Jesuits (Richard died as a student at St.-Omers, and the two surviving daughters, Mary and Catherine, became Benedictine nuns at Brussels), the parents by mutual agreement entered religion. The father entered the Society of Jesus as a lay brother in 1628, and having reconciled his father Ralph (aged 100) to the Church, died at Watten, 17 Sept., 1637. The mother, in 1633, was professed as a Benedictine at Ghent and died a centenarian, 25 Dec., 1652. Ambrose at the age of twelve entered St.-Omers, going thence (1622) to the English College, Rome. He entered the Society of Jesus at Watten in 1627, and in 1641 was professed. Having taught with success for some years at St.-Omers, and been minister at Ghent in 1645, he was appointed confessor at the English College, Rome, where he died in his forty-fifth year. His works are: (1) "Certamen Triplex" etc., the history of the martyrdom of three English Jesuit priests: Thomas Holland, his own brother Ralph Corbie (see below), and Henry Morse (Antwerp, 1645, 12mo), with three engraved portraits; reprinted (Munich, 1646, 12mo); English translation by E. T. Scargill under the title of "The Threefold Conflict", etc.; ed. W. T. Turnbull (London, 1858, 8vo). (2) An account of his family;

English version in Foley, "Records", III, 64. (3) "Vita e morte del Fratello Tomaso Stilintono [i. e. Stillington alias Ogleshorpe] novitio Inglese della Compagnia di Gesu morto in Messina, 15 Sept., 1617"; (MS. at Stonyhurst College; see "Hist. MSS. Comm.", 3rd Report, 338, tr. and ed. Foley, "Records", III, 15 sqq.).

RALPH (called at times CORBINGTON), VENERABLE, brother of the above, martyr-priest, b. 25 March, 1598, near Dublin; d. 7 September, 1644. From the age of five he spent his childhood in the north of England, then going over seas he studied at Saint-Omer, Seville, and Valladolid, where he was ordained. Having become a Jesuit about 1626, he came to England in 1631 and laboured in Durham. He was seized by the Parliamentarians at Hamsterley, 8 July, 1644, when clothed in his Mass vestments, conveyed to London, and committed to Newgate (22 July), with his friend John Duckett, a secular priest. At their trial (Old Bailey, 4 September) they both admitted their priesthood, were condemned to death, and executed at Tyburn, 7 September. Stonyhurst has a relic of Father Corbie; for the Duke of Guelders' attestation in 1650 of other relics, see Foley's "Records S. J.", I, 564; the "Certamen" portrait is reproduced in "Records", VII (I), 168; for his letters, see vol. III, 69 sqq., of the same work. The Corbie *alias*, according to Foley [op. cit., VII (II), 898] was Carlington or Carlton.

PATRICK RYAN.

Corbie (also CORBEY), MONASTERY OF, a Benedictine abbey in Picardy, in the Diocese of Amiens, dedicated to Sts. Peter and Paul. It was founded

CHURCH OF ST. STEPHENS, CORBIE

in 657 by Saint Bathilde, widow of Clovis II, and both she and her son Clotaire III endowed it richly with lands and privileges. The latter were subsequently confirmed by Popes Benedict III and Nicholas I. The first monks came from Luxeuil, Theodefrid being the first abbot. Under St. Adelhard, the ninth abbot, the monastic school of Corbie attained great celebrity and about the same time it sent forth a colony to found the abbey of Corvey in Saxony. In 1137 a fire destroyed the monastic buildings but they were rebuilt on a larger scale. Commendatory abbots were introduced in 1550, amongst those that held the benefice being Cardinal Mazarin. The somewhat drooping fortunes of the abbey were revived in 1618, when it was one of the first to be incorporated into the new Congregation of Saint-Maur. At its suppression in 1790 the buildings were partly demolished, but the church remains to this day, with its imposing portal and western towers. One of the most famous scholars produced by Corbie was Paschasius Radbert (d. 865), the first to write a comprehensive treatise on

the Blessed Sacrament. In the controversy to which this work gave rise, his chief opponent was Ratramnus, one of his own monks, whose views, however, are at variance with Catholic teaching; both treatises are printed in Migne, P. L., CXX-CXXI. The library of Corbie, rich and extensive, was removed to Saint-Germain-des-Prés in 1624.

II.* (Venice, 1733); *SAINTE-MARTE, Galila Christiana* (Paris, 1728), X, 1263; *MIGNE, Dict. des abbayes* (Paris, 1856); *Sources in Kirchenlex.* III, 1088-89; *CHEVALIER, Topo-bibliogr.* (Paris, 1894-99), 793-94, good bibliography. A view of the abbey, as it was before suppression, is given in DELACOURT and DELISLE, *Monasticon Gallicanum* (Paris, 1871), II, pl. 76.

G. CYPRIAN ALSTON.

Corbinian, SAINT, Bishop of Freising, in Bavaria, b. about 680 at Chatres near Melun, France; d. 8 September, 730. His feast is celebrated 8 September, translation, 20 November; emblem, a bear. Nothing is known of his youth. His father, Waldekiso, died before the birth of Corbinian. After the death of his mother, Corbiniana, he lived as a hermit at the church of Saint-Germain at Chatres. With some of his disciples he went to Rome in 716 (709). Here he was consecrated bishop, given the pallium, and sent to preach, which he did with great success in the vicinity of his former home. In 723 (716) he again visited Rome, with the intention of resigning. The pope would not listen to his request. On his return trip Corbinian came to Mais in Tyrol, where he was induced by messengers of Duke Grimoald to go to Bavaria, and settle at Freising. The dates of the Roman journeys are somewhat confused, but the people of Freising seem to consider 724 as the date of Corbinian's arrival, for in 1724 was celebrated the tenth, and in 1824 the eleventh centenary of the existence of the diocese. On account of the incestuous marriage of Grimoald, his apparent repentance, and subsequent relapse, Corbinian left Freising, but returned in 729 (725), on the invitation of Hucbert, Grimoald's successor, and continued his apostolic labours. His body was buried at Freising, then transferred to Mais, and in 769 brought back to Freising by Bishop Aribio, who also wrote his life. St. Corbinian was a man of zeal, and of strong feeling, not to say temper, and exercised great influence over all with whom he came in contact.

FRANCIS MERSHMAN.

Corcoran, JAMES ANDREW, theologian, editor, and Orientalist, b. at Charleston, South Carolina, U. S. A., 30 March, 1820; d. at Philadelphia, 16 July, 1889. In his fourteenth year he was sent to the College of Propaganda, Rome, where he made a brilliant course and was ordained priest 21 December, 1842. He was the first native of the Carolinas who received priestly orders. He remained a year longer in Rome to complete his studies and was made doctor in sacred theology. He read with ease the literatures and dialects of Western and Northern Europe, spoke Latin as fluently as his native tongue, and acquired that thorough mastery of the idiom which distinguishes the text of the Second Plenary Council of Baltimore. In addition, he was a profound Semitic scholar, with a special predilection for Syriac. On the death of Bishop England in 1842 he was recalled to Charleston, where he taught in the seminary, doing parochial work in the meantime, and in conjunction with Dr. Lynch edited the "United States Catholic Miscellany", the first distinctively Catholic literary periodical published in the United States. His position as a Catholic editor naturally involved him in

many controversies, one being on the life and teachings of Martin Luther, for which Dr. Corcoran procured from Europe an abundance of *Lutherana*. He had made great headway with the preparation of a life of Luther, when in 1861 his manuscript and library were destroyed by fire. During the Civil War his sympathies were with the South, and the end of the struggle found him rector of a parish at Wilmington, North Carolina, where he proved his fidelity to pastoral duty during an epidemic of cholera which decimated his little flock. He was made secretary to the Baltimore Provincial Councils of 1855 and 1858; also secretary in chief at the Second Plenary Council of 1866. He was one of the editors of the complete works of Bishop England. In 1868 he was chosen by the unanimous voice of the American hierarchy as their theologian on the commission preparatory to the Vatican Council. He was assigned to the doctrinal commission presided over by Cardinal Billio. During the debates on papal infallibility, a doctrine which he firmly held, he drew up for Archbishop Spalding the famous "Spalding Formula", destined as an olive-branch, in which the doctrine is rather implied than flatly stated. But those were no days for compromises. While at the council, Bishop Wood of Philadelphia, his school-fellow at the Propaganda, perfected arrangements by which Dr. Corcoran took a theological chair in the newly-opened seminary at Overbrook, near Philadelphia. This position he retained until death, declining, on the plea of advancing years, a call to the Catholic University at Washington. In 1876 the "American Catholic Quarterly Review" was founded, and Dr. Corcoran was made chief editor. His able articles and book notices were the principal source of its success. (For a list of his contributions see General Index of the Review, Philadelphia, 1900, p. 15.) In 1883, when the archbishops of the United States were invited to Rome to prepare for the Third Plenary Council of Baltimore, they took Dr. Corcoran with them as secretary, and, at their request, he was permitted to be present and take notes at the sessions held with the three cardinals appointed by Pope Leo XIII as a special commission. The following year he was made a domestic prelate and assisted as secretary at the Plenary Council. That Monsignor Corcoran did not bequeath to posterity works of any great size is explained by the circumstances of his life. He was too busy a man to devote himself to literary pursuits. A great part of his time was occupied with his immense correspondence. He may be said to have been weighted down with "the solicitude of all the Churches", for such was the confidence which the bishops and clergy reposed in his judgment, that they sought his counsel on all difficult points of theology and canon law. He was apparently unconscious of his great gifts, claiming no superiority, and was extremely affable. His love for the Church, and his loyal adhesion to all her doctrines, were patent in all he said or wrote.

KEANE, *In Memoriam: Mgr. Corcoran in Am. Cath. Quart. Rev.* (Philadelphia, 1889), 738.

JAMES F. LOUGHLIN.

Corcoran, MICHAEL, soldier, b. at Carrowkeel, County Sligo, Ireland, 21 September, 1827; d. at Fairfax Court House, Virginia, U. S. A., 22 December, 1863. His father was an army pensioner, and he himself joined the Royal Irish Constabulary when nineteen years of age. He resigned after three years' service and emigrated to New York in August, 1849. Here he soon became a leader among his fellow-countrymen. He enlisted as a private in the Sixty-Ninth Regiment of the State Militia, a command composed of Catholics of Irish birth or descent, and rose from rank to rank until he was elected colonel, 25 August, 1859. The next year the Prince of Wales (afterwards King Edward VII of England) visited New York, and in the military parade given

in his honour Colonel Corcoran refused to order the Sixty-Ninth Regiment to join. For this act of military disobedience he was placed under arrest by the State authorities and ordered before a court martial. The trial created much excitement all over the country, his Irish countrymen enthusiastically applauding his course, and the case was pending when the Civil War broke out. The proceedings were immediately quashed, and the Sixty-Ninth, with overflowing ranks, was one of the first regiments to march, with Corcoran at its head, 23 April, 1861, to the defence of the Union. It participated with special gallantry in the first Battle of Bull Run, 21 July, 1861, in which action Colonel Corcoran was wounded and taken prisoner. He was kept in the Confederate prisons for thirteen months and then exchanged in August, 1862. His return to the North brought him a series of popular ovations and testimonials. He was commissioned a brigadier-general, at once raised a brigade of four regiments, which was called the Irish Legion, and, taking command of it, rejoined the army in Virginia in November, 1862. During the following year the Legion participated in several minor engagements, and while in camp at Fairfax Court House, Virginia, General Corcoran was thrown from his horse and died the same day from the effects of the accident.

THOMAS F. MEEHAN.

Cord, CONFRATERNITIES OF THE, pious associations of the faithful, the members of which wear a cord or cincture in honour of a saint, to keep in mind some special grace or favour which they hope to obtain through his intercession. Among Oriental peoples, and especially among the Jews, whose priests and prophets wore a cincture, the wearing of a belt or girdle dates back to very ancient times. Christ himself commanded his Apostles to have their loins girded. In the early Church virgins wore a cincture as a sign and emblem of purity, and hence it has always been considered a symbol of chastity as well as of mortification and humility. The wearing of a cord or cincture in honour of a saint is of very ancient origin, and we find the first mention of it in the life of St. Monica. In the Middle Ages cinctures were also worn by the faithful in honour of saints, though no confraternities were formally established, and the wearing of a cincture in honour of St. Michael was general throughout France. Later on, ecclesiastical authority set apart special formulæ for the blessing of cinctures in honour of the Most Precious Blood, Our Lady, St. Francis of Paul, and St. Philomena. There are in the Church three archconfraternities and one confraternity the members of which wear a cord or cincture.

(1) *The Archconfraternity of Our Lady of Consolation, or of the Black Leathern Belt of St. Monica, St. Augustine, and St. Nicholas of Tolentino*.—According to an old tradition, St. Monica in a vision received a black leathern belt from the Blessed Virgin, who assured the holy widow that she would take under her special protection all those who wore it in her honour. St. Monica related this vision to St. Ambrose and St. Simplicianus; both saints put on a leathern belt, and St. Ambrose is said to have girded St. Augustine with it at his baptism. Later on it was adopted by the Hermits of St. Augustine as a distinctive part of their habit. When, after the canonization of St. Nicholas of Tolentino, it came into general use among the faithful, Eugene IV in 1439 erected the Confraternity of the Cincture of St. Monica, St. Augustine, and St. Nicholas of Tolentino, in the church of St. James at Bologna. In 1590 Thaddeus

of Perugia, General of the Augustinians, united this confraternity and that of Our Lady of Consolation (founded in 1318 or, according to others, in 1495) into one confraternity, which union was confirmed by Gregory XIII in his Bull "Ad ea" (15 July, 1575). The same pope raised this confraternity to the rank of an archconfraternity and enriched it with many Indulgences. He further ordained that all confraternities of the black leathern belt should be aggregated to the archconfraternity at Bologna, in order to share its privileges and Indulgences. The principal feast of this confraternity is the Sunday within the octave of the feast of St. Augustine (28 August). The members are obliged to wear a black leathern belt, to recite daily thirteen Paters and Aves and the Salve Regina, and to fast on the vigil of the feast of St. Augustine. For the erection of and reception into this archconfraternity special faculties must be had from the general of the Augustinians.

(2) *Archconfraternity of the Cord of St. Francis*.—After his conversion St. Francis girded himself with a rough cord in memory of the cords with which Christ had been bound during His Passion, and a white girdle with three knots came subsequently to form part of the Franciscan habit. According to Wadding, St. Dominic received the cord from St. Francis and always wore it, under his habit out of devotion to the saint, his example being followed by many of the faithful. In his Bull "Ex supernæ dispositionis" (19 November, 1585), Sixtus V erected the Archconfraternity of the Cord of St. Francis in the basilica of the Sacro Convento at Assisi, enriching it with many Indulgences, and conferred upon the minister general of the Conventuals the power of erecting confraternities of the Cord of St. Francis in the churches of his own order and of aggregating them to the archconfraternity at Assisi. The same pope, in his Bull "Divinæ caritatis" (29 August, 1587), granted new Indulgences to the archconfraternity and empowered the minister general of the Friars Minor to erect confraternities of the Cord of St. Francis in the churches of his own order in those places where there are no Conventuals. Paul V, in his Bull "Cum certas" (2 March, 1607), and "Nuper archconfraternitati" (11 March, 1607), revoked all spiritual favours hitherto conceded to the archconfraternity and enriched it with new and more ample Indulgences. Both these Bulls were confirmed by the Brief of Clement X, "Dudum felicitis" (13 July, 1673). Finally, Benedict XIII in his Constitution "Sacrosancti apostolatus" (30 September, 1724), conceded to the minister general of the Conventuals authority to erect confraternities of the Cord of St. Francis in churches not belonging to his own order in those places where there are no Franciscans. New privileges and Indulgences were conceded to the archconfraternity by two decrees of the Sacred Congregation of Indulgences dated 22 March, 1879, and 26 May, 1883. Besides the ordinary requirements necessary for the gaining of all plenary and partial Indulgences, the wearing of the cord and enrolment in the records of the archconfraternity are the only conditions imposed on the members.

(3) *Archconfraternity of the Cord of St. Joseph*.—The miraculous cure of an Augustinian nun at Antwerp in 1657 from a grievous illness, through the wearing of a cord in honour of St. Joseph gave rise to the pious practice of wearing it to obtain the grace of purity through his intercession. The devotion soon spread over many countries of Europe, and in the last century was revived at Rome in the church of San Rocco and in that of San Nicolò at Verona. Pius IX, in a rescript dated 19 September, 1859, approved a special formula for the blessing of the Cord of St. Joseph, and in his Brief "Expositum nobis nuper" (14 March, 1862) enriched the confraternity with many indulgences. In 1860 sev-

eral new Indulgences were granted to the confraternity erected in the church of San Nicolò at Verona and by the Brief "Universi Dominici gregis", 23 September, 1862, the Confraternity of the Cord of St. Joseph was raised to an archconfraternity. The members are obliged to wear a cord having seven knots, and are exhorted to recite daily seven Glorias in honour of St. Joseph. Confraternities of the Cord of St. Joseph must be aggregated to the archconfraternity in the church of San Rocco at Rome in order to enjoy its spiritual favours and Indulgences.

(4) *Confraternity of the Cord of St. Thomas*.—It is related in the life of St. Thomas Aquinas that, as a reward for his overcoming a temptation against purity, he was girded with a cord by angels, and that in consequence he was never again tempted against this virtue. This cord is still preserved in the church at Chieri near Turin. Soon after the saint's death many of the faithful began to wear a cord in honour of St. Thomas, to obtain the grace of purity through his intercession. In the seventeenth century societies were formed at different universities, the student members of which wore a cord in honour of St. Thomas, hoping through his intercession to be protected from the dangers to which youth is generally exposed. The first Confraternity of the Cord of St. Thomas was erected at the University of Louvain by the Belgian Dominican Francis Deuwerders, and numbered among its members all the professors and students of the faculty of theology and many of the faithful. Thence it spread to Maastricht, Vienna, and many other cities of Europe. Innocent X sanctioned this new confraternity by a Brief dated 22 March, 1652. The members are required to have their names enrolled, to wear a cord with fifteen knots, and to recite daily fifteen Ave Marias in honour of St. Thomas. For the erection of and reception into this confraternity special faculties must be had from the superior general of the Dominicans. Its Indulgences and privileges are contained in the great Bull of Benedict XIII, "Pretiosus" (26 April, 1727, § 9) and in the decree of the Sacred Congregation of Indulgences (8 May, 1844). FERDINAND HECKMANN.

Cordara, GIULIO CESARE, historian and *littérateur*, b. at Alessandria in Piedmont, Italy, 14 Dec., 1704; died there 6 March, 1785. The scion of an illustrious and ancient family that came originally from Nice, young Cordara studied at Rome under the Jesuits, and became a Jesuit himself at the age of fourteen. Subsequently he taught in various colleges of the order, soon acquiring a great reputation not only for a knowledge of general literature, but especially for proficiency in poetry, rhetoric, and history. A brilliant discourse on Pope Gregory XIII, the founder of the Roman College, and a satire on the Cabalists of the day, won for him admission into the Academy of the Arcadians. Several poetical works of his appeared under the pen name of Pameno Cassio. He was in high favour with the exiled Stuarts, then residing in Rome, on account of an allegorical drama, "La

Morte di Nice", which he composed in honour of the titular King James III, and a history in Latin of the expedition into Scotland of Charles Edward Stuart, Prince of Wales, which some of his admirers look upon as his most finished production. His satires on "The Literary Spirit of the Times", published in 1737, are of a high order of merit. In them he pillories a class of contemporary writers who arrogated to themselves the literary censorship of their day, condemned the classification of the sciences and the methods of instruction in vogue, and even the accepted principles of taste. A seventh and revised edition was brought out at Augsburg in 1764. But the work by which he is perhaps best known is the "History of the Society of Jesus", Sixth Part, in two volumes, the first published in Rome in 1750, the second posthumously, by Father Raggazzini in 1859, over a century later. This work was a continuation of the history of the Society by Orlandini, Sacchini, and Juvency and embraced the period of Mutius Vitelleschi, 1616-1633. It is in Latin and remarkable for the elegance, purity, and dignity of its style. He is also the author of a history of the German College in Rome, which contains a list of its distinguished *alumni* (Rome, 1770). When the Society of Jesus was suppressed, Cordara, who had been a member for more than half a century, withdrew from Rome to Turin and later to Alessandria, where the King of Sardinia had allowed some members of the Society to live unmolested. Notwithstanding his advanced age and his new mode of life, Cordara continued his literary labours and published much in prose and verse. Sommervogel enumerates more than sixty works, large and small, of which he is the author. The citizens of his native town erected a marble statue to his memory, in the church of the Barnabites where he was interred.

EDWARD P. SPILLANE.

Cordeliers. See RECOLLECTS.

Cordell, CHARLES, English missionary priest, b. 5 October, 1720; d. at Newcastle-on-Tyne, 26 January, 1791. He was the son of Charles Cordell and Hannah Darell, of the well-known family of Scotney Castle and Calehill, Kent, and was educated first at "Dame Alice's School", Fernyhalgh, afterwards at Douai, where, in 1739, he began his course of philosophy. Having been ordained priest, he left the college 10 June, 1748, for England, where he served the mission at Arundel (1748-55), Rounday, in Yorkshire, the Isle of Man, and finally Newcastle-on-Tyne (1765-91). In 1778 the presidency of the English college at Saint-Omer was offered to him, but he would not accept it. He was a scholarly, book-loving man, of some note as a preacher. In politics he remained a staunch Jacobite. He published many translations and one original pamphlet, "A Letter to the Author of a Book called 'A Candid and Impartial Sketch of the Life and Government of Pope Clement XIV'" (1785). The translations include "The Divine Office for the Use of the Laity" (4 vols., Sheffield, 1763; 2d ed., 2 vols., Newcastle, 1780); Bergier's "Deism Self-refuted" (1775); Caraccioli's "Life of Pope Clement XIV" (1776); Letters of Pope Clement XIV (2 vols., 1777); Fronstlet's "Travels of Reason" (1781); Fleury's "Manners of the Christians" (1786) and "Manners of the Israelites" (1786); "Larger Historical Catechism" (1786); and "Short Historical Catechism" (1786).

EDWIN BURTON.

Cordier (CORDERIUS), BALTHASAR, exegete and editor of patristic works, b. at Antwerp, 7 June, 1592; d. at Rome, 24 June, 1650. He entered the Society of Jesus in 1612, and after teaching Greek, moral theology, and Sacred Scripture, devoted himself to translating and editing MSS. of Greek catenæ and other works of the Greek Fathers, for which he searched the libraries of Europe. He published the following: (1) "Catena sexaginta quinque Patrum græcorum in S. Lucam" (Antwerp, 1628); (2) "Catena Patrum græcorum in S. Joannem" (Antwerp, 1630); (3) "Joannis Philoponi in cap. I Geneseos . . . libri septem" (Antwerp, 1630); (4) "S. Cyrilli apologiæ morales" (Vienna, 1630); (5) "Opera S. Dionysii Areopagite cum S. Maximi scholiis" (Antwerp, 1634); (6) "Expositio Patrum græcorum in Psalmos" (Antwerp, 1643-46); (7) "Symbolæ in Matthæum" (2 vols., of which, however, only the second is by him; Toulouse, 1646-47); (8) "S. Dorothei archimandritæ institutiones asceticæ" (Antwerp, 1646); (9) "S. P. N. Cyrilli archiepiscopi Alexandrini homiliæ XIX in Jeremiam" (Antwerp, 1648)—in this case, as in a few others, his critical acumen was at fault; these homilies are Origen's. He is also the author of a commentary on the Book of Job, "Job Illustratus" (Antwerp, 1646; reprinted in Migne's "Cursus S. Scripturæ", XIII and XIV, and in Campon's edition of Cornelius a Lapide).

SOMMERVOGEL, *Biblioth. de la c. de J.*, II, 1438, s. v.; HURTER, *Nomenclator*. F. BECHTEL.

Cordova, DIOCESE OF (CORDUBENSIS), in Spain, formerly suffragan of Toledo, since 1851 of Seville. It includes the province of the same name, with the exception of a few parishes that pertain to the Archdiocese of Seville, while in return Cordova takes in a portion of the civil province of Badajoz. The Gospel, it is believed, was preached there in the Apostolic period, it being very probable that the Apostles St. James the Greater and St. Paul, while preaching in various cities of Spain may have sent thither some of their disciples; Cordova (*Colonia Patricia*) was then the chief city of Bætica, and the centre of Andalusian life. The name of the apostolic founder of the See of Cordova is unknown, as the oldest extant documents do not antedate the third century. The conditions of the Christian religion in this early period were quite similar to those which obtained elsewhere in the Roman Empire—persecution, suspicion, denunciation, enforced profession of idolatry, etc. Many illustrious martyrs, Faustus, Januarius, and others, suffered at Cordova; their relics were afterwards eagerly sought by the other churches of Spain, and even in Gaul and elsewhere. The earliest known bishop (though not the founder of the see) is Severus, about 279; he was followed by Gratus and Berosus. In 294 the famous Hosius became Bishop of Cordova and immortalized it by his resistance to Arianism. Fifteen bishops governed the see from the death of Hosius in 357 to 693, from which period to 839 no bishops are known. All ecclesiastical records, doubtless, perished in the course of the Arab domination that began in 711. During this time, the faithful could, it is true, worship freely, and retained their churches and property on condition of paying a tribute for every parish, cathedral, and monastery; frequently such tribute was increased at the will of the conqueror, and often the living had to pay for the dead. Many of the faithful then fled to Northern Spain; others took refuge in the monasteries of the Sierras, and thus the number of Christians shrank eventually to small proportions.

In 786 the Arab Caliph, Abd-er-Rahman I, began the construction of the great mosque of Cordova, now the cathedral, and compelled many Christians to take part in the preparation of the site and foundations. Though they suffered many vexations, the Christians continued to enjoy freedom of worship, and this tol-

erant attitude of the ameers seduced not a few Christians from their original allegiance. Both Christians and Arabs co-operated at this time to make Cordova a flourishing city, the elegant refinement of which was unequalled in Europe. Under Abd-er-Rahman II there came a change in the attitude of the Arab rulers, and a fierce persecution ensued, during which many Christians were accused of abusing the memory of Mohammed, of entering mosques, and of conspiracy against the Government. Saracen fanaticism ran high. Among the martyrs of this period are Perfectus, Flora, Maria, numerous nuns of the monastery of Tabana in the Sierras, also Aurelius, Sabiniana, Abundius, Amator, and others; the names of more than thirty are known. The most famous of these martyrs is St. Eulogius, priest and abbot, who was in 858 chosen Archbishop of Toledo. For his encouragement of the confessors by his writings, "Memoriale sanctorum", "Apologeticus sanctorum martyrum", "Documentum martyrii", "Epistolæ", he was eventually put to death in 859. His life was written (P. L., CXV, 705-32) by Paulus Alvarus, a Scriptural scholar and theologian, who was not a martyr, Baudissin notwithstanding (Eulogius und Alvarus, Leipzig, 1872). With slight interruptions this persecution continued under succeeding bishops, Saul (850) and Valentinus (862); it co-operated with the Anthropomorphic heresy of Hostegesis and other causes to bring about a gap of a century and a half in the list of the bishops of Cordova. In 962 Abd-er-Rahman III was succeeded by his son Al-Hakim. Owing to the peace which the Christians of Cordova then enjoyed, some knowledge of their condition has been preserved, among other things the name of their bishop, Joannes, also the fact that, at that period, the citizens of Cordova, Arabs, Christians, and Jews, enjoyed so high a degree of literary culture that the city was known as the New Athens. From all quarters came students eager to drink at its founts of knowledge. Among the men afterwards famous who studied at Cordova were the scholarly monk Gerbert, destined to sit on the Chair of Peter as Sylvester II (999-1003), the Jewish rabbi Moses and Maimonides, and the famous Spanish-Arabian commentator on Aristotle, Averroes (Bourret, *De Scholâ Cordubæ christianâ sub Omiaditarum imperio*, Paris, 1853). On account of the wretched administration of the successors of Abd-er-Rahman III, the invasion of the Almohades (1097), and the continuous peninsular warfare between Moslem and Christian, little is known of the episcopal succession in Cordova from the time of Bishop Joannes (988) to the reconquest of the city by the Christians under St. Ferdinand III (1236). The long period (524 years) of humiliation of the Church of Cordova now came to an end, and a new epoch of prosperity and Christian religious service began which was inaugurated by the piety and generosity of the saintly *conquistador* (Haines, Christianity and Islam in Spain, London, 1889, 756-1031). Reference has already been made to the conversion of the mosque into a cathedral; several parishes were also established, and spacious convents were built for various religious orders, Dominicans, Franciscans, Mercedarians. A cathedral chapter was established, some of the earlier Christian churches were restored, and some mosques were converted into churches. The diocese, that in the earlier Hispano-Roman period had been very large, began to expand again and had added to it many cities of the Archdiocese of Seville, which was yet in the power of the Moors. The newly acquired territory was soon occupied by Christian knights and Christian families, owing to the privileges and franchises granted by St. Ferdinand to such colonists. Bishop Lope de Fitero, who was consecrated about 1237, began a new episcopal series which has remained unbroken, the bishop consecrated in 1898 being his seventy-third successor.

Since the expulsion of the Moriscos and Jews at the end of the fifteenth century, the Catholic worship alone has been exercised in the diocese, if individuals belonging to a few sects are excepted. It is true that since the eighteenth century the religious fervour of the Catholics of Cordova has considerably diminished, owing to the assimilation by the civil laws of the liberal principles of the French Revolution, the legalized usurpation of ecclesiastical property, and a positivism nourished by the literature, the theatre, and the free press of the day. There remains, nevertheless, much of the Catholic charity and zeal which distinguished the centuries after the reconquest, when bishops, clergy, and faithful rivalled one another in generous endowment of hospitals, asylums, and schools, and placed at the disposal of the Church a rich patrimony capable of supporting a numerous clergy and a continuous and splendid public worship. A steady sectarian propaganda, a lowering of the moral tone, and religious ignorance have made many Cordovans quite lax in their Catholic practice; nevertheless, they do not at all wish to appear as deserting the Catholic Faith. The palace of the bishop faces the former mosque, and in it are located all the administrative offices of the diocese. The cathedral clergy is composed of twenty canons, fifteen beneficed clergymen, and five ecclesiastics charged with various duties. There are 124 parishes, about 500 priests, and 269 churches and chapels. The population of the diocese is about 430,000; that of the city in 1900 was 58,275. The following religious orders and congregations have houses in the city: Jesuits, Carmelites, Capuchins, Dominicans, Trinitarians, Salesians, and Diocesan Missionaries of the Sacred Heart of Mary, the last named founded in 1876. In four or five other places in the diocese there are also religious houses, among them convents of Franciscans and Augustinians.

In the near vicinity of Cordova is the solitude (*desierto*) of Our Lady of Belén, a monastery of (fourteen) anchorites under a common rule and leading a very austere life; they do not take sacred orders, and are governed by a brother superior (*hermano mayor*); their spiritual director is a secular priest. The Salesian Fathers alone are engaged in teaching; the other orders devote themselves to the contemplative life or conduct public worship. There are seventy-seven religious communities of women, of which twenty-seven are in Cordova and the rest scattered throughout the diocese. They number in all 1106 sisters. Some lead the contemplative life, others devote themselves to teaching or to works of charity. The twelve charitable institutions are cared for by 145 Sisters of Charity; among such institutions in the city are four homes for the aged, two refuges for young girls, a hospital for the insane, a hospital for chronic diseases with 239 patients, a boys' orphan asylum with 425 inmates, and a founding asylum containing 131 children. There is also a charitable restaurant (*Comedor de la Caridad*) in charge of six brothers, which provides good and abundant food for workingmen and poor families at very modest prices. The religious educational institutes of the city for both sexes number twelve, and the pupils attending them 2023. The college of the Salesian Fathers has 325 boys. Outside of Cordova there are several educational and charitable institutions. The Grand Seminary of San Pelagio at Cordova was founded in the sixteenth century by Dr. Mauricio Pazos y Figueroa, and enlarged in the eighteenth by Cardinal Salazar. It has fifteen professors and 125 ecclesiastical students. Attached to the various parishes are many lay confraternities devoted to works of charity, or to the support of public worship. Of the early synods held at Cordova, two are important, those of 839 and 852. The Acts of the former were first printed by Flórez (*España sagrada*, XV; Hefele, IV, 99). It was held against

fanatical heretics, probably from Northern Africa, and known as "Casiani", who professed loose doctrines regarding marriage, rejected veneration of relics, demanded more rigour in fasting, declared unclean certain foods, insisted on receiving the Eucharistic Host each in his own hand, etc. The synod of 852 reproved those Christians who voluntarily sought the occasion of martyrdom and declared that such had no right to the veneration due to martyrs (Mansi, XIV, 970; Hefele, IV, 179).

Cordova, DIOCESE OF (CORDUBENSIS IN AMERICA), in the Argentine Republic, suffragan of Buenos Aires. It was created in 1570, but was vacant from 1819 to 1830, and again from 1841 to 1858. It has 46 parishes, 49 churches and chapels, and, by reason of its vast extent (it includes the two states of Cordova and Rioja, which in 1895 had about 570,000 souls), has two auxiliary bishops. The population of the episcopal city is 53,000; one of the two national universities, the second oldest in the New World (1573), is located there, also a national observatory, and a meteorological bureau.

BATTANDIER, *Ann. Pont. Cath.* (Rome, 1907), 227; STREIT, *Kathol. Missionsanaltas* (Steyl, 1907).

Cordova, JUAN DE, b. 1503, at Cordova in Andalusia, Spain, of noble parents; d. 1595 at Oaxaca, Mexico. It is not certain whether Córdoba was his family name, or whether he assumed it from his native city after he became a Dominican. He first embraced a military career, serving in Flanders as ensign. He then went to Mexico, and accompanied Coronado to New Mexico in 1540-42. In 1543 he entered the Dominican Order at Mexico, and was sent to Oaxaca in 1548, where he acquired the Zapotecan idiom and ministered to the Indians. He was named provincial in 1568. Brought up under military discipline, he administered as provincial with such rigour and severity, that there were many complaints against him to the chapter that congregated at Yanhuilitan in 1570. He refused to comply with the admonitions of his superiors and change his methods, and was accordingly suspended. With the exclamation: "Benedictus Deus!" he received the notification of his deposition, and, declining the interference of the Viceroy Enriquez in his favour, retired to his convent at Tlacoachauaya in Oaxaca, where he died after twenty-five years spent in retirement and in the study of the Zapotecan language and the customs of the natives. His knowledge of the language was thorough, and he composed a "Vocabulario de la Lengua Zapoteca, ó Diccionario Hispano-Zapoteco" (Mexico, 1571, or, according to Ycazbalceta, 1578). The "Arte en Lengua Zapoteca" appeared in 1578 at Mexico. Besides the linguistic part, this book contains a short but valuable note on the rites and superstitions of the Zapotecan Indians, and an equally important account of their method of reckoning time, which has been republished by Manuel Orozco y Berra.

ORIGINAL NUMBER OF COLUMNS 1200

Core, Dathan, and Abiron (אֲבִירִים, דָּתָן, קָהֵר), leaders of a revolt against Moses and Aaron (Num., xvi). Core was the son of Isaar, of the Caathite family of Levites; Dathan and Abiron were the sons of Eliab, the son of Phallu, of the tribe of Ruben. A fourth leader is mentioned, Hon, the son of Pheleth, likewise a Rubenite; but as the name does not again appear, a corruption of the text is rightly suspected. Core was the head of the rebellion, whence it is called the sedition of Core (Num., xvi, 49; xxvi, 9; xxvii, 3; Jude, 11), and the rebels are styled the congregation of Core (Num., xvi, 40; Eccles., xlv, 22). The rebel faction consisted of three parties with different motives and different aims. Many of the people were not yet reconciled to the exclusive priesthood instituted at Sinai, and desired the restoration of the old order, in which the priestly functions were exercised by the oldest member of each family. The non-Aaronic Levites bore it ill that the prerogatives of the priesthood should be confined to the family of Aaron, while they occupied the position of mere servants, and they demanded that they also be admitted to exercise priestly functions. Lastly the Rubenites were aggrieved because their tribe was deprived of the leadership, which naturally should belong to it as being descended from the oldest son of Jacob. But all were animated by jealousy of the power of the house of Amram, in which the civil and religious authority was concentrated, and all aimed at its overthrow. The two first parties, however, desired the removal of Moses from power, only in so far as he was an obstacle to the realization of their claims, whereas with the Rubenites this removal was the main object. In the account of the revolt neither time nor place is mentioned. But it must have occurred shortly after leaving Sinai, when the Aaronic priesthood was still a recent institution. It probably took place at Cades, after the attempt to penetrate into the Promised Land had ended disastrously near Horma (Num., xiv, 40 sq.), and the people had begun to realize that there was no escape from the sentence condemning them to wander forty years in the desert. The taunting words of Dathan and Abiron (Num., xvi, 13, 14) point to such a situation. Core and two hundred and fifty leading men of different tribes (cf. Num., xxvii, 3)—Dathan and Abiron for some unknown reason were not with them—went to Moses and demanded the abolition of the exclusive priesthood. "Enough for you," they said; "all the congregation consisteth of holy ones, and the Lord is with them: why lift you up yourselves above the people of the Lord?" Moses directed them to bring their censers (fire-pans) on the morrow to offer incense with Aaron before the Lord; the Lord would choose between them. When the next day Core and his two hundred and fifty companions offered incense before the door of the tabernacle, they were destroyed by fire from the Lord. In the meanwhile Moses went to the dwellings of Dathan and Abiron, who had refused to obey his summons to appear before him, and warned the people to depart from the tents of Core, Dathan, and Abiron, lest they should share the dreadful punishment about to be inflicted on the two last. Hardly had he done speaking when the earth broke asunder and swallowed up Dathan and Abiron and their households and all the men that appertained to Core. The sons of Core did not perish, however (Num., xxvi, 10, 11), and later we find their descendants among the singers (I Par., vi, 37; II Par., xx, 19; Pss. xli, xliii, xlviii, lxxxiii, lxxxiv, lxxxvi, lxxxvii), or among the door-keepers of the temple (I Par., ix, 19; xxvi, 1, 19). Moses ordered the censers of Core and his companions to be beaten into plates and fastened to the altar as a warning to those who would usurp the priesthood.

The critical school sees in the story of this rebellion

a clumsy combination of three distinct narratives; one relating a revolt under Dathan and Abiron against the civil authority of Moses; another containing an account of a rising of representatives of the people under Core, who is not a Levite, against the ecclesiastical authority of the tribe of Levi; and a third, which is merely a retouched version of the second, telling of the struggle of the non-Aaronic Levites under Core, who is now a Levite, against the exclusive priesthood vested in the family of Aaron. But it may be asked what possible object a redactor could have had in combining the narrative of a rebellion against civil authority with another having for its moral to warn against usurpation of the priesthood. The story presents nothing improbable. We need not search deeply into history to find similar examples of parties with different, or even conflicting interests, uniting for a common end. It may, it is true, be resolved into two fairly complete narratives. But many an historical account can thus be divided by using the arbitrary methods here applied, picking out sentences or parts of sentences here and there and rejecting as later additions whatever militates against division. The literary argument is too weak and too uncertain to base a theory upon it.

F. BECHTEL.

Corea, VICARIATE APOSTOLIC OF, coextensive with the Empire of Corea; it was created a distinct vicariate Apostolic, 9 September, 1831. But for nearly half a century before that time Corea had many fervent Catholics. In a manner perhaps unique in the annals of the Church, the Faith was introduced there without preaching and before any missionaries had penetrated the country. The educated people, more eager for new knowledge the more their country was jealously closed, procured through the annual embassy to Peking all the books possible upon science, literature, etc. Some Christian books fell into their hands, and the grace of God aiding, they recognized the truth. One of them, Ni-seung-houn, undertook in 1784 the journey to Peking and was baptized there, under the name of Peter. Upon his return he baptized his companions, who, like himself, were men of learning and high position. That their faith was firm, events proved. In 1791 Paul Youn and Jacques Kouen sealed their belief with their blood for having refused to offer sacrifice upon the occasion of the death of their relatives. Connected by reason of its origin with the Church of Peking, Corea was dependent upon that vicariate until 1831. About the year 1794, a Chinese priest, Father Jacques Tjyou, was sent to Corea. Upon his arrival he found about 4000 faithful. After seven years of a heroic and fruitful ministry he was arrested and put to death, 31 May, 1801. Before and after him numerous Christians suffered martyrdom with admirable fortitude. Among them particular mention is due to the married couple, Jean Ryou and Luthgarde Ni. Shaken and decimated by the tempest, and deprived of its priests, the Christian religion was preserved by the zeal of the fervent people, voluntary catechists, who rallied the dispersed, and made unheard-of efforts to obtain pastors from the Bishop of Peking or the sovereign pontiff. It was at this time that the vicariate Apostolic was established, and confided to the Society of Foreign Missions of Paris. The first vicar Apostolic named, Mgr. Bruguière, came from the mission of Siam. He started upon his journey in 1832, suffered incredible hardships in passing through China and Mongolia, and died in Tatar, just as he was completing arrangements to enter the country of his mission. His companion, Father Maubant, succeeded

in crossing the northern frontier by way of Eui-tjyou, and in January, 1836, entered the closed country. The following year Father Chastan joined him there, and, a little later, the new vicar Apostolic, Mgr. Imbert. Under their ministrations Christianity soon flourished. All this went on with the greatest secrecy; the least indiscretion would have caused all to be lost. The edicts proscribing Christianity remained as rigorous as ever, and all, both pastors and flock, lived as upon the eve of battle, preparing themselves for martyrdom.

The persecution broke out in 1839, many Christians were arrested, tortured, and put to death; the missionaries were hunted without mercy. Mgr. Imbert was the first to be taken, and, thinking that the capture of his two companions would cause the persecution to cease, he directed them to deliver themselves up; they responded heroically to the call, and all three were beheaded, 21 September, 1839. It was not until 1845 that a new bishop, Mgr. Ferréol, succeeded in entering Corea; he brought with him a young missionary and also the first Korean priest, André Kim, who had made his studies at Macao, and who was taken and executed the following year. His cause, and those of the Venerable Mgrs. Imbert, Maubant, and Chastan, and of the principal Korean martyrs, eighty-two in all, were introduced in the Roman Court by a decree of 24 September, 1857. The country remained more firmly closed than ever, the Christian religion more severely proscribed, and the entrance of apostolic workers more perilous and difficult. Admission to Corea was most often accomplished by way of the sea, a Chinese barque bringing the missionaries with great secrecy to the coast of Corea, where a Korean ship, under cover of the darkness, would go to meet them. Father Maistre spent ten years in vain attempts and useless expeditions before he was able to set foot in Corea. Notwithstanding these difficulties, and numerous local persecutions, during twenty years the mission prospered. In 1866 it counted upwards of 25,000 faithful, two bishops, and ten missionaries. A terrible persecution then broke out, the two bishops and seven missionaries were taken and executed: Mgr. Berneux, vicar Apostolic, with Fathers Beaulieu, Dorie, and de Bretenières (8 March); Father Pourthié, pro-vicar, and Father Petitnicolas (10 March); and Mgr. Daveluy, the coadjutor, with Fathers Aumaitre and Huin (30 March). Numbers of the laity also suffered martyrdom, while others perished of distress and hunger in the mountains. The process, or formal declaration, of the martyrdom of the two bishops, of the seven missionaries, and of twenty of the principal Christians, was sent in 1901 to the Sacred Congregation of Rites. The three surviving missionaries, unable to maintain themselves in the country, were obliged to return to China. This persecution, which occurred during the second year of the reign of the emperor who abdicated in 1907, was not precisely his fault. During his minority the power was exercised by his father, known under the name of Tai-ouen-koun, prince-regent. Of a suspicious and violent character, the regent believed that the extermination of the Catholics in Corea was the best policy to follow. Later he recognized his mistake and repented of it.

A French attempt, known as the Kang-hoa expedition, made to avenge the murder of the French missionaries, was not prosecuted with sufficient vigour, and merely served to revive the persecution which lasted as long as the regent remained in power. In 1876, after an interval of ten years, the new vicar Apostolic, Mgr. Ridet, succeeded in sending two missionaries to Corea; he himself entered the following year with two others. But after some months of sojourn in Seoul his retreat became known and he was thrown into prison. Upon the demand of the French minister to Peking, the Korean Government consented

to send him back to China; in 1879, Father Deguette, arrested in turn, was also sent back after several months of captivity. The bloody era was closed; nevertheless the missionaries were obliged to continue their life of seclusion. Liberty came to them only with the treaty of commerce, concluded with the different Powers towards the year 1884. Upon their return in 1876 they found but 10,000 Christians; since then this number has grown from year to year. The Catholic Coreans numbered in 1885, 14,039; 1890, 17,577; 1895, 25,998; 1900, 42,441; 1905, 58,593; and in 1907, 63,340. From 1876 dates the spread of the ordinary mission-labours which the persecution had not permitted to develop.

In 1888 the Sisters of St. Paul of Chartres were called to take charge of the orphanages. In each district some chapels have been built, with residences for the missionaries. In 1892 a seminary was built at Ryong-saun near Seoul. The quasi-cathedral church of Seoul was solemnly consecrated 29 May, 1898. The parish schools have been opened anew, or organized upon a better footing. It has even been possible to open in the great centres a few schools for girls, a thing which Korean usage would never before have permitted. In 1875 the missionaries published a dictionary and a grammar in French and Korean. The movable type then cast has served as a standard for all that is used to-day. The mission possesses a printing-house for the publication of Korean Catholic books, and of a weekly Korean Catholic newspaper, founded in 1906, which counts more than 4000 subscribers. As a striking event of this period may be noted the conversion to Catholicism of the princess, the mother of the emperor and the true wife of the terrible regent. Christian in her heart even before the persecution of 1866, she was baptized and confirmed 11 October, 1896, but in great secrecy and unknown even to those about her. The following year she received, under the same conditions, the Sacraments of Penance and of Holy Eucharist, and died piously 8 January, 1898. The Vicars Apostolic of Corea have been: Barthélémy Brugière (1831-35); Laurent-Marie-Joseph Imbert (1837-39); Jean-Joseph Ferréol (1843-53); Siméon-François Berneux (1854-66); Marie-Antoine Nicolas Daveluy (1857-66); Félix Clair Ridet (1870-84); Jean-Marie-Gustave Blanc (1884-90); Gustave-Charles-Marie Mutel (1890-).

The following statistics show the state of the missions in 1907: 1 bishop; 46 French missionaries; 10 Korean priests; 11 French sisters; 41 Korean sisters; 72 schools for boys, with 1,014 pupils; 5 schools for girls, with 191 pupils; 2 orphanages, with 28 boys and 261 girls; 379 orphans placed in families; 2 pharmacies; 1 seminary, with 22 preparatory students and 9 theological students; 48 churches or chapels; 48 districts; 931 Christian parishes; 63,340 baptized Christians; 5,503 catechumens under instruction. G. MUTEL.

Corfu, ARCHDIOCESE OF.—Corfu is one of the Ionian Islands, at the entrance of the Adriatic, opposite the Albanian coast, from which it is separated by a narrow channel. Its modern name is an Italian corruption for *Koppol* (pronounced *Corfi*), the Byzantine Greek name for the chief town of the island. The ancient name for both island and city was *Cercyra* or *Corcyra*. This has been identified with the Homeric *Scheria*, where reigned Alcinous, king of the Phæaciens, the host of Ulysses, and Nausicaa's

father. In 735 B. C. the island received Corinthian colonists led by Chersicrates. Its navy and trade increased to such an extent that as early as 664 B. C. it could wage war upon Corinth. During the Peloponnesian War, when allied with the Athenians, Corfu fitted out 120 ships and overcame its suzerain. But internal strife soon caused the decay of its power; while the people sided with the Athenians, the aristocracy were helped by the Corinthians. From the rule of the Macedonians Corfu passed to that of the Romans. Under the Byzantines it became practically the capital of the Ionian Islands and of the neighbouring cities in Epirus (Preveza, Buthrotum, etc.), and signalized itself by courageous conflicts with Dalmatians, Bulgars, and Saracens. About the end of the twelfth century it formed a duchy under the despots of Epirus. Charles of Anjou, King of Naples, conquered it in 1274. It recovered its independence by expelling the Neapolitan garrison and took refuge in the protectorate of Venice. After the capture of Constantinople, Mohammed II sent an army which laid unsuccessful siege to Corfu to punish it for having helped Buthrotum. Solymán II was equally unsuccessful, though he took away 16,000 prisoners. In 1716 Ahmed III was also driven back, the inhabitants being helped by the Saxon general Matthias Schulenburg and inspired by a monk who led the way bearing an uplifted cross. For a brief while, together with Venice (1791), Corfu came under French rule, and was then successively conquered by the Turks and the Russians (1799). The Seven Islands were united in a republic under a Turkish and Russian protectorate. The Treaty of Tilsit gave them again to the French in 1807, but in 1809 the islands, with the exception of Corfu, fell into the power of England. In 1815 the United States of the Ionian Islands were put under the protectorate of Great Britain, with Corfu as capital and residence of the governor. On 8 March, 1864, the islands were annexed to Greece, and since this time Corfu (Gr. Kerkira), with Paxos, Santa Maura (Leukas), and Ithaca, etc. have formed a nomarchy or province of the kingdom.

The island has a mild, salubrious climate. It is hilly, with rather barren valleys, and produces corn and oil. Brimstone and marble are among its exports. The whole population is about 70,000. Italian is still much used, together with Greek, chiefly among the Catholic population. The city of Corfu is situated on the eastern coast and boasts of a broad and good port. It exhibits ruins of a temple of Poseidon, a cenotaph of Menecrates, and a statue of Schulenburg. In 1861 the late Empress Elizabeth of Austria built there, in the purest Greek style, her magnificent palace, the Achilleion, named after a colossal statue of Achilles on one of the terraces of the park; this palace has been bought by the Emperor of Germany. The population of the city is about 17,000; 5000 Jews, 4000 Catholics, the rest orthodox Greeks.

According to legend the Church of Corfu was founded by St. Jason, a disciple of St. Paul, but the first known bishop is Apollodorus, present at Nicæa in 325. It was at first a suffragan of Nicopolis in Epirus Vetus, but in the Middle Ages was made a metropolis. Since 1900 it has again become a simple bishopric. (See "Echos d'Orient", III, 285 sqq.) Among its distinguished prelates were St. Arsenius, a tenth-century author of homilies, and Georgius Bardanes, in the thirteenth century, a fiery adversary of the Latins. (See Lequien, II, 145.) The island honours as its patron the celebrated St. Spyridon, whose relics lie in the Greek cathedral. Since the thirteenth century Corfu has also been a Catholic archiepiscopal see. The archdiocese includes Paxos, Antipaxos, other islets, and several localities in Epirus, between Parga and Sasino; the Catholics,

however, have almost completely disappeared except in Corfu. There is but one parish, with six churches or chapels, and some ten priests. The Sisters of Our Lady of Compassion conduct a school and an orphanage. (For the episcopal list see Lequien, III, 877, completed by Gams, 399, and Eubel, I, 217, II, 152.) Among the archbishops, the famous Benedictine Cardinal, Angelo Maria Quirini, who died in Italy in 1759, deserves mention.

S. PÉTRIDÈS.

Coria (CAURIA), DIOCESE OF (CAURIENSIS), in Spain, suffragan of Toledo; it includes nearly the entire province of Cáceres, with the exception of a few parishes that belong to the Diocese of Salamanca. The first mention of a Diocese of Coria is in 589 when its bishop, Jacintus, subscribed the acts of the Third Council of Toledo. Under Visigothic rule Coria was a suffragan of Merida. During the Arab conquest the episcopal list was continued by means of titular bishops; one of them, Jacobus, appears among the prelates who assisted at the consecration of the church of Compostela in 876. After the reconquest of the city (1142) Alfonso VII turned the mosque into a cathedral, and had it reconsecrated in honour of the Blessed Virgin and all the saints. The first bishop of the new series was Íñigo Navarrón. The statistics for 1906 were: Catholics, 171,041; priests, 250; parishes, 124; churches, 159; chapels, 186.

Corinth (CORINTHUS), a titular archiepiscopal see of Greece. The origin of Corinth belongs to prehistoric legend. About 1100 B. C. this city, delivered from the Argives by the Dorian invasion, became the centre of the Heraclid rule in Peloponnesus; at this time it waged successful wars against neighbouring cities, including Athens. A little later, under the tyranny of the Bacchiadæ (750-657 B. C.), it founded many colonies, among them Coreyra and Syracuse. About 657 B. C. a revolution substituted for tyranny a government based on popular election; from that time Corinth took no great part in Greek history, except as the scene of the Isthmian games and by the transit duty it imposed on all goods passing by its citadel. Its name is scarcely mentioned during the Medie wars, and after beginning the Peloponnesian war (432-404) it handed the direction of it over to Sparta and later on abandoned its ally. The foreign policy of this submissive vassal of Philip (later the federal centre, but not the inspirer, of the Achæan league) was never positive and domestic; its true glory was its luxury, riches, and artistic culture. It gave its name to the third and most ornamental of the orders of Greek architecture. Corinth was captured and plundered by Mummius (146 B. C.), restored and embellished again by Cæsar and Hadrian, and ravaged in turn by the Heruli, Visigoths, and Slavs. In 1205 it was captured by the French, who gave it up to the Venetians, by whom it was held, excepting brief intervals, until 1715. The Turks left it in 1821, and in 1858, after a severe earthquake, it was transferred to the western shore of the gulf. The new town, in the provinces of Argolis and Corinthia, has about 4500 inhabitants, and exports dried currants, oil, corn, and silk. The ancient site is now occupied by a wretched village, Palæo-Corinthos, or Old Corinth, with five churches, probably built where temples had formerly stood. Near by are the lofty Acropolis (Acro-Corinthus) and ruins of a temple and amphitheatre. The ship canal between the

bay of Corinth and the gulf of Ægina, about four miles in length, was opened 8 November, 1893; it had been begun by Nero, and is in great part cut through the solid rock.

St. Paul preached successfully at Corinth, where he lived in the house of Aquila and Priscilla (Acts, xviii, 1), where Silas and Timothy soon joined him. After his departure he was replaced by Apollo, who had been sent from Ephesus by Priscilla. The Apostle visited Corinth at least once more. He wrote to the Corinthians in 57 from Ephesus, and then from Macedonia in the same year, or in 58. The famous letter of St. Clement of Rome to the Corinthian church (about 96) exhibits the earliest evidence concerning the ecclesiastical primacy of the Roman Church. Besides St. Apollo, Lequien (II, 155) mentions forty-three bishops: among them, St. Sosthenes (?), the disciple of St. Paul, St. Dionysius; Paul, brother of St. Peter, Bishop of Argos in the tenth century; St. Athanasius, in the same century; George, or Gregory, a commentator of liturgical hymns. Corinth was the metropolis of all Hellas. After the Byzantine emperors had violently withdrawn Illyricum from papal direction, Corinth appears as a metropolis with seven suffragan sees; at the beginning of the eighteenth century there were only two united in one title. Since 1890 Corinth, for the Greeks, has been a simple bishopric, but the first in rank, Athens being the sole archbishopric of the Kingdom of Greece. Lequien (III, 883) mentions twenty Latin prelates from 1210 to 1700, the later ones being only titular. But Eubel (I, 218; II, 152) mentions twenty-two archbishops for the period from 1212 to 1476.

S. PÉTRIDÈS.

Corinthians, EPISTLES TO THE.—INTRODUCTORY.

—*St. Paul Finds the Church at Corinth.*—St. Paul's first visit to Europe is graphically described by St. Luke (Acts, xvi-xviii). When he reached Troas, at the north-west corner of Asia Minor, on his second great missionary journey in company with Timothy and Silvanus, or Silas (who was a "prophet" and had the confidence of The Twelve), he met St. Luke, probably for the first time. At Troas he had a vision of "a man of Macedonia standing and beseeching him, and saying: Pass over in to Macedonia and help us." In response to this appeal he proceeded to Philippi in Macedonia, where he made many converts, but was cruelly beaten with rods according to the Roman custom. After comforting the brethren he travelled southward to Thessalonica, where some of the Jews "believed, and of those that served God, and of the Gentiles a great multitude, and of noble women not a few. But the Jews, moved with envy, and taking unto them some wicked men of the vulgar sort, set the city in an uproar. . . . And they stirred up the people and the rulers of the city hearing these things. But the brethren immediately sent away Paul and Silas by night to Berea. Who, when they were come thither, went into the synagogue of the Jews, and many of them believed, and of honourable women that were Gentiles and of men not a few." But unbelieving Jews from Thessalonica came to Berea "stirring up and troubling the multitude". "And immediately the brethren sent away Paul to go to the sea; but Silas and Timothy remained there. And they that conducted Paul brought him as far as Athens"—then reduced to the position of an old university town. At Athens he preached his famous philosophical discourse in the Areopagus. Only a few were converted, amongst these being St. Dionysius the Areopagite. Some of his frivolous hearers mocked him. Others said that

that was enough for the present; they would listen to more another time.

He appears to have been very disappointed with Athens. He did not visit it again, and it is never mentioned in his letters. The disappointed and solitary Apostle left Athens and travelled westwards, a distance of forty-five miles, to Corinth, the then capital of Greece. The fearful scourging at Philippi coming not very long after he had been stoned and left for dead at Lystra, together with all his ill-treatment by the Jews, as described in II Cor., must have greatly weakened him. As we are not to suppose that he, any more than his Master, was miraculously saved from pain and its effects, it was with physical pain, nervousness, and misgiving that the lonely Apostle entered this great pagan city, that had a bad name for profligacy throughout the Roman world. To act the Corinthian was synonymous with leading a loose life. Corinth, which had been destroyed by the Romans, was re-established as a colony by Julius Cæsar, 46 B. C., and made the capital of the Roman Province of Achaia by Augustus. It was built on the southern extremity of the isthmus connecting the mainland with the Morea, and was on the great line of traffic between East and West. Its two magnificent harbours, one at each side of the isthmus, were crowded with shipping and were the scenes of constant bustle and activity. Corinth was filled with Greeks, Romans, Syrians, Egyptians, and Jews, many of the last having lately come from Rome on account of their expulsion by Claudius; and its streets were thronged by tens of thousands of slaves. Crowds, too, came from all parts every four years to be present at the Isthmian games. On the summit of the hill to the south of the city was the infamous temple of Venus, with its thousand female devotees dedicated to a life of shame.

It was to this centre of traffic, excitement, wealth, and vice that St. Paul came, probably about the end of A. D. 51; and here he spent upwards of eighteen months of his Apostolic career. He took up his residence with two Christian Jews, Aquila and his wife Priscilla (refugees from Rome), because they were of the same trade as himself. Like all Jews he had learnt a trade in his youth, and in their house he supported himself by working at this trade, viz., that of tentmaker, as he had determined not to receive any support from the money-loving Corinthians. [He began by preaching in the synagogue every Sabbath; "and he persuaded the Jews and the Greeks". Of this period he says that he was with them "in weakness, and fear, and much trembling". The ill-usage he had received was still fresh in his memory, as, writing a month or two later to the Thessalonians, he recalls how he had been "shamefully treated at Philippi". But when he was joined by Silas and Timothy, who brought him pecuniary aid from Macedonia, he became more bold and confident, and "was earnest in testifying to the Jews that Jesus is the Christ. But they gainsaying and blaspheming, he shook his garments and said to them: Your blood be upon your own heads; I am clean: from henceforth I will go unto the Gentiles." He then began to preach in the house of Titus Justus, adjoining the synagogue. Crispus, the ruler of the synagogue, and his family, and several of the Corinthians were converted and baptized. Amongst these were Caius, Stephanas, and his household, and the house of Fortunatus and Achaicus, "the firstfruits of Achaia" (I Cor., i, 14, 16; xvi, 15). The growing opposition of the Jews, however, and the wicked state of the city had a depressing influence upon him; but "the Lord said to Paul in the night, by a vision: Do not fear, but speak; and hold not thy peace, because I am with thee; and no man shall set upon thee to hurt thee; for I have much people in this city. And he stayed there a year and six months, teaching among them the word of God" (Acts, xviii, 9-11). Many were converted; some of them noble, wealthy,

and learned, but the great majority neither learned, nor powerful, nor noble (I Cor., i, 26). During this long period the Faith was planted not only in Corinth but in other portions of Achaia, especially in Cenchreae, the eastern port. At length the unbelieving Jews, seeing the ever-increasing crowd of Christians frequenting the house of Titus Justus, next door to their synagogue, became furious, and rose up with one accord and dragged St. Paul before the newly-appointed Proconsul of Achaia, Gallio, the brother of Seneca (A. D. 54). Gallio, perceiving that it was a question of religion, refused to listen to them. The crowd, seeing this and supposing that it was a dispute between Greeks and Jews, fell upon the ring-leader of the latter (Sosthenes, who succeeded Crispus as ruler of the synagogue) and gave him a sound beating in the very sight of the judgment seat; but Gallio pretended not to notice. His treatment must have cowed the Jews, and St. Paul "stayed yet many days". Cornely is of opinion that at this time he made his journey as far as Illyricum, and that his first visit to them "in sorrow" was when he returned. Others, with greater probability, place it later. St. Paul, at last taking leave of the brethren, travelled as far as Ephesus with Priscilla and Aquila. Leaving them there he went on to Jerusalem and came back by Antioch, Galatia, and Phrygia, where he confirmed all the disciples. After having thus traversed the "upper coasts" he returned to Ephesus, which he made his head-quarters for nearly three years. It was towards the end of that period that the First Epistle was written.

Authenticity of the Epistles.—Little need be said on this point. The historical and internal evidence that they were written by St. Paul is so overwhelmingly strong that their authenticity can be frankly admitted by every distinguished writer of the most advanced critical schools. They were contained in the first collections of St. Paul's Epistles, and were quoted as Scripture by early Christian writers. They were referred to as authorities by the early heretics and translated into many languages in the middle of the second century. The unique personality of St. Paul is impressed upon their every page. Baur, the rationalistic founder of the Tübingen School, and his followers, held the two to the Corinthians, Galatians, and Romans to be unassailable. One or two hypercritical writers, of little weight, brought some futile objections against them; but these were scarcely meant to be taken seriously; they were refuted and brushed aside by such an *ultra* writer as Kuenen. Schmiedel, one of the most advanced modern critics, says (Hand-Kommentar, Leipzig, 1893, p. 51) that unless better arguments can be adduced against them the two Epistles must be acknowledged to be genuine writings of St. Paul. The Second Epistle was known from the very earliest times. There is a trace of it in that portion of "The Ascension of Isaiah" which dates back to the first century (Knowing, "The Testimony of St. Paul to Christ", p. 58; Charles, "The Ascension of Isaiah", pp. 34, 150). It was known to St. Polycarp, to the writer of the Epistle to Diognetus, to Athenagoras, Theophilus, the heretics Basilides and Marcion. In the second half of the second century it was so widely used that it is unnecessary to give quotations.

THE FIRST EPISTLE.—Why Written.—During the years that St. Paul was at Ephesus he must have frequently heard from Corinth, as it was distant only 250 miles, and people were constantly passing to and fro. A ship sailing at the rate of four miles an hour would cover the distance in three days, though on one unpropitious occasion it took Cicero over a fortnight (Ep. vi, 8, 9). By degrees the news reached Ephesus that some of the Corinthians were drifting back into their former vices. Alford and others infer from the words of II Cor., xii, 20, 21; xiii, 1, "Behold this is the third time that I come to you", that he made a fly-

ing visit to check these abuses. Others suppose that this *coming* meant by letter. Be this as it may, it is generally held that he wrote them a brief note (now lost) telling them "not to associate with fornicators", asking them to make collections for the poor brethren at Jerusalem, and giving them an account of his intention of visiting them before going on to Macedonia, and of returning to them again from that place. News which he heard later from the household of Chloe and others made him change this plan, and for this he was accused by his enemies of want of steadiness of purpose (II Cor., i, 17). The accounts which he received caused him great anxiety. Abuses, bickerings, and party strife had grown up amongst them. The party cries were: "I am of Paul; I am of Apollo [Apollon]; I am of Cephas; I am of Christ." These parties, in all likelihood, originated as follows: During St. Paul's circular tour from Ephesus to Jerusalem, Antioch, Galatia, Phrygia, and back to Ephesus, "a certain Jew, named Apollo, born at Alexandria, an eloquent man, came to Ephesus, one mighty in the scriptures, and being fervent in spirit, spoke, and taught diligently the things that are of Jesus, knowing only the baptism of John." Priscilla and Aquila fully instructed him in the Christian Faith. In accordance with his desire he received letters of recommendation to the disciples at Corinth. "Who, when he was come, helped them very much who had believed. For with much vigour he convinced the Jews openly, shewing by the scriptures that Jesus is the Christ" (Acts, xviii, 27, 28). He remained at Corinth about two years, but, being unwilling to be made the centre of strife, he joined St. Paul at Ephesus. From the inspired words of St. Luke, no mean judge, we may take it that in learning and eloquence Apollo was on a par with the greatest of his contemporaries, and that in intellectual powers he was not inferior to Jews like Josephus and Philo. He is likely to have known the latter, who was a prominent member of the Jewish community in his native city of Alexandria, and had died only fourteen years before; and his deep interest in Holy Scripture would certainly have led him to study the works of Philo. The eloquence of Apollo, and his powerful applications of the Old Testament to the Messias, captivated the intellectual Greeks, especially the more educated. *That*, they thought, was true wisdom. They began to make invidious comparisons between him and St. Paul, who on account of his experience at Athens, had purposely confined himself to what we should call solid catechetical instruction. The Greeks dearly loved to belong to some particular school of philosophy; so the admirers of Apollo laid claim to a deeper perception of wisdom and boasted that they belonged to the Christian school of the great Alexandrian preacher. The majority, on the other hand, prided themselves on their intimate connexion with their Apostle. It was not zeal for the honour of their teachers that really prompted either of these parties, but a spirit of pride which made them seek to put themselves above their fellows, and prevented them from humbly thanking God for the grace of being Christians. About this time there came from the East some who had possibly heard St. Peter preach. These regarded the others as their spiritual inferiors; they themselves belonged to Cephas, the Prince of the Apostles. Commentators are of opinion that this party spirit did not go so deep as to constitute formal schism or heresy. They all met together for prayer and the celebration of the Sacred Mysteries; but there were hot disputes and many breaches of fraternal charity. The Fathers mention only three parties; but the text obviously implies that there was another party the members of which said, "I am of Christ". This view is now held by several Catholics, and by many non-Catholics. What was the nature of this party it is difficult to determine. It has been suggested that a few of those who were specially endowed

with spiritual gifts, or *charismata*, boasted that they were above the others, as they were in direct communication with Christ. Another explanation is that they had seen Christ in the flesh, or that they claimed to follow His example in their reverence for the Law of Moses. At any rate, the statement, "I am of Christ", seemed to make Christ a mere party name, and to imply that the others were not Christians in the genuine and perfect sense of the word.

St. Paul, hearing of this state of things, sent Timothy together with Erastus (probably the "treasurer of the city" of Corinth—Rom., xvi, 23) round by Macedonia, to put things in order. Soon after they left, Stephanas and other delegates came with a letter from the Corinthians. This letter contained some self-glorification and requested the Apostle to give a solution to several serious difficulties which they proposed to him; but it made no mention of their shortcomings. By this time he had become fully aware of the grave state of affairs amongst them. Besides party strife, some made light of sins of impurity. One man had gone to the extent of marrying his step-mother, his father being still alive, a crime unheard of amongst the pagans. So far were they from showing horror that they treated him in a friendly manner and allowed him to be present at their meetings. As matters were too pressing to wait for the arrival of Timothy, St. Paul at once wrote the First Epistle to the Corinthians and sent it by Titus, about Easter A. D. 57.

Importance of the First Epistle.—This is generally regarded as the greatest of the writings of St. Paul by reason of the magnificence and beauty of its style and the variety and importance of its contents. So splendid is its style that it has given rise to the conjecture that St. Paul took lessons in oratory at Ephesus; but this is highly improbable. St. Paul's was not the type of eloquence to be moulded by mechanical rules; his was the kind of genius that produces literature on which rules of rhetoric are based. If the Corinthians were impressed by the eloquence of Apollo, they could not help feeling, when they heard and read this Epistle, that there was an author capable of bearing comparison not only with Apollo, but with the best that they could boast in Greek literature, of which they were so justly proud. Scholars of all schools are loud in its praise. The striking similes, figures of speech, and telling sentences of the Epistle have passed into the literatures of the world. Plummer, in Smith's "Dict. of the Bible", says that chapters xiii and xv are among the most sublime passages, not only in the Bible, but in all literature.

But this Epistle is great not only for its style but also for the variety and importance of its doctrinal teaching. In no other Epistle does St. Paul treat of so many different subjects; and the doctrines which are touched upon (in many cases only incidentally) are important as showing what he and Silvanus, a disciple and trusted delegate of the older Apostles, taught the early Christians. In some of his letters he had to defend his Apostolate and the freedom of Christians from the Law of Moses against heretical teachers; but he never had to defend himself against his bitterest enemies, the judaizers, for his teaching on Christ and the principal points of doctrine contained in these two Epistles, the obvious reason being that his teaching must have been in perfect harmony with that of The Twelve. He distinctly states in ch. xv, 11, "For whether I, or they [The Twelve Apostles], so we preach, and so you have believed."

Divisions of the First Epistle.—Instead of giving a formal summary of the contents of the Epistle, it may be more useful to give the teaching of the Apostle, in his own words, classified under various heads, following, in general, the order of the Creed. With regard to arrangement, it may be stated, in passing, that the Epistle is divided into two parts. In the first six chapters he rebukes them for their faults and cor-

rects abuses: (1) He shows the absurdity of their divisions and bickerings; (2) deals with the scandalous case of incest; (3) their lawsuits, before pagans; and (4) the want of sufficient horror of impurity in some of them. In the second part (the remaining ten chapters) he solves the difficulties which they proposed to him and lays down various regulations for their conduct. He deals with questions relating to (1) marriage, (2) virginity, (3) the use of things offered to idols, (4) proper decorum in church and the celebration of the Eucharist, (5) spiritual gifts, or *Charismata*, (6) the Resurrection, (7) the collections for the poor of Jerusalem.

Its Teaching.—God the Father (passim). "Yet there is but one God, the Father, of whom are all things, and we unto him; and one Lord Jesus Christ, by whom are all things and we by him" (viii, 6). Compare II Cor., xiii, 13: "The grace of our Lord Jesus Christ, and the charity of God, and the communication of the Holy Ghost be with you all." (Bengel, quoted by Bernard, calls this an *egregium testimonium* to the Blessed Trinity.)—*Jesus Christ.* (1) "Grace to you and peace from God our Father, and from the Lord Jesus Christ" (i, 3). "You are called unto the fellowship of his Son, Jesus Christ our Lord" (i, 9). "Christ the power of God and the wisdom of God" (i, 24). "We speak the wisdom of God in a mystery, a wisdom which is hidden, which God ordained before the world, unto our glory, which none of the princes of this world knew; for if they had known it, they would never have crucified the Lord of glory" (ii, 7, 8). "But you are washed, but you are sanctified, but you are justified in the name of our Lord Jesus Christ and the Spirit of our God" (vi, 11—see also i, 2, 4, 7, 9, 13; iii, 5, 11; vi, 11; xii, 4-6). (2) "The word of the cross to them that are saved is the power of God" (i, 18). "We preach Christ crucified, unto them that are called Christ the power of God and the wisdom of God" (i, 23, 24). "But of him are you in Christ Jesus, who of God is made unto us wisdom, and justice, and sanctification and redemption" (i, 30). "For I judged myself not to know any thing among you, but Jesus Christ, and him crucified" (ii, 3). "For Christ our pasch is sacrificed" (v, 7). "For you are bought with a great price" (vi, 20—cf. i, 13, 17; vii, 23; viii, 11, 12.) (3) The following passage probably contains fragments of an early creed: "The gospel which I preached to you, which also you have received. . . . For I delivered unto you first of all, which I also received: how that Christ died for our sins, according to the scriptures: and that he was buried, and that he rose again the third day, according to the scriptures: and that he was seen by Cephas; and after that by the eleven. Then was he seen by more than five hundred brethren at once: of whom many remain until this present, and some are fallen asleep. After that, he was seen by James, then by all the apostles. And last of all, he was seen also by me, as by one born out of due time" (xv, 1-8). "Have not I seen Christ Jesus our Lord?" (ix, 1). "And if Christ be not risen again, then is our preaching vain, and your faith is also vain" (xv, 14). "But now Christ is risen from the dead, the firstfruits of them that sleep" (xv, 20—cf. vi, 14). (4) "Waiting for the coming of our Lord Jesus Christ" (i, 7). "That the spirit may be saved in the day of our Lord Jesus Christ" (v, 5). "He that judgeth me is the Lord. Therefore judge not before the time; until the Lord come, who both will bring to light the hidden things of darkness, and will make manifest the counsels of the hearts; and then shall every man have praise from God" (iv, 4, 5).—*The Holy Ghost.* "Now there are diversities of graces, but the same Spirit; and there are diversities of ministries, but the same Lord; and there are diversities of operations, but the same God" (xii, 4-6). "But to us God hath revealed them, by his Spirit. The Spirit searcheth all things, yea, the

deep things of God. . . . the things that are of God no man knoweth, but the Spirit of God" (ii, 10, 11—cf. ii, 12-14, 16). "Know you not, that you are the temple of God, and that the Spirit of God dwelleth in you?" (iii, 16). "But you are washed, but you are sanctified . . . in the name of our Lord Jesus Christ, and the Spirit of our God" (vi, 11). "Or know you not, that your members are the temple of the Holy Ghost, who is in you, whom you have from God; and you are not your own? . . . Glorify and bear God in your body" (vi, 19, 20). "But all these things one and the same Spirit worketh, dividing to every one according as he will" (xii, 11). "For in one Spirit were we all baptized unto one body" (xii, 13). "Yet by the Spirit he speaketh mysteries" (xiv, 2).—*The Holy Catholic Church*. "The head of every man is Christ" (xi, 3).—*Unity*. "Is Christ divided?" (i, 13). "Now I beseech you, brethren, by the name of our Lord Jesus Christ, that you all speak the same thing, and that there be no schisms among you; but that you be perfect in the same mind, and in the same judgment" (i, 10). He devotes four chapters to the reprehension of their divisions, which did not really amount to anything constituting formal schism or heresy. They met in common for prayer and the participation of the Blessed Eucharist. "Know you not that you [the Christian body] are the temple of God . . . but if any man violate the temple of God [by pulling it to pieces], him shall God destroy. For the temple of God is holy, which you are" (iii, 16, 17). "For as the body is one, and hath many members, and all the members of the body, whereas they are many, yet are one body, so also is Christ. For in one Spirit were we all baptized into one body, whether Jews or Gentiles, whether bond or free" (xii, 12, 13). [Here follows the allegory of the body and its members, xii, 14-25.] "Now you are the body of Christ, and members of member" (xii, 27). "And God hath set some in the church; first apostles, secondly prophets . . . Are all apostles?" (xii, 28-31). "For God is not the God of dissension, but of peace: as also I teach in all the Churches of the saints" (xiv, 33). "I have sent you Timothy, who is my dearest son and faithful in the Lord, who will put you in mind of my ways, which are in Christ Jesus: as I teach everywhere in every church" (iv, 17). "But if any man seem to be contentious, we have no such custom, nor the church of God" (xi, 16). "The gospel which I preached to you . . . and wherein you stand; by which also you are [being] saved, if you hold fast after the manner I preached unto you, unless you have believed in vain" (xv, 1-2). "For whether I, or they [The Twelve Apostles], so we preach, and so you have believed" (xv, 11). "The churches of Asia salute you" (xvi, 19).—*Old Testament Types*. "Now all these things happened to them in figure; and they are written for our correction" (x, 11).—*Authority*. "What will you? shall I come to you with a rod; or in charity, and in the spirit of meekness?" (iv, 21). "Now concerning the collections. . . . as I have given order to the churches of Galatia, so do ye also" (xvi, 1).—*Power of excommunication*. "I indeed, absent in body, but present in spirit, have already judged, as though I were present, him that hath so done. In the name of our Lord Jesus Christ, you being gathered together, and my spirit, with the power of our Lord Jesus Christ, to deliver such a one to Satan for the destruction of the flesh, that the spirit may be saved" (v, 3-5).—*Jews and pagans exempt from Church's jurisdiction*. "For what have I to do to judge them that are without . . . For them that are without, God will judge" (v, 12, 13).—*Sanctity*. "For the temple of God is holy, which you are" (iii, 17). "Know you not that your bodies are the members of Christ" (vi, 15). "Your members are the temple of the Holy Ghost . . . Glorify and bear God in your body" (vi, 19, 20—cf. vi, 11, etc.).—*Grace*. "God is faith-

ful, who will not suffer you to be tempted above that which you are able, but will make also with temptation issue, that you may be able to bear it" (x, 13). "Grace be to you . . ." (i, 3). "But by the grace of God, I am what I am; and his grace in me hath not been void, but I have laboured more abundantly than all they: yet not I, but the grace of God with me" (xv, 10).—*Virtuous life necessary for salvation*. "Know you not that the unjust shall not possess the kingdom of God? Do not err: neither fornicators, nor idolaters, nor adulterers, nor the effeminate . . . nor thieves, nor covetous, nor drunkards, . . . shall possess the kingdom of God" (vi, 9, 10). This, like a dominant note, rings clear through all the Epistles of St. Paul as in the teaching of his Divine Master. "But I chastise my body, and bring it into subjection: lest perhaps when I have preached to others, I myself should become a castaway" (ix, 27). "Wherefore he that thinketh himself to stand, let him take heed lest he fall" (x, 12). "Therefore, my beloved brethren, be ye steadfast and unmoveable; always abounding in the work of the Lord, knowing that your labour is not in vain in the Lord" (xv, 58). "Watch ye, stand fast in the faith, do manfully, and be strengthened" (xvi, 13). "Do all to the glory of God" (x, 31). "Be without offence to the Jews, and to the Gentiles, and to the church of God" (x, 32). "Be ye followers of me as I am of Christ" (xi, 1).—*Resurrection of the body and life everlasting*. "For God hath raised up the Lord, and he will raise us up also by his power" (vi, 14). "And as in Adam all die, so also in Christ all shall be made alive." "For star differeth from star in glory. So also is the resurrection of the dead. It is sown in corruption, it shall rise in incorruption. It is sown in dishonour, it shall rise in glory." "Behold, I tell you a mystery. We shall all indeed rise again." "In a moment, in the twinkling of an eye, at the last trumpet: for the trumpet shall sound, and the dead shall rise again incorruptible." (See all of ch. xv.) "We see now through a glass in a dark manner; but then face to face. Now I know in part; but then I shall know even as I am known" (xii, 12).—*Baptism*. "Were you baptized in the name of Paul?" (i, 13). "I baptized also the household of Stephanus" (i, 16). "For in one Spirit were we all baptized into one body" (xii, 13). "But you are washed [*ἀπελούσασθε*], but you are sanctified, but you are justified in the name of our Lord Jesus Christ, and the Spirit of our God" (vi, 11).—*Eucharist*. "The chalice of benediction, which we bless, is it not the communion of the blood of Christ? And the bread, which we break, is it not the partaking of the body of the Lord? . . . But the things which the heathens sacrifice, they sacrifice to devils. . . . You cannot drink the chalice of the Lord and the chalice of devils" (x, 16-21). "For I have received of the Lord that which also I delivered unto you, that the Lord Jesus, the same night in which he was betrayed, took bread, and giving thanks, said: Take ye, and eat: this is my body . . . In like manner also the chalice, etc. . . . Therefore whosoever shall eat this bread, or drink the chalice of the Lord unworthily, shall be guilty of the body and of the blood of the Lord. . . . For he that eateth and drinketh unworthily, eateth and drinketh judgment to himself, not discerning the body of the Lord" (xi, 23-29). On the words of consecration see the two able articles by Dr. A. R. Eagar in "The Expositor", March and April, 1908.—*Marriage*. Its use. Marriage good, but celibacy better.—The marriage of divorced persons forbidden.—Second marriage allowed to Christians; but single state preferable for those who have the gift from God (vii, 1-8). Pauline Dispensation: a Christian is not bound to remain single if his pagan partner is unwilling to live with him (vii, 12-15).—*Virginity*. It is not wrong to marry; but preferable to remain single.—St. Paul's example—"He that giveth his virgin in marriage doth well; and he that giveth her not doth

better." (vii, 25-40.)—*Principles of moral theology.* In ch. vii and following chapters St. Paul solves several difficult cases of conscience, some of them of a very delicate nature, falling under what we should now call the *tractatus de sexto* (sc. *praecepto decalogi*). He would, doubtless, have preferred to be free from the necessity of having to enter into such disagreeable subjects; but as the welfare of souls required it, he felt it incumbent upon him, as part of his Apostolic office, to deal with the matter. It is in the same spirit that pastors of souls have acted ever since. If so many difficulties arose in a few years in one town, it was inevitable that numerous complicated cases should occur in the course of centuries amongst peoples belonging to every degree of barbarism and civilization; and to these questions the Church was rightly expected to give a helpful answer; hence the growth of moral theology.

THE SECOND EPISTLE was written a few months after the First, in which St. Paul had stated that he intended to go round by Macedonia. He set out on this journey sooner than he had anticipated, on account of the disturbance at Ephesus caused by Demetrius and the votaries of Diana of the Ephesians. He travelled northwards as far as Troas, and after waiting some time for Titus, whom he expected to meet on his way back from Corinth, whither he had carried the First Epistle, he set sail for Macedonia and went on to Philippi. Here he met Titus and Timothy. The news that Titus brought him from Corinth was for the most part of a cheering character. The great majority were loyal to their Apostle. They were sorry for their faults; they had obeyed his injunctions regarding the public sinner, and the man himself had deeply repented. We hear no more of the parties of Paul, Apollo, and Cephas, though the letter appears to contain one reference to the fourth party. His friends, who had expected a visit from himself, were deeply grieved at his not coming as he had promised; a few who were his enemies, probably judaizers, sought to take advantage of this to undermine his authority by discovering in this a clear proof of fickleness of mind and instability of purpose; they said that his unwillingness to receive support betrayed want of affection; that he used threatening language when at a safe distance, but was in fact a coward who was mild and conciliating when present; that they were foolish to let themselves be led by one who made the rather enormous pretension to be an Apostle of Christ, when he was nothing of the kind, and was in reality, both naturally and supernaturally, inferior to men they could name. This news filled the soul of St. Paul with the deepest emotion. He purposely delayed in Macedonia, and sent them this Epistle to prepare them better for his coming and to counteract the evil influence of his opponents. It was sent by Titus and two others, one of whom, it is almost certain, was St. Luke. The circumstances under which the Epistle was written can be best gathered from the text itself. We can easily imagine the effect produced when it was read for the first time to the assembled Christians at Corinth, by Titus, or in the sonorous tones of the Evangelist St. Luke. The news that their great Apostle had sent them another letter rapidly spread through the city; the previous one had been such a masterly production that all were eager to listen to this. The great bulk of the expectant congregation were his enthusiastic admirers, but a few came to criticize, especially one man, a Jew, who had recently arrived with letters of recommendation, and was endeavouring to supplant St. Paul. He said he was an Apostle (not one of The Twelve, but of the kind mentioned in the Didache). He was a man of dignified presence, as he spoke slightly of St. Paul's insignificant appearance. He was skilled in philosophy and polished in speech, and he insinuated that St. Paul was wanting in both. He knew little or nothing of St. Paul except by hearsay,

as he accused him of want of determination, of cowardice, and unworthy motives, things belied by every fact of St. Paul's history. The latter might terrify others by letters, but he would not frighten him. This man comes to the assembly expecting to be attacked and prepared to attack in turn. As the letter is being read, ever and anon small dark clouds appear on the horizon; but when, in the second part, the Epistle has quieted down into a calm exhortation to almsgiving, this man is congratulating himself on his easy escape, and is already picking holes in what he has heard. Then, suddenly, as upon the army of Sisara, the storm breaks upon him; lightnings strike, thunder upbraids. He is beaten down by the deluge, and his influence is swept out of existence by the irresistible torrent. At any rate, he is never heard of again. These two Epistles as effectively destroyed St. Paul's opponents at Corinth, as the Epistle to the Galatians annihilated the judaizers in Asia Minor.

Style.—This Epistle, though not written with the same degree of care and polish as the First, is more varied and spontaneous in style. Erasmus says that it would take all the ingenuity of a skilled rhetorician to explain the multitude of its strophes and figures. It was written with great emotion and intensity of feeling, and some of its sudden outbursts reach the highest levels of eloquence. It gives a deeper insight than any other of his writings into the character and personal history of St. Paul. With Cornely, we may call it his "*Apologia pro Vitâ Suâ*", a fact which makes it one of the most interesting of the writings of the New Testament. Erasmus described it as follows: "Now it bubbles up as a limpid fountain; soon it rushes down as a roaring torrent carrying all before it; then it flows peacefully and gently along. Now it widens out as into a broad and tranquil lake. Yonder it gets lost to view, and suddenly reappears in quite a different direction, when it is seen meandering and winding along, now deflecting to the right, now to the left; then making a wider loop and occasionally doubling back upon itself."

Divisions of the Epistle.—It consists of three parts. In the first of these (*chapters i to vii, incl.*), after (1) introduction, (2) the Apostle shows that his change of plan is not due to lightness of purpose but for the good of the people, and his teaching not mutable; (3) he did not wish to come again in sorrow. The repentant sinner, the cause of his sorrow, to be now reconciled. (4) His great affection for them. (5) He does not require, like others, letters of recommendation. They, as Christians, are his commendatory letters. (6) He writes with authority, not on account of arrogance, but because of the greatness of the ministry with which he was entrusted, as compared with the ministry of Moses. Those who refuse to listen have the veil over their hearts, like the carnal Jews. (7) He endeavours to please Christ Who showed His love by dying for all, and will reward His servants. (8) Moving exhortation.

The second part (*chapters viii and ix*) relates to the collections for the poor Christians at Jerusalem. (1) He praises the Macedonians for their ready generosity in giving out of their poverty. He exhorts the Corinthians to follow their example in imitation of Christ Who, being rich, became poor for our sakes. (2) He sends Titus and two others to make the collections and to remove all grounds of calumny that he was enriching himself. (3) He has boasted of them in Macedonia that they began before others. (4) A man shall reap in proportion as he sows. God loves the cheerful giver and is able to repay. Giving not only relieves the poor brethren but causes thanksgiving to God and prayers for benefactors.

The third part (*last four chapters*) is directed against the pseudo-Apostles. (1) He is bold towards some who think he acts from worldly motives. He has powerful arms from God for humbling such and pun-

ishing their disobedience. Some say he terrifies by letters which "are weighty and strong; but his bodily presence is weak, and his speech contemptible". Let such a one understand that such as he is in his Epistle, so will he be when present. (2) He will not pretend, as they do, to be greater than he is, nor will he exalt himself by other men's labours. (3) He asks pardon for talking like a worldly-minded man. It is to counteract the influence of the pseudo-Apostles. He jealously guards the Corinthians lest they be deceived as Eve was by the serpent. (4) If the new-comers brought them anything better in the way of religion, he could understand their submission to their dictatorship. (5) He is not inferior to those superlative Apostles. If his speech is rude, his knowledge is not. He humbled himself amongst them, and did not exact support in order to gain them. The false Apostles profess a like disinterestedness; but they are deceitful workmen transforming themselves into Apostles of Jesus Christ. And no wonder: for Satan transformed himself into an angel of light, and they imitate their master. They make false insinuations against the Apostle. (6) He, too, will glory a little (speaking like a foolish worldly person, in order to confound them). They boast of natural advantages. He is not inferior to them in any; but he far surpasses them in his sufferings for the propagation of the Gospel, in his supernatural gifts, and in the miraculous proofs of his Apostleship at Corinth, "in all patience, in signs, and wonders, and mighty deeds". The Corinthians have all that other Churches had except the burden of his support. He asks them to pardon him that injury. Neither he nor Titus nor any other of his friends overreached them. He writes thus lest he should come again in sorrow. He threatens the unrepentant.

Unity of the Second Epistle.—Whilst the Pauline authorship is universally acknowledged, the same cannot be said for its unity. Some critics hold that it consists of two Epistles, or portions of Epistles, by St. Paul; that the first nine chapters belong to one Epistle, and the last four to another. As these two sections are held to have been written by St. Paul, there appears to be nothing in this view that can be said to be in opposition to the Catholic doctrine of inspiration. But the hypothesis is very far from being proved. Nay more, on account of the arguments that can be alleged against it, it can scarcely be regarded as probable. The principal objection against the unity of the Epistle is the difference of tone in the two sections. This is well stated and answered by the Catholic scholar Hug ("Introduction", tr. by Wait, London, 1827, p. 392): "It is moreover objected how different is the tone of the first part, mild, amiable, affectionate, whereas the third part is severe, vehement, and irrespectively castigatory. But who on this account would divide Demosthenes' oration *De Corona* into two parts, because in the more general defence placidity and circumspection predominate while on the other hand, in abashing and chastizing the accuser, in the parallel between him and Æschines, words of bitter irony gush out impetuously and fall like rain in a storm." This argument is referred to with approval by Meyer, Cornely, and Jacquier. Others have explained the difference of tone by supposing that when the first nine chapters were finished fresh news of a disagreeable kind arrived from Corinth, and that this led St. Paul to add the last four chapters. In the same way the parenthetical section (vi, 14, vii, 2), which seems to have been inserted as an afterthought, can be explained. It was added, according to Bernard, to prevent a misconception of the expression used in vi, 11, 13, "our heart is enlarged . . . be you also enlarged", which in the O. T. had the bad meaning of being too free with infidels. St. Paul's manner of writing has also to be taken into account. In this, as in his other Epistles, he speaks as a preacher who now addresses one portion of his

congregation, now another, as if they were the only persons present, and that without fear of being misunderstood. Dr. Bernard thinks that the difference of tone can be sufficiently accounted for on the supposition that the letter was written at different sittings, and that the writer was in a different mood owing to ill-health or other circumstances. The other objections brought against the unity of the Epistle are ably refuted by the same author, whose argument may be briefly summarized as follows: The last section, it is said, begins very abruptly, and is loosely connected with the previous one by the particle *δέ*. But there are several other instances in the Epistles of St. Paul where transition is made in precisely the same way. In the last part, it is objected, people in open rebellion are denounced, whereas that is not the case in the first portion. Still, there is clear reference in the first section to persons who accused him of being fickle, arrogant, brave at a distance, etc. One of the strongest arguments against the integrity is that there are several verses in the first nine chapters which seem to presuppose an equal number of passages in the second, and the contention is that the last section is a portion of an earlier Epistle. But on closer examination of each passage this connexion is seen to be only apparent. On the other hand, there are at least as many passages in the last part which clearly and unmistakably look back to and presuppose verses in the first. It is remarkable, moreover, that the only extant fragments of the supposed two Epistles should fit so well. It has also been urged that the First Epistle is not "painful" enough to account for statements in the Second. But a close examination of i, 11, 14; ii, 6; iii, 1, 2, 3, 4, 18; iv, 8, 9, 10, 18, 19; v, etc., of the First Epistle, will show that this objection is quite unfounded. The linguistic unity between the two portions of the Epistle is very great; and many examples can be given to show that the two sections were always integral portions of one whole. The evidence afforded by early manuscripts, translations, and quotations points strongly in the same direction.

ORGANIZATION OF THE CHURCH AT CORINTH AS EXHIBITED IN THE TWO EPISTLES.—There is nothing in either Epistle which enables us to say what was the precise nature of the organization of the Church at Corinth. In I Cor., xii, 28, we read: "And God indeed hath set some in the church; first apostles, secondly prophets, thirdly doctors; after that [the gift of] miracles; then the graces [*charismata*] of healings, helps, governments [or wise counsels], kinds of tongues, interpretations of speeches. Are all apostles? . . . Are all workers of miracles? Have all the grace of healing?" From the whole context it is clear that this passage is nothing else than an enumeration of extraordinary gifts, and that it has no bearing whatsoever on church government. The word *apostle* is probably used here in its broad sense, not as meaning the Apostles of Jesus Christ, but the apostles of the Church. If it is meant to include the former, then the reference is not to their ruling power, but to their supernatural gifts, upon which the whole argument turns. St. Paul thanked God that he spoke with all their tongues. Barnabas is called an apostle (Acts, xiv, 4, 13). In II Cor., viii, 23, St. Paul calls his messengers "the apostles of the churches". (Compare Rom., xvi, 7; Apoc., ii, 2.) The Didache, or "Teaching of the Twelve Apostles", which is probably a work of the first century, has the statement that if an apostle remains till the third day claiming support, he is to be regarded as a false prophet. It also says that every true teacher and true prophet is worthy of his support; and it gives one of the rules for detecting a false prophet. "Prophets and doctors" are referred to in Acts, xiii, 1. It is extremely probable that St. Paul had organized the Church at Corinth during his long stay there as carefully as he had previously done in Galatia ("and when they had ordained to them priests in

every church"—Acts, xiv, 22) and in Ephesus ("wherein the Holy Ghost hath placed you bishops"—Acts, xx, 7, 28). We have these statements on the authority of the author of the Acts, now admitted, even by Harnack, to be St. Luke, the companion of the Apostle. St. Paul had spent six or eight times as long at Corinth as he had at Philippi, yet we find him writing to the latter place: "Paul and Timothy . . . to all the saints in Christ Jesus, who are at Philippi, with the bishops and deacons" (Phil., i, 1—cf. I Thess., v, 12). The principal office of the bishops and deacons was, according to the Didache, to consecrate the Blessed Eucharist. It is only by accident, as it were, on account of abuses, that St. Paul speaks, in the First Epistle, of the form of consecration used at Corinth, and which is substantially the same as that given in the Gospels. Had the abuses not arisen, it seems clear that he would not have referred to the Eucharist. He says nothing of it in the Second Epistle. In that case there would not be wanting those who would have loudly asserted that the Corinthians "knew nothing of it", and, by implication, that the Apostle's mind had not yet developed to that extent. But as he speaks so clearly we may take it as certain, too, that the ministers of the Eucharist were the same as in other places. There is no evidence that it was ever consecrated without a bishop or priest. These, with the deacons, were the regular ministers in each place, under the immediate jurisdiction of the Apostles of Jesus Christ. From all this we may conclude that the Church in Achaia was as regularly organized as the earlier Churches of Galatia, Ephesus, and the neighbouring Province of Macedonia, or as in the Church of Crete (Tit., i, 5). There were "bishops" (which word certainly meant priests and perhaps also our modern bishops) and deacons. Later on, Timothy, and Titus, and others were appointed over these "bishops", priests, and deacons, and were monarchical bishops in the modern sense of the word. Other such bishops succeeded the Apostles. (See BISHOP.)

C. AHERNE.

Coriolis, GASPARD-GUSTAVE DE, French mathematician, b. at Paris, in 1792; d. in the same city, 1843. He entered the Ecole Polytechnique in 1808, and later continued his studies at the Ecole des Ponts et Chaussées. Though determined to become an engineer, he did not enter upon the practice of his profession, but became instead, in the year 1816, a tutor in mathematical analysis and mechanics at the Ecole Polytechnique. In 1838 he succeeded Dulong as director of studies in the same school. He became a member of the Académie des Sciences in 1836. Coriolis was a man of much ability, but his delicate health prevented him from doing justice to his powers. He was a successful educator and together with Gen. Poncelet was one of the pioneers of reform in the methods of teaching mechanics. While engaged in teaching, he at the same time carried on his researches in theoretical and applied mechanics. The theorem enunciated by him regarding relative motions has found numerous applications, particularly in the case of motions taking place on the surface of the earth: as, for example, the deviation towards the west of

falling bodies, the apparent rotation of the plane of vibration of a pendulum, etc. Coriolis was the author of "Calcul de l'effet des machines" (1829), which was reprinted in 1844 with the title "Traité de la mécanique des corps solides", and of "Théorie mathématique du jeu de billard" (1835). He also published a number of articles, notably in the "Dictionnaire de l'industrie".

MARIE, *Hist. des sciences math. et phys.* (Paris, 1888), XII, 190.

HENRY M. BROCK.

Cork (CORCAGIA), DIOCESE OF (CORCAGIENSIS), in Ireland, suffragan of Cashel. St. Finbarr was the founder and first bishop of this see. He was born about the middle of the sixth century at Rathcullen, six miles north of Bandon, and educated in Leinster. Having spent some time on "a green island" in Gougane Barra, he founded a monastery and a school at Lough Eirc, the name given to the marshy expansion of the river Lee, on which the city is built, and from which both city and diocese derive the name Cork (*corcagh*, "marsh"). This monastery seems to have been erected on the elevated plateau to the south of the city, now known as the Rock, close by the palace of the Protestant bishop. Soon many students flocked thither from various parts. They and those interested in them rapidly took possession of the large island in the marsh beneath, built on it, and so gave birth to a city which now numbers over 70,000 inhabitants, and is the residence of the saint's episcopal successor.

The limits of the territory over which St. Finbarr ruled cannot be accurately defined to-day. A fact, however, not generally recognized by historians enables us to conclude that the boundaries were sufficiently clear even in the most ancient times. Finbarr's father was chief metal-worker to Tigheerach, chief of Ui Eachach Mumhan. As the saint advanced in years he was venerated as a patron by the entire sept, and so obtained spiritual jurisdiction over their wide territories. The eastern and western limits were respectively Cork and Mizen Head, and there are arguments to show that the northern and southern were the Avonmore (Blackwater) and the ocean. In the Synod of Rathbreasail (1110) these are also named as the limits of the Diocese of Cork, whence it would appear that the sept lands and the diocese were coterminous, as was the case with St. Faughnan's Diocese of Ross, which coincides with the lands of the O'Driscolls; and that of St. Munchin, Limerick, with those of Ui Fighente, in later times O'Donovans. At some period after the twelfth century part of the territory between the Lee and Blackwater to the north was detached in favour of the neighbouring Diocese of Cloyne; the land of the O'Driscolls had been already erected into the Diocese of Ross; and to-day Cork is approximately bounded on the north by the city and suburbs, and the River Lee as far as Gougane Barra, on the east by Cork Harbour, on the south by the Diocese of Ross and the ocean, and on the west by Bantry Bay.

The church and monastery founded by St. Finbarr were naturally the centre of the diocese till the sixteenth century. For many years the successor to the first abbot was also bishop of the diocese. Other churches and monasteries, however, grew up in the city itself and in the territories over which he ruled. In a document dated 1199, in which Innocent III confirms to the Bishop of Cork his various privileges, mention is made of eight churches in the city, the first being Sancta Maria in Monte, doubtless St. Mary's, Shandon, close by which stands the Catholic cathedral of to-day. Two centuries later (1309), in the will of John de Wychedon, we find the names of no fewer than fifteen churches, all in the city, four of them bearing names such as "Lepers of Dilby", "Lepers of Glenamore"; but a hundred years after

this (1462), in a charter of Edward IV, we find only eleven churches mentioned. Of the churches in country districts during this long period we have no definite account. The Carmelites were introduced into Kinsale in 1334 by Robert Balmrin; much earlier, in the seventh century, we find mention of Saint Gobban, abbot of a monastery of regular canons in the same town. In Bantry Dermot O'Sullivan Beare built a convent for Franciscans about 1463, and McCarthy Lauder had done likewise at Ballymacadane on the Bandon Road in 1460. Tracton Abbey, two miles west from Carrigaline, was begun in 1224, and the great monastery of Kilcrea, five miles west of Cork, was founded by MacCarthy Mor in 1466, who is interred in the middle of the choir.

At the Reformation, when Bishop Bennett was deprived of the temporalities of the see (1535), such of the churches as remained passed into Protestant hands. Among others the old church of St. Finbarr, called Gill Abbey, after a famous bishop of the twelfth century (1152-72), seems to have remained in some form till 1725. At that date it was removed to make room for a more modern building, which in turn has been succeeded by the present Protestant cathedral. After the Sequestration the Catholics had perforce to rest contented with very humble "Mass-houses", as contemporary accounts describe them. In the reports given by government officials in 1731 we find many of them put down as huts; and the addition "built since George the 1st" applied to the names of many more. The existing churches of the diocese have been erected in recent years on, or near, the sites of these last monuments of persecution. In the five parishes into which the city is divided there are thirteen public churches, besides private oratories and chapels attached to institutions. In each of the thirty parishes in country districts there are one, two, or three churches, according to the population, all of recent erection, and built in a manner that befits the great mysteries they enclose. Of the city parishes two—that called the North, or St. Mary's, and that of Sts. Peter and Paul—are held by the bishop. In the former stands the pro-cathedral, begun by Dr. Moylan in 1729, a red sandstone structure, overlooked by a magnificent tower of the same material, due to the energy of a well-known Cork priest.

The lists of successors to St. Finbarr in the bishopric vary considerably with the different authorities. The present (1908) occupant of the see is described as the 59th, or the 105th, from the first bishop. The latter number seems to be the more correct, though somewhat too large. Two have been raised to the altars of the Church—St. Nessian and Blessed Thaddeus McCarthy. The veneration of the former dates from ancient times, that of the latter from 1492, when he died a pilgrim at Ivrea in Piedmont, Italy. First appointed Bishop of Ross, and expelled therefrom on a false charge, he was nominated to the united Dioceses of Cork and Cloyne. Unable to occupy the see owing to the opposition of the Geraldines, etc., he journeyed to Rome, won his cause, but died amid wonderful evidences of sanctity on the return journey. The decree of his beatification was published in 1895. Giolla Aedh O'Muighin (1152-72) was a famous bishop. He practically refounded the old monastery of St. Finbarr; like his great predecessor he belonged to a Connacht clan. The Four Masters speak of him as "the tower of the virginity and wisdom of the time".

Three centuries after his death (1430), at the instance of the Bishop of Cloyne, the two Dioceses of Cork and Cloyne were united, and remained thus for three hundred years (1747). During the seventeenth century the united bishoprics were more than once governed by vicars apostolic. This occurred in 1614-20 and again in 1666-76. During the same period Catholic citizens of Cork were more than once expelled for their religion; frequently the Catholics of the

province were forbidden to live in walled towns or fortified places (1644, 56, 72). In 1693, on the representation of King James, the administration of Ross was given to the reigning Bishop Sleyne. It seems to have remained in the hands of his successors until 1747, when it passed into the jurisdiction of the newly enfranchised Bishopric of St. Colman.

The Diocese of Cork possessed a chapter, with twelve prebendaries and the usual dignitaries. Though re-established by Dr. Delaney in 1858-59, it dates from the twelfth century; naturally it ceased to exist during the years of persecution. The religious orders and congregations in the diocese are eight in number: Augustinians (second foundation, Red Abbey, in fifteenth century); Dominicans (first foundation Abbey of the Island, 1229); Friars Minor (first foundation near Wise's Hill, 1214); Carmelites (Kinsale); Franciscan Capuchins; Vincentians; Fathers of Charity; Society of African Missions, the last four being quite modern foundations. There are in addition two teaching orders of men, the Christian and Presentation Brothers, besides 11 communities of nuns; the latter are: Presentation (4 houses), Ursulines (2 houses), Sisters of Mercy (4 houses), Sisters of Charity (4 houses), Good Shepherd (1 house), French Sisters of Charity (2 houses), Sisters of Marie Réparatrice (1 house), Bon Secours (1 house), Sisters of the Poor (1 house), Sisters of the Assumption (1 house), the last nursing the poor in their own homes.

At the census of 1891 the Catholic population of the diocese numbered 178,461. They are attended by one bishop and 114 priests, who administer 35 parishes, of which 5 are in the city. Kilcrea Abbey and Gougane Barra are the best preserved among the early monuments of the diocese. A great part of the former still stands. The latter is an island on which are the ruins of a square court, with walls fourteen feet thick, in which are eight cells or cloisters rudely arched over. Each of the cells is ten feet deep by seven broad, and the court fifty feet square. It was here that St. Finbarr prepared himself by prayer and seclusion in the lonely shadows of the mountains that surround the lake for the great work of founding a city and a diocese.

P. SEXTON.

Cork, SCHOOL OF.—The monastic School of Cork had a wide reputation, especially in the seventh and eighth centuries. The name is derived from the Irish *corcagh*, which means a marsh, for in ancient times the floods of the River Lee covered the low ground on which most of the present city of Cork was afterwards built. The founder of the School and Diocese of Cork was Barra or Baire (Barry), more commonly called Finbarr the Fair-haired. His family belonged to the Hy Brinin Ratha, a tribe that dwelt on the eastern shore of Lough Corrib, in the County Galway; but his father, a skilful *cerd*, or certified worker in brass, was forced to migrate to Hy Liathain, in the west of the County Cork, where the saint was born about the middle of the sixth century. His chief teacher was a certain MacCuirc, or Curporius, who himself, it is said, had been a student under St. Gregory the Great in Rome. To perfect himself in the science of the saints, Barra retired to a hermitage in a small island of the lonely lake which still bears his name, Gougane Barra. Callanan's splendid poem in praise of the romantic beauty of this lake has made its name familiar to all Irishmen. From Gougane Barra, it would appear, Barra returned to his native territory, where he founded some dozen churches before he

finally established himself near the marsh of Lough Eirc (Eirce), which appears to have been the original name of the place. There he founded a monastic school about 620, which in a short time attracted a multitude of students and produced many great scholars. The Irish "Life of Finbarr" gives the names of a dozen of these holy and learned men, who in turn became founders of churches and schools in the South of Ireland. The most distinguished of them was St. Colman Mac Ua Cluasaigh, *Ferlegind* or professor in the School of Cork about the year 664.

At that time all Ireland was devastated by a terrible yellow plague which carried off two-thirds of the population. There was a prevalent idea that the pestilence could not, or at least did not, extend beyond nine waves from the shore. So Colman and his pupils wisely resolved to migrate from their monastery in the marshes of Cork to one of the islands in the high sea. Being a poet and a holy man he composed a poem, mostly in Irish, committing himself and his pupils to the protection of God and His saints, especially the patron saints of Erin. As they sought their island refuge the students chanted the poem verse by verse, each one reciting his own stanza until it was finished, and then they began again. Fortunately

lines themselves do. The School of Cork continued to flourish for many centuries, even after the Danes had established themselves there; in 874 we find recorded the death of a "Scribe of Cork", and in 891 we are told of the death of a certain son of Connudh,

"a scribe, wise man, bishop and abbot of Cork". In 1134 the ancient monastery and School of Cork, which had fallen into decay, were refounded by the celebrated Cormac MacCarthy, King of Munster. (See FINBARR, SAINT.)

JOHN HEALY.

ST. MARY'S CATHEDRAL, CORK

Corker, MAURUS, an English Benedictine, b. in

1636 in Yorkshire; d. 22 December, 1715, at Paddington near London. His baptismal name, James, he exchanged for Maurus when he entered the order. On 23 April, 1656, he took vows at the English Benedictine Abbey of Lamspringe near Hildesheim, in Germany, and returned to England as missionary in 1665. Being accused by Titus Oates of implication in "the Popish Plot" he was imprisoned in Newgate, but was acquitted of treason by a London jury, 18 July, 1679.

QUEENSTOWN HARBOUR, CORK

most of this poem still survives, and is printed in the "Leabhar Imuin" or "Book of Hymns" (edited by J. H. Todd, Dublin, 1855-69). The language is of the most archaic type of Gaelic, and is interspersed here and there with phrases mostly taken from Scripture, but made to rhyme with each other as the Gaelic

Hereupon he was arraigned for being a priest and sentenced to death, 17 January, 1680. Through influential friends he was granted a reprieve and detained in Newgate. While thus confined he is said to have reconciled more than a thousand Protestants to the Faith. One of his fellow-prisoners at Newgate was

the saintly Oliver Plunket, Archbishop of Armagh, with whom he formed an intimate friendship, and whom he prepared for his martyrdom, which took place, 15 June, 1681. Some very interesting correspondence which was carried on in prison between these two confessors of the Faith was published in the "Irish Ecclesiastical Record" (Sept., 1883). On the accession of James II in 1685, Father Corker was released and kept at the court as resident ambassador of Prince-Bishop Ferdinand of Bavaria, the Elector of Cologne. In 1687 he erected the little convent of St. John at Clerkenwell, where religious services were held for the public, but which was destroyed by a mob, 11 November, 1688, during the revolt against King James. Father Corker himself was obliged to seek refuge on the continent. In 1691 he was made Abbot of Cismar near Lübeck and, two years later, of Lampringe, where he had made his religious profession. In 1696 he resigned as abbot and returned to England to continue his missionary labours. He is the author of various pamphlets proving the innocence of those condemned for implication in the fictitious "Popish Plot."

GILLOW, *Bibl. Dict. of Eng. Cath.* s. v.; WELDON, *Chronicle of the English Benedictine Monks* (London, 1881), 219, etc.; CHALLONER, *Memoirs of Missionary Priests* (Derby, 1843), II; MORAN, in *Irish Ecc. Record*, IV, 613 sq.; TAUNTON, *The English Black Monks of St. Benedict* (London, 1898), II, passim; SPILLMANN, *Die Blutszeugen aus dem Tagen der Titus Oates Verschwörung* (Freiburg im Br., 1901), 135 sq.

MICHAEL OTT.

Cormac MacCuilenan (836–908), an Irish bishop and King of Cashel, was of the race of Eoghannacht, of Southern Ireland, and in his early years received a good education in one of the Irish schools. He was ordained priest, and afterwards appointed Bishop of Cashel. In the year 900 he became, on account of his descent, King of Cashel, and thus were combined in his person the two offices of spiritual and temporal ruler of Leth Moga, as the southern portion of Ireland was called. The *ardri* (high king), Flann, assisted by the King of Leinster, led his forces into the Southern Province (906), and was met by the Munstermen under Cormac at Moylena (Tullamore). The *ardri* suffered a signal defeat. Later on, however (908) Flann, assisted by Ceorball, King of Leinster, and Cathal, King of Connaught, returned to the attack, apparently because Cormac, instigated by Flaherty, Abbot of Inniscathay, had claimed tribute from Leinster, and had even signified his intention of assuming the position of *ardri*. The battle was fought at the present Ballymoon; the Munstermen suffered a complete defeat and Cormac was killed in the battle. An Irish Glossary called "Sanas Chormaic", containing etymologies and explanations of over 1400 Irish words has come down to us. Though, etymologically, the work is of little value, yet on account of the light it throws upon many ancient Irish customs and institutions it is of great importance to the historian. The "Glossary of Cormac" is said to be only a part of the "Saltair Chaisil", also attributed to Cormac. This work, if it ever existed, has disappeared, or, as W. Stokes thinks, it is more likely that at best the "Saltair Chaisil" was only a collection of transcripts of manuscripts from the hands of different writers. The above-mentioned "Sanas Chormaic", or "Cormac's Glossary", was translated and annotated by John O'Donovan and edited by W. Stokes (Calcutta, 1868). See Stokes, "Three Irish Glossaries" (London, 1862).

JAMES MACCAFFREY.

Cornaro, ELENA LUCREZIA PISCOPIA, a learned Italian woman of noble descent, b. at Venice, 5 June, 1646; d. at Padua, 26 July, 1684. Her father, Gio-

vanni Battista Cornaro, was Procurator of St. Mark's. At the age of seven she began the study of Latin and Greek under distinguished instructors, and soon became proficient in these languages. She also mastered Hebrew, Spanish, French, and Arabic, earning the title of "Oraculum Septilingue". Her later studies included mathematics, philosophy, and theology. In 1665 she took the habit of a Benedictine Oblate without, however, becoming a nun. In compliance with her father's wishes she entered the University of Padua and after a brilliant course of study received the doctorate in philosophy. The degree was conferred 25 June, 1678, in the cathedral of Padua in presence of many persons eminent for learning and rank. Elena was a member of various academies and was esteemed throughout Europe for her attainments and virtues. The last seven years of her life were devoted to study and charity. She was buried in the church of Santa Giustina at Padua and her statue was placed in the university. Her writings, published at Parma in 1688, include academic discourses, translations, and devotional treatises. In 1685 the University of Padua caused a medal to be struck in her honour. In 1895 Abbess Mathilda Pynsent of the English Benedictine Nuns in Rome had Elena's tomb opened, the remains placed in a new casket, and a suitable tablet inscribed to her memory.

Biographies (in Italian) by DEZA (Venice, 1686); LUPIA (Venice, 1689); BACCHINI (Parma, 1688); more recently, DE SANTI (Rome, 1890); ABBESS PYNSSENT, *Life of Helen Lucreria Cornaro* (Rome, 1896). For an account of the bibliography see *Civiltà Cattolica* (Rome, 1898–1899), 17th series, vols. IV, V; BAILEY, *A Daughter of the Doges in Amer. Cath. Quart. Review* (Philadelphia, 1896), XXI, 820.

E. A. PACE.

Corneille, JEAN-BAPTISTE, French painter, etcher, and engraver, b. at Paris between 1646 and 1649; d. there, 12 April, 1695. He was the youngest son of Michel Corneille of Orléans, and brother of the younger Michel. He is known as "the younger Corneille". His devoted father was his teacher and painstakingly prepared the youth for his future successes as an historical painter. In 1664 he won the second prize and in 1668 the first prize of the academy. He then went to study in Rome and, on his return in 1675 was received into the Royal Academy, painting for his reception-picture the "Punishment of Busiris by Hercules", now one of the notable canvases in the Louvre. He painted in some of the Paris churches and in 1679 finished his "Deliverance of St. Peter from Prison" for the Cathedral of Notre-Dame. With Jacques Vouet he was employed on the decorations of the Tuileries. In 1692 he was appointed professor in the academy.

His style, like his brother's, was that of the school of the Desiderosi, but Jean was somewhat inferior to the younger Michel in composition and drawing. Many of the paintings of this excellent artist were engraved by contemporaries, a few by the great Mariette, and Jean himself engraved and etched plates after his own designs and finished pictures, and after the Carracci. His work with acid and the burin was spirited and exhibited his thorough mastery of technic. He commenced and finished his plates after the manner of Agostino Carracci. His most important plates were: "Bust of Michelangelo", "St. Bernard", "Mercury in the Air", and "St. John in the Wilderness" (after Annibale Carracci).

For bibliography, see article CORNEILLE, MICHEL (the Younger).

LEIGH HUNT.

Corneille, MICHEL, a French painter, etcher and engraver, b. in Paris in 1642; d. at the Gobelins manufactory at Paris, 16 August, 1708. He was the son of an artist, Michel Corneille of Orléans, and on this account is sometimes called the "younger Michel". He is also and more commonly known as

1. The first step in the process of identifying a problem is to define the problem. This involves identifying the symptoms of the problem and determining the scope of the problem. Once the problem has been defined, the next step is to identify the causes of the problem. This involves identifying the factors that are contributing to the problem and determining the underlying causes. Once the causes have been identified, the next step is to develop a plan of action. This involves identifying the steps that need to be taken to solve the problem and determining the resources that will be needed to implement the plan. Finally, the last step is to implement the plan and monitor the results. This involves putting the plan into action and tracking the progress of the solution. Once the problem has been solved, the final step is to evaluate the results and determine if the solution was effective. This involves comparing the results of the solution to the original problem and determining if the problem has been resolved.

During the 1950s, the "Cold War" between the United States and the Soviet Union was at its height. The United States was concerned about the spread of Communism and the loss of its global influence. The Soviet Union, on the other hand, was trying to expand its power and influence around the world. This led to a series of events, including the Cuban Missile Crisis, which brought the world to the brink of nuclear war. The United States eventually won the crisis, but the Cold War continued for several more decades.

DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT
WASHINGTON, D. C. 20246

1. The first part of the document is a letter from the President of the United States to the Congress, dated January 1, 1861. It is a formal address, and it is the first of its kind since the signing of the Constitution. The President, James Buchanan, is addressing the Congress, and he is doing so in a very formal and dignified manner. He is discussing the state of the Union, and he is discussing the issues that are facing the country at that time. He is also discussing the role of the President, and he is discussing the responsibilities of the Congress. The letter is a very important document, and it is a very interesting one to read. It is a document that shows the President's view of the country, and it is a document that shows the President's view of the Congress. It is a document that is worth reading, and it is a document that is worth studying.

3. The results show the Chinese stock market is not efficient, especially in the short run. The results suggest that the Chinese government should improve the market mechanism and the information disclosure system to make the market more efficient.

... ..

him from Cornelius were known to Eusebius, who gives extracts from one of them (Hist. Eccl., VI, xliii), in which the pope details the faults in Novatian's election and conduct with considerable bitterness. We incidentally learn that in the Roman Church there were forty-six priests, seven deacons, seven subdeacons, forty-two acolytes, fifty-two ostiarii, and over one thousand five hundred widows and persons in distress. From this Burnet estimated the number of Christians in Rome at fifty thousand, so also Gibbon; but Benson and Harnack think this figure possibly too large. Pope Fabian had made seven regions; it appears that each had one deacon, one subdeacon and six acolytes. Of the letters of Cornelius to Cyprian two have come down to us, together with nine from Cyprian to the pope. Mgr. Mercati has shown that in the true text the letters of Cornelius are in the colloquial "vulgar Latin" of the day, and not in the more classical style affected by the ex-orator Cyprian and the learned philosopher Novatian. Cornelius sanctioned the milder measures proposed by St. Cyprian and accepted by his Carthaginian council of 251 for the restoration to communion, after varying terms of penance, of those who had fallen during the Decian persecution (see CYPRIAN).

At the beginning of 253 a new persecution suddenly broke out. Cornelius was exiled to Centumcellæ (Civita Vecchia). There were no defections among the Roman Christians, all were confessors. The pope "led his brethren in confession", writes Cyprian (Ep. ix, ad Corn.), with a manifest reference to the confession of St. Peter. "With one heart and one voice the whole Roman Church confessed. Then was seen, dearest Brother, that faith which the blessed Apostle praised in you (Rom. i, 8); even then he foresaw in spirit your glorious fortitude and firm strength." In June Cornelius died a martyr, as St. Cyprian repeatedly calls him. The Liberian catalogue has *ibi cum gloriâ dormicionem accepit*, and this may mean that he died of the rigours of his banishment, though later accounts say that he was beheaded. St. Jerome says that Cornelius and Cyprian suffered on the same day in different years, and his careless statement has been generally followed. The feast of St. Cyprian was in fact kept at Rome at the tomb of Cornelius, for the fourth century "Depositio Martirum" has "XVIII kl octob Cypriani Africa Romæ celebratur in Callisti". St. Cornelius was not buried in the chapel of the popes, but in an adjoining catacomb, perhaps that of a branch of the noble Corneliî. His inscription is in Latin: CORNELIUS* MARTYR* whereas those of Fabian and Lucius are in Greek (Northcote and Brownlow, "Roma sotteranea", I, vi). His feast is kept with that of St. Cyprian on 14 September, possibly the day of his translation from Centumcellæ to the catacombs.

The two Latin letters will be found in all editions of CYPRIAN. A better text is in MERCATI, *D'alcuni nuovi sussidi per la critica del testo di S. Cypriano* (Rome, 1899). They will be found with the fragments in COUSANT, *Epp. Rom. Pont.* and in ROUTH, *Reliquia Sacra*. There is a spurious letter to St. Cyprian in the appendix to his works, another to Lupicinus of Vienne, and two more were forged by Pseudo-Isidore. All these will be found in the collections of councils and in MIGNE. The pseudo-Cyprianic *Ad Novatianum* is attributed to Cornelius by NELKE, *Die Chronol. der Correspondenz Cyprians* (Thorn, 1902); but it is by an unknown contemporary. On Cornelius see TILLEMONT, III; Acta SS. 14 Sept.; BENSON, *Cyprian* (London, 1897). The Acts of St. Cornelius are valueless.

JOHN CHAPMAN.

Cornelius, PETER, later when ennobled, VON CORNELIUS, b. at Düsseldorf, 23 September, 1783; d. at Berlin, 6 March, 1867. In 1811 he went to Rome, where he stayed until 1819. Returning home he became director of the Academy of Fine Arts at Düsseldorf; while at Düsseldorf he also executed works on a large scale for the Crown-Prince of Bavaria, later Louis I. In 1825 Cornelius was appointed director of the Academy at Munich, and for a long time

Louis I of Bavaria was his liberal patron. After fifteen years, however, misunderstandings and the envy of detractors obliged Cornelius to accept the position offered him by Frederick IV of Prussia as director of the Academy of Fine Arts at Berlin, which office he retained until his death. Cornelius early developed poetic imagination, great energy, courage for large undertakings, and technical skill. He felt himself called to accomplish great tasks, and soon occupied himself with a large theme, the illustration of Goethe's "Faust". The publication of the first six sheets furnished Cornelius with the means for his first visit to Rome. Here he joined the Italian colony of German artists, the so-called "Nazarene painters", and was powerfully stimulated both by working with them and by their enthusiasm for a new school of German-Christian art. This intercourse, however, entailed no loss of his independence and native force. He drew the remaining six pictures for "Faust", illustrated the "Romeo and Juliet" of Shakespeare, whose works just at this period were becoming better known in Germany, and filled by the rising national spirit of his country made drawings for the old German epic, the "Nibelungenlied".

PETER VON CORNELIUS

While at Rome his longing to express great conceptions in fresco-painting on a large scale had its first opportunity of fulfilment. The Prussian ambassador, Bartholdy, gave a commission to the German painters for the decoration of his house on Monte Pincio with frescoes from the Old-Testament story of Joseph; through Bartholdy's influence the same painters received an order from the Marchese Massimi to paint frescoes from the works of Ariosto, Tasso, and Dante in his villa near the Lateran. Some of these frescoes have a deservedly high reputation, as: "Joseph before Pharaoh", "Joseph and his Brethren", "Dante before Peter, James, and John", as well as other groups in the cartoons for scenes in Paradise. Three of the Dante cartoons were completed, but one of them has since vanished. The superiority of Cornelius to the entire circle of his artist-friends, Overbeck included, became so clear to men like Niebuhr and Prince Louis of Bavaria that the two positions above-mentioned, at Düsseldorf and Munich, were offered him. No longer hampered by material cares or artistic limitations, Cornelius had now full opportunity and a fine field for the carrying out of his ideals. A commanding place in the artistic world of his own country was a long time assured him, and the attainment of his hopes for the development of art on a heroic scale in Germany seemed near. The first ten years of his life in Düsseldorf and Munich as a professor and working artist formed a period of great renown and success.

As director Cornelius took up with vigour the reorganization of the art academies of Munich and Düsseldorf, but his influence in the latter city was not permanent. After he had made Munich his permanent residence and most of his friends had followed him there, the academy at Düsseldorf, under the direction of Schadow, pursued other aims, one of the main differences being that the scheme of de-

veloping painting in fresco on a heroic scale was abandoned. At the same time Cornelius did not find at Munich all the assistants he had wished; above all Overbeck had not followed him. Besides this the pupils did not meet the great problems of painting in fresco with skill equal to his; he was also not able to obtain in every case competent teachers for the theoretical instruction in the subsidiary sciences which at that time he held to be absolutely essential. Moreover, the favour of the king was too extreme to be permanent, nor could it fail to arouse envy. After 1820 Cornelius and his pupils decorated two halls and an entrance chamber of the Glyptothek at Munich, a building intended for the exhibition of ancient sculpture. The subjects were, for the two halls, the gods and heroes of classic antiquity and, for the entrance chamber, the history of primitive man, the compositions being based on Greek mythology. The selection gave the artist the opportunity of presenting beautiful forms, strong action,

and the avoidance of repellent nudity distinguish the painting from Michelangelo's "Judgment" on the altar wall of the Sistine Chapel. The colour scheme, it must be acknowledged, is somewhat lacking in harmony, and the light in the church is unfavourable. King Louis saw the fresco under peculiarly unfortunate circumstances, and Cornelius fell into disgrace.

In 1841 he went to Berlin where the art-loving Frederick William IV became his unwavering patron. While at Berlin he drew for the royal mausoleum planned by the king the celebrated cartoons: "Christ Conquering Sin", intended for the east wall of a cloister designed in connexion with a new cathedral; "Christ Conquering Death", for the west wall of the cloister; "Christ in His Church", for the south wall, and "Christ at the End of the World", taken from the imagery of the Apocalypse, for the north wall. In harmony with the scheme of the cartoons is the painting for the apse of the intended cathedral, "Mankind Awaiting the Day of Judgment", completed by Cornelius in 1856. During his residence at Berlin Cornelius produced his most mature work as a draughtsman; his designs were at all times so complete that they were not certain to gain by execution in colour. The cartoons for the royal mausoleum, of which the one for the north wall was on the scale of the intended fresco, met fairly undisputed approval. His work as head of the German School at Rome and as leader in Germany of aspiring artists gives Cornelius the position of a pioneer of the nineteenth century in asserting high ideals and in developing technic on the heroic scale.

H. GRIMM, *Neue Essays* (Berlin, 1865); VON WOLZOGEN, *Peter von Cornelius* (Berlin, 1867); RIEDEL, *Cornelius, der Meister der deutschen Malerei* (Hanover, 1870); FÖRSTER, *Peter von Cornelius, ein Gedenkbuch* (Berlin, 1874); CARRIÈRE in *Neuer Plutarch* (Leipzig, 1880); ECKERT, *Peter Cornelius* (Bielefeld, 1906), gives on p. 131 a complete bibliography. G. GIETMANN.

THE FOUR KNIGHTS OF THE APOCALYPSE—PETER VON CORNELIUS

and lofty ideals; at the same time he could make use of symbolical allusions as they are conceived by Dante.

Cornelius has been called a poet and thinker; the loftiness and unity of conception displayed by these frescoes justify the assertion. The mastery of the difficult proportion of space shown is astonishing; the surfaces seem to have been planned for the frescoes and not the frescoes for the spaces. On the other hand, the inequality of execution especially in regard to colour is very striking. Cornelius allowed great liberty to his unequally gifted pupils; still much of the work, especially what he painted himself, is excellently carried out, as: "The Fall of Troy", "The Judges of the Lower World", "Eros with an Eagle", and "Eros with Cerberus". It must be acknowledged that Cornelius was not strong in colour, although his frescoes from the life of Joseph in the Villa Bartholdy are in all particulars satisfactory. King Louis I allowed him to make only the drawings for the loggias of the Pinakothek; the execution of the work was entrusted to Clemens Zimmermann. In these designs Cornelius gave in an unconstrained manner, yet one full of thought and imagination, the history of German and Italian painting. He hoped to have an opportunity in the new church, the "Ludwigskirche", to create a Christian epic which should be a Divine Comedy in colour, but to his bitter disappointment he was only commissioned to decorate the choir and transept. The subject chosen for delineation was the Christian conception of the Creation, Redemption, and the Last Judgment; the gigantic fresco of the Judgment, containing 2500 square feet, was painted by Cornelius himself (1836-39). Parts of the fresco show great merit in composition and drawing; a reverent composure

Cornelius Cornelii a Lapide (CORNELIS CORNELIJSSEN VAN DEN STEEN), Flemish Jesuit and exegete, b. at Bocholt, in Flemish Limburg, 18 December, 1567; d. at Rome, 12 March, 1637. He studied humanities and philosophy at the Jesuit colleges of Maastricht and Cologne, theology first, for half a year, at the University of Douai, and afterwards for four years at Louvain; he entered the Society of Jesus, 11 June, 1592, and, after two years' novitiate and another year of theology, was ordained priest 24 December, 1595. After teaching philosophy for half a year, he was made professor of Holy Scripture at Louvain in 1596 and next year of Hebrew also. Twenty years later, in 1616, he was called to Rome in the same capacity, where, on the 3rd of November, he assumed the office which he filled with such renown for many years after. The latter years of his life, however, he seems to have devoted exclusively to finishing and correcting his celebrated commentaries. He was a sincerely pious and zealous priest and an exemplary religious. During his professorship at Louvain he liked to spend his holidays preaching and administering the sacraments, especially at the pilgrimage of Scherpenheuvel (Montaigu). With moving simplicity and truth he portrayed himself in an emotional prayer to the Prophets at the end of his commentary on Daniel: "For nearly thirty years I suffer with and for you with gladness the continual martyrdom of religious life, the martyrdom of illness, the martyrdom of study and writing; obtain for me also, I beseech you, to crown all, the fourth martyrdom, of blood. For you I have spent my vital and animal spirits; I will spend my blood too." With his brethren in religion at Rome he enjoyed so high a reputation for sanctity that, when he died, they gave him a separate burial place, in order to be the more certain of finding his bones when eventually, as they hoped, he should receive the honour of beatification.

Cornelius a Lapide wrote ample commentaries on all the books of the Catholic Canon of Scripture, with the exception only of Job and the Psalms. Even before leaving Flanders, he edited the "Commentarius in omnes divi Pauli epistolas" (1614) and "in Pentateuchum" (1616), both at Antwerp. The commentaries on the Greater and Lesser Prophets, on the Acts of the Apostles, the Canonical Epistles and the Apocalypse, Ecclesiasticus and the Proverbs, followed later on. The rest were edited only after his death; but all of them have been several times re-edited, both separately and collectively. Of the Commentary on the Epistles of St. Paul he himself was permitted to see at least eleven editions. The complete series, with Job and the Psalms added by other hands, appeared at Antwerp, 1681, 1714; at Venice, 1717, 1740, 1798; at Cologne, 1732; at Turin, 1838; at Lyons, 1839-42, 1865 and 1866; at Malta, 1843-46; at Naples, 1854; at Lyons and Paris, 1855 and 1856; at Milan, 1857; at Paris, 1859-63. The last-mentioned edition has been enriched by Crampon and Péronne with many annotations from more recent interpreters. All these commentaries are on a very large scale. They explain not only the literal, but also the allegorical, tropological, and anagogical sense of the sacred text, and furnish a large number of quotations from the Fathers and the later interpreters of Holy Writ during the Middle Ages. Like most of his predecessors and contemporaries, a Lapide intends to serve not only the historical and scientific study of the Bible, but, even more, the purposes of pious meditation, and especially of pulpit exposition. An extract from the commentary on the Acts appeared in 1737 at Tynau, under the title: "Effigies Sancti Pauli, sive idea vitæ apostolicæ". A large work in 4 vols., "Les trésors de Cornelius a Lapide: extraits de ses commentaires de l'écriture sainte à l'usage des prédicateurs, des communautés et des familles chrétiennes", by the Abbé Barbier, was published at Le Mans and Paris, 1856, re-edited at Paris, 1859, 1872, 1876, 1885, 1896; and an Italian translation of the same, by F. M. Faber, appeared at Parma, 1869-70, in 10 vols., 16 mo.

These numerous editions show how highly these works are estimated by Catholics. But Protestant voices have joined in the appreciation. G. H. Goetzius (Leipzig, 1699) wrote an academical dissertation, "Exercitatio theologica de Cornelii a Lapide Commentariis in Sacram Scripturam", in which he praises the Jesuit author as the most important of Catholic Scriptural writers. An English translation of the complete commentaries was undertaken by the Rev. Thomas W. Mossman, an Anglican clergyman, under the title, "The great Commentary of Cornelius a Lapide" (London, 1876—). A manuscript in the Vatican Library contains an Arabic translation of the Commentary on the Apocalypse, by Yusuf ibn Girgis (beginning of the eighteenth century). The same Maronite writer is said to have translated the Commentary on the Epistles of St. Paul.

JOHN P. VAN KASTEREN.

Cornely, KARL JOSEF RUDOLF, German Biblical scholar and Jesuit, b. 19 April, 1830, at Breyell in Germany; d. at Treves, 3 March, 1908. On the completion of his classical studies he matriculated at Münster in Westphalia to study philology and theology. In 1852 he joined the Society of Jesus. Recognizing his abilities, his superiors determined to give him the best possible training both practical and theoretical. Consequently, his novitiate finished, he took a two years' course of Scholastic philosophy at Paderborn and Bonn and another year of sacred and profane oratory. Then he was sent to Feldkirch to teach

Latin, Greek, and German, and to preside at the disputations of the students of philosophy from 1857 to 1859. After this practical experience he returned to Paderborn to go through the necessary course of dogmatic and moral theology previous to his ordination in 1860. The next years he devoted to special study of the Scriptural sciences and languages in Germany, at Ghazir near Beirut, in Egypt, and in Paris, and by dint of hard labour acquired an extensive knowledge of Syriac, Arabic, Samaritan, and Aramaic. After five years thus spent in special work, he was recalled to Maria-Laach, the theologate of the Society, to review his varied acquirements in the light of dogmatic theology and to prepare his theses for the final examination and the degree of Doctor in the Society. After the customary third year of probation spent in study and practice of the exercises and the Institute of St. Ignatius, he was appointed professor of Scripture and Oriental languages at Maria-Laach.

When the Jesuits founded the periodical "Stimmen aus Maria-Laach", Father Cornely became at first a regular contributor and then its editor from 1872 to 1879. His style is remarkable for clearness and vigour and compares favourably with the great German classics. The ring of indignation and irony in his articles against the Old Catholics, on the Protestant Association, and on political hypocrisy finds its explanation in the unwarranted attacks and in the relentless persecution of the Church and of the order to which he belonged. The expulsion of the Jesuits from Germany in 1872 interrupted his career as a professor and rendered the task of the editor extremely difficult. With three or four of his brethren he took up his residence at Tervuren near Brussels, and though many of his collaborators and the rich library of Maria-Laach were scattered about in different places, he succeeded not only in maintaining the periodical on its former level but also in strengthening and widening its influence on Catholic Germany. Most of the men who from that time on contributed to the "Stimmen" were won and trained by the magnetic personality of Cornely, who frequently inspired and always carefully revised their papers, thus securing uniformity of tone and tendency. An important stage in the development of the "Stimmen" was marked by the appearance of the first supplements (*Ergänzungshefte*), in 1876. This new departure was occasioned by the numerous philosophic writings of Father Tilmann Pesch. They could not all be published in the "Stimmen" without altering the general character of the periodical and sacrificing the interest of some classes of readers. They might, of course, have been separately published in book form. But Cornely was of opinion that a series of supplements to a widely read review would reach larger numbers and would in a manner offset the numerous non-Catholic publications of a similar character. The supplements embody the most varied scholarship: theology, philosophy, literature, and science.

To quicken the interest of his countrymen in the missionary work of the Church, Father Cornely founded in 1873 "Die katholischen Missionen". Intended for German readers this magazine was above all to describe the labours and successes of the German missionary and to give the history, the geography, and the ethnographic features of the German missions in foreign countries. In the beginning Cornely took the lion's share of the work upon himself. Soon, however, the labour was thus divided: Cornely wrote the reports on Europe and Australia; Baumgartner reported on Asia; Kreiten on Africa; and von Hummelauer on America. In 1879 Cornely was appointed professor of exegesis at the Gregorian University in Rome. Here he planned and wrote the first volumes of the "Cursus Scripturæ Sacræ", a complete Biblical encyclopedia, the largest publication of its kind in modern Catholic literature. To carry out a plan so

vast required the combined efforts of many scholars. Cornely himself undertook to write the general and special introductions and the commentaries on the Epistles of St. Paul. Even this task he could not complete, although he discontinued lecturing in 1889 to devote all his energies to the greatest work of his laborious life. Among his writings are: "Introductio generalis in U. T. libros sacros" (Paris, 1893); "Introductio specialis in historicos V. T. libros" (Paris, 1897); "Introductio specialis in didacticos et propheticos V. T. libros" (Paris, 1897); "Introductio specialis in singulos N. T. libros" (Paris, 1897); "Historicæ et criticæ Introductionis in U. T. libros Compendium" (Paris, 1900); "Synopsis omnium librorum sacrorum" (Paris, 1899); "Psalmorum synopsis" (Paris, 1899); "Analyses librorum sacrorum N. T." (Paris, 1888); "Commentarius in priorem ep. ad Corinthios" (Paris, 1890); "Commentarius in epistolam ad Cor. alteram et ad Galatas" (Paris, 1892); "Commentarius in ep. ad Romanos" (Paris, 1896); "Leben des sel. Petrus Faber" (Freiburg, 1900); "Leben des sel. Spinola" (Mainz, 1868).

PETER SCHWEITZER.

Cornet, NICOLAS, a French theologian, b. at Amiens, 1572; d. at Paris, 1663. He studied at the Jesuit college of his native place, took the doctorate of theology at the University of Paris, 1626, and soon became president of the Collège de Navarre and syndic of the Sorbonne or faculty of theology. In this latter capacity he reported to the assembly of the Sorbonne, 1649, seven propositions, two taken from Arnauld's "Fréquente Communion" and five from the "Augustinus" of Jansenius. In spite of strong opposition created by members of the faculty who, with Saint-Amour, appealed to Parliament and by Jansenists like De Bourseis in "Propositiones de gratiâ in Sorbonnæ facultate prope diem examinandæ, propositæ Cal. Junii 1649", and Arnauld in "Considérations sur l'entreprise faite par M. Cornet, syndic de la faculté, en l'assemblée de Juillet 1649", he succeeded in having the Assembly of the Clergy of 1650 denounce the five propositions of the "Augustinus" to Pope Innocent X, who condemned them, 31 May, 1653 (Denzinger, *Enchiridion*, nos. 1092 (966) sq.). Maligned by Jansenist writers like Hermant, Cornet was held in high esteem by Richelieu and Mazarin. His eulogy was pronounced by no less a personage than Bossuet himself (Oraison funèbre de Messire Nicolas Cornet). He left no writings, but is said to have collaborated with Richelieu on the "Méthodes de controverse".

Cornillon, ABBEY OF, founded by Albero, Bishop of Liège, in 1124, three years after St. Norbert had formed the Premonstratensian Order. The abbey

was intended for Canons Regular of Prémontré who had been sent from the Abbey of Floreffe near Namur; it stood on the right bank of the Meuse on an elevation called Mont Cornillon which overlooked the city of Liège. In the early years of the order all Norbertine abbeys were double abbeys, that is to say, the canons lived on one side of the church and the Norbertine nuns, who had charge of the hospital for women, dwelt on the other side. Where an abbey stood on an elevation, as was the case at Cornillon, both the nunnery and the hospital were erected at the foot of the hill. St. Juliana of Cornillon (b. 1193; d. 1258), whose name is connected with the institution of the feast of Corpus Christi, was a nun of this convent. The first abbot of Cornillon was Blessed Lucas, one of St. Norbert's disciples, a learned and holy religious, some of whose writings have been published in the "Bibliotheca Magna Patrum", and also by Migne. The Bishop of Liège, wishing to build a fortress on the heights of Cornillon, gave in 1288, in exchange to the Norbertine canons, another place in his episcopal city where the abbey, now called Beaurepart (Bellus Reditus), stood until it was suppressed by the French Republic in 1796. All the religious refused to take the oath of allegiance to the Republic; some were exiled and one was put to death. The abbey was declared to be of public utility, consequently it was not sold; for a time it served as an arsenal and for other government purposes, but by decree of 11 June, 1809, Napoleon gave the abbey to the Bishop of Liège, as the bishop's residence and diocesan seminary. Where the Abbey of Mont Cornillon originally stood the Little Sisters of the Poor have erected a home for old people, and close to the home, but below, at the foot of the hill, the former convent is now inhabited by Carmelite nuns. Part of the church of the nuns has remained as it was when St. Juliana of Cornillon prayed in it and was favoured with visions which led to the institution of the feast of Corpus Christi.

Cornoldi, GIOVANNI MARIA, professor, author, and preacher, born at Venice, 29 Sept., 1822; d. at Rome, 18 Jan., 1892. He entered the Society of Jesus in 1840 and taught philosophy at Bressanone and Padua for many years. From 1880 until his death he belonged to the editorial staff of the "Civiltà Cattolica", at Rome and often preached at the church of the Gesù. He was an ardent disciple of St. Thomas and wrote many works in explanation of his doctrine and in refutation of Rosminianism. His "Lezioni di Filosofia" (Rome, 1872) was translated into Latin by Cardinal Agostini under the title "Institutiones Philosophicæ ad mentem divi Thomæ Aquinatis". In addition to his purely philosophical writings he published a commentary on the "Divina Commedia" of Dante, illustrated from philosophy and theology. He founded academies in honour of St. Thomas at Bologna and at Rome and established two periodicals, "La Scienza Italiana" and the journal of the "Accademia di S. Tommaso". He was a man of great amiability, zealous and fervent in religious life.

Civiltà Cattolica, 1892, I, 348-352, gives a full list of his writings; HURTER, *Nomenclator*.

Coronado, FRANCISCO VASQUEZ DE, explorer, b. at Salamanca, Spain, 1500; d. in Mexico, 1553. He went to Mexico before 1538, and is said to have been a favourite of the viceroy Don Antonio de Mendoza, who appointed him Governor of New Galicia in 1538. In the year following, on the strength of the

statements of Cabeza de Vaca and other vague reports, the viceroy sent Father Marcos of Nizza with the negro or Moor Estévanico to reconnoitre towards the north. The friar coming back with the news that sedentary Indians had been met beyond what are now the limits of Mexico, an expedition was determined upon and Coronado was made commander.

One of the chief objects of this expedition seems to have been to free Mexico from an idle and unruly element. Hence exaggerated accounts of the northern regions, of the culture of their inhabitants, and of their mineral resources, were purposely spread abroad. Whether or not Coronado knew of this object is not stated. The expedition collected at Compostella on the Pacific coast, and consisted of about 300 Spaniards and 1000 Indians, with 1000 horses and six swivel guns (*pedereros*). There were also a number of sheep and some cattle, and everything indicated that the intention was not only to explore but to colonize. In the course of two years Coronado visited almost every New Mexican *pueblo* then inhabited. The first of the *pueblo* groups touched was what is now called Zuñi, which had become known to the Spaniards through Father Marcos of Nizza the year previous under the name of "Cibola". The first engagement took place about 7 July, at the village of Hauicu of the Zuñi group. Coronado was wounded, but the *pueblo* taken. After that, only one other conflict with Pueblo Indians occurred, viz., near Bernalillo, in New Mexico, on the Rio Grande, in March, 1541. The conduct of Coronado towards the Indians during the whole campaign was humane and he secured their respect and sympathy. New Mexico and Arizona (which he explored as far as the Colorado River) disappointed the expectations of the Spaniards. The wealth in metals supposed to exist there was not found, the inhabited regions were partly barren, and the population less numerous than it had been represented. While Coronado was establishing himself at Zuñi, another expedition, by sea, under the command of Hernando de Alarcón, reached the mouth of the Colorado and explored the course of the river for about two hundred miles inland, but found it impossible to communicate with Coronado, and returned to the Mexican coast.

While at the *pueblo* of Pecos, south-east of the present city of Santa Fé, the Spaniards had been told glowing stories of metallic riches among a tribe called Quivira, said to dwell beyond the great eastern plains. These tales were reported by an Indian from the plains, a captive among the Pecos tribe. Coronado set out for Quivira on 23 April, 1541, with part of his forces, and wandered as far as the confines of Arkansas, then northward as far as southern Nebraska, finding none but nomadic Indians, except at the farthest point reached by him, where the Quivira Indians lived in more stable settlements of houses, round in shape and built of wood, with roofs of grass. They cultivated corn, and the only trace of metal was a piece of native copper which they had obtained from afar. After an absence of six months Coronado returned to New Mexico on the Rio Grande, and while there suffered a fall from his horse, which injured his head seriously. Henceforward he lost energy. His people also were discouraged and, while some were in favour of remaining in New Mexico, the majority clamoured to return to New Spain. In April, 1542, the homeward march was resumed. There remained in the country only Fray Juan de Padilla, a lay brother, Fray Luis, and a Portuguese soldier, Do campo. Coronado reported to the Viceroy Mendoza, who was highly incensed at the failure of his plan to rid New Spain of undesirable elements. Although Coronado was not punished for what was looked upon as disobedience to orders, he fell into a mild disgrace and died in comparative obscurity, leaving a widow and eight children. The reports on his expedition are of the greatest importance for the geog-

raphy, and more particularly ethnography, of the south-western part of North America. They were not so well appreciated at the time as they are now, when the "March" of Coronado is looked upon as one of the most important explorations in America during the sixteenth century.³

Bureau of Ethnology* (Washington, 1906), with Sp. texts and tr.; IDEM, *The Journey of Coronado in The Trailmakers* (New York, 1904); GOMARA, *Historia general de las Indias* (Medina del Campo, 1553); OVIEDO, *Historia general y natural* (Madrid, 1850); HERRERA, *Historia general* (Madrid, 1601); MOTA PADILLA, *Historia de la Nueva Galicia* (Mexico, 1670, though written in 1742); DAVIS, *Coronado's March*; BANDELIER, *Introduction to Studies Among the Sedentary Indians of New Mexico*; IDEM, *Report on the Ruins of the Pueblo of Pecos* (Boston, 1883); IDEM, *Final Report* (Boston, 1888 and 1890); IDEM, *Documentary History of Zuñi*.

AD. F. BANDELIER.

Coronation.—The subject will be treated under the following headings: (I) The Emperors at Constantinople; (II) Visigothic and Celtic Elements; (III) The English Coronation Orders; (IV) The Western Empire and the Roman Pontifical; (V) Other Ceremonials.

I. THE EMPERORS AT CONSTANTINOPLE.—"A coronation rite", it has been well said, "is ideally the process of the creation of the monarch, even though in course of time, through a change in the theory of succession, it may come to be rather the ratification of an accomplished fact than the means of its accomplishment" (Brightman, *Byzantine Coronations*, 359). In the light of this very true remark it will be needful to trace the coronation ceremonies back to a time earlier than the introduction of any ecclesiastical ritual. Down to the reign of Constantine it may be said that coronation, properly speaking, there was none, for it was he who first brought the regal diadem into prominence. Yet certain features about the accession of the emperors in this early period deserve attention. In the first place, theoretically at least, the emperor was elected. Normally, the senate voted and the people, or more commonly the army, acclaimed and in that way ratified the choice. No doubt this procedure was often anticipated and the result was assured before any forms were gone through. But the forms were not dispensed with, and even when the senate or the army had exercised an influence which was decisive, the people met and acclaimed in more or less formal comitia. In spite, however, of the principle of election, the emperor was often able to exercise a predominant voice in the election of his successor or his colleague, as he could also create his wife "Augusta". At this period the more distinctive imperial insignia were "the purple", that is the *paludamentum* (or *chlamys*) of the general in the field, emblematic of the supreme military authority, for the emperor was sole *imperator*; and secondly, the laurel wreath. The more or less violent clothing of the new emperor in the *paludamentum* often constituted a sort of investiture. On his part the promise of a largess to the soldiers, and sometimes to the people, became the equivalent of a formal acceptance of the election.

A new order of things was brought about by Constantine's assumption of the diadem (see Sichel, in *Byzantinische Zeitschrift*, VII, 513-534). Constantine wore it habitually during life (*caput exornans perpetuo diademate*, says Aurelius Victor, Ep. ix), and after death it adorned his corpse. In this way the diadem became the primary symbol of sovereignty, but without at first any prescription of forms according to which it should be conferred. When Julian was proclaimed emperor by his troops in 360, they hoisted him standing upon a shield, a ceremony they seemed to have learned from the German recruits in their ranks, and then a standard-bearer took off the torque, or gold necklace, which he wore and set it upon Julian's head. No other crowning seems to have taken place, but soon after we find the emperor at Vienne

wearing a gorgeous diadem set with jewels. In the case of Valentinian (364) and his son Gratian (367) we have equally mention of a crown assumed amid profuse acclamations of the assembled army. In each case, also, the newly-elected sovereign made a speech and promised a largess to the troops, which Julian fixed at five gold pieces and a pound of silver to each man. Informal as the proceedings in all these cases seem to have been, most of the elements so far mentioned took a permanent place in the coronation ceremonial which was ultimately evolved. Even the Teutonic practice of hoisting upon a buckler (see Tacitus, *Ann.*, XV, 29) though rarely mentioned explicitly, was probably maintained for a considerable time, for it certainly was observed in the election of Anastasius (491) and Justin II (565), and the miniature of the election of David in a tenth-century psalter at Paris, in which he is repre-

the selection of the patriarch may possibly have been due simply to the desire to preclude jealousy and to avoid giving offence to more powerful claimants of the honour. But already in 473, when Leo II was crowned in the lifetime of his grandfather, we find the Patriarch Acacius not only figuring in the ceremony but reciting a prayer before the imposition of the diadem. If it was Leo's grandfather and not Acacius who actually imposed it, that is only on account of the accepted rule, that the reigning emperor in his lifetime is alone

the fount of honour whenever he chooses to commit any portion of his authority to colleague or consort. Following close upon the first intervention of the patriarch, the ecclesiastical element in the coronation ceremonial rapidly develops. At the election of Anastasius (491) the patriarch is present at the assembly of the senate and notables when they

CORONATION OF CHARLEMAGNE BY LEO III (Rathaus, Aachen)

sented standing upon a buckler supported by young men while another sets a diadem on his head, implies that this ceremony was generally familiar at a later date. The diadem, though the military torque after the analogy of Julian's election was often retained as well, was and continued to be the symbol of supreme power, and along with it, from the time of Constantine onward, went the ceremony of "adoration" of the monarch by prostration.

The next epoch-making change seems to have been the introduction of the Patriarch of Constantinople to set the diadem upon the head of the elected sovereign. The date at which this first took place is disputed, for we cannot altogether ignore the alleged dream of Theodosius I who saw himself crowned by a bishop (Theodoret, *Hist. Eccl.*, VI, vi), but Sickel (*loc. cit.*, p. 517; cf. Gibbon, *ch. xxxvi*) holds that the Patriarch Anatolius in 450 crowned Marcian and by that act originated a ceremony which became of the greatest possible significance in the later conception of kingship. At first there seems to have been no idea of lending any religious character to this investiture; and

make their formal choice, and the book of the Holy Gospels is exposed in their midst (Const. Porph., *De Cær.*, I, 92). The coronation does not take place in a sacred building, but an oath is taken by the emperor to govern justly and another written oath is exacted of him by the patriarch that he will keep the Faith entire and introduce no novelty into the Church. Then after the emperor had donned a portion of the regalia, the patriarch made a prayer, and the "Kyrie eleison" (possibly an *ektene* or litany) being said, put upon his sovereign the imperial chlamys and the jewelled crown. The acclamations also which accompany and follow the emperor's speech with its promises of the usual largess, are pronounced religious in character; for example "God will preserve a Christian Emperor! These are common prayers! These are the prayers of the world! Lord help the pious! Holy Lord uplift Thy world! . . . God be with you!" Moreover at the conclusion of the ceremony the emperor went straight to St. Sophia, putting off his crown and offering it at the altar.

The first emperor to be crowned in church was Pho-

cas in 602, and although our records of procedure are somewhat defective, no doubt can be felt that from this time forth the whole ceremonial assumed a formal and religious character. The rite is contained in the "Euchologium", the earliest extant manuscript, dating from about 795. There is a partial clothing with the insignia in the metatorium before the ceremony begins, but the ritual centres in the conferring of the chlamys and crown. Before each of these is imposed the patriarch reads in silence an impressive prayer closely analogous in spirit to what we find in the Western orders at a later date. For example the prayer over the chlamys begins thus: "O Lord, our God, the King of kings and Lord of lords, who through Samuel the prophet didst choose David Thy servant to be king over Thy people Israel; do Thou now also hear the supplication of us unworthy and behold from Thy dwelling place Thy faithful servant N. whom Thou hast been pleased to set as king over Thy holy nation, which Thou didst purchase with the precious blood of Thine only-begotten Son: vouchsafe to anoint him with the oil of gladness, endure him with power from on high, put upon his head a crown of pure gold, grant him long life," etc. After the crowning the people cry out, "Holy, holy, holy" and "Glory to God in the highest and on earth peace", three times. Then Holy Communion is given to the emperor from the reserved Sacrament, or perhaps even the Mass of the Presanctified is celebrated. After which all the standards and halberds are dipped and raised again, and the senators and clergy prostrate in adoration.

One cannot help suspecting that the choice of this particular moment, when the emperor has just received the Sacred Host, for the act of adoration may have been motivated by some foresight of possible conscientious objections about performing such adoration merely to the emperor's person. The rite of prostration, though introduced by Constantine, was probably not unaffected by lingering memories of the pagan apotheosis of the Cæsars. Finally, after the adoration came the *laudes* (see ACCLAMATIONS) or *acta* as they were called in the East (*ἀκρονοεῖν* was the technical word). The cantors cried "Glory be to God in the highest. . . . This is the great day of the Lord. This is the day of the life of the Romans", and so on for many verses, the people repeating each once or thrice. After which "Many, many, many". R. "Many years, for many years". "Long years to you, N. and N., auto-crats of the Romans". R. "Many years to you" and so forth with much repetition. Finally, the emperor leaves the church wearing his crown and going to the metatorium seats himself upon his throne while the dignitaries (*ἀξιωματικοί*) come and do homage by kissing his knees. Although the prayer over the chlamys begs God to "anoint him with the oil of gladness" the early euchologia contain no mention of any rite of unction, and it seems tolerably certain that this was not introduced in the East until the twelfth century (Brightman, loc. cit., 383-386). Even when adopted, the unction was confined to making the sign of the cross with chrism upon the monarch's head. The introduction of this new feature seems to have been accompanied with other changes which are found in the later Byzantine coronations. The investiture with the purple chlamys altogether disappears, but two distinct prayers or blessings are retained, between which are inserted both the unction and the crowning. Finally, we may notice that the emperor is to some extent treated as an ecclesiastic, for he wears a *mandyas*, or cope, and discharges the functions of a *deputatus*, which is, or was, the Greek equivalent of one of our minor orders.

II. VISIGOTHIC AND CELTIC ELEMENTS.—Turning now to the inauguration rite of early kingships in the West the first traces of a coronation order seem to be found in Spain and in Great Britain. Some of the

Spanish councils speak copiously, though vaguely, of the election of kings (Migne, P. L., LXXXIV, 385, 396, 426), and while in the first half of the seventh century there is no mention of unction but only of a profession of faith and promise of just government on the part of the king with a corresponding oath of fealty on the part of his subjects, towards the close of the same century we have the clearest evidence that the Visigothic kings on their accession were solemnly anointed by the Bishop of Toledo. When in 672 the oil was poured upon the head of the kneeling King Wamba a cloud of vapour arose (*evaporatio quædam fumo similis in modum columnæ*, Julian, *Historia*, c. iv; Migne, P. L., XCVI, 766) which was regarded by those present as a supernatural portent. For the rest we know little of this early Spanish coronation rite beyond the fact that it was a religious ceremony and that the king undertook certain obligations towards his people. It is chiefly interesting as supplying the earliest known examples of the unction. Whether this ceremony was instituted by the Spanish bishops in imitation of what they read in the Old Testament concerning the unction of Saul, David, and Solomon (I Kings, x and xvi; III Kings, i) or whether they themselves derived it from some early Christian tradition it seems impossible now to decide.

In view of what has been written of late about the close liturgical relations between Spain and England, via Celtic, i. e. probably Irish, channels (see Bishop in *Journ. of Theol. Stud.*, VIII, 278), it is natural to pass from Spain to the earliest coronations in the British Isles. The statement of Gildas (c. 530?) cannot be ignored, when, speaking of the desolation and corruption of manners in Britain, he says: "ungebantur reges non per Deum, sed qui ceteris crudeliores exstarent, et paulo post ab unctoribus non pro veri examinatione trucidabantur, aliis electis trucidioribus" (*De Excidio*, ch. xxi; Mommsen, 37). Again, in his commentary on the First Book of Kings (x, 1) St. Gregory the Great certainly seems to speak as if the rite of the unction of kings was practised in his time (Migne, P. L., LXXIX, 278). "Ungatur caput regis", he says, "quia spirituali gratiâ mens est replenda doctoris". It may conceivably be that these passages are only metaphorical, but they at least show a familiarity with the conception which might at any moment find expression in actual practice. At the same time no record exists of the use of unction in the earliest Scottish coronations. Gathering up scattered traditions, the Marquess of Bute gives the following ceremonial as representing in all probability the rite of "ordination" of a Celtic king, say the Lord of the Isles, in the seventh and eighth centuries. There was a gathering of the principal people of the nation including, if possible, seven priests. The new ruler was elected unless a *tanist* (a lieutenant with right of succession) had been elected already. The king was clad in white and Mass was celebrated down to the Gospel. After the Gospel the king was made to set his right foot in the foot-print of Fergus Mor Mac Erca, the impression of which was cut in stone; there he took an oath to preserve all the ancient customs of the country and to leave the succession to the *tanist*. His father's sword or some other sword was then placed in one of his hands and a white rod in the other, with suitable exhortations. After this a bard or herald rehearsed his genealogy. Re-entering the church seven prayers were recited over him by, if possible, as many priests, one at least of these prayers being called the Benediction, during which he who offered it laid his hand upon the king's head. The Mass was then finished and the king probably Communicated. At the conclusion of the whole he gave a feast and distributed a largess (Bute, *Scottish Coronations*, 34). It will be noticed that here, as in the earlier Spanish ritual, there is no mention of a crown or diadem, and though the unction which is so prominent a feature in the Spanish ceremony is ap-

parently lacking, still our information is too fragmentary to enable us to speak with confidence, more especially in view of the casual utterance of Gildas.

III. THE ENGLISH CORONATION ORDERS.—But of all detailed ceremonials for the investiture of a monarch the earliest which has been preserved to us in a complete form is one of English origin. It is known as the Egbertine Order, because the best-known manuscript in which it is contained is an Anglo-Saxon codex which professes to be a copy of the Pontifical of Archbishop Egbert of York (732–766). We cannot in such a case be secure against the possibility of subsequent interpolations, for the Egbert Pontifical, now at Paris (MS. Latin 10,575), is only of the tenth century, but the character of the coronation order itself is quite consistent with an early date. Moreover the same ritual occurs in other early manuscripts, and fragments of it are found embedded in Continental orders, such as that for the coronation of Queen Judith (856). Nearly everything in this Egbertine Order is of interest and we may analyse it rather closely. At the head we find the title: *Missa pro regibus in die benedictionis ejus* (sic). Being, as the title says, a Mass, it begins with a “proper” Introit, collect, lesson from Leviticus (xxvi, 6–9), Gradual, and Gospel (Matt., xxii, 15 sq.). Then occurs the rubric: “the blessing upon a newly-elected king”, upon which follow three prayers of moderate length beginning respectively: “Te invocamus, Domine sancte”, etc.; “Deus qui populus tuus”, etc.; and “In diebus ejus oriatur omnibus aequitas”, etc. The second of these prayers, which still remains practically unchanged in the coronation order used at the accession of King Edward VII, may be quoted here as a specimen:—

“O God, who providest for Thy people by Thy power and rulest over them in love; grant unto this Thy servant Edward our King, the spirit of wisdom and government, that being devoted unto Thee with all his heart, he may so wisely govern this kingdom, that in his time Thy Church and people may continue in safety and prosperity, and that, persevering in good works unto the end, he may through Thy mercy come to Thine everlasting Kingdom; through Jesus Christ Thy Son our Lord. Amen.”

It is worth noting that we have no reason to believe that this prayer or others occurring in the Egbertine Order is necessarily of English origin. On the contrary it seems to have been adapted out of one for the pope occurring in the Gregorian Sacramentary which begins: *Deus qui populus tuus indulgentiâ consulis*, and an intermediate form was used at the coronation of Charles the Bald as King of Lotharingia in 869. After the three prayers we meet the rubric: “Here he shall pour oil upon his head from a horn, with the antiphon: *Unxerunt Salomonem*, etc., and the Psalm *Domine in virtute tuâ*, etc. (Ps. xx). Let one of the bishops say the prayer while the others anoint him.”

The prayer referred to is the *Deus electorum fortitudo*, some phrases of which still remain in the prayer now said immediately before the unction. The same *Deus electorum fortitudo* is found in the coronation order of Queen Judith, who was anointed queen by Hincmar, Bishop of Reims, in 856. It contains allusions to the olive-branch brought by the dove to the ark and to the anointing of Aaron and of the kings of Israel and thus shows itself to have been originally designed for some such purpose as a prayer of unction. Then follows another rubric: “Here all the bishops with the magnates [*principibus*] put the sceptre into his hand.” Some of the texts, however, omit this last rubric and write simply *Benedictio*; and to say the truth the short sentences which follow are very much of the nature of acclamations of benediction, such as we have already quoted from some of the Byzantine orders, though they are a little longer in form and could certainly not have been repeated in Latin by the Anglo-Saxon populace or even the magnates. The

people's share in this function is probably indicated by the simple “Amen” which follows each clause. There are sixteen of these brief clauses and then the rubric announces: “Here a staff is put into his hand”, whereupon another prayer of moderate length is said which is followed by a prayer of blessing, vague and somewhat extravagant in language, preceded by the rubric: “Here let all the bishops take the helmet and set it upon his head.” The simultaneous crowning by several hands is rather a noteworthy feature in the ceremony and it is curious that although in the later “*Liber Regalis*” and other orders the archbishop is named as alone imposing the crown, the illuminations in medieval chronicles and romances almost invariably represent the crown as being put on by at least two bishops standing on either side. After this prayer follows what is perhaps the most interesting rubric of the whole order, though unfortunately even with the aid of our three different manuscripts we cannot restore the text of the latter part with any great degree of confidence. “And all the people shall say three times with the bishops and priests: ‘May King N. live for ever. Amen, Amen, Amen.’ Then shall the whole people come to kiss the prince; and he shall be strengthened on his throne by this [i. e. the following] blessing.” Accordingly before the Mass is suffered to proceed another solemn prayer is said, *Deus perpetuitatis auctor*, which in the Egbert Pontifical is emphasized by a preceding rubric: “Let them say the seventh prayer over the King.” Now the prayer in question is really the eighth, and undoubtedly this fact coupled with traces of marginal numbering which reveal themselves in the Egbert Pontifical lends probability to Lord Bute's theory that this series of prayers betrays Celtic influences and was originally destined for the seven priests whose presence was supposed in the Celtic ritual. The eighth prayer, as he thinks that of the unction, is shown on this hypothesis to be an interpolation of somewhat later date. After this last prayer, *Deus perpetuitatis auctor*, the Mass is resumed. The Mass prayers are Roman and the same Mass prayers are attached to the very early coronation order which Mgr. Magistretti has printed from an Ambrosian pontifical of the ninth century and which he pronounces to be also indisputably Roman. It seems probable enough that we are here again in the presence of the same sort of compromise between Celtic and Roman elements which we find in the Stowe Missal (see CELTIC RITE). At the conclusion of the Mass we find the following rubric—it may perhaps be an interpolation of later date than the rest of the order—and we may here see the King's first proclamation to his people:—

“It is rightful conduct in a king newly ordained to make these three behests [*præcepta*] to his people.

“First, that the Church of God and all Christian folk should keep true peace at all times. Amen.

“The second is that he should forbid all robbery and all unrighteous things to all orders. Amen.

“The third is that he should enjoin in all dooms justice and mercy, that the gracious and merciful God, of His everlasting mercy, may show pardon to us all. Amen.”

It is probable that in this triple division of the primitive oath we have the explanation of a feature which still survives in the English coronation service. Before the king three naked swords are carried, two pointed and one without a point, which is hence known as *curtana*, the sword cut short. The first two swords were known to medieval writers as the sword of the clergy and the sword of justice. They represent the king's two promises, to defend the Church (not, as certain Anglican writers have unwarrantably supposed, to coerce and punish the Church) and to punish evildoers. The third, without a point, most aptly symbolizes the mercy with which, as the sovereign himself is taught to hope for mercy, all his justice is to

be tempered. We have evidence that these three swords were known in English ceremonial as early as Richard I (1189), while the form of oath just cited remained in use until a century later. Upon this oath something more will need to be said.

Towards the end of the tenth century we find that a new coronation order was in use in England. It incorporated most of the Egbertine Order but it added much new matter. Various considerations show that it was an attempt to imitate the imperial coronation of the Carolingian monarchs on the Continent, and our knowledge of the imperial state assumed by King Eadgar strongly suggests that it is to be assigned to the date of his deferred coronation (973). Another modification took place shortly after the Conquest and is probably to be traced to Norman influences which made themselves felt in Church and State. But the most important English order is that introduced at the coronation of Edward II, in 1307, and known as that of the "Liber Regalis". It lasted practically unaltered through the Reformation period and though translated into English upon the accession of James I it was not substantially modified until the coronation of his grandson James II, and it may be said even at the present day to form the substance of the ritual by which the monarchs of Great Britain are crowned. While it contained many prayers in common with those used in the imperial coronation of the Western Empire and those of the existing "Pontificale Romanum" it also preserved many distinctive features. A short synopsis of it will be serviceable.

After the sovereign had been solemnly brought to Westminster Abbey church and had made an offering at the altar, he was conducted to a raised platform erected for the purpose and there he was presented to the people, who, on a short address from one of the bishops, signified by acclamations their assent to the coronation. Then the king was interrogated by the archbishop as to his willingness to observe the laws, customs, and liberties granted by St. Edward the Confessor, and he was required to promise peace to the Church and justice to his people, all which he confirmed by an oath taken upon the altar. Next they proceeded to the unction, which was introduced by the *Veni Creator* and the litanies, during which the king remained prostrate on his face. For the unction the king was seated and his hand, breast, shoulder-blades, and joints of the arms were all anointed with the oil of catechumens, an anthem and several long prayers being recited the while. Finally his head was anointed, first with the oil of catechumens and afterwards with chrism. The next stage in the ceremony was the dressing and investiture of the monarch. A tunic (*colobium sindonis*) was put upon him with sandals upon his feet and spurs. Then he was girded with a sword and received the *armilla*, a sort of stole put about the neck and tied to his arms at the elbows. These were followed by the *pallium*, or cloak, formerly the equivalent of the chlamys, or purple *paludamentum*, and fastened by a clasp over the right shoulder, but now represented in English coronations by a sort of mantle like a cope. Then the crown was blessed by a special prayer, *Deus tuorum corona fidelium*, and imposed by the archbishop with two other prayers. This was followed by the blessing and conferring of the ring and finally the sceptre and rod were presented, also with prayers. A further long blessing was pronounced when the king was conducted to the throne there to receive the homage of the peers. Then if there was no queen consort to be crowned, Mass began immediately, a Mass with "proper" prayers and preface and a special benediction given by the archbishop before the *Agnus Dei*. After the *Credo* the king again went to the altar and offered bread and wine and a mark of gold. The kiss of peace was brought to the king at his throne but he went humbly to the altar to Communicate, after which he received a draught of wine from St. Edward's stone chalice. At

the end the king was conducted to the shrine of St. Edward where he made an offering of his crown.

As already remarked, the service for the coronation of the King of England even in modern times remains substantially the same, though English has been substituted for Latin and though many transpositions and modifications have been introduced in the prayers and ceremonies, all distinctively Roman expressions being studiously suppressed. The Mass of course gives place to the communion service of the Book of Common Prayer, but the sovereign still offers bread and wine as well as gold, and down to the coronation of Queen Victoria even the "proper" preface was retained. Indeed its omission and other omissions and changes introduced for the first time in the coronation of King Edward VII were prompted only by the desire to abbreviate a very long service. The most serious alteration in the medieval form is of course in the oath. Since the time of William III the king has sworn to maintain "the Protestant Reformed Religion established by Law"—a phrase which has always been a thorn in the side of those advanced Ritualists who contend that the Church of England has never been Protestant. Moreover since the interrogative form is used, this description is uttered by the Archbishop of Canterbury before the Lords and Commons and the representatives of the whole English Church. On the other hand one clause in the interrogation still stands as it did. The king is asked, "Will you to your power cause Law and Justice in mercy to be executed in all your judgments?" To which he replies, "I will"—a promise which differs but slightly from the undertaking made in the oldest Egbertine Order. After the archbishop's questions have all been answered the king advances to the "Altar", as it is still called, and takes this solemn oath upon the Bible lying there: "The things which I have here before promised I will perform and keep, so help me God." The coronation oath, it should be noticed, must be carefully distinguished from "the Protestant Declaration", which the sovereign by a still unrepealed clause of the Bill of Rights (1689) is required to make on the first day of his first Parliament. In this declaration Transubstantiation and other Catholic doctrines are repudiated and the Mass declared idolatrous. When, as sometimes has happened, the coronation ceremony precedes the first meeting of Parliament, the declaration against Transubstantiation has to be made in the course of the coronation ceremony. The only new element introduced into the English rite since the Reformation is the presenting of the Bible to the sovereign. This like the Protestant Declaration dates from the coronation of William and Mary.

IV. THE WESTERN EMPIRE AND THE ROMAN PONTIFICAL.—There is so much general similarity between the English coronation order in its perfected form and that used for the coronation of the Emperor and the King of the Romans that it will not be necessary to treat this section in great detail. The fact undoubtedly is, though Anglican liturgists ignore it as far as possible, that at each of the early modifications of the English ritual, more especially that under King Eadgar, the imperial ceremonial was freely imitated (see Thurston, *Coronation Ceremonial*, 18-23 sqq.). But owing to the accidental preservation of so many English documents there is no coronation ceremonial in the world the history of which is so well known to us as that of England and we have consequently given it the preference in order of treatment. Apart from Spanish examples, the earliest definite instance of unction of a Christian sovereign seems to be that of Pepin, who was first crowned by St. Boniface, the papal legate at Soissons in 752, and again, together with his sons Charles and Carloman and his wife Bertha, by Pope Stephen at St-Denis, Sunday, 28 July, 754. Charlemagne was solemnly crowned at St. Peter's in Rome by Pope Leo III, on Christmas

Day, 800. The statement of a Greek chronicler that he was anointed from head to foot is probably a mere blunder or gross exaggeration. Despite the efforts of Dr. Diemand (*Das Ceremoniell der Kaiserkrönungen*) to classify the various *Ordines* for the coronation of the emperor and to trace the stages of their development, the subject remains intricate and obscure. We may be content to note rapidly the elements of its complete form.

The ceremony was assumed to take place at Rome, as by right it should, and the first incident was the solemn entry of the emperor into Rome, which should if possible take place on a Sunday or festival. He was met in state outside the walls and escorted to St. Peter's. Next came the reception by the pope, who sat enthroned and surrounded by his cardinals at the head of the steps before St. Peter's, and there the emperor, after kissing the pope's foot, took the coronation oath (Diemand, 108-123), which in its earliest form ran as follows: "In the name of Christ I, N., the Emperor, promise, undertake and protest in the presence of God and Blessed Peter the Apostle, that I will be the protector and defender of the Holy Roman Church in all ways that I can be of help [*in omnibus utilitatibus*] so far as I shall be supported by the Divine aid, according to my knowledge and ability." This undertaking, which at first was clearly not an oath in form, was afterwards strengthened by a number of added clauses, for instance by the words, "I swear upon these Holy Gospels", or again by an explicit promise of fealty to the reigning pope by name and to his successors. There was here also perhaps a prayer of blessing spoken as the emperor was escorted into the church. At one time this was followed by a sort of examination into the fitness of the candidate (*scrutinium*), but this disappeared in the later *Ordines*. He was then received and in a sense enrolled among the canons of St. Peter's and prepared for the anointing. The unction was introduced by the litany and performed by the Bishop of Ostia, who only anointed the right arm and the back between the shoulders with the oil of catechumens. Two prayers follow, both of which have found their way into the English order, though one of them occurs in a contracted form and is used only for conferring the ring. All this took place before the beginning of Mass, but in the later forms of the imperial *ordo* the next item of the coronation service, the bestowal of the insignia and notably of the crown, took place after the Gradual, being thus inserted in the Mass itself. The order in which the insignia were delivered varied much, and in the later forms a mitre was given to the emperor before the crown, and the sceptre was accompanied with an orb. This last had no place in the mediæval English ceremony. After the giving of the insignia the *Laudes*, or acclamations, were sung and then the Gospel was chanted and the Mass resumed its course. The whole ceremony concluded with a solemn procession to the Lateran and a state banquet.

The form used in Germany for the coronation of the King of the Romans retains much in common with the imperial order, but it bears a still closer resemblance to what is known as the "second" English ritual, viz.: that used for the Anglo-Saxon King Eadgar. The fact, as Dr. Diemand points out, seems to have been that the Egbertine Order was reinforced by imperial elements borrowed from abroad, and thus acquired a certain reputation as the most elaborate form for the crowning of a king. Hence it came to be largely copied on the Continent and in that way we find unmistakable traces of prayers originally written for Anglo-Saxon kings travelling into Central Europe and even as far south as Milan. The *ordo* inscribed "De Benedictione et Coronatione Regis", which is still extant in the "Pontificale Romanum", bears much resemblance to the forms

just described used for the coronation of the emperor. For example the *scrutinium* occurs in this form: The king is presented to the consecrating archbishop by two bishops, who petition that he may be crowned, and who, when themselves interrogated as to his fitness, reply that they know him to be a worthy and proper person. The oath follows, also the litany with prostration, and then the anointing on the arm and between the shoulders. Then, after Mass has been begun and brought as far as the Gradual, the king kneeling at the altar-steps receives successively sword, crown, and sceptre, each accompanied with appropriate prayers. Finally the king is solemnly enthroned, the *Te Deum* sung, and the remainder of the Mass follows. A similar, but generally somewhat shorter, rite is observed in the coronation of a queen consort. The prayers often differ from those used for the king and the insignia are naturally fewer.

V. OTHER CEREMONIALS.—In earlier ages almost every country under monarchical government had a coronation ceremony of its own and this was nearly always distinguished by some peculiar features. For example in Aragon the king was expected to pass the preceding night in the church with a purpose which was evidently analogous to that of the knight's vigil spent in the watching of his arms. In Scotland again the right of regal unction and coronation was accorded (1329) in a Bull of Pope John XXII (the crown having previously been regarded rather as a civil ornament) in which the privilege was burdened with the condition that the king should take an oath that he would do his utmost to extirpate from his dominions all whom the Church should denounce as heretics. As a remote consequence of this James VI, the infant son of Queen Mary, or rather Morton, the Regent, in his name, took an oath "to root out all heresy and enemies to the true worship of God that shall be convicted by the true kirk of God of the aforesaid crimes"; the principal among these crimes being the "ydolatre of the odious and blasphemous mass". At present, however, the investiture of sovereigns with the insignia of their office by a religious ceremony is by no means universal, and it is curious that in Spain, a most Catholic country in full diplomatic relations with the Holy See, no such religious ceremony is now in use. Of European countries we may note that the rite followed in France in the fourteenth and subsequent centuries was almost identical in substance with that of the English "Liber Regalis" (see the careful comparison in Dewick's "The Order of Coronation of Charles V", pp. xvi sqq.). The most important differences were first the privilege of the French king, a privilege not shared by his consort, of Communicating under both species, and secondly the use of the oil from the Sainte Ampoule, an oil which according to universal belief had been miraculously brought from heaven by an angel, or a dove, for the baptism of Clovis. This oil down to the Revolution was kept in the Abbey of Reims. The abbot brought the Sainte Ampoule to the coronation and by means of a golden needle a drop of its contents was extracted and mixed with chrism. With this mixture the king was anointed first on the head, then on the breast, and finally on the back and on the joints of the arms. It seems clear that this privilege of the French king provoked imitation in England, and a letter of Pope John XXII has recently been brought to light returning a guarded answer to an application of Edward II who wished to be anointed with certain oil said to have been revealed by Our Blessed Lady to St. Thomas of Canterbury.

It would take us too far to enter into any details as to the ceremonial formerly observed in the coronation of the Kings of Hungary, Bohemia, and Poland, but a word may be added about one of the most splendid of the coronation orders still maintained, namely that of the czar, which always takes place at Moscow. The service begins after the Prosecomedy, or Offertory, by a

solemn procession in which the emperor enters the church and is conducted to his throne. The lifting upon a shield which was long retained in the old Greek ritual of Constantinople is not now used at Moscow. After the emperor has recited the Nicene Creed as a profession of faith, and after an invocation of the Holy Ghost and litany, the emperor assumes the purple chlamys and then the crown is presented to him. He takes it and puts it on his head himself, while the metropolitan says, "In the name of the Father and of the Son and of the Holy Ghost, Amen," and then the metropolitan makes the following short address: "Most God-fearing, absolute and mighty Lord, Emperor of all the Russias, this visible and tangible adornment of thy head is an eloquent symbol that thou as the head of the whole Russian people art invisibly crowned by the King of kings, Christ, with a most ample blessing, seeing that He bestows upon thee entire authority over His people." This is followed by the delivery of the sceptre and orb, each with addresses: Then the queen is crowned, the emperor for a moment putting his own crown on the head of the empress before he invests her with that which properly belongs to her. This is followed by the proclamation of the emperor's style and by a general act of homage. The Liturgy is then celebrated, and after the Communion hymn (κοινωνικόν) the royal gates of the sanctuary are opened, the emperor is invited to approach, and there, near the entrance, standing on the cloth of gold, the emperor and empress are anointed. In the case of the emperor the forehead, eyes, nostrils, mouth, ears, breast, and the hands on both sides, are all touched with oil but in the case of the empress the unction is confined to the forehead only. Then the emperor passes within the royal gates and receives both the Eucharistic species as a priest does, separately. The empress, however, remains outside, and receives only, as the Greek laity usually do, by intinction.

HERBERT THURSTON.

Coronel, GREGORIO NUÑEZ, a distinguished theologian, writer, and preacher, b. in Portugal, about 1548; d. about 1620. At an early age he entered the Order of St. Augustine in one of its many houses in his native land. He manifested, during the course of his studies, great powers of research and a ready grasp of the most abstruse problems of philosophy and theology. Soon after his ordination to the priesthood he became famous as a profound theologian and master of sacred eloquence. When his fame was at its zenith, he left Portugal and was appointed by the Duke of Savoy

chaplain and preacher to his court. He came to Rome by order of his superiors, and there took the degree of Doctor of Divinity. Coronel taught theology for many years in the Eternal City with credit to himself and honour to his order. At this time the controversy about the efficacy of Divine grace and free will between the Jesuits and Dominicans was at its height. The reigning pontiff, Clement VIII, established the famous Congregatio de Auxiliis to decide the points at issue, and Coronel was appointed by the pope to the onerous and invidious position of secretary. He was continued in this office by Pope Clement's successor, Paul V. As a reward for his services to the congregation, he was offered a bishopric. This he declined, saying that at his age—he was then sixty—honours and responsibilities were rather to be laid down than assumed. He attended the general chapter of his order, held at Rome in 1620, as definitor of the Sardinian province. Coronel's principal works are: "Libri decem de verâ Christi Ecclesiâ" (Rome, 1594); "Libri sex de optimo reipublicæ statu" (Rome, 1597); "De traditionibus apostolicis" (Rome, 1597). A history of the Congregatio de Auxiliis, in manuscript, is preserved in the Angelica Library in Rome.

J. A. KNOWLES.

Coronel, JUAN, b. 1569, in Spain; d. 1651, at Mérida, Mexico. He made his academic studies at the University of Alcalá de Henares, and joined the Franciscans of the province of Castile. He was sent to Yucatan, Mexico, in 1590, and there so familiarized himself with the Maya language that he was able to teach it, the historian Cogolludo being one of his pupils. Cogolludo says he wrote a Maya grammar (*Arte*) that was printed in Mexico, of which, however, nothing else is known. A catechism in Maya: "Doctrina cristiana en lengua Maya", was published at Mexico in 1620, and in the same year there appeared in print, also at Mexico, "Discursos predicables y tratados espirituales en lengua Maya". Both are exceedingly rare. Father Coronel was one of the foremost teachers of the Indians of Yucatan in the seventeenth century. He was a strict Observant for sixty-seven years, always travelling barefooted. His great austerity impeded his election to the office of Provincial of the Franciscan Order in Yucatan.

COGOLLUDO, *Historia de Yucatan* (Madrid, 1688; Mérida, 1842); BÉRISTAIN, *Biblioteca hispano-americana* (Mexico, 1816; Amecameca, 1883); SQUIER, *Monograph*, etc. (New York, 1861); he merely copies BÉRISTAIN.

AD. F. BANDELIER.

Corporal (from Lat. *corpus*, body), a square white linen cloth, now usually somewhat smaller than the breadth of an altar, upon which the Sacred Host and chalice are placed during the celebration of Mass. Although formal evidence is wanting, it may fairly be assumed that something in the nature of a corporal has been in use since the earliest days of Christianity. Naturally it is difficult in the early stages to distinguish the corporal from the altar-cloth, and a passage of St. Optatus (c. 375), which asks, "What Christian is unaware that in celebrating the Sacred Mysteries the wood [of the altar] is covered with a linen cloth?" (*ipsa ligna lintheamine cooperiri*, Optatus, VI, ed. Ziwsa, p. 145), leaves us in doubt which he is referring to. This is probably the earliest direct testimony; for the statement of the "Liber Pontificalis", "He [Pope Sylvester] decreed that the Sacrifice should not be celebrated upon a silken or dyed cloth, but only on linen, sprung from the earth, as the Body of our Lord Jesus Christ was buried in a clean linen shroud" (Mommson, p. 51), cannot be relied upon. Still, the

ideas expressed in this passage are found in an authentic letter of St. Isidore of Pelusium (Ep. i, 123) and again in the "Expositio" of St. Germanus of Paris in the sixth century (P. L., LXXII, 93). Indeed they lasted through the Middle Ages, as the verses attributed to Hildebert (P. L., CLXXI, 1194) sufficiently show:—

Ara crucis, tumulique calix, lapidisque patena,
Sindonis officium candida byssus habet.

It is quite probable that in the early centuries only one linen cloth was used which served both for altar-cloth and corporal, this being of large size and doubled back to cover the chalice. Much doubt must be felt as to the original use of certain cloths of figured linen in the treasury of Monza which Barbier de Montault sought to identify as corporals. The corporal was described as *palla corporalis*, or *velamen dominice mensæ*, or *opertorium dominici corporis*, etc.; and it seems generally to have been of linen, though we hear of altar-cloths of silk (Greg. of Tours, "Hist. Franc.", VII, 22; X, 16), or of purple (Paulus Silentarius, "Descr. S. Sophia", p. 758; a coloured miniature in the tenth-century Benedictional of St. Æthelwold also seems to show a purple altar-covering), or of cloth-of-gold (Chrysostom in Matt., Hom. I). In some of these cases it seems difficult to decide whether altar-cloth or corporal is meant. However, there is no doubt that a clear distinction had established itself in Carolingian times or even earlier. Thus, in the tenth century, Regino of Prüm (De Disc. Eccl., cap. cxviii) quotes a council of Reims as having decreed "that the corporal [*corporale*] upon which the Holy Sacrifice was offered must be of the finest and purest linen without admixture of any other fibre, because Our Saviour's Body was wrapped not in silk, but in clean linen". He adds that the corporal was never to remain on the altar, but was to be put in the Missal [*Sacramentorum libro*] or shut up with the chalice and paten in some clean receptacle. And when it was washed, it was to be washed first of all by a priest, deacon, or subdeacon in the church itself, in a place or a vessel specially reserved for this, because it had been impregnated with the Body and Blood of Our Lord. Afterwards it might be sent to the laundry and treated like other linen. The suggestion as to keeping the corporal between the leaves of the Missal is interesting because it shows that it cannot, even in the tenth century, have always been of that extravagant size which might be inferred from the description in the "Second Roman Ordo" (cap. ix), where the deacon and an assistant deacon are represented as folding it up between them. Still it was big enough at this period to allow of its being bent back to cover the chalice, and thus serve the purpose of our present pall. This is done by the Carthusians to this day, who use no pall and have no proper elevation of the chalice. As regards the size of the corporal, some change may have taken place when it ceased to be usual for the people to bring loaves to the altar, for there was no longer need of a large cloth to fold back over them and cover them. Anyway, it is in the eleventh and twelfth centuries that the practice of doubling the corporal over the chalice gave place to a new plan of using a second (folded) corporal to cover the mouth of the chalice when required. The question is debated in some detail in one of the letters of St. Anselm, who quite approves of the arrangement (P. L., CLVIII, 550); and a hundred years later we find Pope Innocent III stating, "there are two kinds of palls or corporals, as they are called [*duplex est palla que dicitur corporale*] one which the deacon spreads out upon the altar, the other which he places folded upon the mouth of the chalice" (De Sacrif. Missæ, II, 56). The essential unity of the pall and the corporal is further shown by the fact that the special blessing which both palls and corporals must always receive before use designates the two as "linteamen ad tegendum involvendumque Corpus et Sanguinem D. N. J. C.", i. e.

to cover and enfold the Body and Blood of Christ. This special blessing for corporals and palls is alluded to even in the Celtic liturgical documents of the seventh century, and the actual form now prescribed by the modern Roman Pontifical is found almost in the same words in the Spanish "Liber Ordinum" of about the same early date.

According to existing liturgical rules, the corporal must not be ornamented with embroidery, and must be made entirely of pure white linen, though there seem to have been many medieval exceptions to this law. It is not to be left to lie open upon the altar, but when not in use is to be folded and put away in a burse, or "corporas-case", as it was commonly called in pre-Reformation England. Upon these burses much ornamentation is lavished, and this has been the case since medieval times, as many existing examples survive to show. The corporal is now usually folded twice in length and twice in breadth, so that when folded it still forms a small square. At an earlier period, when it was larger and was used to cover the chalice as well, it was commonly folded four times in length and thrice in breadth. This practice is still followed by some of the older religious orders. The corporal and pall have to pass through a triple washing at the hands of a priest, or at least a subdeacon, before they may be sent to a laundry. Also, when they are in use they may not be handled by any but the clergy, or sacristans to whom special permission is given.

HERBERT THURSTON.

Corporal Works of Mercy. See MERCY.

Corporation (Lat. *corpus*, a body), an association recognized by civil law and regarded in all ordinary transactions as an individual. It is an artificial person. Chief Justice Marshall of the Supreme Court of the United States of America, in the course of a formal judicial utterance, thus defined the term *corporation*: "A corporation is an artificial being, invisible, intangible, and existing only in contemplation of law. Being the mere creature of law, it possesses only those properties which the charter of its creation confers upon it, either expressly or as incidental to its very existence. These are such as are supposed best calculated to effect the object for which it was created. Among the most important are immortality, and, if the expression may be allowed, individuality; properties by which a perpetual succession of many persons are considered as the same, and may act as a single individual. They enable a corporation to manage its own affairs, and to hold property without the perplexing intricacies, the hazardous and endless necessity of perpetual conveyances for the purpose of transmitting it from hand to hand. It is chiefly for the purpose of clothing bodies of men, in succession, with qualities and capacities, that corporations were invented, and are in use. By these means, a perpetual succession of individuals are capable of acting for the promotion of the particular object, like one immortal being."

Chancellor Kent of New York, one of the most famous jurists of modern times, defines a corporation as "a franchise possessed by one or more individuals, who subsist, as a body politic, under a special denomination, and are vested, by the policy of the law, with the capacity of perpetual succession, and of acting in several respects, however numerous the associations may be, as a single individual. The object of the institution is to enable the members to act by one united will, and to continue their joint

powers and property in the same body, undisturbed by the change of members, and without the necessity of perpetual conveyances, as the rights of members pass from one individual to another. All the individuals composing a corporation and their successors, are considered in law as but one person, capable, under an artificial form, of taking and conveying property, contracting debts and duties, and of enjoying a variety of civil and political rights. One of the peculiar properties of a corporation is the power of perpetual succession; for, in judgment of law, it is capable of indefinite duration. The rights and privileges of the corporation do not determine, or vary upon the death or change of any of the individual members. They continue as long as the corporation endures."

ANCIENT CORPORATIONS.—Among the ancient Greeks a kind of association called *εταίρα* corresponded in its characteristics very closely with the modern corporation. Solon is said to have encouraged the formation of such bodies, and in his legislation permitted them to be instituted freely and to engage in any transactions not contrary to law. The Roman prototype of the corporation as it came into existence under the common law of England, and from England was transplanted into America, was the *collegium*. This kind of association, called also *corpus*, was required to consist of at least three persons (Dig., L. tit. xvi), and persons who had regularly and legally constituted a collegium were said *corpus habere* (to have a body), i. e. to have been, as we say, duly incorporated. The persons who formed a collegium were called *collegæ* or *sodales*. The word *collegium* derived from *con*, "with", and *lego*, "to select", had the literal meaning of an aggregation of persons united in any office or for any common purpose. In the later days of the Roman Republic *corporation* was used in documents relating to public law in the same sense as collegium. The word *societas* seems to have been used as a term corresponding to our word partnership. A collegium possessed the legal right of holding property in common. Its members had a common treasury and could sue and be sued by their *syndicus* or *actor*. According to the Roman law, that which was due to the collegium was not due to individuals composing it; that which was an indebtedness of the collegium was not the debt of individuals. The property of the collegium was liable to be seized and sold for its debts. The term *universitas* is used by the Roman law writers in the same sense as collegium. The application of *universitas* to an academic or literary institution is first found in a Decretal of one of the popes establishing a medieval university for the teaching of religion, literature, science, and the arts. A collegium or universitas was, under the Roman law, managed by its officers and agents under regulations established by the corporate body itself, and these regulations might be such as were agreed upon by the members, subject only to the limitation that they were not contrary to the public law.

A lawfully constituted collegium was termed *legitimum*. Associations attempting to act as a collegium, when not duly authorized, were called *collegia illicita*. It seems that no particular Roman law defined the mode in which *collegia* were regularly to be formed. They appear to have been formed by the voluntary association of individuals according to some general legal authority. Some of these ancient Roman corporations resembled the guilds of medieval times, such as the *collegia fabrorum*, *collegia pistorum*, etc.; others were of a religious nature such as the *collegia pontificum*, *augurum*. According to Ulpian a universitas, though reduced to a single member, was still considered a universitas; for the remaining member thereof possessed all the rights and privileges of the universitas, and used the name by which it was originally known. When a new member was taken

into a collegium, he was said *co-optari*, and the members of an association into which he was introduced were said, with respect to him, *recipere in collegium*. The chief public corporation of ancient Rome was the *municipium*. Municipia possessed all of the characteristic powers of ordinary corporations together with the right of local government. It is stated by Plutarch that corporations were introduced into the Roman system of legislation by Numa. That sovereign, upon his accession to the throne, noted that great public disorder existed in the city of Rome by reason of the contentions between the rival factions of Sabines and Romans; and for the purpose of protecting the State against tumult, divided each of these factions into many smaller ones by creating *collegia* for each of the professions and for each of the manual occupations.

CLASSIFICATION.—Under the English law corporations are distinguished in the first place as being either aggregate or sole. A corporation aggregate consists of several persons united in a society and maintained by a perpetual succession of members. A corporation sole consists of one person only, and the successors of that person in some particular station or office. The King of England is a corporation sole; so is a bishop; and in the Church of England every parson and vicar is, in view of the law, a corporation sole. The laws of the United States have rarely recognized any sole corporation, but "the Catholic Bishop of Chicago", now Archbishop, was, many years ago, created a corporation sole by a special act of the legislature of the State of Illinois. In Maryland the Archbishop of Baltimore holds all Church property as a corporation sole. Similarly in the several Catholic dioceses of California, the bishop or archbishop is a corporation sole, and since 1897 such is the case in Massachusetts for the Archdiocese of Boston (H. J. Desmond, The Church and the Law, Chicago, 1898, 72, 73). Under certain circumstances the Third Plenary Council of Baltimore (Acta et Decreta, no. 267) urged each bishop and archbishop of the United States to have himself constituted a corporation sole (see PROPERTY, ECCLESIASTICAL).

A further division of corporations, either sole or aggregate, recognized by the law of England, is that of ecclesiastical corporations and lay corporations. Ecclesiastical corporations are those whose members are persons devoted to spiritual affairs, such as bishops, archdeacons, parsons, and vicars. Prior to the reign of Edward VI, deans and chapters, priors and convents, abbots and monks were ecclesiastical corporations aggregate. Lay corporations are of two kinds, civil and eleemosynary. Civil are such as exist for the safeguarding and administration of temporal affairs. As Blackstone says, the king is made a corporation to prevent in general the possibility of an interregnum and to preserve the possessions of the Crown entire; for immediately upon the demise of one king his successor is considered in law as having full possession of the regal dignity and privileges. Examples of other lay corporations are those which are created to govern towns or districts such as the corporation known as the City of London; others have been created for the conduct of manufacturing and commercial enterprises, for the diffusion of learning, and for scientific research. The Universities of Oxford and Cambridge are examples of corporations created for the advancement of learning. Eleemosynary corporations are defined by Blackstone to be such as are constituted for the perpetual distribution of free alms or bounty of the founder thereof to such persons as such founder may have designated. Of this kind are all hospitals for the maintenance of the poor, sick, and impotent.

CREATION.—Under the common law of England corporations depended for their existence upon a charter (Lat. *charta*, a paper) granted by the king.

Corporations which had existed so long a time that "the memory of man ran not to the contrary" were said to exist by prescription; but that considerate doctrine was based upon the theory that the corporation had at one time received a charter, which, in course of time and by reason of the vicissitudes of human affairs, had been lost. When the religious revolution of the sixteenth century occurred, most of the religious houses of England were corporations by prescription, because they were so ancient that their original charters, if there were any, had disappeared. The rights of a corporation by prescription, however, are quite as valid at common law as are the rights of those which can exhibit a charter. Instances of corporations interesting to American people are those created by letters patent from the King of England to the London Company, under which the original settlements of the New England coast were made; and the charter to the Virginia Company, under which the shores of Virginia were first colonized by Englishmen.

NAME.—Under the Roman law as well as under the English common law a corporation must, necessarily, have a name, and by that name alone it must appear in court and must conduct all of its transactions. Such a name is said by Blackstone to be for a corporation, "the very being of its constitution". The name of incorporation is said by Sir Edward Coke to be its proper name or name of baptism.

ECCLIESIASTICAL CORPORATIONS, as such, are not recognized by the laws of the United States or of the several States constituting the Union. Under the American system of law, corporations are either public or private, public corporations being those that are erected for the purposes of local government, such as municipal corporations for the government of cities. The term private corporations includes all others, religious, literary, charitable, manufacturing, insurance, banking, and railroad corporations. In the various States of the Union corporations were formerly created by charter granted by the legislature. In the greater number of the States at the present time private corporations are created by the voluntary act of individuals who associate themselves together and make a public declaration of their intention to become a body corporate and take such action in conformity with general rules laid down by legislation. Charters of incorporation granted by the legislatures of the States to private corporations are considered as executed contracts within the protection of Article 1, Section 10, of the Constitution of the United States, by which it is declared that "no State shall pass any law impairing the obligation of contracts". This was decided by the Supreme Court of the United States in the case entitled "The Trustees of Dartmouth College vs. Woodward" (Wheaton's Reports, Vol. 4, p. 518). In many States the right to amend, modify, or repeal a charter was usually reserved in the charter itself. Such a provision is now incorporated into the constitutions of many of the States.

POWER OF CORPORATIONS.—The principal characteristic of a corporation at common law was that it was vested with the privilege of perpetuity, that is, it was said to have perpetual succession. At the present time in the greater number of American States the general legislation providing for the creation of corporations expressly designates a fixed term during which a corporation may exist. The second of the original powers of corporations which is still maintained, is to sue or to be sued, implead, or to be impleaded, grant or receive, by its corporate name and to do all other acts as natural persons may. The third privilege was to purchase lands and to hold them for the benefit of the members of the corporation and their successors. This right was largely modified by the statutes of mortmain (q. v.) in England and has been strictly regulated and greatly limited by American legislation. The fourth original power possessed

by corporations was that of having a common seal. As was said by the ancient law writers of England, a corporation, being an invisible body, cannot manifest its intentions by any personal act or by speech, and therefore can act and speak only by its common seal. In modern times many corporations are expressly authorized by legislation to act without using a seal, and the decisions of the courts have generally held, at least in modern times, that a corporation was bound by implication in many cases where its acts had not been attested by the corporate seal. The fifth privilege of a corporation, which has existed from time immemorial and still exists, is that of making by-laws or providing statutes for the regulation of its own affairs; and these are binding upon the corporation and its members unless contrary to the law of the land. This right was allowed by the Law of the Twelve Tables at Rome.

PRIVILEGES AND DISABILITIES.—A corporation must always appear by attorney or agent (the *actor* or *syndicus* of the Roman law) for it cannot appear in person; being, as Sir Edward Coke says, invisible and existing only in contemplation of the law. Under the strict construction of its legal quality the courts of England originally held that a corporation could not be held liable for any action based upon tortious conduct; that is, a corporation could not be held liable for personal injuries inflicted by the wrongful act or culpable neglect of its agents. It is now held however, both in England and America, that a corporation is liable in damages for any wrong committed by its servants or agents when acting within the scope of the duties which properly devolve upon them. The doctrine designated by the term *ultra vires* is that which governs the courts in limiting the liability of a corporation to acts which are expressly authorized by its charter, or acts which are defined by its original articles of institution to be within the scope of its corporate operations. This doctrine is sound because it would be contrary to public policy to hold that a corporation had the right to do any act or to undertake any course of transactions which was not within the scope of the powers which it originally declared itself as possessing. However, the application of this doctrine is so restricted by the courts as not to allow corporate officers to use the doctrine as a cloak for deeds not equitable in their nature. It is construed strictly by the courts as a shield and is not allowed to operate as a sword.

VISITATION.—The necessity of supervision over corporate acts being generally acknowledged, it was held at common law that every corporation had, necessarily, a visitor. As Blackstone well says, "Corporations, being composed of individuals, subject to human frailties, are liable as well as private persons, to deviate from the end of their institution. And for that reason the law has provided proper persons to visit, inquire into and correct all irregularities that arise in such corporations, either sole or aggregate, and whether ecclesiastical, civil or eleemosynary". Prior to the religious revolution of the sixteenth century the pope was the visitor of the archbishops and metropolitans. In respect to all lay corporations, the founder, his heirs, or assigns are the visitors under the English system. In the various States of the American Union visitors of corporations are practically unknown; the supervision of private corporations being vested in courts of equity. In England the king is considered as the visitor for all civil corporations, and this jurisdiction is exercised through the Court of King's Bench.

DISSOLUTION.—Any member of a corporation may be disfranchised, that is, he may lose his membership in the corporation by acting in such manner as to forfeit his rights under a provision of the by-laws; or he may resign from the corporation by his own voluntary act. A resignation by parole, if entered upon

the records and accepted by the corporation, is sufficient. The corporation itself may be dissolved and in such case, at common law, debts due from a corporation were wholly extinguished *ipso facto* by such dissolution; and in this respect the common law concurred with the maxim of the civil law which declared that the members of a corporation in respect to its property rights and credits had no individual rights therein: "si quid universitati debetur; singulis non debetur; nec, quod debet universitas, singuli debent" (Pandects, III, 4, 7).

The method of dissolution under the common law was (1) by an act of Parliament; (2) in the case of a corporation aggregate, by the death of all its members; (3) by surrender of its franchise into the hands of the king through voluntary action of the corporation; (4) by the forfeiture of its corporate rights through negligence or through non-user or abuse of its franchise. The franchises, as the English law termed the privileges which corporations enjoyed, were considered a trust lodged in the corporation for the general benefit of society, and to allow such privileges to be abused or to discontinue the exercise of such franchise was held to be a fault punishable according to its degree and, in extreme cases, punishable by extinction of corporate existence. The regular course adopted for the punishment of corporations or their dissolution is to proceed by what is termed a writ of *quo warranto*, which means that a representative of the State presents to some competent tribunal a petition reciting abuses, wrongs, or culpable non-action of a corporate body, prays for its dissolution, and demands that a writ issue from the court requiring the corporation to show "by what warrant" it presumes to exist and to act as a corporation. Upon a proper showing by petition, the court issues its writ *quo warranto*; that is, the court issues a document requiring the corporation to present to such court the facts which the corporation deems sufficient to warrant its continued existence. Upon a trial of the issues involved, if it be found that the corporation is amenable to public discipline, it may be amerced or its extinction may be decreed. Proceedings by *quo warranto* still have a place in the law of England and also in the laws of the various American States, although such proceedings have been greatly modified by statute. Students of history will recall the great public agitation caused during the reign of King Charles II by the institution of proceedings in *quo warranto* against the city of London. Judgment, however, was rendered by a competent tribunal against the city of London, and it is probable that, according to a strict construction of the law, the proceedings were justified. After the English revolution which seated William and Mary upon the throne, the judgment against the city of London was reversed by an Act of Parliament. In all civilized countries bodies politic, similar in nature and quality to English and American corporations, exist. As these have many special characteristics imparted to them by the legislation of the various countries in which they exist, no attempt to describe them is made in this article.

JOHN W. WILLIS.

Corporation Act of 1661.—The Corporation Act of 1661 belongs to the general category of test acts, designed for the express purpose of restricting public offices to members of the Church of England. Though

commonly spoken of as one of the "Penal Laws", and enumerated by Butler in his "Historical Account of the Laws against the Roman Catholics of England", it was not directly aimed against them, but against the Presbyterians. It was passed in December, 1661, the year after the Restoration, technically 13 Charles II. Parliament was at that time entirely reactionary. The Cavaliers were in power, and they aimed at nothing short of restoring England to its state before the time of the Commonwealth. It required all the prudence of the Earl of Clarendon, the chancellor, to restrain them. The Corporation Act represents the limit to which he was prepared to go in endeavouring to restrict the power of the Presbyterians. They were influentially represented in the government of cities and boroughs throughout the country, and this act was designed to dispossess them. It provided that no person could be legally elected to any office relating to the government of a city or corporation, unless he had within the previous twelve months received the sacrament of "the Lord's Supper" according to the rites of the Church of England. He was also commanded to take the Oaths of Allegiance and Supremacy, to swear belief in the Doctrine of Passive Obedience, and to renounce the Covenant. In default of these requisites the election was to be void. A somewhat similar act passed twelve years later, known as the Test Act, prescribed for all officers, civil and military, further stringent conditions, including a declaration against Transubstantiation. These two acts operated very prejudicially on Catholics, forming an important part of the general Penal Code which kept them out of public life. In later times the number, even of non-Catholics, who qualified for civil and military posts in accordance with their provisions was very small, and an "Act of Indemnity" used to be passed annually, to relieve those who had not done so from the penalties incurred. There was no expression in this act limiting its operation to the case of Protestants; yet on the only occasion when a Catholic ventured to ask for a share in the Indemnity, it was refused on the ground of the act not being applicable to him. (Butler, op. cit., 19.) The Corporation Act remained nominally in force throughout the eighteenth century. It was eventually repealed in 1828, the year before Catholic Emancipation.

BERNARD WARD.

Corpus Christi (BODY OF CHRIST), FEAST OF, is celebrated in the Latin Church on the Thursday after Trinity Sunday to solemnly commemorate the institution of the Holy Eucharist. Of Maundy Thursday, which commemorates this great event, mention is made as *Natalis Calicis* (Birth of the Chalice) in the Calendar of Polemius (448) for the 24th of March, the 25th of March being in some places considered as the day of the death of Christ. This day, however, was in Holy Week, a season of sadness, during which the minds of the faithful are expected to be occupied with thoughts of the Lord's Passion. Moreover, so many other functions took place on this day that the principal event was almost lost sight of. This is mentioned as the chief reason for the introduction of the new feast, in the Bull "Transitusus".

The instrument in the hand of Divine Providence was St. Juliana of Mont Cornillon, in Belgium. She was born in 1193 at Retinnes near Liège. Orphaned at an early age, she was educated by the Augustinian nuns of Mont Cornillon. Here she in time made her religious profession and later became superioress. Intrigues of various kinds several times drove her from her convent. She died 5 April, 1258, at the House of the Cistercian nuns at Fosses, and was buried at Villiers.

Juliana, from her early youth, had a great veneration for the Blessed Sacrament, and always longed for a special feast in its honour. This desire is said

to have been increased by a vision of the Church under the appearance of the full moon having one dark spot, which signified the absence of such a solemnity. She made known her ideas to Robert de Thorete, then Bishop of Liège, to the learned Dominican Hugh, later cardinal legate in the Netherlands, and to Jacques Pantaléon, at that time Archdeacon of Liège, afterwards Bishop of Verdun, Patriarch of Jerusalem, and finally Pope Urban IV. Bishop Robert was favourably impressed, and, since bishops as yet had the right of ordering feasts for their dioceses, he called a synod in 1246 and ordered the celebration to be held in the following year, also, that a monk named John should write the Office for the occasion. The decree is preserved in Binterim (Denkwürdigkeiten, V, 1, 276), together with parts of the Office.

Bishop Robert did not live to see the execution of his order, for he died 16 October, 1246; but the feast was celebrated for the first time by the canons of St. Martin at Liège. Jacques Pantaléon became pope 29 August, 1261. The recluse Eve, with whom Juliana had spent some time, and who was also a fervent adorer of the Holy Eucharist, now urged Henry of Guelders, Bishop of Liège, to request the pope to extend the celebration to the entire world. Urban IV, always an admirer of the feast, published the Bull "Transiturus" (8 September, 1264), in which, after having extolled the love of Our Saviour as expressed in the Holy Eucharist, he ordered the annual celebration of Corpus Christi on the Thursday next after Trinity Sunday, at the same time granting many Indulgences to the faithful for the attendance at Mass and at the Office. This Office, composed at the request of the pope by the Angelic Doctor St. Thomas Aquinas, is one of the most beautiful in the Roman Breviary and has been admired even by Protestants. The death of Pope Urban IV (2 October, 1264), shortly after the publication of the decree, somewhat impeded the spread of the festival. Clement V again took the matter in hand and, at the General Council of Vienne (1311), once more ordered the adoption of the feast. He published a new decree which embodied that of Urban IV. John XXII, successor of Clement V, urged its observance. Neither decree speaks of the theophoric procession as a feature of the celebration. This procession, already held in some places, was endowed with Indulgences by Popes Martin V and Eugene IV. The feast had been accepted in 1306 at Cologne; Worms adopted it in 1315; Strasburg in 1316. In England it was introduced from Belgium between 1320 and 1325. In the United States and some other countries the solemnity is held on the Sunday after Trinity.

In the Greek Church the feast of Corpus Christi is known in the calendars of the Syrians, Armenians, Copts, Melchites, and the Ruthenians of Galicia, Calabria, and Sicily.

FRANCIS MERSHMAN.

Corpus Juris Canonici.—I. DEFINITION.—The term *corpus* here denotes a collection of documents; *corpus juris*, a collection of laws, especially if they are placed in systematic order. It may signify also an official and complete collection of a legislation made by the legislative power, comprising all the laws which are in force in a country or society. The term, although it never received legal sanction in either Roman or canon law, being merely the phraseology of the learned, is used in the above sense when the "Corpus Juris Civilis" of the Roman Christian emperors is meant. The expression *corpus juris* may also mean, not the collection of laws itself, but the legislation of a society considered as a whole. Hence

Benedict XIV could rightly say that the collection of his Bulls formed part of the *corpus juris* (Jam fere sextus, 1746). We cannot better explain the signification of the term *corpus juris canonici* than by showing the successive meanings which were assigned to it in the past and which it usually bears at the present day. Under the name of "corpus canonum" were designated the collection of Dionysius Exiguus and the "Collectio Anselmo dedicata" (see below). The "Decree" of Gratian is already called "Corpus Juris Canonici" by a glossator of the twelfth century, and Innocent IV calls by this name the "Decretals" of Gregory IX (Ad expediendos, 9 Sept., 1253). Since the second half of the thirteenth century, *Corpus Juris Canonici* in contradistinction to *Corpus Juris Civilis*, or Roman law, generally denoted the following collections: (1) the "Decretals" of Gregory IX; (2) those of Boniface VIII (Sixth Book of the Decretals); (3) those of Clement V (Clementinæ), i. e. the collections which at that time, with the "Decree" of Gratian, were taught and explained at the universities. At the present day, under the above title are commonly understood these three collections with the addition of the "Decree" of Gratian, the "Extravagantes" of John XXII, and the "Extravagantes Communes".

Thus understood, the term dates back to the sixteenth century and was officially sanctioned by Gregory XIII (Cum pro munere, 1 July, 1580). The earliest editions of these texts printed under the now usual title of "Corpus Juris Canonici", date from the end of the sixteenth century (Frankfort, 8vo, 1586; Paris, fol., 1587). In the strict sense of the word the Church does not possess a *corpus juris clausum*, i. e. a collection of laws to which new ones cannot be added. The Council of Basle (Sess. XXIII, ch. vi) and the decree of the Congregation "Super statu regularium" (25 Jan., 1848) do not speak of a *corpus clausum*; the first refers to *reservationibus in corpore juris expresse clausis*, that is, reservations of ecclesiastical benefices contained in the "Corpus Juris", especially in the "Liber Sextus" of Boniface VIII, to the exclusion of those held in the "Extravagantes" described below, and at that time not comprised in the "Corpus Juris Canonici"; the second speaks of *cuiuslibet privilegio, licet in corpore juris clauso et confirmato*, i. e. of privileges not only granted by the Holy See, but also inserted in the official collections of canon law.

II. PRINCIPAL CANONICAL COLLECTIONS.—We shall briefly sketch the history of the earliest collections of canons, and shall add a brief description of the "Corpus Juris Canonici" as it is now understood. The history of canon law is generally divided into three periods. The first extends to the "Decree" of Gratian, i. e. to the middle of the twelfth century (*jus antiquum*); the second reaches to the Council of Trent (*jus novum*); the third includes the latest enactments since the Council of Trent inclusively (*jus novissimum*).

(1) *Jus antiquum*.—The most ancient collections of canonical legislation are certain very early pseudo-Apostolic documents; for instance, the *Διδαχὴ τῶν δώδεκα ἀποστόλων* or "Teaching of the Twelve Apostles", which dates from the end of the first or the beginning of the second century; the Apostolic Church Ordinance; the "Didascalia", or "Teaching of the Apostles" (third century); the Apostolic Canons (see CANONS, APOSTOLIC); and Apostolic Constitutions. These collections have never had any official value, no more than any other collection of this first period. It was in the East, after the Edict of Milan (313), that arose the first systematic collections. We cannot so designate the chronological collections of the canons of the councils of the fourth and fifth centuries (314-451); the oldest systematic collection, made by an unknown author in 535, has not come down. The most important collections of this epoch are the *Συναγωγή*

κανόνων, or the collection of John the Scholastic (Johannes Scholasticus), compiled at Antioch about 550, and the Nomocanons, or compilations of civil laws affecting religious matters (*νόμος*) and ecclesiastical laws (*κανόν*). One such mixed collection is dated in the sixth century and has been erroneously attributed to John the Scholastic; another of the seventh century was rewritten and much enlarged by the schismatical patriarch Photius (883). In the Western Church three collections of canons have exercised an influence far beyond the limits of the country in which they were composed; they are the "Collectio Dionysiana", the lengthy Irish collection (Hibernensis), and the "Decretals" of Pseudo-Isidore. The "Dionysiana", also called "Corpus canonum", "Corpus codicis canonum", was the work of Dionysius Exiguus who died between the years 540 and 555; it contains his Latin translation of the canons of the councils of the Eastern Church and a collection of (38) papal letters (Epistolae decretales) dating from the reign of Pope Siricius (384-398) to that of Anastasius II (d. 498). The authority of this Italian collection, at once quite considerable at Rome and in Italy, was greatly increased after Adrian I had sent to Charlemagne (774) a modified and enlarged copy of the collection, thenceforth known as the "Collectio Dionysio-Hadriana", and the Synod of Aachen (802) accepted it as the "Codex Canonum" of the immense Empire of the Franks.

The lengthy Irish collection of canons, compiled in the eighth century, influenced both Gaul and Italy. The latter country possessed, moreover, two fifth-century Latin translations of the Greek synods (the collection erroneously called "Isidoriana" or "Hispana", and the "Collectio Prisca"); also an important collection of pontifical and imperial documents (the "Avellana", compiled in the pontificate of Gregory the Great, 590-604). Africa possessed a collection of 105, or more exactly 94, canons, compiled about 419; also the "Breviatio Canonum", or digest of the canons of the councils by Fulgentius Ferrandus (d. c. 546), and the "Concordia Canonum" of Cresconius, an adaptation of the "Dionysiana" (about 690). In Gaul are found, at the beginning of the sixth century, the "Statuta Ecclesiae antiqua", erroneously attributed to Africa, and, among many other collections, the "Quesnelliana" (end of the fifth or beginning of the sixth century) and the "Dacheriana" (about 800), both so called from the names of their editors, Paschase Quesnel and d'Achéry. Spain possessed the "Capitula Martini", compiled about 572 by Martin, Bishop of Braga, and a "Codex canonum" or "Collectio Hispana" dating from about 633, attributed in the ninth century to St. Isidore of Seville. In the ninth century arose several apocryphal collections, viz. those of Benedictus Levita, of Isidorus Mercator (also Peccator or Mercatus), and the "Capitula Angilramni". An examination of the controversies which these three collections give rise to will be found elsewhere (see FALSE DECRETALS). The Pseudo-Isidorian collection, the authenticity of which was for a long time admitted, has exercised considerable influence on ecclesiastical discipline, without however modifying it in its essential principles. Among the numerous collections of a later date, we may mention the "Collectio Anselmo dedicata", compiled in Italy at the end of the ninth century, the "Libellus de ecclesiasticis disciplinis" of Regino of Prüm (d. 915); the "Collectarium canonum" of Burchard of Worms (d. 1025); the collection of the younger St. Anselm of Lucca, compiled towards the end of the eleventh century; the "Collectio trium partium", the "Decretum" and the "Panormia" of Yves of Chartres (d. 1115 or 1117); the "Liber de misericordia et justitia" of Algerus of Liège, who died in 1132—all collections which Gratian made use of in the compilation of his "Decretum". The aforesaid collections and others are

described more fully in the article CANONS, COLLECTIONS OF ANCIENT.

(2) *Jus novum and Corpus juris canonici*.—It was about 1150 that the Camaldolese monk, Gratian, professor of theology at the University of Bologna, to obviate the difficulties which beset the study of practical, external theology (*theologia practica externa*), i. e. canon law, composed the work entitled by himself "Concordia discordantium canonum", but called by others "Nova collectio", "Decreta", "Corpus juris canonici", also "Decretum Gratiani", the latter being now the commonly accepted name. In spite of its great reputation the "Decretum" has never been recognized by the Church as an official collection. It is divided into three parts (*ministeria, negotia, sacramenta*). The first part is divided into 101 distinctions (*distinctiones*), the first 20 of which form an introduction to the general principles of canon law (*tractatus decretalium*); the remainder constitutes a *tractatus ordinandorum*, relative to ecclesiastical persons and functions. The second part contains 36 causes (*causae*), divided into questions (*questiones*), and treat of ecclesiastical administration and marriage; the third question of the 33rd *causa* treats of the Sacrament of Penance and is divided into 7 distinctions. The third part, entitled "De consecratione", treats of the sacraments and other sacred things and contains 5 distinctions. Each distinction or question contains *dicta Gratiani*, or maxims of Gratian, and *canones*. Gratian himself raises questions and brings forward difficulties, which he answers by quoting *authoritates*, i. e. canons of councils, decretals of the popes, texts of the Scripture or of the Fathers. These are the *canones*; the entire remaining portion, even the summaries of the canons and the chronological indications, are called the maxims or *dicta Gratiani*. It is to be noted that many *authoritates* have been inserted in the "Decretum" by authors of a later date. These are the *Palae*, so called from Paucapalea, the name of the principal commentator on the "Decretum". The Roman revisers of the sixteenth century (1566-82) corrected the text of the "Decree" and added many critical notes designated by the words *Correctores Romani*.

The "Decretum" is quoted by indicating the number of the canon and that of the distinction or of the cause and the question. To differentiate the distinctions of the first part from those of the third question of the 33rd cause of the second part and those of the third part, the words *de Pen.*, i. e. *de Penitentia*, and *de Cons.*, i. e. *de Consecratione* are added to the latter. For instance, "c. 1. d. XI" indicates the first part of the "Decree", distinction XI, canon 1; "c. 1., de Pen., d. VI" refers to the second part, 33rd cause, question 3, distinction VI, canon 1; "c. 8, de Cons., d. II" refers to the third part, distinction II, canon 8; "c. 8, C. XII, q. 3" refers to the second part, cause XII, question 3, canon 8. Sometimes, especially in the case of well-known and much-quoted canons, the first words are also indicated, e. g., *Si quis suadente diabolo*, C. XVII, q. 4, i. e. the 29th canon of the second part, cause XVII, question 4. Occasionally the first words alone are quoted. In both cases, to find the canon it is necessary to consult the alphabetical tables (printed in all editions of Gratian) that contain the first words of every canon.

The general laws of a later date than the "Decree" of Gratian have been called "Extravagantes", i. e. laws not contained in Gratian's "Decree" (*Vagantes extra Decretum*). These were soon brought together in new collections, five of which (Quinque compilationes antiquae) possessed a special authority. Two of them, namely the third and the fifth, are the most ancient official compilations of the Roman Church (see DECRETALS, PAPAL). Among other compilations at the end of the twelfth and the beginning of the thirteenth century the following deserve special atten-

tion: "Appendix concilii Lateranensis III"; the collections known as "Bambergensis" (Bamberg), "Lipsiensis" (Leipzig), "Casselana" (Cassel), "Halensis" (Halle), and "Lucensis" (Lucca), so named from the libraries in which the manuscripts of these collections were found; the collection of the Italian Benedictine Rainerus Pomposianus, that of the English canonist Gilbert (Collectio Gilberti), that of his countryman Alanus, professor at Bologna (Collectio Alani), and that of the Spaniard Bernard of Compostella. But soon the new era of official collections began to dawn. In 1230 Gregory IX ordered St. Raymond of Pennafort to make a new collection, which is called the "Decretals of Gregory IX" (Decretales Gregorii IX). To this collection he gave force of law by the Bull "Rex pacificus", 5 Sept., 1234. This collection is also known to canonists as the "Liber extra", i. e. *extra Decretum Gratiani*. Boniface VIII published a similar code 3 March, 1298, called the "Sixth Book of the Decretals" (Liber Sextus). John XXII added to it the last official collection of canon law, the "Liber septimus Decretalium", better known under the title of "Constitutiones Clementis V", or simply "Clementinæ" (Quoniam nulla, 25 Oct., 1317). Later on the canonists added to the manuscripts of the "Decretals" the most important constitutions of succeeding popes. These were soon known and quoted as "Extravagantes", i. e. twenty constitutions of John XXII himself, and those of other popes to 1484. In the Paris edition of the canonical collections (1499-1505) Jean Chappuis drew them up in the form since then universally accepted, and kept for the first the name "Extravagantes Joannis XXII", and called the others, "Extravagantes communes", i. e. commonly met with in the manuscripts of the "Decretals" (see DECRETALS, PAPAL).

The "Corpus Juris Canonici" was now, indeed, complete, but it contained collections of widely different juridical value. Considered as collections, the "Decree" of Gratian, the "Extravagantes Joannis XXII", and the "Extravagantes communes" have not, and never had, a legal value, but the documents which they contain may possess and, as a matter of fact, often do possess, very great authority. Moreover, custom has even given to several apocryphal canons of the "Decree" of Gratian the force of law. The other collections are official, and consist of legislative decisions still binding, unless abrogated by subsequent legislation. The collections of Gregory IX (Libri quinque Decretalium) and of Boniface VIII (Liber Sextus) are moreover exclusive. The former, indeed, abrogated all the laws contained in the aforesaid compilations subsequent to the "Decree" of Gratian. Several authors, however, have maintained, but wrongly, that it abrogated also all the ancient laws which had not been incorporated in Gratian. The second abrogated all the laws passed at a later date than the "Decretals" of Gregory IX and not included in itself. Each of these three collections is considered as one collection (*collectio una*), i. e. one of which all the decisions have the same value, even if they appear to contain antinomies. It is to be noted, however, that, in cases of contradiction, the decisions of the collections of later date invalidate those found in a collection of an earlier date.

The "Decretals" of Gregory IX, those of Boniface VIII, and the "Clementinæ" are divided uniformly into five books (*liber*), the books into titles (*titulus*), the titles into chapters (*caput*), and treat successively of jurisdiction (*iudex*), procedure (*iudicium*), the clergy (*clerus*), marriage (*connubium*), and delinquencies (*crimen*). The rubrics, i. e. the summaries of the various titles, have the force of law, if they contain a complete meaning; on the other hand, the summaries of the chapters have not this juridical value. It is customary to quote these collections by indicating the number of the chapter, the title of the collec-

tion, the heading of the title, the number of the book and the title. The "Decretals" of Gregory IX are indicated by the letter "X", i. e. *extra Decretum Gratiani*; the "Sixth Book" or "Decretals" of Boniface VIII by "in VI", i. e. "in Sexto"; the "Clementines" by "in Clem.", i. e. "in Clementinis". For instance: "c. 2, X, De pactis, l. 35", refers to the second chapter of the "Decretals" of Gregory IX, first book, title 35; "c. 2, in VI, De hæreticis, V, 2", refers to the second chapter of the "Decretals" of Boniface VIII, fifth book, title 2; "c. 2, in Clem., De testibus, II, 8", refers to the second chapter of the "Clementines", second book, title 8. If there is only one chapter in a title, or if the last chapter is quoted, these passages are indicated by "c. unic.", and "c. ult.", i. e. "caput unicum" and "caput ultimum". Sometimes also the indication of the number of the chapters is replaced by the first words of the chapter, as for instance: c. Odoardus. In such cases the number of the chapter may be found in the index-tables printed in all the editions. The "Extravagantes Communes" are divided and quoted in the same manner as the "Decretals", and the collection is indicated by the abbreviation: "Extrav. Commun." For instance: "c. 1 (or unicum, or Ambitosæ), Extrav. Commun., De rebus Ecclesiæ non alienandis, III, 4", refers to the first chapter (the only chapter) in book III, title 4 of the "Extravagantes Communes". This collection omits the usual "Liber IV" which treats of marriage. The "Extravagantes of John XXII" are divided only into titles and chapters. They are indicated by the abbreviation, "Extrav. Joan. XXII". For instance: "c. 2, Extrav. Joan. XXII, De verborum significatione XIV" refers to the second chapter of the fourteenth title of this collection.

Principal editions.—Very soon after the invention of printing editions of the "Corpus Juris", with or without the gloss (comments of canonists) were published. We have already mentioned the importance of the Paris edition (1499-1505) for the two collections of "Extravagantes". This edition includes the gloss. The last edition with the gloss is that of Lyons (1671). Though the Council of Trent did not order a revision of the text of the canonical collections, St. Pius V appointed (1566) a commission to prepare a new edition of the "Corpus Juris Canonici". This commission devoted itself especially to the correction of the text of the "Decree" of Gratian and of its gloss. Gregory XIII ("Cum pro munere", 1 July, 1580; "Emendationem", 2 June, 1582) decreed that no change was to be made in the revised text. This edition of the "Corpus" appeared at Rome in 1582, *in ædibus populi Romani*, and serves as exemplar for all subsequent editions. The best-known, previous to the nineteenth century, are those of the brothers Pithou (Paris, 1687), Freiesleben (Prague, 1728), and the Protestant canonist Böhmer (Halle-Magdeburg, 1747). It is to be noted that the text of the latter edition differs from that of the Roman edition of 1582, and does not therefore possess practical utility. The edition of Richter (Leipzig, 1833-39) avoids this defect and is valuable for its critical notes. The edition of Friedberg (Leipzig, 1879-81) does not reproduce the text of the Roman edition for the "Decree" of Gratian, but gives the Roman text of the other collections. It is the best and most critical edition.

(3) *Jus novissimum.*—After the Council of Trent, an attempt to secure a new official collection of church laws was made about 1580, when Gregory XIII charged three cardinals with the task. The work continued during the pontificate of Sixtus V, was accomplished under Clement VIII, and was printed (Rome, 1598) as: "Sanctissimi Domini nostri Clementis papæ VIII Decretales", sometimes also "Septimus liber Decretalium". This collection, never approved either by Clement VIII or by Paul V, was recently edited (Freiburg, 1870) by Sentsis. In 1557

an Italian canonist, Paul Lancelottus, attempted unsuccessfully to secure from Paul IV, for the four books of his "Institutiones juris canonici" (Rome, 1563), an authority equal to that which its model, the "Institutiones" of Emperor Justinian, once enjoyed in the Roman Empire. A private individual, Pierre Mathieu of Lyons, also wrote a "Liber septimus Decretalium", inserted in the appendix to the Frankfort (1590) edition of the "Corpus Juris Canonici". This work was put on the Index. The sources of modern canon law must be looked for in the disciplinary canons of the Council of Trent (see TRENT, COUNCIL OF), in the collections of papal Bulls (see BULLARIUM), of general and local councils, and in the collections of the decisions and answers of the Roman Congregations (see CONGREGATIONS, ROMAN). However, the ancient "Corpus Juris Canonici" forms yet the basis of the actual canonical legislation. The present position is not without grave inconveniences. At the Vatican Council several bishops asked for a new codification of the canon law, and since then several canonists have attempted to compile treatises in the form of a full code of canonical legislation, e. g. de Luise (1873), Pillet (1890), Pezzani (1894), Deshayes (1894), Colomati (1898-1901). Finally Pius X determined to undertake this work by his decree "Arduum sane munus" (19 March, 1904), and named a commission of cardinals to compile a new "Corpus Juris Canonici" on the model of the codes of civil law. (See LAW.)

Corrado, RUDOLFO. See GHIRLANDAJO.

Correction, FRATERNAL, is here taken to mean the admonishing of one's neighbour by a private individual with the purpose of reforming him or, if possible, preventing his sinful indulgence. This is clearly distinguishable from an official disciplining, whose mouth-piece is a judge or other like superior, whose object is the punishment of one found to be guilty, and whose motive is not so directly the individual advantage of the offender as the furtherance of the common good. That there is, upon occasion and with due regard to circumstances, an obligation to administer fraternal correction there can be no doubt. This is a conclusion not only deducible from the natural law binding us to love and to assist one another, but also explicitly contained in positive precept such as the inculcation of Christ: "If thy brother shall offend against thee, go, and rebuke him between thee and him alone. If he shall hear thee, thou shalt gain thy brother" (Matt., xviii, 15). Given a sufficiently grave condition of spiritual distress calling for succour in this way, this commandment may exact fulfilment under pain of mortal sin. This is reckoned to be so only when (1) the delinquency to be corrected or prevented is a grievous one; (2) there is no good reason to believe that the sinner will adequately provide for himself; (3) there is a well-founded expectation that the admonition will be heeded; (4) there is no one else just as well fitted for this work of Christian charity and likely to undertake it; (5) there is no special trouble or disadvantage accruing to the reformer as a result of his zeal. Practically, however, individuals without any official capacity are seldom impeachable as having seriously transgressed the law in this matter because

it is but rarely one finds the coalition of circumstances just enumerated.

Of course the reproof is to be administered privately, i. e. directly to the delinquent and not in the presence of others. This is plainly the method appointed by Christ in the words just cited and only as a remedy for obduracy is any other contemplated by Him. Still there are occasions upon which one might lawfully proceed in a different way. For instance (a) when the offence is a public one; (b) when it makes for the prejudice of a third party or perhaps even the entire community; (c) when it can only be condignly dealt with by the authority of a superior paternally exercised; (d) when a public rebuke is necessary to preclude scandal: witness the withstanding of Peter by Paul mentioned in the Epistle to the Galatians (ii, 11-14); (e) when the offender has already in advance relinquished whatever right he possessed to have his good name safeguarded, as is the custom in some religious bodies. The obligation of fraternal correction, so far as private persons go, does not obtain, generally speaking, for the case of one who violates a law through invincible ignorance. The obvious reason is that there is then no formal sin. Superiors to be sure can claim no such immunity for it is their duty to instruct their subordinates. Every one, however, whether having an official competency or not, is bound to give the admonition when the sin, committed though it be from ignorance, is hurtful to the offender or a third party or is the occasion of scandal.

Correction, HOUSES OF SPIRITUAL. See RETREAT, HOUSES OF CORRECTIONAL.

Correctories are the text-forms of the Latin Vulgate resulting from the critical emendations as practised during the course of the thirteenth century. Owing to the carelessness of transcribers, the conjectural corrections of critics, the insertion of glosses and paraphrases, and especially to the preference for readings found in the earlier Latin versions, the text of St. Jerome was corrupted at an early date. About 550 Cassiodorus made an attempt at restoring the purity of the Latin text. Charlemagne entrusted the same labour to Alcuin, who presented his royal patron with a corrected copy in 801. Similar attempts were repeated by Theodulphus Bishop of Orleans [787(?) - 821], Lanfranc, Archbishop of Canterbury (1070-1089), Stephen Harding, Abbot of Cîteaux (1109-1134), and Deacon Nicolaus Maniacoria (about the beginning of the thirteenth century). At this period the need of a revised Latin text of the Vulgate became more imperative than ever. When, towards the end of the twelfth century, the schools of Paris were organized into the university and its various faculties adopted the same reference texts, the faculty of theology, too, adhered to a uniform text of the Latin Bible. It cannot be ascertained at present whether this adoption was owing to the chance prevalence of a certain manuscript or to the critical work of theologians, whether it was the effect of an official choice of the university or of a prevailing custom; at any rate, the almost general adoption of this text threw into oblivion a great number of genuine readings which had been current in the preceding centuries, and perpetuated a text, uniform, indeed, but very corrupt. This is the so-called "Biblia Parisiensis"; or Paris Bible; no copy is known to exist in our days. The thirteenth century reacted against this evil by a series of correctories. Father Denifle enumerates as many as thirteen groups, but it is more convenient to reduce them to three classes: the Dominican, the Franciscan, and the allied correctories.

Dominican Correctories.—The general chapter of the Dominicans held in 1236 connects a corrected text of the Latin Bible with the members of the province of France; it ordained that all Bibles should be conformed to this. Little more is known of this work; but the following correctories are more noted: (1) The "Biblia Senonensis", or the Bible of Sens, is not the Paris Bible as approved of by the Archbishop of Sens, nor is it a particular text adopted by the ecclesiastical authority of that city, but it is a correction of the Paris Bible prepared by the Dominican Fathers residing there. Whatever be the value of this correctory, it did not meet with the approval of the Dominican Order, as may be inferred from an ordination of the general chapter held in Paris, 1256. Quotations from it found in the "Correctorium Sorbonicum" resemble the readings of the Latin manuscript No. 17 in the National Library, Paris. The fathers of Sens failed to produce a satisfactory text because they were too sparing in their emendation of the Paris Bible. (2) Hugues of Saint-Cher tried to restore the primitive text of the Latin Vulgate, which in his day was practically identical with the Paris Bible, by removing its glosses and all foreign accretions. But instead of having recourse to the manuscripts of St. Jerome's text he compared the Paris Bible with the original Hebrew and Greek readings, thus furnishing a new version rather than a correctory. Roger Bacon calls his work "the worst corruption, the destruction of the text of God". Eight manuscripts of Hugues' correctory are still extant. (3) Theobald is the name of the Dominican Father who is usually connected with the next correction of the Latin Vulgate text, which appeared about 1248. The text of this too resembles that of the Latin manuscript No. 17 in the National Library, Paris, and is thus related to the "Correctorium Senonense". It may be identical with the "Correctio Parisiensis secunda", quoted in the "Correctorium Sorbonicum". (4) Another correctory was prepared about 1256 in the Dominican convent of Saint-Jacques, Paris. The manuscript thus corrected contains a text as bad as, if not worse than the Bible of Paris, the readings of which were carried into the new correctory. The principles of Hugues of Saint-Cher were followed by the correctors, who marked in red the words to be omitted, and added marginal notes to explain changes and suggest variants. They are more copious in the Old Testament than in the New. The autograph is preserved in the National Library, Paris, MSS. lat. 16,719-16,722.

Franciscan Correctories.—The great Franciscan writer, Roger Bacon, was the first to formulate the true principles which ought to guide the correction of the Latin Vulgate; his religious brethren endeavoured to apply them, though not always successfully. (1) The "Correctorium Sorbonicum", probably the work of William of Brittany, derives its name from the fact that the thirteenth-century manuscript in which the emendations were made belonged to the Library of the Sorbonne, though at present it is kept in the National Library, Paris, MS. lat. 15554, fol. 147-253. The marginal and interlinear glosses are derived from the Paris Bible and the correctory of the Dominican Father Theobald; the make-up of the work imitates the Dominican correctories. (2) The "Correctorium Vaticanum" owes its name to the circumstance that its first known manuscript was the Cod. Vaticanus lat. 3466, though at present eight other copies are known, belonging to the thirteenth or the beginning of the fourteenth century. Its author is William de Mara, of Oxford, a disciple of Roger Bacon, whose principles and methods he follows. Though acquainted with several Latin and Hebrew manuscripts, the Targum, the commentaries of Rashi, and the original texts, he relied more on the authority of the early manuscripts of St. Jerome's text. There are some faults in the correctory, resulting mainly from the

author's limited knowledge of Greek. (3) Gérard de Huy was a faithful follower of Roger Bacon's principles; the old Latin manuscripts and the readings of the Fathers are his first authority, and only when they disagree does he have recourse to the original texts. Unfortunately he knew no Latin manuscripts older than those of the ninth and tenth centuries containing a text of Alcuin's recension. But Gérard knew the history of the versions and the origin of the textual corruptions of the Sacred Scriptures. He corrected the Paris Bible and gave an account of his emendations in his marginal notes. (4) Two more Franciscan correctories must be noted: MS. 61 (Toulouse), of the fifteenth century, reproduces the correctory of Gérard de Buxo, of Avignon, a work rather exegetical than critical in character; MS. 28 (Einsiedeln), of the beginning of the fourteenth century, contains the work of John of Cologne.

Allied Correctories.—Mangenot mentions six other groups of correctories which have not been fully investigated as yet. Two of them are allied to the Dominican correctory of the convent of Saint-Jacques; one is represented by the MS. lat. 15,554, fol. 1-146, National Library, Paris; the other by Cod. Laurent., Plut., XXV, sin., cod. 4, fol. 101-107 (Florence), and by MS. 131, fol. 1, Arsenal, Paris. Two other groups are allied to the Franciscan correctories; one, represented by Cod. 141, lat. class. I, fol. 121-390, Marciana (Venice), depends on William de Mara and Gérard de Huy; the other, found in MS. 82, Borges. (Rome), depends on Gérard de Huy. Finally two very brief correctories are to be found in MS. 492, Antoniana, Padua, and in MS. Cent. I, 47, fol. 127, Nürenberg.

Correggio. See ALLEGRI, ANTONIO.

Corrigan, MICHAEL AUGUSTINE, third Archbishop of New York, b. 13 August, 1839, at Newark, New Jersey; d. at New York, 5 May, 1900. His parents were natives of Ireland. After graduating at Mt. St. Mary's College, Emmitsburg, Md., in 1859, he entered the College of the Propaganda at Rome, and was one of the twelve students with whom the North American College was opened there, 8 December, 1859. He was ordained priest at Rome, 19 September, 1863, and received there the degree of Doctor of Divinity in 1864. Returning to his native diocese in September, 1864, he was successively professor of dogmatic theology and of Scripture, vice-president and president of Seton Hall College and Seminary, and vicar-general of the diocese until 1873, when on 4 May he was consecrated Bishop of Newark. His administration, during the seven years of its continuance, was characterized by unceasing and successful efforts to bring the regulation of the spiritual and temporal affairs of the diocese into strict accordance with the prescriptions and recommendations of the plenary councils of the Church in the United States that had been held previous to his accession to the episcopacy.

The declining health of Cardinal McCloskey, Archbishop of New York requiring the appointment of a coadjutor, the young Bishop of Newark was named, 1 October, 1880, titular Archbishop of Petra, with the right of succession for New York, and on the death of Cardinal McCloskey in October, 1885, he assumed charge. Having taken an active part in the proceedings of the Third Plenary Council of Baltimore (1884) as the representative of the cardinal, his first impor-

tant act as archbishop was to convoke a synod of the diocese, in November, 1886, to carry into effect the decrees of the council. The considerable changes made by the council in the status of the clergy and its provisions for the administration of the dioceses of the United States, as to their subordinate officials, were adopted. A new theological seminary, to replace that of St. Joseph's, Troy, was built at Dunwoodie and opened September, 1896. The unfinished towers of St. Patrick's Cathedral were completed. The Orphan Asylums on Fifth and Madison Avenues were transferred to a new suburban location at Kingsbridge. The construction of the Lady Chapel of the cathedral, through funds donated by a generous Catholic family, was begun.

During the municipal election of 1886 Archbishop Corrigan deemed it his duty to disapprove of the socialistic character of the writings and addresses of one of the candidates for the mayoralty. This brought about the most disturbing incident, perhaps, of the archbishop's administration, the difference between himself and a prominent member of his clergy, the Rev. Dr. Edward McGlynn, rector of St. Stephen's Church, New York city, occasioned by the latter's advocacy of opinions which the archbishop believed were not in accord with Catholic teaching on the subject of the rights of property. The controversy began in 1886 with the clergyman's appearance on the public platform, in behalf of one of the candidates for mayor, who stood for certain novel economic theories, and led to the privation of his pastoral office. Not complying afterwards with the order of the pope, Leo XIII, to proceed to Rome, he incurred the sentence of excommunication.

There resulted some commotion in ecclesiastical and other circles, accentuated later (1892) by a new phase which the Catholic School question assumed in its relation to the State. A period of much public discussion and excitement followed which, however, began to subside rapidly when Dr. McGlynn was relieved of the censure by the Apostolic Delegate, then Archbishop Satolli, and obeyed the summons of the Holy Father. In 1894 Archbishop Corrigan appointed Dr. McGlynn pastor of St. Mary's Church, Newburgh, where he remained until his death in 1901.

On May 4th, 1898, Archbishop Corrigan celebrated the twenty-fifth anniversary of his episcopal consecration. Laymen, priests, and many prominent non-Catholics assembled to testify to his virtues as an ecclesiastic and as a citizen. He made his last visit *ad limina Apostolorum* in 1900. Two years afterwards, returning from a confirmation visit to the Bahamas, he contracted a cold, which, aggravated by an accident, caused his death on May 5th of the same year. The manifestation of sentiments of respect and affection on that event was not only local but national. From the beginning of his episcopate in New York he was obliged to face the problem of the great influx of foreign, especially Italian, immigration and its religious requirements. He had to guide and direct the charitable and educational interests of his diocese which rapidly and widely expanded during his administration. During the seventeen years of his rule he was instrumental in the increase of the churches, chapels, and stations of the archdiocese by one hundred and eighty-eight, of the clergy by two hundred and eighty-four, of schools by seventy-five. His scholarship was deep and wide, extending to every branch of ecclesiastical learning; his piety marked but unobtrusive; his methods gentle but firm. His devotion, his zeal, and his unceasing labours in behalf of religion make him a conspicuous figure in the history of the American Church of the nineteenth century. The only literary production that his busy life as a priest and bishop permitted him to publish was a "Register of the Clergy laboring in the Archdiocese of New York from early missions to 1885", which he compiled for the

"Historical Records and Studies" of the United States Catholic History Society (Jan., 1889, sqq.).

JOSEPH F. MOONEY.

Corrigan, SIR DOMINIC, physician, b. 1802, in Dublin, Ireland; d. there, 1880; distinguished for his original observations in heart disease, a special type of pulse being named after him. The son of a poor shopkeeper, his early education was obtained at Maynooth, which then had a department for secular students apart from the ecclesiastical seminary. He was attracted to the study of medicine by the physician in attendance. After several years of medical study in Dublin he followed the prevailing custom of the time and went to Edinburgh where he received his degree as M. D. in 1825. After his return to Dublin he was appointed physician to the Jervis Street Hospital, which had but six medical beds. During the next four years he studied certain forms of heart disease to such good purpose that he recast the teaching of diseases of the aortic valves. His article on "Permanent Patency of the Aortic Valves" appeared in the Edinburgh "Medical and Surgical Journal" for April, 1832. He was eminently successful as a teacher of medicine. In 1842 the London College of Surgeons conferred on him its diploma. In 1849 he received from the University of Dublin the honorary degree of M. D. He was known as a very hard-working physician, and his self-sacrificing devotion during the famine fever years made him famous. His "Lectures on Fevers" (Dublin, 1853) are a valuable contribution to our knowledge of this subject. He was created a baronet partly as a reward for his services as Commissioner of Education for many years. He was a member of Parliament in the Liberal interest for five years after 1869. He was defeated for re-election in 1874 by the liquor interest which he had antagonized by supporting the Sunday Closing Bill. He was President of the Royal Zoological Society of Dublin, of the Dublin Pathological Society, of the Dublin Pharmaceutical Society, and was five times elected President of the College of Physicians in Dublin, an unprecedented honour. His work on heart disease stamps him as a great original investigator in medicine. Trousseau, the French clinician, proposed that aortic heart disease should be called Corrigan's disease.

JAMES J. WALSH.

Corsica, the third island of the Mediterranean in point of size, only Sicily and Sardinia being of greater extent. The distance from the French seaport Antibes, on the Riviera, to Calvi, the port of Corsica nearest to France, is one hundred and eleven miles. There is a brisk commerce between Leghorn, in Italy, and Bastia, in Corsica, the voyage being made in five hours. The island is mountainous and well watered, a large part being covered with forests and almost impenetrable thickets called *maquis*. The climate is mild on the coast, but cold in the elevated regions. The area of Corsica is 3367 square miles, the population 300,000. Both the natives of the interior and those of the coast, whose ancestors were Italians, are nearly all Catholics.

The island was early visited by the Phoenicians and Phocians who established colonies there. For a time it belonged to Carthage, but was taken by the Romans, who retained possession from 260 B. C. to the end of the fifth century of the Christian Era. But they never subdued the mountain tribes of the interior, and even in the time of Gregory I (590-604).

there were many heathens in Corsica, which long retained its early reputation as a wild and inhospitable island. On the fall of the Western Empire (476) Corsica was taken by the Vandals, but was recovered by Belisarius, only to be captured by the Goths under Totila. Eventually, however, it became subject to the exarchs of Ravenna, and remained a Byzantine possession until the eighth century. At the end of the sixth and the beginning of the seventh century the Roman Church owned large landed estates in Corsica. By the Donation of Pepin the Short (754-55) the island came under the civil sovereignty of the popes (Liber Pontif., ed. Duchesne, I, 498; II, 104, note 35). From the eighth to the eleventh century it was frequently plundered by Saracen pirates. Pisa then set up a claim of overlordship which was soon disputed by Genoa. In 1300 the latter made good its claim to the civil and ecclesiastical influence hitherto exercised by Pisa, and despite numerous revolutions (Sampiero, 1567; Baron Neuhoof, 1729; Paoli, 1755) held at least a nominal authority until 1768. In that year Genoa ceded Corsica to France, since which time the island has remained a French province. Ajaccio, its chief town, is historically famous as the birthplace of Napoleon Bonaparte.

It has been asserted that Christianity was introduced into Corsica in Apostolic times. Ughelli, in his "Italia Sacra", says of Mariana, one of the oldest settlements: "It received the Catholic Faith, and has had its own pastors, ever since the times of the Apostles"; but this would be difficult to establish. Another tradition which finds favour with historians is, that Christianity was spread in the island by confessors of the Faith exiled thither (Hergenröther, I, in French tr., Paris, 1901, p. 297). The Bollandists say the country was entirely Christian in A. D. 439. It gave saints and martyrs to the Church; Mgr. de la Foata, in his "Recherches" (see bibliography *infra*), cites the names of three Corsican Friars Minor of the Observance, Bernardino Alberti, Franceschino Mucchieli, Teofilo Designorio, whose virtues had been authoritatively declared heroic, and also claims as Corsicans St. Laurina, virgin and martyr, whose festival was celebrated as a first-class feast in the ancient Diocese of Aleria, St. Partheus, martyr, St. Vinemialis and St. Florentius. It is said, also, that St. Julia was a Corsican.

We have seen that before and after 600 Corsica was in close dependence on the Apostolic See, and always remained so, (see Cappelletti, *Le Chiese d'Italia*, XVI, 307 sqq.). In 1077 Gregory VII named as his *vicarius* for Corsica the Bishop of Pisa. In 1092 Pope Urban II made its bishops suffragans of the Archbishop of Pisa. In 1133 Innocent II, having granted the pallium to the Archbishop of Genoa, gave him for suffragans the Corsican Bishops of Mariana, Nebbio, and Accia, the Archbishop of Pisa retaining as suffragans the sees of Ajaccio, Aleria, and Sagona. The Bishoprics of Mariana and Accia were united, 30 January, 1563. About 1580 the Blessed Alexander Sauli (q. v.), known as the "Apostle of Corsica" awoke the islanders to a more earnest religious life and founded a seminary on the model of those decreed by the Council of Trent. At the time of the French Revolution there were five dioceses in Corsica: Mariana and Accia, Nebbio, Aleria, Sagona, and Ajaccio. A decree of 12 July, 1790, of the National Assembly at Paris, whose members had voted the Civil Constitution of the Clergy, reduced these five bishoprics to one, giving to Bastia the pastoral care of the whole island. On 8 May, 1791, the election of the Constitutional bishop took place. The choice of the electors fell upon the canon Ignatius Francis Guasco, Vicar-General of Mariana, and Provost of the Cathedral. He, however, made a public and solemn recantation 22 December, 1794. The Concordat of 1801, between the Holy See and the

French Republic, which officially restored Catholic worship in France, made of Corsica a single diocese with Ajaccio as its episcopal city. (See CONCORDAT OF 1801; AJACCIO.) St. Euphrasius, bishop and martyr, is the patron of the diocese. Sts. Julia and Devota were declared patronesses of the island by decree of the S. C. of Rites, 5 August, 1809, and 14 March, 1820. The "Directorium Cleri" of the diocese for 1907 states that there are in Corsica one bishop and five hundred and ninety-seven priests, professors, directors, and chaplains. There are one vicar-general, eight titular canons, twenty-nine honorary canons, five archpriests, thirteen parishes of the first class, forty-eight of the second class, and three hundred and thirty-three chapels. Parochial councils, composed of members of the laity, assist the parish priests, since the suppression of the former boards of trustees by the separation of Church and State. In Ajaccio there was, until recently, a diocesan seminary, but the students were dispersed on account of the non-acceptance by Pope Pius X of the so-called "Law of Separation". At the time it ceased to exist, it had thirty-eight students and ten candidates for the priesthood. Every newly ordained priest is required to present himself yearly for five consecutive years for examination in ecclesiastical sciences before a special committee. The degrees in theology may dispense from several or all of these examinations, but a young priest is never admitted to the parish ministry without having passed an examination of this kind. In Corsica there are numerous charitable and pious brotherhoods, founded in the days of Italian rule. Several of these associations assemble in their own chapels. The churches are usually of the Italian style of architecture and sometimes richly adorned. The Society for the Propagation of the Faith is directed by a diocesan committee instituted 13 February, 1859. The St. Vincent de Paul Society has two conferences. An Association for free Catholic schools is supported by the subscriptions of the faithful, who also provide for the needs of Catholic worship. Before the suppression of the religious orders there were in Corsica one house of the Jesuits, six Franciscans, one Dominican, and five Capuchin monasteries, and one house of the Oblates of Mary. These, as well as the schools of the Christian Brothers and all convent schools, have been closed by the Government. There are still six convents of nuns. In consequence of the new laws of France, the Catholic Church in Corsica, a poor country, is confronted with a crisis: the people, habituated to look to the State for the support of public worship, must now adopt new methods and make many sacrifices for the maintenance of religion.

Cortés, DONOSO. See DONOSO CORTES.

Cortés, HERNANDO, conqueror of Mexico, b. at Medellin in Spain c. 1485; d. at Castilleja de la Cuesta near Seville, 2 December, 1547. He was married first to Catalina Xuarez, from which marriage there

was no issue, and, after her death, to Doña Juana de Zuñiga, niece of the Duke of Bejar. From this union there sprang four children, one son (Martín) and three daughters. His parents were Martín Cortés de Monroy and Catalina Pizarro Altamirano, both of honourable extraction, belonging to the middle class of nobility, but not wealthy. They sent their son to school at Salamanca when he was fourteen years of age, but study was irksome to him, his restless and ambitious temper chafed under restraint, and he returned home much to the displeasure of his parents. As he was the only son, they looked upon him as their hope and future support, and had wished that he would adopt the profession of the law. Dissatisfied at home Cortés turned his eyes to the newly discovered Western world, and, after an unsuccessful attempt to embark for the West Indies with Ovando, succeeded in reaching Española in a craft commanded by one Quintero, who signaled himself during the voyage by trying to deceive his superiors and reach the New World before them in order to secure personal advantages. It may be that the example of Quintero was a school for Cortés in his subsequent career. The life Cortés led in the Antilles was that of the military man of his time, with intervals of rest on such estates as he gradually acquired. He was a favourite of both Ovando and Velazquez, but he quarrelled with the latter, deceived him and made him a mortal enemy. The consequences were very serious, for Velazquez was Governor of Cuba and a man of influence at court. The conduct of Cortés during his stay in the Antilles (1504-1519) revealed, besides military aptitude (which he had small opportunity of displaying), shrewdness, daring (in his dealings with Velazquez), and no excess of scruples in morals.

In 1517 Cordova reached the coast of Yucatan, while commanding a modest expedition despatched by Velazquez. He was mortally wounded and only a remnant of his crew reached Cuba again, bringing back news of the superior culture of the people they had met. Another expedition was determined upon, and was carried out the year following under the leadership of Grijalva. It touched the coast of Mexico, and brought home metallic objects and evidences of superior culture. Ere Grijalva had come back, Velazquez determined to send a third and more numerous squadron to the Mexican coast. Cortés, then one of Velazquez's favourites, was named as the commander, a choice which created no little envy. Cortés entered into the enterprise with zeal and energy, sacrificing with too much ostentation a considerable part of his fortune to equip the expedition. Eleven vessels were brought together,

manned with well-armed men, and horses and artillery were embarked. At the last moment Velazquez, whose suspicions were aroused by the actions of Cortés, instigated by his surroundings, attempted to prevent the departure. It was too late; Cortés, after the example set by Quintero, slipped away from the Cuban coast and thus began the conquest of Mexico. His life from the time he sailed on his momentous undertaking in 1519 is so intimately linked with the history of Mexico, that the reader may be referred for additional details to the articles MEXICO, AZTECS, and PEDRO DE ALVARADO.

As a soldier Cortés put to use in Mexico the Indian

mode of warfare he had observed in the Antilles, and it enabled him to achieve an unbroken success in the open field. Indian defensive tactics from buildings and walls were new to him, but he quickly saw both their strong and their weak points, and his reduction of the island settlement of Tenochtitlan was no small feat. Here recognized at an early date the Indian method of proceeding by decoy and ambush, and this led to his success against the tribe of Tlaxcals. He was very quick in detecting devices and stratagems, even in time of apparent peace, and in adopting and executing measures to defeat them. One of the most remarkable instances is what has been called the "massacre of Cholula". When Cortés was at the large Indian settlement of Tlaxcals and had perfected an alliance with that people, some Indians from the neighbouring tribe of Cholula urged him to visit their home. He was warned not to go, since the visitors did not express the wish of their kindred, who were bitterly opposed to dealing with the Spaniards.

HERNANDO CORTÉS
(Painting in the Hospital of the Immaculate Conception, Mexico)

Though unacquainted with the character of the natives, he marched to Cholula, but noticed that a trap was being set for him. He prevented the outbreak by an attack on the Indians, and after a short struggle forced them into submission.

The most daring of his exploits, and one that may be qualified as absolutely reckless although successful, was his march on Narvaez who, with a much superior force of Spaniards, had landed on the gulf coast with orders from Velazquez, not only to supersede Cortés, but to capture him and bring him to trial in Cuba for disobedience and treason towards the governor. Leaving only one hundred and forty men under Alvarado to hold an Indian settlement of twenty thousand souls, he set out against Narvaez, who had nine hundred soldiers, while Cortés, reinforced as he approached the coast, mustered about two hundred and sixty. With these he surprised his antagonist and took him prisoner. The move was a desperate one, as the sequel proved. But the secret

of his success lay in his marvellously quick movements, for which Narvaez was not prepared, as well as in his rapid return to the plateau, by which he surprised the Indians who held Alvarado and his people at their mercy. The desperate defence of the Spaniards in the absence of Cortés would have been unavailing had the latter not moved with such celerity. In contrast with that lightning-like quickness, but equally well adapted to the necessities of the case, was the methodical investment and capture of the lake settlement, showing the fertility of the conqueror's mind in suiting his tactics to altered conditions.

To these military accomplishments Cortés joined an unusual perspicacity in penetrating the general situation in aboriginal Mexico. He saw, soon after landing at Vera Cruz, the looseness of the bonds by which the Indian tribes were connected, and yet his keen perception remained at fault in that he did not appreciate (nor could he, from the standpoint of the times, understand) Indian tribal organization. The sway the tribes of the table-land and interior lake-basin held over many of their neighbours appeared to him (judging from European and Asiatic models) as an evidence of a consolidated empire; the offices of superior rank held by chiefs, as parts of an organized hierarchy or feudal lordships; and the head war-chief a hereditary autocrat. Of the nature of tribal society he had not, and could not have, any idea. While, therefore, his attempts at winning tribes leagued with the Mexican confederacy over to the Spanish cause were usually successful, he was less fortunate in his relations with the Mexicans themselves. His seizure of the person of Montezuma, the head war-chief of the confederates, did not have the expected result. Led by the belief that Montezuma was a supreme ruler, hence the pivot of a state, Cortés confidently hoped to control the Mexican tribe and its confederates through his captive. The seizure itself appears as an act of singular daring, and Cortés and his men were astonished at the ease with which it was executed, and the lack of opposition on the part of the Indians; but they did not know that their prisoner was of so little importance. He was an elected officer, who could be replaced without trouble, and the tribal council, supported by the medicine men and guided by their oracular utterances, were the real heads of the confederacy. The general outbreak against the Spaniards began after Montezuma's successor had been installed; until then hostile manifestations were limited to blockading Alvarado.

For the sake of policy, Cortés was, in general, far from cruel towards the Indians. He allowed Cuauhtemotzin to be tortured in order to force him to reveal the whereabouts of his supposed hidden treasures. Such acts were not uncommon at that period, and every nation was at times guilty of them. This cruelty was, however, useless, because the greater part of the Mexican treasures had already passed into the hands of the Spaniards. The execution of Cuauhtemotzin on the journey to Honduras was another instance of the misconception by Cortés of Indian conditions. It is not at all unlikely that the Mexican chieftain was party to a plan to exterminate the Spaniards while they were floundering through the forests and swamps, but even if this were so, his execution was not necessary. By restraint the same object might have been achieved. But Cortés had an exaggerated conception of the power and influence of Cuauhtemotzin's office, as he had in the case of Montezuma. To the Indians as a mass he was kind. He recognized that their preservation would insure eventual prosperity for the Spaniards, provided the Indians gradually accepted European ideas. Therefore he regarded the Church as the main instrument for the education of the Indian.

But he was far from sharing in the dreams of Las Casas. His relations with the clergy were very cordial, he did all he could to introduce missionaries, and even Las Casas mentions him favourably. It has been intimated that the kind treatment of the Mexican natives by Cortés was part of a deeply-laid plan to use his conquest of Mexico for selfish and treasonable purposes, for Cortés was not always the faithful subject. This leads us to consider his relations to the Crown of Spain and a few points of his private character.

The impression has prevailed that Cortés was treated by the Spanish Government with base ingratitude. It is true that a few years after 1521 an unfavourable change took place in his relations with the Emperor Charles V and his government. The change never led to an absolute break, but it caused a gradual curtailing of his power which Cortés felt very keenly. While lavishly contributing his own means at the outset, Cortés made his conquest avowedly as a Spanish subject, for and in behalf of Spain and its monarch. Mexico became a Spanish colony through his instrumentality, but it was the duty of the Spanish Government to care for it. Cortés personally was not ungenerously rewarded, but he speedily complained of insufficient compensation to himself and his comrades. Thinking himself beyond reach of restraint, he disobeyed many of the orders of the Crown, and, what was more imprudent, said so in a letter to the emperor, dated 15 October, 1524 (*Ycazbalceta, "Documentos para la Historia de México"*, Mexico, 1858, I). In this letter Cortés, besides recalling in a rather abrupt manner that the conquest of Mexico was due to him alone, deliberately acknowledges his disobedience in terms which could not fail to create a most unfavourable impression. Soon after the capture of the Indian settlement the Crown, as was its prerogative, in 1522 sent to Mexico officers to investigate the condition of affairs, and to report on the conduct of Cortés. To this he could not object, as it was an established custom. The commissioner, Tapia, charged with the investigation, was so hampered, however, by the officers of Cortés that he did not even reach the valley of Mexico, but returned without carrying out his orders. Cortés himself, while keeping at a distance, treated him with the utmost courtesy, but rendered all action on his part impossible. A second commissioner, Luis Ponce de León, was sent in 1526 with discretionary and very dangerous powers. He died at Mexico soon after his arrival, in a manner that leaves little doubt of foul play, although Prescott discredits it. But Prescott had not then the documentary material since unearthed. A number of minor charges were brought against the conqueror, and they appear to have been substantiated. They could not fail to create grave suspicion, because they presented the picture of a conspiracy, the object of which was to make Cortés the independent ruler of Mexico. Under such circumstances the least that could be expected was the elimination of Cortés from the government of the new province. The situation was a very critical one for the Crown. Cortés held the country and its resources, and controlled a body of officers and men who had, in 1520, expressed to the emperor in writing their admiration for their captain, and dwelt in the strongest terms on the obligations under which his achievements had placed the mother country. It is true, in case of a clash, Spain might have counted upon the support of the inhabitants of the Antilles, but the military reputation of Cortés had become so great that the selection of a leader against him would have been very embarrassing. Hence a conflict had to be avoided as long as possible. Cortés' position was gradually undermined, titles and honours were conferred upon him, but not the administrative

authority he coveted. At the same time his attention was insensibly directed to explorations outside of America, to the much-desired Moluccas or Spice Islands.

At a time when there was almost a certainty, in court circles in Spain, of an intended rebellion by Cortés, a charge was brought against him that cast a fatal blight upon his character and plans. He was accused of the murder of his first wife. Prescott makes light of the accusation, but his opinion has little weight because, as above stated, evidence has since been discovered which was beyond his reach. This evidence leaves no doubt that Catalina Xuarez was strangled by her husband. The proceedings of the investigation were kept secret. No report, either exonerating or condemning Cortés, was published. Had the Government declared him innocent, it would have greatly increased his popularity; had it declared him a criminal, a crisis would have been precipitated by the accused and his party. Silence was the only safe policy. But that silence is a strong indication that grave danger was apprehended from his influence. It is curious that, after the conquest of the Mexicans had been consummated, but more particularly after the sinister deeds above mentioned, success seems to have abandoned his banner. Excluded from the government of Mexico, his eyes were turned to further exploration. Don Antonio de Mendoza, first viceroy of New Spain, was looked upon by Cortés as his enemy, but the accusation that he opposed and hampered Cortés in nearly every one of his new enterprises is not justified. It was the latter who, at once, opened a violent campaign against everybody who approached what he considered his new domain. He found grave faults with every measure, and resorted to statements that were utterly baseless. Thus his attack upon Father Marcos de Nizza, charging him with having attributed to himself the discovery of New Mexico while in reality he, Cortés, had been the discoverer, is so groundless that it appears almost ridiculous. Every expedition set on foot by Cortés in the Pacific either failed absolutely or produced meagre, unsatisfactory results. Soured by these failures which stood in flagrant contrast to the brilliant success of his early efforts, Cortés became a chronic complainant. He saw his influence gone, his prestige waning. The Government could not forget the proofs of unreliability which the conqueror of Mexico had given when he thought himself master of the situation. The emperor finally permitted him to join the great expedition against Algiers in 1541. It may be that had the advice of Cortés been followed that undertaking would have had a less disastrous end; but he was not even consulted. The enterprise failed, and the conqueror of Mexico did not long survive the failure.

Cortés was a good writer. His letters to the emperor, on the conquest, deserve to be classed among the best Spanish documents of the period. They are, of course, coloured so as to place his own achievements in relief, but, withal, he keeps within bounds and does not exaggerate, except in matters of Indian civilization and the numbers of population as implied by the size of the settlements. Even there he uses comparatives only, judging from outward appearances and from impressions. His first letter is lost, and the one from the municipality of Vera Cruz has to take its place. It was published for the first time in volume IV of "*Documentos para la Historia de España*", and subsequently reprinted. The "*Segunda Carta de Relacion*", bearing the date of 30 Oct., 1520, appeared in print at Seville in 1522. The "*Carta tercera*", 15 May, 1522, appeared at Seville in 1523. The fourth, 20 October, 1524, was printed at Toledo in 1525. The fifth, on the Honduras expedition, is contained in volume IV of the "*Docu-*

mentos para la Hist. de España". The important letter mentioned in the text has been published under the heading of "*Carta inédita de Cortés*" by Ycazbalceta. A great number of minor documents, either by Cortés or others, for or against him, are dispersed through the voluminous collection above cited and through the "*Colección de Documentos de Indias*", as well as in the "*Documentos para la Historia de México*" of Ycazbalceta. Of his letters on the conquest there are a number of reprints and translations into various languages.

See articles on AZTECS and MEXICO for the bulk of literature on the conquest of Mexico and the part played by Cortés in it. PETER MARTYR and especially OVIEDO were contemporaries; their statements therefore deserve particular attention, although absolute impartiality and reliability cannot be expected. On the sinister occurrences of the death of Ponce de León and of Catalina Xuarez the *Documentos de Indias* contain the authentic investigations. The early life of Cortés is described at length in a fragment from the sixteenth century, *De Rebus Gestis Ferdinand Cortesii*, author unknown, published by YCAZBALCETA in his *Documentos*, I, first series. BERNAL DÍAZ DEL CASTILLO gives many very valuable data on Cortés, but he must be classed among writers on the conquest.

AD. F. BANDELIER.

Cortese, GIOVANNI ANDREA (his name in the Benedictine Order was Gregorio), cardinal and monastic reformer, b. 1483 at Modena; d. 21 Sept., 1548. After receiving a training in the Humanities at Modena under the learned Cistercian Varino of Piacenza, he devoted himself to the study of jurisprudence for five years, first at Bologna, then at Padua, and was graduated as doctor of laws at the early age of seventeen. His thorough knowledge of the Latin and Greek languages induced Cardinal Giovanni de' Medici, the future Pope Leo X, to take him into his service and afterwards appoint him legal auditor in the Curia. Desirous of leading a more quiet life, Cortese resigned this office and in 1507 entered the Benedictine monastery of Polirone near Mantua, one of the most flourishing abbeys of the recently founded Cassinese Congregation. When Cardinal Giovanni de' Medici heard that his former auditor had become a monk, he addressed a letter to him expressing his surprise and displeasure at the step which Cortese had taken and urging him to leave the monastery and resume his former occupation in Rome. In his answer to the cardinal's letter Cortese points out the great dangers which beset his soul when he was still engaged in worldly pursuits, and speaks of the interior happiness which he experienced while chanting the Divine praises and applying himself to the study of Holy Scripture. When in 1513 Giovanni de' Medici ascended the papal throne as Leo X, Cortese sent him a letter of congratulation in which, however, he did not omit to remind the new pontiff of his duty to begin at last that general reform of which the Church stood in extreme need. Like many other saintly and learned men of the time, Cortese was deeply grieved at the indifference manifested by many ecclesiastical dignitaries towards a wholesome internal reform of the Church. It is due to his untiring zeal that the Benedictine reform, which had recently been inaugurated in Italy by the Cassinese Congregation, was carried through, and that, with the return of monastic discipline, the Benedictine monasteries of Italy again became seats of that learning for which they had been so famous in the past.

In 1516 Augustin de Grimaldi, Bishop of Grasse and abbot of the monastery of Lérins, united his monastery with the Cassinese Congregation, and, upon the bishop's request, Cortese and a few others were sent thither to assist in introducing the Cassinese reform. Here Cortese devoted himself to literary pursuits, and in order to promote the study of the Humanities he founded an academy where he and other learned members of the monastery educated the French youth, thus becoming instrumental in transplanting to French soil the literary Humanistic move-

ment. The moral and literary reform of Lérins was assured when in 1524 Cortese was elected its abbot. His health, however, was greatly impaired during his sojourn at Lérins, so that in 1527 he considered a change of climate indispensable and asked the superior of the congregation for permission to return to Italy. As a result, he was appointed Abbot of St. Peter's at Modena; a year later, Abbot of St. Peter's at Perugia; and in 1537 Abbot of the famous San Giorgio Maggiore at Venice. Cortese was now considered one of the most learned men in Italy and had regular correspondence with the greatest scholars in Europe. He counted among his friends Gasparo Contarini, Reginald Pole, Jacopo Sadoletto, Pietro Bembo, Gian Matteo Giberti, and many other Humanists and ecclesiastical dignitaries. The garden of San Giorgio was the place where those pious and learned discussions were held to which the Florentine scholar Brucioletto refers in his dialogues on moral philosophy. In 1536 Pope Paul III made him a member of the committee of nine ecclesiastics who were to draw up a statement of those ecclesiastical abuses which called most loudly for reform. Soon after, he was appointed Apostolic visitor for the whole of Italy and, somewhat later, was sent to Germany to take part in the theological disputation at Worms in 1540, but became sick on the journey and was obliged to remain in Italy. Meanwhile (1538) he had become Abbot of San Benedetto in Polirone, then the most important monastery of the Cassinese Congregation. A few times, moreover, he was chosen visitor general of his congregation. Finally, 2 June, 1542, Pope Paul III created him cardinal-priest and appointed him a member of the committee of cardinals for the preparation of the Council of Trent. Towards the end of the same year he became Bishop of Urbino. During the five years of his cardinalate he was an esteemed friend and adviser of Paul III, and used all his influence to bring about that reform of the Church for which the better sort of ecclesiastics had been clamouring many years.

Cortese was one of the best-known writers of his times. He was master of such a finished style that the classically trained Cardinal Bembo and others did not hesitate to class him among the most elegant Latin writers of this Humanistic period. His principal works are epistles, poems, a treatise proving that St. Peter was in Rome, a Latin translation of the New Testament from the Greek texts, a historical work on the destruction of Genoa, etc. All his extant works were collected and edited with a biography of the author by the Benedictine Bishop Gradenigo of Ceneda in two volumes (Padua, 1774).

PRANDI, *Elogio storico del Cardinale Gregorio Cortese* (Pavia, 1788); ANSAR, *Vie de Grégoire Cortes, bën., évêque d'Urbain et cardinal* (Paris, 1786); DITTRICH in *Kirchenlex.*; ZIEGELBAUER, *Hist. Lit. O. S. B.*, III, 339-344; CIACONIUS-OLDOINUS, *Vita et res gestæ Pontificum Rom. et S. R. E. Cardinalium* (Rome, 1677), III, 683 sqq.; HURTER, *Nomenclator* (Freiburg, 1899), IV, 1278 sq.

MICHAEL OTT.

Cortona, DIOCESE OF (CORTONENSIS), immediately subject to the Holy See. Cortona is a small city in the province of Arezzo, Tuscany, Central Italy, situated on a commanding hill, and overlooking the Lake of Perugia. Its cyclopean walls, still in great part preserved, are said to be 3000 years old. It is certainly very ancient, was one of the twelve cities of Etruria, and in its neighbourhood many ruins and Etruscan tombs are still to be found. Cortona took part in all the wars against Rome, until 310 B.C., when Fabius Rullianus defeated the Etruscans and took Perugia which, thereupon, with other cities, made peace with Rome. Later it was destroyed by the Lombards but was soon rebuilt. In the fourteenth century it was governed by the Casali, and became afterwards part of the great Duchy of Tuscany. Many famous men were born or lived in Cortona:

IV.—26

Brother Elias (Elia Coppi), the famous companion of St. Francis of Assisi, and later Vicar-General of the Franciscan Order; Cardinals Egidio Boni and Silvio Passerini; the painter Luca Signorelli; the architect and painter Pietro Berrettini (Pietro da Cortona). One of the glories of the city is St. Margaret of Cortona (1248-97). She was born at Laviano (Alviano) in the Diocese of Chiusi, and formed an evil relation with a nobleman of the vicinity. On discovering his body after he had met a violent death, she repented suddenly, and after a public penance, retired to Cortona, where she took the habit of a Tertiary of St. Francis and devoted her life to works of penance and charity. There still exist at Cortona religious works due to her zeal. Leo X permitted her veneration at Cortona, and Urban VIII extended the privilege to the Franciscan Order. Benedict XIII canonized her in 1728. Her body rests in a beautiful sarcophagus in the church dedicated to her at Cortona. It is not known whether Cortona was an episcopal see previous to its destruction by the Lombards. From that time until 1325 it belonged to the Diocese of Arezzo. In that year, at the request of Guglielmo Casali, John XXII raised Cortona to episcopal rank, as a reward for the fidelity of its Guelph populace, Arezzo remaining Ghibelline. The first bishop was Rainerio Ubertini. Other bishops were Luca Grazio, who was a distinguished member of the Council of Florence (1438); Matteo Concini (1560) and Gerolamo Gaddi (1562) were present at the Council of Trent. The cathedral

PALAZZO PRETORIO, CORTONA, XVI CENTURY

CATHEDRAL, CORTONA (Designed by Antonio da Sangallo?)

and the other churches of Cortona possess numerous works of art, especially paintings of the school of Luca Signorelli and of Fra Angelico. The diocese has 50 parishes, 60 churches and oratories, 85 secular and 36 regular priests, 30,200 inhabitants, 6 religious houses of men, and 6 of women.

CAPPILLETTI, *Le chiese d'Italia* (Venice, 1844), XVIII, 267-97; CHEVALIER, *Rép. hist.: Topo-bibl.*, s. v.; *Ann. ecl.* (Rome, 1907), 427-29.

U. BENIGNI.

Corvey, ABBEY OF (also called NEW CORBIE), a Benedictine monastery in the Diocese of Paderborn, in Westphalia, founded c. 820 from Corbie in Picardy, by the Emperor Louis the Pious and St. Adalhard, Abbot of the older Corbie, from which the new foundation derived its name. Corvey soon became famous, and its abbots ranked as princes of the empire. In its school were cultivated all the arts and sciences, and it produced many celebrated scholars. To it the world is indebted for the preservation of the first five books of the "Annals" of Tacitus. From its cloisters went forth a stream of missionaries who evangelized Northern Europe, chief amongst them being St. Ansgar, the Apostle of Scandinavia. Here, too, Widukind is believed to have written his history of the Saxons (see SAXONS), and the "Annales Corbejenses", which issued from the same scriptorium, figure largely in the "Monumenta Germaniæ" collected by Pertz. (These "Annales" must not be confounded with the forged "Chronicon Corbejense" which appeared in the nineteenth century.) The school of Corvey declined after the fifteenth century, but the abbey itself continued until 1803, when it was secularized and given to the family of Oranje-Nassau. The famous abbey library has long since been dispersed.

Hist.: Scriptores* (Hanover, 1839), III; MIGNÉ, *Dict. des Abbayes* (Paris, 1856); ENCK, *Kirchenlex.*, III, 1143-51; CHEVALIER, *Topo-bibl.* (Paris, 1894-99); JANSEN, *Wibald von Stablo und Corvey* (Berlin, 1854)

G. CYPRIAN ALSTON.

Corycus, a titular see of Cilicia Trachæa in Asia Minor. It was the port of Seleucia, where, in 191 B. C., the fleet of Antiochus the Great was defeated by the Romans. In the Roman times it preserved its ancient laws; the emperors usually kept a fleet there to watch over the pirates. Justinian restored the public baths and a hospital. Alexius Comnenus re-equipped the fortress, which had been dismantled. Soon after Corycus was conquered by the Armenians, who held it till the middle of the fourteenth century, when it was occupied temporarily by the Turks, and for a time played an important part. Peter I, King of Cyprus, captured it in 1361. From 1448 or 1454 it belonged alternately to the Karamanlis, the Egyptians, the Karamanlis a second time, and finally to the Osmanlis. The ruins of the city are at Ghorghos, twenty-eight miles north-east of Selefké (Seleucia), in the vilayet of Adana. Among them are a triumphal arch, a beautiful Christian tomb, sarcophagi, etc. The two medieval castles, one on the shore, the other in an islet, connected by a ruined pier, are partially preserved; the former was reputed impregnable. Three churches are also found, one decorated with frescoes. About two miles from the cape is the famous Corycian cavern, 886 feet long, 65 wide, from 98 to 228 high. Near this castle are many other smaller but curious grottoes, a temple of Zeus, and a little church with Byzantine paintings, converted into a mosque. About ten miles north of Ghorghos exists another large grotto with thirteen curious bas-reliefs hewn in the rock. The city figures in the "Synecdemus" of Hierocles, and about 840 in Parthey's "Notitia Prima"; it was suffragan of Tarsus. Lequien (II, 879) mentions five Greek bishops from 381 to 680; another is known from an inscription (Waddington, *Inscriptions*, . . . d'Asie mineure, 341). One Latin Bishop, Gerardus, was present at a council of Antioch about 1136; four are known in the fourteenth century (Lequien, III, 1197; Eubel, I, 218).

CUNET, *Turquie d'Asie*, II, 73; ALISHAN, *Sissouan* (Venice, 1899), 393-409.

S. VAILHÉ.

Corydallus, a titular see of Asia Minor. Korydallos, later also Korydalla, was a city in Lycia. In Roman times it struck coins. It figures in the

"Notitiæ episcopatum" as late as the twelfth or thirteenth century as a suffragan of Myra. Lequien (I, 979) mentions only four bishops: Alexander, spoken of in St. Basil's letter cexviii, Palladius in 451 and 458, Leo in 787, and Eustratius in 879. Corydallus has not as yet been identified. There was a see of the same name in Pamphylia, suffragan to Perge (see Lequien, I, 1031). S. PÉTRIDIS.

Cosa, JUAN DE LA, navigator and cartographer, according to tradition b. in 1460 at Sta. María del Puerto (Santoña), on the Bay of Biscay, Spain, and hence called JUAN BISCAYNO, d. on the coast of the Gulf of Uraba, 28 February, 1510. He passed his life from earliest childhood on the ocean. From the waters of his native country, which he knew thoroughly, he soon ventured onto the coast of Western Africa, which was at that time the goal of so many Spanish expeditions. When Columbus in 1492 made preparations for his voyage to the west, Juan de la Cosa had attained such reputation, that the great discoverer engaged him, together with his ship Santa María, and in spite of a passing estrangement between them, he secured de la Cosa's services as cartographer for his second expedition in 1493-1496. In 1499 Juan de la Cosa joined as first pilot the expedition of Alonso de Ojeda and Vespucci, and was with them amongst the first to set foot on the South American Continent on the Gulf of Paria. At the same time the coast from Essequibo to the Cape Vela was explored. Immediately after his return he designed his chart of the whole world, which is of the utmost importance for the history of the discovery of America. Later in the same year, or early in 1501, he continued his discoveries along the South American coast to the Isthmus of Panama, and returned in 1502 to Haiti. When the Spanish court found soon afterwards that the Portuguese had made several incursions into the newly discovered country, Queen Isabella sent Juan de la Cosa at the head of a delegation to Portugal, to remonstrate. He was nominated alguazil major, and in 1504-05 was commander of an expedition to the Pearl Islands and the Gulf of Uraba to found settlements there. At the same time he visited Jamaica and Haiti. Another voyage undertaken 1507-08 with Martín de los Reyes and Juan Correa as pilots had the same object in view. In 1509 for the seventh and last time Juan de la Cosa started for the New World. He carried two hundred colonists on three ships and on reaching Haiti he placed himself under the command of Ojeda, who added another ship with one hundred settlers to the expedition. After having decided an old frontier-dispute between Ojeda and Nicuesa, they went with Pizarro into Ojeda's territory and landed at Cartagena against the warnings of Cosa, who proposed to disembark on the more peaceful coast of the Gulf of Uraba. They were attacked by the natives and de la Cosa was killed.

Juan de la Cosa made several charts of which one, the famous chart of the world is still preserved. It is the oldest representation of the New World. Of special interest is the outline of Cuba, which Columbus never believed to be an island. Walkenaer and Alexander von Humboldt were the first to point out the great importance of this chart. It is now in the Museo Naval in Madrid. Reproductions of it are given by Humboldt in his "Atlas géographique et physique"; by Jomard in his "Collection des Monuments", tab. XVI; by Winsor, in his "History of America", III (London, 1888), and by Kretschmer, "Die Entdeckung Americas" (Berlin, 1892), Atlas, table VII. A facsimile was published in Madrid, 1892.

DE LEGUINA, *Juan de la Cosa* (Madrid, 1877); VASCANO, *Ensayo biográfico del célebre navegante Juan de la Cosa. Obra impresa en español, francés é inglés para acompañar al Mapa Mundi de Juan de la Cosa* (Madrid, 1892).

OTTO HARTIG.

This is a historical map of the world, likely a reproduction of a 15th-century map. It is oriented with North at the top. The map is divided into several sections:

- Top Section (North):** Shows the northern part of the world, including the Arctic region and the northern coast of Europe and Asia. The word "NORTH" is written at the top center.
- Left Section (Americas):** A rectangular inset map shows the Americas, with the word "America" written below it. The map is labeled with various geographical names and features.
- Right Section (Europe and Africa):** A large rectangular map shows the European continent and the northern part of Africa. The word "Europe" is written below the continent. The word "Africa" is written below the continent. The word "Asia" is written below the continent.
- Center:** A large circular compass rose is located in the center of the map. It features a sun in the center, surrounded by a ring of stars. The words "NORTH", "SOUTH", "EAST", and "WEST" are written around the compass rose.
- Bottom Section (South):** Shows the southern part of the world, including the southern coast of Europe and Africa. The word "SOUTH" is written at the bottom center.

The map is decorated with various symbols, including stars, clouds, and a large figure of a person in the center. The map is labeled with various geographical names and features.

WESTERN HALF OF THE FIRST MAP OF THE NEW DISCOVERIES, DRAWN ON OX-HIDE IN COLOURS BY THE PILOT JUAN DE LA COSA, A. D. 1500, NOW PRESERVED IN THE NAVAL MUSEUM, MADRID. SIZE 18 x 22 INCHES. THIS CELEBRATED MAP WAS DISCOVERED BY BARON ALEXANDER VON HUMBOLDT WHILE AT WORK IN THE LIBRARY OF BARON WALKENBER. IN THE MIDDLE OF THE WEST SIDE OF THE MAP IS A VIGNETTE REPRESENTING SAINT CHRISTOPHER (THE CHRIST-BEARER) CARRYING UPON HIS SHOULDERS THE INFANT CHRIST, SUPPOSED TO BE AN ALLUSION TO COLUMBUS.

Cosenza, ARCHDIOCESE OF (CUSENTINA), immediately subject to the Holy See. Cosenza is a city in the province of Calabria, Southern Italy, at the confluence of the Crati and the Busento. It was known to the ancients as *Consentia*, and was the capital of Bruttium. It was conquered (338 B. C.) by Alexander of Epirus, uncle of Alexander the Great. Later it adhered to King Pyrrhus, when he invaded Italy. Between 278-176 B. C. both Lucania and Bruttium acknowledged the supremacy of Rome. Alaric besieged the city (A. D. 410), but died there the same year and was buried in the bed of the Busento at its confluence with the Crati. In 902 Cosenza was pillaged by the Saracens, who were later expelled by the Normans but regained possession of the city in 1004. In 1130 Cosenza became the capital of Calabria Citeriore, now Cosenza, and thenceforth shared the vicissitudes of the Kingdom of Naples. Among its famous citizens may be mentioned the savant Gian Vincenzo Gravina, co-founder with Queen Christina of Sweden of the Roman Academy of the Arcadia in 1656 (see *ACADEMIES*, ROMAN). The city suffered much from earthquakes, especially in 1184, 1658, and 1783. The Gospel was first preached in Cosenza by missionaries from Reggio; its earliest known bishop is Palumbus, a correspondent (599) of St. Gregory the Great. Cosenza was raised to the dignity of an archbishopric about 1050. Among the best known Archbishops of Cosenza have been: Ruffo, who perished in the earthquake of 1184; the Cistercian Martino (1285), a prolific but uncritical writer; Pirro Caracciolo (1452), the friend of St. Francis of Paula; Bartolommeo Fleury, who died at Rome (1495) in Castle Sant' Angelo, where he had been imprisoned for forgery of pontifical documents; Taddeo, later Cardinal, Gaddi (1535), who obtained from Paul IV the privilege by which the cathedral canons of Cosenza wear the choir habit of the Vatican basilica; and Giuseppe Maria Sanfelice (1650), frequently charged by the Holy See with diplomatic missions. The diocese has a population of 159,500, with 109 parishes, 264 churches and chapels, 200 secular and 16 regular priests, 2 religious houses of men and 5 of women.

U. BENIGNI.

Cosgrove, HENRY, second Bishop of Davenport, Iowa, U. S. A., b. 19 December, 1834, at Williamsport, Pennsylvania; d. at Davenport, 23 December, 1906. He was the first native of the United States appointed to a see west of the Mississippi. In 1845 he emigrated to Iowa with his parents from Pennsylvania. He was ordained priest 27 August, 1857, and became pastor of St. Marguerite's church, Davenport, in 1861. After the death of Bishop McMullen of Davenport he was administrator of the see, for which he was consecrated 20 July, 1884.

THOMAS F. MEEHAN.

Cosin (the name is also written COSYN), EDMUND, Vice-Chancellor of Cambridge University, England. The dates of his birth and death are uncertain. He was born in Bedfordshire and entered King's Hall, Cambridge, as a Bible clerk, receiving the degrees of B.A. early in 1535, M.A. in 1541, and B.D. in 1547. He held the living of Grendon, Northamptonshire, which was in the gift of King's Hall, from 21 September, 1538, to November, 1541, and, successively, fellowships of King's Hall, St. Catharine's Hall, and of Trinity College. Early in Queen Mary's reign he was elected Master of St. Catharine's, which brought him as gifts from the Crown the Norfolk rectories of St. Edmund, North Lynn (1533), Fakenham (1555), and

the Norfolk vicarages of Caistor Holy Trinity, and of Oxburgh (1554). He was presented to the rectory of Thorpland by Trinity College in the following year. He was also chaplain to Bishop Bonner of London and assistant to Michael Dunning, the Chancellor of the Diocese of Norwich. In 1558 he was elected Vice-Chancellor of Cambridge but being a Catholic he refused to conform to the Elizabethan heresies, and hence in 1560 was forced to resign all his preferments and went in 1564 to live in retirement in Caius College, Cambridge. Four years later, summoned to answer before the Lords of the Council to a charge of non-conformity, he went into exile rather than forswear his faith. He was living on the Continent in 1576 but no further definite records of his career are available.

THOMAS F. MEEHAN.

Cosmas (called HAGIOPOLITES or COSMAS OF JERUSALEM), a hymn-writer of the Greek Church in the eighth century, was the foster-brother of St. John of Damascus. The teacher of the two boys was an elderly Silician, also named Cosmas, who had been freed from slavery by St. John's father. St. John and Cosmas went from Damascus to Jerusalem, where both became monks in the monastery of St. Sabas near that city. Cosmas, however, left the monastery in 743, when he was appointed Bishop of Maiuma, the port of ancient Gaza on the southern coast of Phœnicia. The Greek Church observes his feast on 14 October. As a learned prose-author Cosmas wrote comments on the poems of Gregory of Nazianzus; as a poet he is regarded by the Greek Church with great admiration. It considers Cosmas and St. John of Damascus the best representatives of the later Greek classical hymnology, the most characteristic examples of which are the artistic liturgical chants known as "Canons". The hymns of Cosmas were originally intended to add to the interest of the services at Jerusalem, but through the influence of Constantinople their use became universal in the Orthodox Greek Church. It is not certain, however, that all the hymns ascribed to Cosmas in the Greek liturgical books were really his compositions, especially as his teacher of the same name was also a hymn-writer. Collections of hymns, varying in number, are attributed to Cosmas, and may be found in Migne, P. G., XCVIII, 459-524, and in Christ-Paranikas, "Anthologia græca carminum christianorum" (Leipzig, 1871), 161-204. For the above-mentioned notes or *scholia* on the poems of Gregory of Nazianzus see Mai, "Spicilegium Romanum", II, Pt. II, 1-375, and Migne, P. G., XXXVIII, 339-679.

ANTON BAUMSTARK.

Cosmas and Damian, SAINTS, early Christian physicians and martyrs whose feast is celebrated on 27 September. They were twins, born in Arabia, and practised the art of healing in the seaport Ægea, now Ayash (Ajass), on the Gulf of Iskanderun in Cilicia, Asia Minor, and attained a great reputation. They accepted no pay for their services and were, therefore, called ἀράργυροι, "the silverless". In this way they brought many to the Christian Faith. When the Diocletian persecution began, the Prefect Lysias had Cosmas and Damian arrested, and ordered them to recant. They remained constant under torture, in a miraculous manner suffered no injury from water, fire, air, nor on the cross, and were finally beheaded with the sword. Their three brothers, Anthimus, Leontius, and Euprepus died as martyrs with them. The execution took place 27 September, probably in the year 287. At a later date a number of fables grew up about them, connected in part with their relics.

The remains of the martyrs were buried in the city of Cyrus in Syria; the Emperor Justinian I (527-565) sumptuously restored the city in their honour. Having been cured of a dangerous illness by the intercession of Cosmas and Damian, Justinian, in gratitude for their aid, rebuilt and adorned their church at Constantinople, and it became a celebrated place of pilgrimage. At Rome Pope Felix IV (526-530) erected a church in their honour, the mosaics of which are still among the most valuable art-remains of the city. The Greek Church celebrates the feast of Saints Cosmas and Damian on 1 July, 17 October, and 1 November, and venerates three pairs of saints of the same name and profession. Cosmas and Damian are regarded as the patrons of physicians and surgeons and are sometimes

landi in his "Bibliotheca veterum patrum" (Venice, 1776), and in Migne, P. G. (Paris, 1864), LXXXVIII, 51-476. A French translation of the most important parts is found in Charton, "Voyageurs anciens et modernes" (Paris, 1855); a complete English translation, with notes and a critical introduction, was issued for the Hakluyt Society by J. W. McCrindle (London, 1897). The work is divided into twelve books and contains a description of the universe, as Cosmas constructed it in his imagination, and an account of those regions which he had visited, or concerning which he had gathered information. According to Cosmas the world is a rectangular structure in two sections, their length much greater than their breadth, and corresponding in form and proportions to the Tabernacle of

GABRIEL MEIER.

Cosmas Indicopleustes (COSMAS THE INDIAN VOYAGER), a Greek traveller and geographer of the first half of the sixth century, b. at Alexandria, Egypt. Cosmas probably received only an elementary education, as he was intended for a mercantile life, and in his earlier years was engaged in business pursuits. It may be, however, that by further study he increased his knowledge, since his notes and observations show more than ordinary training. His business took him to the regions lying south of Egypt, the farthest point of his travels in this direction being Cape Guardafui. He traversed the Mediterranean, the Red Sea, and the Persian Gulf, and gathered information about lands lying far to the East; but it is not certain that he actually visited India. In his later years he entered the monastery of Raithu on the Peninsula of Sinai. If it be necessary to suppose, as some investigators assert, that Cosmas was at any time a Nestorian, it would appear from his work, the "Christian Topography", that, at least towards the close of his life, he returned to the orthodox faith. While an inmate of the monastery he wrote the "Topography" above mentioned, a work which gives him a position of importance among the geographers of the early Middle Ages.

The "Christian Topography" has been preserved in two manuscript copies, one in the Laurentian Library at Florence, and the other in the Vatican. In the second half of the seventeenth century Isaac Vossius, Emeric Bigot, and Melchisédech Thévenot first made the work known in a fragmentary way by publishing extracts from it. The first complete and critical edition, accompanied by a Latin translation, was issued by Bernard de Montfaucon in his "Collectio nova patrum et scriptorum graecorum" (Paris, 1707), II, 113-345. The "Topography" was also printed by Gal-

landi in his "Bibliotheca veterum patrum" (Venice, 1776), and in Migne, P. G. (Paris, 1864), LXXXVIII, 51-476. A French translation of the most important parts is found in Charton, "Voyageurs anciens et modernes" (Paris, 1855); a complete English translation, with notes and a critical introduction, was issued for the Hakluyt Society by J. W. McCrindle (London, 1897). The work is divided into twelve books and contains a description of the universe, as Cosmas constructed it in his imagination, and an account of those regions which he had visited, or concerning which he had gathered information. According to Cosmas the world is a rectangular structure in two sections, their length much greater than their breadth, and corresponding in form and proportions to the Tabernacle of

the Old Testament. The base is formed by the surface of the earth, around which flows the ocean; on the other side of the ocean lies another—unknown—continent, from which rise the walls that support the firmament above. The stars are carried by the angels in a circle around the firmament. Above the firmament springs a vault which separates the heaven of the blessed from the world beneath. The theory that there is an antipodes, says Cosmas, is a doctrine to be rejected. The earth rises towards the north and ends in a cone-shaped mountain behind which the sun continues its wanderings during the night, and the nights are long or short according as the position of the sun is near the base or the summit of the mountain. This curious attempt to harmonize a childish Biblical exegesis with ordinary phenomena and the current opinions of the time is at least superior to the extraordinary geographical hypotheses of that day. Aside from the fact that the theories of Cosmas exercised no influence, they are not of sufficient importance to affect the genuine worth of several portions of the "Topography". The value of these passages rests on the methodical conscientiousness of the simple merchant, as it is seen, for example, in the careful copy of the so-called Inscription of Adulis (*Monumentum Adulitanum*) which has been preserved to Greek epigraphy only in the copy of Cosmas. Cosmas, with the aid of his travelling companion, Menas, took a copy of it in 522 for the governor of the Christian King Elesbaan of Abyssinia, retaining a replica for himself. Of equal importance is the information he collected concerning Zanzibar and the Indian Ocean, and what he learned as to the trade of Abyssinia with the interior of Africa and of Egypt with the East. The best-known and most celebrated part of the "Topography" is the description, in the ninth book, of Ceylon and of the plants and animals of India. The work also gives much valuable information concerning the extension of Christianity in his day. The Vatican manuscript of the "Christian Topography" has explanatory maps and sketches, either made by Cosmas himself or prepared under his direction; they are of value as the first efforts of pa-

tristic geography. Four other writings of Cosmas are unfortunately lost: a cosmography, an astronomical treatise, and commentaries on the Canticles and the Psalms.

OTTO HARTIG.

Cosmas of Prague, Bohemian historian, b. about 1045, at Prague, Bohemia; d. there, 21 October, 1125. He belonged to a knightly family, received his first instruction in the schools of Prague, and studied grammar and dialects at Liège under the direction of a renowned master named Franco. At Liège he acquired good literary taste and that acquaintance with the classics which is evident throughout his work. While still young he entered ecclesiastical life at Prague, but was not ordained priest until 11 June, 1099, at Gran, Hungary. In due time he became a member of the cathedral chapter of St. Vitus in Prague, and ultimately its dean. According to a general custom of the age, while still a minor cleric, he was married to one Bozetechna, by whom he had a son named Henry or Zdie, afterwards Bishop of Olmütz. With the Bishops of Prague, Gebhard, Cosmas, and Hermann, he was on terms of great intimacy, and often accompanied them on their travels; he likewise enjoyed the esteem and the confidence of the rulers of Bohemia. Cosmas wrote in Latin a "*Chronica Bohemorum*", or history of Bohemia from the earliest times to 1125. The work consists of three books; the first brings the narrative to 1038, the second to 1092, the third to 1125. For the early part he relied almost exclusively on popular tradition, since there was no previous work on the subject. For the other parts he drew from the testimony of eyewitnesses, from his own experience, or from monuments and written documents. As an historian, Cosmas is generally truthful and conscientious; he distinguishes between what is certain and what is based only on rumours or tradition, and often indicates his sources of information. The style is pleasing, and the character-sketches are vivid. Owing to these qualities, and also to the fact that he was the first writer of Bohemian history, he is called the Herodotus of Bohemia. The work was edited repeatedly: Freher, "*Scriptores rerum bohemicarum*" (Hanover, 1602, 1607, 1620); Mencke, "*Scriptores rerum Germ.: Saxon.*" (Leipzig, 1728), I; Pelzl and Dobrowsky; "*Scriptores rerum bohemicarum*" (Prague, 1783); Koepke, "*Mon. Germ. Hist.: Script.*" (Hanover, 1851), IX; also in Migne, P. L., CLXVI; Emler and Tomek, "*Fontes rerum bohemicarum*" (Prague, 1874), II.

KOEPKE, *Prolegomena* to his edition of *Cosmas in Mon. Germ. Hist.*, and MIGNE, P. L.; BOROWY in *Kirchenlex.* (Freiburg im Br., 1884), III; POTTHAST, *Bibliotheca mediæ ævi* (Berlin, 1896), I; CHEVALIER, *Bio-bibl.* (Paris, 1905), I.

FRANCIS J. SCHAEFER.

Cosmati Mosaic (Gr. *κόσμος*), a peculiar style of inlaid ornamental mosaic introduced into the decorative art of Europe during the twelfth century, by a marble-worker named Laurentius, a native of Anagni, a small hill-town thirty-seven miles east-south-east of Rome. Laurentius acquired his craft from Greek masters and for a time followed their method of work, but early in his career, freeing himself from Byzantine traditions and influences, he worked along original lines and evolved a new style of decorative mosaic, vigorous in colour and design, which he invariably employed in conjunction with plain or sculptured marble surfaces, making

it a decorative accessory to some architectural feature. As a rule he used white or light-coloured marbles for his backgrounds; these he inlaid with squares, parallelograms, and circles of darker marble, porphyry, or serpentine, surrounding them with ribbons of mosaic composed of coloured and gold-glass tesserae. These harlequinads he separated one from another with marble mouldings, carvings, and flat bands, and further enriched them with mosaic. His earliest recorded work was executed for a church at Fabrii in 1190, and the earliest existing example is to be seen in the church of Ara Cœli at Rome. It consists of an epistle and gospel ambo, a chair, screen, and pavement. In much of his work he was assisted by his son, Jacobus, who was not only a sculptor and mosaic-worker, but also an architect of ability, as witness the architectural alterations carried out by him in the cathedral of Civitā Castellana, a foreshadowing of the Renaissance. This was a work in which other members of his family took part, and they were all followers of the craft for four generations. Those attaining eminence in their art are named in the following genealogical epitome: Laurentius (1140-1210); Jacobus (1165-1234); Luca (1221-1240); Jacobus (1213-1293); Deodatus (1225-1294); Johannes (1231-1303). Their noted Cosmatesque mosaics are to be seen in the Roman churches of SS. Alessio e Bonifacio, S. Sabba, S. Cesario, S. Giovanni a Porta Latina, S. Maria in Cosmedin, S. Balbina, S. Maria sopra Minerva, S. Maria Maggiore, and in the cloister of S. Scholastica at Subiaco, the basilica of St. Magus at Anagni, the duomo of Civitā Castellana, and the ruined shrine of St. Edward the Confessor in Westminster Abbey.

CARYL COLEMAN.

Cosmogony.—By this term is understood an account of how the universe (*cosmos*) came into being (*gonia*—*γέγονα*—I have become). It differs from cosmology, or the science of the universe, in this: that the latter aims at understanding the actual composition and governing laws of the universe as it now exists; while the former answers the question as to how it first came to be. The Christian Faith accounts for the origin of the universe by creation *ex nihilo* of the matter out of which the universe arose, and the *preservatio*, or maintenance, of Providence according to which it developed into what it now is. Modern science has propounded many theories as to how the primeval gaseous substance evolved into the present harmony of the universe. These theories may be called *scientific* cosmogonies; and the account of the origin of the world given in Genesis, i and ii, is styled *Mosaic* cosmogony. The word *cosmogony* is, however, usually applied to mythical accounts of the world's origin current amongst the peoples of antiquity and the more modern races which have not been touched by recent scientific methods. In this article the word is understood only in this latter sense. In treating of the strange admixture of pseudo-scientific speculations and religious ideas which the human mind, unassisted by revelation, elaborated to account for the existence and harmony of the universe, we are forced at first to follow only the chronological order. The different accounts given of the origin of the heavens and the earth are at first sight so irreconcilable, so fanciful, that no other order of treatment seems possible; but an attempt will be made in the conclusion to sum up and systematize the various ideas enumerated, to trace the various lines along which past thought and fancy developed to some great central principles, and thus to show the unity which underlies even this confusing diversity. As modern

scholarship seems to suggest the Euphrates valley as the cradle of all civilization, the cosmogonies there in vogue shall be treated first; although Egyptian ideas on this subject can be traced to an antiquity at least as remote as that of the earliest Babylonian cosmogonies known to us.

BABYLONIAN.—Two different Assyro-Babylonian cosmogonies have come down to us. The longer one is known under the name of Creation Epos or "Enuma elish", the words with which it begins. The shorter one is commonly known as the Bilingual Account of Creation because, on the fragmentary tablet on which it is written, the Semitic Babylonian is accompanied by a Sumerian version.

(a) *The Creation Epos*.—A good summary of this cosmogony had been known since the sixth century of the Christian Era, through Damascius (the Athenian neo-Platonist who emigrated to Persia when Justinian suppressed the schools of Athens), as follows: "The Babylonians, passing over in silence the one-principle of the universe, constitute two, Tauthe and Apason, making Apason the husband of Tauthe and calling her the mother of the gods. And from these proceeds an only-begotten son, Mounis, who, I consider, is nought else but the intelligible world proceeding from the two principles. From them another progeny is likewise produced, Dache and Dachos, and also a third, Kassaré and Assoras, from which last three others proceed, Anos, and Illinos, and Aos. And to Aos and Dauke a son is born called Belos of whom they say that he is the creator of the world [*demiurgus*]." The Assyrian original upon which this summary is based was first discovered and published by G. Smith, in 1875, from seven fragmentary tablets in the British Museum. It has been translated by a number of scholars, and recently (London, 1903), with the addition of numerous fragments, by L. W. King of the same museum. It opens as follows:—

When on high the heavens were not uttered,
Below the earth bore not yet a name;
The ocean primeval was their begetter,
Mummu Tiamtu the parent of all of them.
Their waters were mixed together in one and
Fields not yet marked, marshes not yet seen [?]
When of the gods there existed still none
None bore any name, the fates [not yet settled]
Then came into being the gods [in order?]
Lahmu and Lahamu went forth [as the first?]
Great were the ages
Ansar and Kisar were produced, and over them
Long grew the days, there appeared
The God Anu, their son . . .

The Greek copyist had evidently mistaken ΔΑΧΟC for ΔΑΧΟC, but otherwise the two accounts tally exactly: Apason is Apsu the Ocean; Tauthe is Tiamtu, as Assyrian labializes the nasals; Lache and Lachos are likewise Lahmu and Lahamu; Kissare, Assoras, Anos, Illinos, and Aos correspond to Kisar and Ansar, Anu, Enlil, and Ea or Ae. Damascius considered Mounis the son of Tiamtu. But in the Babylonian text Mummu seems to have Tiamat in apposition, and the participle *muallidat* is in the feminine, yet on a later fragment Mummu does figure as the son of Tiamat, and Damascius' statement seems correct. In any case they began with a double, purely material, principle Apsu and Tiamat, male and female, probably personifying the mass of salt and sweet water "mixed together in one". Out of all these things even the gods arise, their birth is in reality the gradual differentiation of the as yet undifferentiated, undetermined, undivided, watery ALL. The meaning of Ansar and Kisar is plain; they are personified ideas: Above and Below. The meaning of Lahmu and Lahamu is not so clear. Popular mythology spoke of the Lahmu as monsters and demons, spirits of evil, and their pro-

geny sides with Tiamat as the monster of Chaos; yet, on the other hand, they cannot be evil in themselves, for the good gods, Anu, Bel, and Ea, are their children. It has been suggested with great probability that Lahmu and Lahamu are the personifications of Dawn and Twilight.—In the watery Chaos first the light breaks; an above and a below begin to be; and the result is Anu, Bel, and Ea—Sky, Earth, and Water. But this process of development is not to proceed unopposed, nor are the powers (gods) of order peacefully to conquer the power of Chaos. This war is mythologically described in the great Epos. Tiamat creates a brood of monsters to fight on her side, puts Kingu, her husband, at the head, gives him the tablets of fate in his bosom, thereby giving him supreme power. Ea hears of this plot, tells Ansar, his father, who asks Anu to interfere, but in vain. Ea is likewise applied to, but without result. At last Ea's son Marduk, at the request of the gods, becomes their champion and conquers the Dragon of Chaos. Cutting the lifeless body of the dragon in two he makes out of one half the expanse of the heavens, thereby preventing the waters above from coming down; out of the other the earth. He then firmly fixes the stars, arranging the constellations of the zodiac, creates the moon, "sets him as a creature of night, to make known the days monthly without failing". After this Marduk's "heart urged him, and he made cunning plans, he opened his mouth and said to Ae: "Let me gather my blood and let me [take my] bone, let me set up a man and let the man . . . let me make then men dwelling . . ." The gods praise Marduk's work and they applaud him with fifty names; each god transferring to Marduk his own function and dignity. Marduk, then, is the real Demiurgus or world-creator, a dignity, however, which was not originally his. The political success of Marduk's city, Babylon, necessitated this god's rise in rank in the Pantheon; this was ingeniously contrived by inventing the legend of all the gods voluntarily ceding their place to him because he conquered the Dragon of Chaos, Tiamat. This part of the cosmogony, therefore, probably does not date back before 2000 B. C. It is quite likely, however, that some story of a struggle with a monster of evil and disorder is of much greater antiquity. In any case this cosmogony is sharply characterized because in it the cosmos arises out of a struggle between Chaos and Order, good and evil. It must, however, not be forgotten that both good and bad gods are alike the progeny of Apsu and Tiamat.

(b) *The Bilingual Creation-Story* was found on a tablet in Sippar by Rassam in 1882. It consists of three columns, the central column being Semitic, the first and third being Sumerian, every line and sentence being cut in two by the intervening Semitic version. It is really an incantation for purification; unfortunately the tablet is mutilated, and the connexion of this temple ritual with an account of the origin of the world is not quite clear. At the end of the tablet a second incantation begins, of which only the words, "The star . . . long chariot of heaven", are left—sufficient to show that these tablets belonged to an astronomical or scientific series. The cosmogony begins, as is usual with cosmogonies, by thinking away all things in the world. It is remarkable that the empty void is expressed by first thinking away civilization, temples, gardens, houses, cities; the ancient cities are even given by name: "Nippur had not been built, E-Kura [its temple] not been constructed, Erech had not been built, E-ana not been constructed."—"The Abyss had not been made; Eridu [the oldest of all cities, once on the Persian Gulf], with its foundations in the deep [the abyss], had not been constructed, the foundation of the house of the gods not laid—the whole of the lands was sea. When within the sea there was a stream, in that day Eridu was made, Esagila [its temple] constructed—Esagila, which the god Lugaldazaga founded within the abyss—Baby-

ion he built, Esagila [a counterpart of the Esagila of Eridu] was completed. He created the gods; the Anunnaki [tutelary spirits of the earth] created the glorious city together with him. The seat of their heart's joy he proclaimed on high. Marduk bound together a foundation [*amtu*] upon the waters. He made dust and cast it over the foundation, that the gods might sit in a pleasant place. He made mankind. Aruru [the goddess of Sippar] made the seed of mankind with him". Marduk then creates the animals, the plants, the city, the state, Nippur, Erech, and their temples. Lugaldazaga is considered to be another name for Marduk. In the text it is doubtful whether the Anunnaki were created by Marduk or whether they were assistant-creators with Marduk. The latter seems preferable. The meaning of "he bound together a foundation" is doubtful, because of the uncertainty about the word *amtu*. The ancients thought the earth to be like a section of a hollow ball floating on the great waters, convex side upwards. Marduk is here forming his rough skeleton of the earth as a raft on the waters, and he fills it up with soil or clay dust according to the text. This cosmogony is probably not so ancient as that of the Creation Epos, because it makes Marduk sole creator without reference even to Anu or Ea. It is remarkable that man is created before animals and plants, and scholars have not failed to draw attention to a similar statement in Genesis, ii, 7-9. Furthermore, the Tigris and the Euphrates are named in this cosmogony: "He made them and set them in their place—well proclaimed he their name", which also reminds one of the mention of the rivers in the same chapter of Genesis. Some remote connexion is of course possible.

EGYPTIAN.—The fundamental ideas of Egyptian cosmogonies can be gathered from the Book of the Dead, chapter xvii, which goes back to the eleventh dynasty (c. 2560 B. C.), if not to the sixth (c. 3000 B. C.). Cosmogonic speculations in greater detail can be found in the funeral inscriptions of Seti I, in the Valley of the Dead near Thebes (c. 1400 B. C.), nor are they wanting in texts on monuments and papyri down to late in the Ptolemaic period. But according to Brugsch, Egyptian thought was but little subject to change even during the score of centuries and more during which it is known to us. In the beginning there was neither heaven nor earth. Shoreless waters, covered with thick darkness, filled the world-space. These primeval waters are called *Nun*, and they were said to contain the male and female germs and the beginnings of the future world. From the very first there dwelt in this watery proto-matter a divine force or proto-soul, which pervaded and penetrated its as yet not differentiated parts. This penetration was so absolute that this soul became almost identical with the matter it pervaded. The divine proto-soul then felt a desire for creative activity and this his will, personified as the god Thot, brought the universe into being; whereas the image of the universe had previously formed itself in the eyes of Thot. The word of Thot brought movement in the still watery substance of *Nun*—movement both conscious and purposeful. *Nun* now began to differentiate itself, i. e. its qualities became manifest in a cosmogonic ogdoad of deities (four pairs, male and female): *Nun* and *Nunet*, *Heh* and *Hehet*, *Keke* and *Keket*, *Nenu* and *Nenut*. *Nun* and *Nunet* represent the begetting and bearing Proto-Matter-Soul; *Heh* and *Hehet* are rather difficult ideas to grasp, perhaps active and passive infinity would be a good expression. This infinity is mostly conceived in relation to time, and is consequently equivalent to, and often described by, the Greek *Αἰών*; as infinity of force it resembles *Έπος*. *Kek* and *Keket* are the abysmal darkness, the *Erebos* of the Egyptians. *Nenu* and *Nenut* symbolize rest; the two other names or titles of *Nenu*, *Gohr* and *Hems*, embody the same idea—to settle or lie down, to cease

from work. Contrary to the Babylonian idea of war with the Dragon of Chaos, tranquillity is, in Egypt, a principle of progress. All united, these divinities of the ogdoad form the beginnings and are the fathers and mothers of all things. Pictorially, they are indicated by figures of four men and women; the men carry a frog; the women a serpent's head on their shoulders. The frog and serpent represent the first elements of animal creation; the unaccounted for appearance and disappearance of frogs in marshes seemed like a sort of spontaneous generation of animal life out of stagnant water; the serpent periodically shedding its skin was a symbol of the yearly renewal of nature. The male figures are coloured blue, to signify water the begetter of all things; the female are flesh-coloured, to signify the life produced. These cosmogonic gods then transform the invisible divine will of Thot into a visible universe, harmoniously welded together. The first act of creation is the formation of an egg, which rises upon the hands of *Heh* and *Hehet* out of the proto-matter. Out of the egg arises the god of light, *Râ*, the immediate cause of life in this world. Now this universe was conceived as being both the house and body of God, divinity not dwelling in, but being identical with, the cosmic All.

This universe, however, was formed by concurrence of nine divine things, i. e. the great Ennead of Gods: (1) *Shu*, the dry air of day; (2) *Tafnut*, the night air, pregnant with the rays of the waxing moon; (3) *Keb*, the god of the earth, or soil; (4) *Nut*, the goddess of the heavens above; (5) *Osiris*, the moist or fructifying element; (6) *Isis*, the maternal or conceiving force of the earth; (7) *Set*, the god of evil and contradiction—the destructive element in nature, opposing the light, moisture, and fertility of the earth—in popular mythology, the brother-enemy of *Osiris* and *Isis*; (8) *Horus*, popularly conceived as the divine child of *Isis* and *Osiris*, living nature in the circle of her perpetual rejuvenescence; (9) *Nephthys*, the boundary spirit or horizon, the world-limit, or the strand of the endless sea.

Parallel with these quasi-scientific explanations of the universe, the popular mind attributed to its favourite divinities a share in the cosmogony. In Upper Egypt the egg-productive energy gave first rise to a divinity, *Chnum*, the potter who shapes the egg on his wheel; in Lower Egypt, *Ptah*, the artificer, becomes the creator of the egg. Sometimes, however, a divine bird is required to lay it. Not unfrequently the cosmogonic functions of the egg are attributed to the lotus-bud. In one of the inscriptions of Denderah, Pharaoh hands a lotus-flower to the solar deity, saying: "I hand thee the flower which arose in the beginning, the glorious lily on the great sea. Thou camest forth in the city of *Chmun* out of its leaves, and thou didst give light to the earth till then wrapped in darkness". On the other hand, *Râ* is not merely the enlightener, but the personal creator of the world, the Lord, infinite in his being, the Master Everlasting, who was before all things; none is like unto him. He suspended the heavens above, that he might dwell therein; he laid the foundations of the earth, that it might sustain his form; he created the deep, that he might be hidden in the lower spheres, he, the noble youth, came forth out of *Nun*. This personification of the spirits of light in the sun-god *Râ* could evoke real sublimity of thought and expression, so much so that, for a little while, the idea reached a quasi-monotheism under Amenophis III and IV. On the other hand the amplitude of divine titles of each local deity plays havoc with cosmogonic consistency, thus *Ptah* in Memphis is ruler of infinity (*Heh*) and Lord of eternity (*Tet*), *Min Amum*, Lord of Infinity, lasting for eternity; *Hathor* of Denderah, Mistress of Infinity and Creatrix of Eternity; *Hathor* and *Horus* are mother and father to *Horsamtu*, a phase of *Râ* the sun-god, and similar fancies.

IRANIAN.—In considering these cosmogonies we must distinguish a threefold phase of development: (a) The ancient Iranian phase, as given in the Avesta, the Yasnas, and the Vendidad. Without entering into the much-disputed question of the date of the Avesta, it may be safely said that these oldest cosmogonies go back to about 1000 B. C. (b) The later Iranian or early Persian phase, as contained in orthodox Pahlavi literature, the Bundahis and the Mainochired. (c) Heterodox Iranian opinions amongst schismatical sects, as the Zervanites, Gayomarthiya, Rivayets, and others. We shall find the dualism, which is the great characteristic of Iranian thought, showing a gradual tendency towards monism, and its primeval simplicity transformed into fanciful intricacy without, however, altogether losing the loftiness of its first ideas.

Although we possess no full systematic expositions of the views of the ancient Iranians on the origin of the universe, yet scattered passages in the Avesta leave no doubt that at the beginning of all things they postulated a twofold principle: good and evil. At the head indeed of all creation stands Ahura Mazda, a purely spiritual being, who is distinctly and expressly styled "Creator of the World" of spirit and of matter. Yet in the older books the idea of the unity of origin of the universe is far from having come to maturity; so in the Gathas a distinct dualism of origin is taught. At the end of Yasna, xxviii, Zarathustra asks: "Do thou, Ahura Mazda, teach me from thyself, that I may declare it forth, through what the primeval world arose." And in Yasna, xxx, comes the answer: "Thus are the primeval spirits, who as a pair—yet each independent in his action—have been famed of old. They are [these two spiritual principles] a better thing and a worse thing as to thought, word, and deed. When the two spirits came together at the first to make life and non-life, and to determine how the world at last should be made, [then there was] for the wicked the worst life and for the holy the best state of mind. He who was the evil one chose the evil, but the bountiful spirit chose righteousness." Ahura Mazda, or, as the name later became abbreviated, Ormuzd, the Wise Lord, is the good spirit or *Spento Mainyu*; the Evil One is *Anro Mainyu*, the destroying spirit later known as Ahriman. The absolute dualism of the above passage is unmistakable: in the beginning was Good and Evil; the good became as it were incarnate in Ormuzd, the evil in Ahriman. The name *Ahriman*, however, does not actually occur in this Yasna. This dualism gradually softened as centuries went on, and Ormuzd was repeatedly and emphatically designated as the Creator. Thus Yasna, i, 1 (which is of considerably later date than Yasna, xxx): "I confess and proclaim Ahura Mazda, the creator, the radiant, the glorious, who sends his joy-creating grace afar, who made us and who fashioned us, who has nourished us and protected us, who is the *Spento Mainyu*." But whenever Ormuzd, the source of all good, produces what is good, the Evil One produces its opposite, therewith to destroy Ormuzd's creation. Ahriman, therefore, becomes only a secondary, or counter-creator. This is thus expressed in Fargard i of the Vendidad: "The first of good lands which I, Ahura Mazda, created was Iran-Veg, thereupon came Anro Mainyu, who is all death, and he counter-created the serpent in the river, and the winter, the work of demons. The second of good lands which I created was the plain of Sogdiana. Thereupon came Anro Mainyu, who is all death, and he counter-created the locust, bringing death unto cattle and plants." No less than sixteen such creations and counter-creations are thus enumerated: Ahriman counter-creates plunder, sin, ants and ant-hills, unbelief, tears and wailing, idolatry, pride, impurity, burial of the dead, the cooking of corpses, abnormal issues, excessive heat, and bitter cold. From this enumeration of Ahriman's work one gathers that he and his good adversary were originally personified

principles, and this personification led to their being accounted real spiritual beings. Sometimes this personification was so materialized as to lead to the ascription of a body to Ormuzd, but this was of some aerial substance invisible even to the celestials. Besides these two world-creators we meet in the Avesta four elementary beings, or rather attributes of Ormuzd, called Thwasha or Infinite Space, Zrvan Akarana or Endless Time, Anaghra raocao and Temoao or Beginningless Light and Darkness. These personified abstractions—Space, Time, Light, and Darkness—are co-eternal with Ormuzd and Ahriman; they do not create, but they constitute the receptacle, the source, and the twofold material of creation.

Later Parthian speculations on the origin of the universe are found in the Bundahis, a Pahlavi commentary on the Avesta, which may date from the Sassanids, but in its present form cannot be earlier than the seventh century of the Christian Era. Ormuzd is here described as in endless light and all-wise; but Ahriman in endless darkness and lacking in knowledge. Light and darkness seem to have been identified with Ormuzd and Ahriman at an earlier period, according to Porphyrius and Plutarch. Ormuzd and Ahriman both produced their own creatures, which remain apart in a spiritual or ideal state for 3000 years; for Ahriman is unaware of the existence of Ormuzd and his good creation. After this begins Ahriman's opposition to the work of Ormuzd, with the understanding, however, that the period of the evil influence would not exceed 9000 years, and only the middle 3000 years were to see Ahriman successful. By pronouncing a mysterious spell Ormuzd throws Ahriman into a state of confusion for a second 3000 years. Meanwhile, Ormuzd creates the archangels and the material universe with sun, moon, and stars; Ahriman produces the *devas*, or evil spirits, and, helped by them, he throws himself upon the good creation to destroy it. The six divisions of creation—the sky, water, earth, plants, and animals, and men—suffer the attacks of the *devas*. The primeval ox, symbolizing the later animal world, is slain, and so is Gayomard, representing humanity. Yet, though Gayomard dies, his offspring lives. After many purifications by archangels, the Rivas plant, begotten of him, grows up. This plant contains both man and woman; when their bodies have sufficiently developed they receive "the breath spiritually into them, which is the soul"; for Ahura Mazda said that "the soul is created before and the body after, for him who was created". And Ahura Mazda said to them, "You are man, you are the ancestry of the world". A story is told of the first pair, whether Mashya and Mashyana or, as elsewhere given, Yima and his wife, similar to that of Adam's sin in paradise; a like similarity can also be found in Ahura Mazda creating the world in six stages, but there is nothing to show that the Bible is the borrower, in fact the contrary is most probable. In the Mainochired a further stage in Persian cosmogonies is reached. There the light is distinctly named as the matter out of which the universe is created and *erwan*, or endless time, is no longer considered an attribute of Ormuzd, but is an independent fundamental being, which pronounces its blessing and joy over the creation which Ormuzd produces. So chapter viii: "The creator Ahura produced these creatures and creation, the archangels and the spirit of wisdom from that which is his own splendour and with the blessing of endless time. For this reason unlimited time is undecaying and immortal, painless and hungerless, thirstless and undisturbed; for ever and ever no one will be able to overpower it or to make it not all-over-ruling in his own affairs. And Ahriman, the wicked, counter-created the *devas* and *drugs* [demons and fiends] and the rest of the things of corruption." He made a treaty with Ormuzd for 9000 years, during which things must remain as they are. But after 9000 years Ahriman will be utterly impotent.

Srosh, the angel of obedience, will smite Aeshun, the attacking demon. Mithra, the angel of sunlight, and Zrvan Akarana, Time-without-end, and the angel of justice and providence, will smite the creation of Ahri-man, and Ahura Mazda will become again undisturbed as in the beginning. Cosmology perhaps, rather than cosmogony, is contained in chapter xlv: "Sky, and earth, and water, and what is therein are like the egg of a bird. By Ahura Mazda, the creator, the sky is arranged above the earth like an egg and the semblance of the earth in the midst of the sky is just like the yolk within the egg; the water within the earth and sky is such as the white of the egg." This, of course, must not be understood as a sort of early evolution theory; it merely indicates the shape of the universe as conceived by the Persians.

Iranian dualism then was never quite consistent, not even in the Avesta. In the Mainoichired it makes indeed an attempt at monism in personifying Zrvan, out of which creation comes, and by which creation is blessed, but the inconsistencies of the system finally brought forth a number of unorthodox sects. Each of these sects solved the problem of unity versus plurality in its own way. Some, as the Gayomarthiya, those indicated in Firdosi's book of kings, and the author of the Vajarkart, practically believed in an eternal almighty creator of heaven and earth, much in the same sense as Christians do. Ahri-man, at first a primeval being coeval with Ormuzd, is transformed into the Parsee equivalent for Satan. Others reached a sort of monism by making either Thwasha (Space) or Zrvan (Time) the origin of all things, even of Ormuzd and Ahri-man. That Thwasha was once the head of the Iranian pantheon is perhaps indicated by so early a witness as Herodotus (I, cxxxi) and much later by Damascius. Zrvan, as the source of all things amongst the Persians, is attested by many of the Fathers (Theod. Mops., Moses of Chorene), by Eznik and Eli-seus. At this period the origin of all things was conceived in various fantastical ways. According to some (Rivajets, Cod. XII), Time created Water and Fire and when these came together Ormuzd arose. According to others, Time for 1000 years yearned to bring forth a son and offered sacrifice for that purpose, but then doubted; Ormuzd was conceived as fruit of the sacrifice, Ahri-man as fruit of the doubt—and similar fancies which strongly suggest Indian influence. It is remarkable, however, that Ormuzd remains throughout the foremost and immediate creator of the *cosmos* or world as it now is, and as far as it is good. It is remarkable also that Iranian cosmogonies are not devoid of a noble ethical strain, however much they may have changed during the course of ages.

INDIAN.—These cosmogonies are so manifold and so bewildering in their fantastic variety that only the oldest and most purely Indian can be referred to, and the main outlines indicated. As ethical dualism is the characteristic of Iranian thought, so is idealistic pantheism of the thought of India. In Indian cosmogonies more than elsewhere we have to distinguish between philosophic speculation and popular religion, which each in its way influenced their conception of the origin of the world. The oldest cosmogonies must naturally be sought in the Rig-Veda. The age of these sacred books is largely a matter of controversy, but their origin can be roughly assigned to a date earlier than 1000 B. C. Among the 1028 hymns of the Rig-Veda none is so famous as cxxix of Book X, of which a translation was given by Max Müller forty years ago. This translation, though metrical, is remarkably literal and contains the best exposition of ancient Indian thought on this subject. It runs as follows:—

Nor Aught nor Naught existed; yon bright sky
Was not, nor heaven's broad woof outstretched above.
What covered all? what sheltered? what concealed?
Was it the water's fathomless abyss?

There was not death—yet there was naught immortal.
There was no confine betwixt day and night;
The Only One breathed breathless by itself,
Other than it there nothing since has been.
Darkness there was, and all at first was veiled
In gloom profound—an ocean without light—
The Germ that still lay covered in the husk
Burst forth, one nature, from the fervent heat.
Then first came Love upon it, the new Spring
Of mind—yea, poets in their hearts discerned,
Pondering, this bond between created things
And uncreated. Comes this spark from the earth
Piercing and all pervading, or from heaven?
Then seeds were sown and mighty powers arose—
Nature below and Power and Will above—
Who knows the secret? Who proclaimed it here?
Whence, whence this manifold creation sprang?
The gods themselves came later into being—
Who knows from whence this great creation sprang?
He from whom all this great creation came,
Whether his will created or was mute,
The Most-High Seer that is in highest heaven,
He knows it—or perchance even He knows not.

If, however, we divest this and similar Indian effusions (Rig-V., X, cxc, lxxii) of their poetical garb and set aside the agnostic touch in the last line, their cosmogony is philosophically conceived as follows: The first principle of all Being is Tad (i. e. the absolutely indefinite *That*), this unites in itself all spiritual and material elements of the world. Tad is an idea obtained only by absolute abstraction, for it possesses only one quality, viz. that of vitality. From Tad the universe proceeds by evolution. This evolution is introduced by *Tapas*, i. e. the intensity of self-contemplation or introspection—self-love, one would almost translate. This is the spiritual progress by which Tad for the first time leaves his inaction. Then there arises within Tad, *kama*, or the desire, the will, the purpose to create. Tad has therefore evolved into a conscious act of the will, that is Manas has begun, thereby Tad has ceased to be unconscious and has completely left his state of inactivity. There further arises, in consequence of *Tapas*, *Ritam*, i. e. the highest law or causality. The production of the world through the intelligent will of a personal creator is, at least with regard to the first stages of evolution, unknown to these hymns. Yet a universe without any regular connexion of phenomena seemed unthinkable, hence this principle of causality was postulated previous to all cosmic evolution, and in this sense *Ritam* was the first thing to arise out of Tad previous to the universe. But all *Ritam* must have its *Satyam*, or counterpart in actuality. In theistic phraseology this would mean that all creation must have its archetype in the Divine Mind, and that to create is nothing but the realization of this archetype as distinct from God. According to Indian thought the force of their ground principle, will, or *kama*, was not blind activity, but bound by *Ritam*, or Supreme Law. The world therefore was not the result of chance, and thus their philosophers could establish connexion between their speculations and popular religion. Now there arose out of Tad the elements of the material world: the moist primeval matter, the space to surround it, and darkness to fill the space. Time was not reckoned among the elements, as in some Iranian cosmogonies; it was but the measure of changing phenomena. Material evolutions having so far proceeded, the first cosmic cycle of gods makes its appearance: Aditi and his Adityas. From Aditi, or Infinity, united to Daksha, or Spirit Force, the Adityas take their origin. The highest among them is Varuna (*ούρανός*?), the world-creator in popular religion. These work together to bring about the present *cosmos*. The first things produced by separating the primeval waters is light, then follow darkness, day and night; and thus time begins. By

differentiation of the primeval matter, sun, moon, and earth arise; by differentiation of space, the realms of heaven, air, and ether. Thus:—

Intellectual Process	Tad	Protoplasm	Material Process
	Tapas	Darkness	
	Kama	Place	
	Manas	Alternation of Time	
	Ritam	Division of Space	
	Satyam	Great World Bodies	

Another development, or rather another nomenclature for the same cosmogonic principles, makes Brahma the source of all things. Brahma is Tad, or the impersonal, unconscious All-Soul. This word Brahma, from meaning originally sacred sacrificial food, came to be used for the Supreme Being out of which the universe comes and unto which it returns. In later days Atman, or Highest Self, becomes the starting-point in Indian cosmogonies.

A curious feature, especially in later cosmogonic ideas, is the power of sacrifice, to which even the evolution of the universe is due; in fact sacrificial food is the very material out of which the world is made. This is brought out in one of the latest hymns of the Rig-Veda (Book X, xc, the so-called song of Purusha) and often in the Upanishads. Purusha is one more designation of the Supreme Being. On his spiritual side he is often identified with Brahma and Atman, on his material side he is the proto-matter out of which the world is made. Out of Purusha's mouth proceed Indra and Agni. Indra in popular religion becomes the world-creator, as also Varuna the king. Some references to King Varuna are of singular sublimity (Atharva-Veda, IV, xvi): "If two persons sit together and scheme, King Varuna is there as a third and knows it. Both this earth here belongs to King Varuna and also yonder broad sky, whose boundaries are far away. The oceans are the loins of Varuna, yet he is hidden in a small drop of water. He that should flee beyond the heavens would not be free from King Varuna. King Varuna sees through all that is between heaven and earth and all that is beyond. He has counted the winkings of man's eyes; the world is in his hands as the dice in the hands of a player". In the mind of the people the impersonal abstractions of pantheism became individualized and conceived as an intensely personal creator. On the other hand the most grotesque, and often coarse, conceptions arose as to the physical process of the world's production. As intermediary beings or stages were mentioned seed, or an egg, or a tree, or the lotus-bud; different animals, such as a boar, a fish, a turtle; or sexual intercourse. The most common theory is that of the egg (Chand. br., V, xix): "This all was in the beginning non-existent, only Tad existed, Tad became transformed, it became an egg, this lay there for a year; then it divided itself in two, the two halves of the shell were silver and gold. The Gold is the Heaven, the Silver the Earth, and what was born is the Sun". Not infrequent are the incarnations of the deity in animals. Brahmanapati, the personification of the creative power of Brahma, or Prajapati, or Vishnu, became incarnate in a boar or a turtle; and similar fancies. In the Atharva-Veda, especially XIX, 53, 54, another fundamental cosmogonic being or personification enters, which is unknown to earliest Indian speculations, viz.: Time; it occurs here and there in the Rig-Veda, but in Ath.-Ved., xix, Kala has risen to the first place of all, and even Brahma and Tapas proceed from it. This rise in Kala's dignity was prepared already in the Upanishads (Maitri-Up., VI, xiv), where Kala and Akala, time and not-time, are two forms of Brahma, after he had produced the world or rather the sun as the first thing in the universe.

PHœNICIAN.—Almost all we know of Phœnician

cosmogonies is derived from a late source, Philo Byblius (born A. D. 42), transmitted to us by Eusebius in his "Praeparatio Evangelica". Philo, however, only claimed to have translated a late copy of an ancient Phœnician author called Sanchoniathon. This statement, though believed by Eusebius and by Porphyrius before him (De abst., II, 56) is rejected as a literary fraud by many modern, especially German, scholars. Philo is supposed to have pretended to use an extremely ancient source merely to bolster up his theory that all mythology was deified ancient history. The great controversy that has raged round the name of Sanchoniathon cannot here be gone into, but in reading this cosmogony it must throughout be borne in mind that, instead of being the exposition of very early Canaanitish ideas, it may possibly be a manipulated account of that cosmopolitan mixture of ideas which was current in Syria about A. D. 100. The beginning of all things, according to this account, was air moved by a breath of wind and dark chaos black as Erebus. This windy chaos was eternal, infinite. But when this breath yearned over its own elements, and confusion arose, this was called Desire. This Desire was the origin of all creation, and, though it knew not its own creation, out of its self-embrace arose *Mot* a slimy or watery substance, out of which all created germs were produced. Animal life without sensation came first; out of this came beings endowed with intelligence which were called Zophesamin (צופסמינ), "over-seers of heaven". *Mot* had a shape like that of an egg out of which came forth sun, moon, and stars. The air being thus illumined, owing to the glow of the sea and land, winds were formed, and clouds and a vast downpour of the heavenly waters took place. By the heat of the sun things were made to split off from one another and, being projected on high, clashed with one another, caused thunder and lightning, and thus awoke the above-mentioned intelligent beings, who took fright and began to stir on the earth and in the sea as males and females. Not unlike this is the cosmogony given by Damascius on the authority of Eudemos. Before all things was Time, then Desire, then Darkness. Out of the union of Desire and Darkness were born Air (*mase*.) and Breath (*fem.*), Air representing pure thought, and Breath the prototype of life proceeding therefrom by motion. Out of Air and Breath came forth the cosmic egg. According to the cosmogony given by the same writer on the authority of Mocho, Ether and Air generated *Oulomos* (world-time, *saeculum*), *Chousoros* (artificer, creative energy), and the cosmic egg; and Damascius expressly states that, according to the Phœnicians, world-time is the first principle containing all in itself. The origin of mankind is described as the birth of *Aeon* and *Protopogonos* from the wind *Colpias* and the woman *Baau*, (said to mean "night"). The name *Baau* strongly suggests בְּאוּ of Genesis; for *Colpias* several derivations have been suggested: קול פִּיחַ "voice of the wind"; קול פִּי הַיָּם "the sound of the voice of Jahve"; or *kolias*, "turgid"; כָּל פֶּאֶחַ "wind from every side". But these derivations are perhaps more ingenious than probable.

GREEK.—The cosmogonies are far too numerous and divergent to allow of one simple description embracing all. Only some prominent cosmogonies can be indicated, and some of the points common to all. Homer seems to have taken the universe as he found it without inquiring further, but from *Iliad*, XIV, verse 201, one gathers that *Oceanus* is origin, and *Thetys* mother of all; from verse 244 that *Nētē* (Night) has power even over *Oceanus*; hence Darkness, Water, and Motherhood seem the three stages of his cosmogony. The fragments of Orphic cosmogonies given by Eudemos, and Plato, and Lydus do not quite agree, but at least Night, *Oceanus*, and *Thetys* are elementary beings, and the first of them in order of existence was probably Night. A more detailed cosmogony of great antiq-

uity is to be found in Hesiod's "Theogony" (about 800 B. C.) in verses 160 sqq., which C. A. Elton translated as follows:—

First Chaos was; next ample-bosomed Earth,
The seat immovable for evermore
Of those Immortals who the snow-topped heights
Inhabit of Olympus, or the gloom
Of Tartarus, in the broad-tracked ground's abyss.
Love then arose, most beautiful amongst
The deathless deities; resistless, he
Of every god and every mortal man
Unnerves the limbs; dissolves the wiser breast
By reason steeled and quells the very soul.
From Chaos, Erebus and Ebon Night;
From Night the Day sprang forth and shining air
Whom to the love of Erebus she gave.
Earth first produced the heaven and all the stars,
She brought the lofty mountains forth,
And next the sea. . . Then, with Heaven
Consorting, Ocean from her bosom burst
With its deep eddying waters.

Chaos, then, is the starting-point of Hesiod's cosmogony. Chaos, however, must probably not be understood as "primeval matter" without harmony and order, but rather as the "empty void" or "place in the abstract". To Hesiod *χάος* cannot have lost its original meaning (from *χα* in *χάσσω*; *χάσμα*, "chasm", etc.). Hesiod, then, starts at infinite space; other Greeks take Time, or *χρόνος*, as a starting-point. The cosmogony of Pherecydes (544 B. C.) claims a high place among Greek theories as to the origin of the world, because of the prominence given to Zeus, a personal spiritual being, as the origin of all things. "Zeus and Chronos and Chthonia have always been and are the three first beginnings; but the One I would consider before the Two, and the Two after the One. Then Chronos produced out of himself fire, air, and water, these I take to be the three Logical Elements, and out of them arose a numerous progeny of gods divided into five parts or a *pentecocosmos*." Pherecydes' cosmogony has come down to us in some other slightly modified forms but Zeus is ever at the head. He seems also to have known of a primeval battle between Chronos and Ophioneus, but how it fits in with his cosmogony we know not. Chthonia seems to be the moist Proto-matter, neither dry earth nor sea, out of which Ge, or the earth, is created. The stages of his cosmogony are therefore: God, Time, Matter—all three first principles, yet God is in some sense first; God, when feeling a desire to create, changes himself into love, so that he may bring forth a *Cosmos*, i. e. a well-ordered world, out of contraries, bringing its elements into agreement and friendship. A noble idea, truly, only falling short of the Christian idea in conceiving time and matter as eternal, Zeus thus being maker or fashioner, not creator, of heaven and earth.

A cosmogony of almost the same date is that of Epimenides, which seems in flat contradiction to that of Pherecydes; for it postulates two first principles, not originating from Unity: Air and Night. Out of these arise Tartarus etc. Later Orphic cosmogonies begin some with Chronos, others with Water and Earth, some with *Ἀπειρος* *Ἄλη*. In the last stage of the Greek cosmogony the egg plays an important part, either as evolutionary stage, as embryonic state of the earth, or merely to indicate the shape of the *Cosmos*.

We possess no ancient Etruscan or Latin cosmogonies, but it is certain that the God Janus was a cosmogonic deity; though Jupiter was *summus*, the highest god, Janus was *primus*, the first of the gods, and as such he received sacrifice before even Jupiter. This ancient reminiscence of Janus as creator is made use of in Ovid's "Metamorphoses", but in how far so late a writer represents early speculations we know not. Janus is perhaps the Latin equivalent for the Greek Chaos as origin of all things. Janus is said to be not

only *initium mundi*, but *mundus* itself, i. e. the all-embracing.

SUMMARY OF ANCIENT COSMOGONIES.—Common to all is the effort to explain the origin of the world by as few elementary beings as possible. In order to arrive at the origin of all things, man began by abstraction from the actual differentiation of being which he saw around him to obtain some simple element underlying all. Mere abstraction, however, or reduction from the compound to the simple, did not suffice, but some intelligent causality was demanded by the intellect of man. Hence personification plays a great rôle in every cosmogony, and the actual function of creating, or rather forming and arranging the world as it now is, is ascribed to one intelligent personality; every people worshipped some deity, be he then Marduk or Varuna, or Bel or Ahura-Mazda, or Zeus or Janus. No ancient cosmogony, however, rose to the pure concept of creation out of nothing by an infinite spirit; for none succeeded in eliminating matter or its phenomena altogether, and conceiving a subsistent Intelligence which could create both matter and spirit. The first steps in this process of abstraction are simple enough and common to most cosmogonies; once upon a time there were no men nor beasts, nor plants; no stars nor sky, no mountains and valleys, and neither dry land nor sea. Then only proto-matter remained. Some cosmogonies stopped here and were frankly materialistic; it probably depended on climatic surroundings what they conceived the proto-matter to be, whether clay or water, or air, or fire, or light (conceived as substances). Other cosmogonies carried the process of abstraction farther. The variation between light and darkness, day and night, season and season cannot always have been, hence these were also abstracted from; naught therefore remained but Darkness, Night, Eternity. By thinking away all special localities in the universe, only Place remained in the abstract, or the Void. By thinking away all differences in the mental and spiritual sphere naught remained but Force in general. Force, Place, Time, and Darkness became personified cosmogonic elements. Some were able to abstract even from Force; to them only Place, Time, and Darkness remained. Some rightly argued that time was but the measure of phenomena, and by abstracting from phenomena Time ceased to be. To them only Space and Darkness remained; but then Darkness was conceived as the fluid filling the vessel of Space, and therefore could be abstracted from, and only the Void remained. All these ideas actually occur in the different cosmogonies. Chaos is empty space; Chronos, Zrvan, Heh, abstract time; Nux, the unchangeable quintessence of time; Zeus, Tad, Ahura Mazda, That are spirit forces. Those cosmogonies which did not go so far as to personify space or time or darkness, but stopped short at the idea of some protosubstance, were faced by the problem whether this primeval substance was spirit, or matter, or both. Some answered, both, as the Egyptians (Nun) and the later Indians (Purusha); some answered that spirit was first, as some Babylonian thinkers (Anu), most Indians (Tad, Brahma, Atman) and the Iranians (Ahura, Ahriman); some answered that matter was first, as Babylonians (Apsu Tiamat), Persians, and Egyptians (Light, Râ) Phœnicians (Air), Etruscans (Æther). Thus ancient thought wandered through the whole range of possible theories, not, however, guided by mere caprice, but forced to some conclusion which seemed to them inevitable. With regard to the immediate process according to which this world was produced, freer scope was given to unbridled fancy. Yet even here the analogy with the production of life in nature was the guiding principle, the world was produced as life comes from life by animal generations, or as the tree comes out of the seed, the flower out of the bud, or as the egg is laid by the bird. These imaginations are often combined in a grotesque ensemble,

against the complexity of which appear in greater relief the majesty and simplicity of the words: In the beginning God created the heavens and the earth.

COSMOGONIES OF MORE MODERN RACES.—Amongst more modern myths of the world's origin the Norse and the American cosmogonies call for comment.

The Norse Cosmogonies are the only remnant of ancient German ideas on this subject, for the so-called "Prayer of Wessobrunn", a fragment ascribed to the eighth or ninth century, is too short to give us any information beyond the belief in the existence of one almighty god, and with him a multitude of divine spirits, before the world was. It is, moreover, uncertain whether the Wessobrunner fragment represents pure Germanic thought uninfluenced by Christianity. The Norse cosmogonies are contained in the Edda; the more ancient one in the Voluspa of the Poetic Edda, the younger one in the Gylfaginning of the Prose Edda. It is sometimes said that these cosmogonies so clearly betray the influence of the Arctic climate that they can in no sense belong to the Southern Germans. This, however, is hardly convincing, as it is unknown where precisely the Germans lived previous to their immigration into Europe, and what was the climate of Northern Europe and Asia when these Sagas first grew up. In the third verse of "The Sibyl's Song", of Voluspa, the cosmogony begins:—

There was a time when only Ymir was,
Nor sand, nor sea, nor briny waves,
Nay earth existed not, nor heaven above.
A yawning space without a spot of green
Until the vaults were raised of all
By Buri's Sons creating noble Midgard.
Then shone the Southern Sun on stony mountains,
And from the very soil the herbs were sprouting.
And yet the Southern Sun, the helpmate of the Moon,
Bridled heaven's steeds with her right hand,
For it was unknown as yet where she should dwell,
Nor knew the moon the power he possessed,
The Stars were ignorant of their abode.
Then went the Powers all to sit in judgment
The all-holy gods held thereupon their council,
To Night and to the waning moon gave names.
They gave to Morn and Noon their calling
To Afternoon and Eve, whereby to reckon years.

The Sibyl further chants how the Aesir met on Ida's plain, built altars and temples, lit the blazing furnace, and forged their tools. The creation of dwarfs is then related in detail, and finally the creation of man. Three Aesir, great and kind, went to the world and found in utter weakness Ask and Embla, the first human pair. "Spirit they possessed, but sense had none; No blood, nor strength to move, nor goodly colour. Life gave Odin, Sense gave Hoenir, Blood gave Lodur and goodly colour." This cosmogony is explained, enlarged, and slightly modified in the Gylfaginning, or Gylfa's deception. The lengthy account can be summed up as follows:—

There are three stages of development: (a) the rise of three fundamental beings in times primeval, Muspelheim, or the southern realm of Light, Nifheim or the northern realm of Darkness, and between them the Ginnunga Gap, or yawning cleft. Muspelheim existed first, and Nifheim is secondary in the order of being, but how either arose the cosmogony does not explain. In the northern realm there existed a well, called Hwergelmir, from which proceeded twelve torrents, called together Elivagar, or Icestream. This stream flowing into the Ginnunga Gap formed the cosmogonic being Ymir. At first this was a lifeless mass, but this mass develops under the influence of Audhumla, represented as a cow licking the ice, being a figure for the Thawing Warmth. (b) Out of Ymir the Frost Giants, or Hrimthurse, arise, and the fundamental gods; out of Audhumla arise Odin, Vili, and Ve; or Odin, Vili, and Ve are the sons of Bór, who

married Bestla, daughter of the Frost Giant Bölthorn. (c) Odin, Vili, and Ve slay the monster Ymir, throw his body into the Ginnunga Gap, and out of his limbs form the visible universe, or the Midgard, out of his skull the vault of heaven, out of his brains the clouds, out of his blood the seas; and so on. Then they build the Burgh of the Gods, Asgard; they order the course of the stars and create the Dwarfs. Lastly, the first man and woman are created, Ask and Embla, whom Odin found as weak and miserable beings on the seashore.

These Norse cosmogonies differ from the more ancient cosmogonies in this: that they do not really go back to the first beginning of all things, but presuppose the existence of a twofold world—one South the other North—and only account for the formation of this present world in the space between both. They agree with most other cosmogonies in ascribing the actual formation of this Cosmos to one (Odin) or more (Odin, with Vili and Ve as destroyers of Chaos) intelligent personal beings or gods.

American Cosmogonies have been preserved in fair number. The early missionaries to America, especially those to Mexico, Central America, and South America, were strongly impressed with the monotheistic character of Indian speculations, ascribing this world and its phenomena to the influence of one omnipresent spiritual being, called in one place the "Great Spirit", in another place Viracocha, in another Hunabku, elsewhere Quetzalcoatl, etc. Yet, concurrently with these true religious and philosophic ideas, there existed a number of apparently puerile traditions concerning the beginning of things. But again these childish fancies were but the clothing of general cosmogonic ideas. According to the Ottawas and other northern Algonquins, a raft was floating on the shoreless waters. Upon this raft were a number of animals with Michabo, the Giant Rabbit, as their chief. As they were without land to live on, Michabo, the Giant Rabbit, made first the beaver and then the otter, that they should dive and bring up a piece of mud. As they failed, Wajashk, the female muskrat, at her own request is allowed to dive. When she had remained below for a day and a night, she floated to the surface as dead, but they found in one of her paws a little clod of mud. Michabo, endowed with creative power, kneads this little bit of soil till he makes it grow into an island, a mountain, a country, nay into this world in which we live. He shoots his arrows in the ground and transfixes them with other arrows, thus creating trees with stems and branches. Some say he created man from the dead bodies of certain animals, others that he married the muskrat and thus begat the ancestors of the human race. It has been suggested that in the name "Michabo" there lies concealed another word, viz. "Michi Waban", the great Dawn, or the great East. The word "Wajashk", likewise, probably contains the word "Ajishki", or mud. The story then would mean: When the great light in the east shone upon the primeval waters, dry land in ever-increasing extent appeared above the surface, and the rays of the sun, piercing the soil, brought forth the trees, and the action of the light on the slime brought forth man.

Closely similar to this cosmogony is that of the Iroquois. In the beginning the heavens above were peopled with celestial beings, and the wide ocean below with monsters of the deep. Then Ataensic, a divine being, fell through a rift in the sky into the primeval waters. The turtle offered her his back as resting place. Then some animal brought her a little clay, out of which she produced the dry land. Ataensic gave birth to a daughter, who, though a virgin, gave birth to twins, Tawiscara and Joskeha. This daughter having died in childbirth, her body, being buried, imparts fertility to the soil. A mortal battle is waged between the two brothers Joskeha, the good, and Tawiscara, the evil one. The latter is overcome, flies to the West, and becomes the god of the dead. Joskeha creates first

the animals and then man. Ataensic is said to mean "She-who-is-in-the-water", i. e. the dry land in the midst of the ocean; Joskeha is the growing light, or dawn; Tawiscara, the evening twilight, or growing darkness. The Quiche of Guatemala have left us in their sacred book "Popol Vuh" the most detailed cosmogony of Central America. The universe first consisted of the endless ocean and the twilight brooding over it. Then the Creator took counsel with his helpmate to produce the world. Though described as a pair of gods, male and female, this pair is conceived as a unity of being, male and female being but different aspects of the Deity. This Creator is called by every conceivable name, even with names proper to other deities. Thus he is called Heart of the Universe, which is a special title of the god Hurakan, or of Gukumatz the feathered serpent. He is evidently conceived as the All-in-One, as Hunabku, from whom men and gods descend. This Creator uttered the word *Earth*, and the land began to rise out of the waters. As often as God called a thing so often it entered into reality. Then God takes counsel with the lesser gods, whom, apparently, he has meanwhile created, how to fashion man. They first created him out of clay, then of wood, and finally out of maize. The first two attempts failed, the third succeeded. The monkeys are the surviving remnants of the second unsuccessful endeavour.

Very weird are the cosmogonies of the ancient Mexicans. They are characterized by the strong influence of dualism, the universe being in the throes of a perpetual contest between good and evil. The infinite deity has four sons: the black and the red Tezcatlipoca, and Quetzalcoatl, and Huitzilopochtli. These four brothers consulted together about the creation of things. The actual work fell to the lot of Quetzalcoatl and Huitzilopochtli. They made fire, then half the sun, the heavens, the waters, and a certain great fish therein with the name of Cipactli. From its flesh was formed solid earth and the first man and woman, Cipactonal and Oxomuco. The half-sun created by Quetzalcoatl lighted the world but poorly, and the four gods consult once more to add another half to it. Tezcatlipoca does not wait for their decision, but transforms himself into the sun. But after thirteen times fifty-two years, Quetzalcoatl seized a great stick and with a blow knocked Tezcatlipoca from the sky into the waters, and became himself the sun. Four times was the earth destroyed in this struggle. Quetzalcoatl is at present triumphant, but Tezcatlipoca is only biding his time. This cosmogonic episode of war between brothers runs through other North American accounts, as, e. g., Tawiscara and Joskeha amongst the Iroquois, and is prominent in the Egyptian cosmogony.

The noblest account of the world's origin was found amongst the Maya of Yucatan, who ascribed all to an immaterial, invisible god Hunabku, father of Itzamna, the personification of the heavenly fire. Similarly, the ancient Aymara ascribed all to Viracocha (Foam-of-the-Sea—the colour white, the Spaniards, as whiteskins, being called *viracochas*). This Viracocha, or White One, was Creator and Possessor of all things. As all things were his, and he was everywhere, the Incas built him no temples. Ere sun or moon was made, he rose from the bosom of the lake Titicaca and presided over the building of the ancient cities. He created the luminaries and placed them in the sky, and peopled the earth with inhabitants. But, journeying from the lake westward, he was attacked by the creatures he had made. Scorning the contest with the work of his own hands, he only hurled lightning over hillside and forest, and when his creatures repented he became reconciled and taught them all things. Viracocha was the divine light, symbolized by, but not identical with, the sun. One can hardly refrain from a comparison with Khun-Aten, the solar disc of Amenho-

tep's foreign worship introduced into Egypt some three thousand years before the religious revival of the Incas of Peru.

Cosmography. See GEOGRAPHY.

Cosmology.—From its Greek etymology (*κόσμος* world; *λόγος*, knowledge or science) the word *cosmology* means the science of the world. It ought, therefore, to include in its scope the study of the whole material universe: that is to say, of inorganic substances, of plants, of animals, and of man himself. But, as a matter of fact, the wide range indicated by the etymology of the word has been narrowed in the actual meaning. In our day cosmology is a branch of philosophical study, and therefore excludes from its investigation whatever forms the object of the natural sciences. While the sciences of physics and biology seek the proximate causes of corporeal phenomena, the laws that govern them, and the wonderful harmony resulting therefrom, cosmology aims to discover the deeper and remoter causes which neither observation nor experiment immediately reveals. This special purpose restricts in many ways the field of cosmology. There is another limitation not less important. Man's unique position in the universe makes him the object of a special philosophical study, viz. psychology, or anthropology; and, in consequence, that portion of the corporeal world with which these sciences deal has been cut off from the domain of cosmology properly so called.

There is a tendency at present to restrict the field still further; and limit it to what is known as inorganic creation. Psychology being by its very definition the study of human life considered in its first principle and in the totality of its phenomena, its investigations ought to comprise, it would seem, the threefold life of man, vegetative, animal, and rational. And, indeed, the inter-dependence of these three lives in the one living human being appears to justify the enlargement demanded nowadays by many authors of note for the psychological field. Hence for those who accept this view, cosmology has nothing to do with organic life but is reduced to "a philosophical study of the inorganic world". Such, in our opinion, is the best definition that can be given. At the same time it should be remarked that many philosophers still favour a broader definition, which would include not only the mineral kingdom but also living things considered in a general way. In German-speaking countries cosmology, as a rule, is known as *Naturphilosophie*, i. e. philosophy of nature.

Under this name, philosophers usually understand a study of the universe along the lines of one of the foregoing definitions. Scientists, on the other hand, give a more scientific turn to this philosophy of nature, transforming it into a sort of general physics with an occasional excursion into the realm of sensitive and intellectual life. A notable instance is the work of Prof. Ostwald, "Vorlesungen über Naturphilosophie" (Leipzig, 1902).

ORIGIN OF COSMOLOGY.—The word itself is of recent origin. It was first used by Wolff when, in 1730, he entitled one of his works "Cosmologia Generalis" (Frankfort and Leipzig). In this treatise the author studies especially the laws of motion, the relations that exist among things in nature, the contingency of the universe, the harmony of nature, the necessity of

postulating a God to explain the origin of the cosmos and its manifestation of purpose. Because of the advance the natural sciences were then making, Wolff omitted from his philosophic study of nature the purely scientific portion which till then had been closely allied with it. The cosmology of the ancients and especially of Aristotle was simply a branch of physics. The "Physics" of Aristotle treats of corporeal beings in as far as they are subject to motion. The work is divided into two parts: (1) General physics, which embraces the general principles governing corporeal being. It treats of local motion and its various kinds; the origin of substantial compounds; changes in quality; changes in quantity by increase and decrease; and changes arising from motion in place, on which Aristotle hinges our notions of the infinite, of time, and of space. (2) Special physics which deals with the various classes of beings: terrestrial bodies, celestial bodies, and man. It is the first part of this work that comes nearest to what we mean by cosmology. The Schoolmen of the Middle Ages, as a rule, follow the path marked out for them by Aristotle. Cosmological subjects, properly so called, have no reserved place in philosophical study, and are generally treated as a part of physics. In our own time, philosophers employ the words "cosmology" and "philosophy of nature" to designate the philosophic study of the corporeal world.

METHOD.—Cosmology is the natural complement of the special sciences. It begins where they leave off, and its domain is quite distinct from theirs. The scientist determines the immediate cause of the phenomena observed in the mineral or the organic world: he formulates their laws, and builds these into a synthesis with the help of certain general theories, such as those of light, of heat, and of electricity. The cosmologist, on the other hand, seeks the ultimate causes, not of this or that class of beings or of phenomena, but of the whole material universe. He inquires into the constituent nature of corporeal beings, their destiny, and their first cause. It is clear that these larger problems are quite beyond the range and purpose of the various sciences, each of which is by its method confined to its own particular subject. Nevertheless, cosmology must borrow, and borrow largely, from the data of science, since the causes which it studies are not directly perceptible; they can be known only through phenomena which are their more or less faithful manifestations. It is on these that cosmology must rest in order to pass upward from cause to cause till the ultimate cause is reached. Since, then, it is the rôle of the natural sciences to analyse and classify the properties and phenomena of nature, cosmology is obliged to draw very freely upon those sciences and to neglect none of their definitive results. In a word, the cosmological method is essentially *a posteriori*. Descartes and his school followed a different, even an opposite, course. Being a mathematician above all else, he applies to cosmology the principles of mathematics, and as mathematics sets out from the simplest propositions and travels along the road of deduction to the most complex truths, so Descartes, starting from extension as the primordial and universal property of matter, in fact its very essence, ends by ascribing to all bodies in nature whatever extension implies and by eliminating from them whatever it excludes. This *a priori* method, being essentially deductive is anti-scientific; and is based, moreover, on a false supposition, since extension is only one of the many properties of matter, not its essence. As Leibniz pointed out, extension presupposes something extended, just as a repetition presupposes something to be repeated. Philosophers, therefore, have almost entirely abandoned this method; with the exception perhaps of the Idealistic Pantheists of whom we shall speak presently.

DIVISION OF COSMOLOGY.—Cosmology, as most

philosophers understand it, has a threefold problem to solve: Whence this corporeal world? What is it? Why is it? Hence its three parts, concerned respectively with (1) the primordial efficient cause of the cosmos; (2) its actual constituent causes; (3) its final cause.

The first cause of the material universe.—Geology, go back as it may and as far as it may in the scientific history of the earth, must ever remain face to face with a fact that calls for explanation, viz. the existence of matter itself. Even if it could decisively prove Laplace's hypothesis, according to which all portions of this universe, earth, sun, and the whole stellar system, originally made up a single nebular mass, there would still remain the very reasonable question, whence came this mass and what was its origin? Now this is precisely the question cosmology asks; and in seeking the answer it has given rise to many systems which can always be brought under one of the following headings: (a) Monism; (b) the theory of Transitive Emanation; (c) Creationism. (a) The Monist theory is that all beings in the world are but one and the same necessary and eternal substance having within itself the sufficient reason of its existence; while the seeming diversity of things and their attributes, are but the various manifestations and evolutions of this single substance. Pantheism identifies the world with the Divine Being. This Being is ceaselessly in process of evolution; which, however, in no wise disturbs the universal identity of things. The Pantheist is either an Idealist or a Realist according to the view he takes of the nature and character of the original substance. If that substance is real he is styled a Realist, and such were Erigena, Amalric, David of Dinant, Giordano Bruno, and Spinoza. But if the original substance is something ideal, e. g. the Ego, the Absolute, the Concept, he is styled an Idealist, and such were Hegel, Schelling, and Fichte. Kraus and Tiberghien support the Pantheistic view: God is in the world and the world is in God, although they are not identical. Schopenhauer devised a form of Pantheism which is known as Pantheism. According to his view the motive force of the whole universe is a single blind will. Hartmann goes a step farther and says the world is but the constant evolution of the unconscious: hence the name Panhylism. Modern Materialists, such as Büchner, Häckel, Baruch, as well as the old Greek Atomists, Leucippus, Democritus, and Epicurus, consider all the activities of the universe as so many purely material phenomena arising from one necessary and eternal substance. Lastly, according to the supporters of the Immanent Emanation theory, the Divine Being develops within itself so that it is continually identifying itself with the beings it evolves, or that come forth from it, just as the grub maintains its substantial identity throughout its transformation into chrysalis and butterfly. It is clear that such a theory hardly differs from Pantheism.

(b) In the Transitive Emanation theory all beings issue from the Divine Substance much in the same way as new fruits appear on the parent tree without changing its substance and without diminishing its productive power. (c) Creationism is the view held by the generality of spiritualistic philosophers. The universe through its endless transformations reveals its contingency: that is to say, its existence is not a necessity: therefore it must have received its existence from some other being. This first cause must be a necessary and independent one, unless we admit an infinite series of dependent causes and so leave unsolved the problem of the world's existence. God has, therefore, drawn all things from nothingness by the free act of His Almighty Will; in a word, He has made them out of nothing, since any other explanation, e. g. Emanationism, which implies a real intrinsic change in God, is incompatible with the immutability, necessity, and absolute perfection of the Divine Being.

The constituent causes of the world.—The composition of corporeal beings is also the subject of much discussion. There are actually four systems of note, each promising to solve this delicate problem: Mechanism; Hylomorphism (the Scholastic system); Dynamic Atomism; and Dynamism proper.

The characteristic tendency of Mechanism, i. e. of the mechanical theory, is to disregard all qualitative difference in natural phenomena and to emphasize their quantitative differences. That is to say, in this system the constituent matter of all corporeal beings is everywhere the same and is essentially homogeneous; all the forces animating it are of the same nature; they are simply modes of local motion. Furthermore, there is no internal principle of finality; in the world everything is determined by mechanical laws. To explain all cosmic phenomena, nothing is needed but mass and motion; so that all the differences observable between corporeal beings are merely differences in the amount of matter and motion. Mechanism appeals especially to the law of the correlation of forces in nature and of the mechanical equivalent of heat. Heat, we know, does work; but it consumes itself in proportion to its own activity. In like manner mechanical causes produce heat and grow weaker in proportion to the intensity of their effect. So it is with all corporeal energy; one form may be substituted for another, but the quantity of the new force will be always equivalent to the quantity of the force that has disappeared. Having in this way identified mechanical force with motion, the holders of this theory felt authorized to unify all forces and reduce them to local motion; and it was then an easy step to consider substance as homogeneous since its only use is to serve as a background for phenomena. Other arguments are drawn from chemistry, especially from the facts of isomerism, polymerism, and allotropism.

The mechanical theory is of ancient origin. Amongst its earliest partisans were Thales, Anaximander, and Heraclitus, whose chief concern was to prove the derivation of the world from one simple primitive substance. Empedocles, however, held out for four elements—air, earth, water, fire. But Democritus, and later Epicurus, suppressed this distinction between the elements, proclaimed the essential homogeneity of matter, and referred the variety of natural phenomena to differences of motion. After the time of Epicurus (270 B. C.), this system disappeared from philosophical thought for eighteen centuries. Restored by Descartes, it soon won the favour of most scientists, and it is still dominant in scientific research. The Cartesian philosophy was a restatement of the two basic principles of the old theory, the homogeneity of nature and the reduction of all forces to terms of motion; but it got new vigour by contact with the natural sciences, especially physics and chemistry; hence the name *Atomism* (q. v.) by which it is usually known. It should, however, be noted that there are two Atomisms, the one purely chemical, the other philosophical. According to the former all simple bodies are made up of atoms, i. e. of particles so small that no chemical force known to us can divide them, but which have all the properties of visible bodies. Atoms form groups of two or four or sometimes more; these small tenacious groups, known as chemical molecules coalesce in physical molecules, and from these in turn are built up the material bodies we see around us. The material body thus results from a progressive aggregation of molecules, and the very smallest portion of it that is endowed with the properties of the compound contains many atoms of various species, since by definition the compound results from the union of numerous elements. On this atomic theory, independent as such of all philosophical systems, was grafted during the last century that philosophical Atomism which, while ascribing to all

atoms the same nature, differentiates them only by varying amounts of mass and motion.

Another explanation of the material world is offered by Dynamism. If Mechanism attributes extension to matter and complete passivity to corporeal substances, Dynamism sees in the world only simple forces, unextended, yet essentially active. There is nothing strange in the antithesis of these two systems. The Dynamism of Leibniz—it was he who propounded it—was but a reaction against the Mechanism of Descartes. To these two matrix-ideas of unextended, active forces the majority of Dynamists add the principle of *actio in distans*. They soon found out that points without extension can touch only by completely merging the one with the other, and on their own hypothesis the points in contact would amount to nothing more than a mathematical point which could never give us even the illusion of apparent extension. To avoid this pitfall, the Dynamists bethought them of considering all bodies as aggregates of force unextended indeed but separated by intervals from one another. Conceived by Leibniz, who held the monads to be dowered with an immanent activity, this system has been amended and modernized by Father Bosovich, Kant, Father Palmieri, Father Carbonelle, Hirn, and Father Leroy. On the whole it has found few supporters; scientists as a rule prefer the mechanical view. It would seem, however, that a reaction towards it has set in since the discovery of the radioactivity of matter. The property manifested by a considerable number of bodies of emitting at ordinary temperatures a seemingly inexhaustible quantity of electric rays suggests the idea that matter is a focus of energy which tends to diffuse itself in space. But in point of fact there are only two arguments in favour of Dynamism. One is drawn from the difficulties of grasping the concept of extension; the other from the fact that all we know of matter comes to us through its action on our organs of sense; hence the inference that force is the only thing existing apart from ourselves.

Between these two extremes stands the Scholastic theory, known as Hylomorphism, or theory of matter and form (*ἔλν*, matter; *μορφή*, form), also as the Aristotelean theory, and later as the Thomistic theory from the name of its principal defender in the Middle Ages. Aristotle (384–322 B. C.), who was its author, gave it a large place in his treatises on physics and on metaphysics. It was discussed during centuries in the Peripatetic and neo-Platonic schools and in the schools of Constantinople and Athens; but from the sixth century to the twelfth, though its essential principles survived, it was an insignificant factor in philosophical thought. An exception, however, must be made in favour of Avicenna in the East (980–1037) and of Averroes in Spain (1126–1198), both famous commentators on the Aristotelean encyclopedia. In the thirteenth century, the Golden Age of Scholasticism, the system was restored, thanks to a number of Latin translations, and its long-forgotten treasures were brought to light by daring prospectors, such as Alexander of Hales, Albertus Magnus, St. Thomas Aquinas, St. Bonaventure, and Henry of Ghent. During the fourteenth and fifteenth centuries the cosmological theory, and indeed the whole Scholastic system, suffered a decline which lasted till the nineteenth century, though during the interval it found ardent supporters in some of the religious orders. The restoration movement began about the middle of the nineteenth century with the works of Kleutgen (1811–1883); Sanseverino (1811–1865), and Liberatore (1810–1892); but it was especially owing to the impulse given it by the famous Encyclical of Leo XIII, "*Æterni Patris*" (1879), that Scholasticism regained its place of honour beside the great modern systems.

The Scholastic theory can be summed up in the following propositions: (1) Bodies both elementary and compound have an essential unity; they differ spe-

cifically, and are by their very nature extended; (2) they possess powers or energies both passive and active which spring from their substantial nature and are inseparable from it; (3) they have an immanent tendency toward certain special ends to be realized by the exercise of their native energies. The basic principle of this cosmology is that of immanent finality. The corporeal world is a masterpiece of order and harmony. In spite of ceaseless transformations, every species of body, simple and composite alike, reappears again and again with its characteristic properties to further the well-being of the individual and of the universe as a whole. Now this constant and harmonious co-operation of innumerable causes acting under conditions the most diverse can only be explained, say the Scholastics, by admitting in the material agents themselves fixed and permanent principles of order. The universe must therefore be composed of specific natures, i. e. of beings which by their constitution and properties are really adapted to the ends they have to attain. Substance and its distinctive energies form a whole which is completely subordinated to its appointed destiny; so that if serious alterations, such as chemical combinations, succeed in affecting these properties and in marring the harmony that ought to exist between them and their substantial base, the being so affected must put on a new nature in harmony with its new state. There takes place, in other words, what the Scholastics call a substantial transformation. But this implies that an essential portion of the original being must persist throughout the change, and be carried over into the final result, otherwise transformation would involve the annihilation of the first being and the production of the second out of nothing. On the other hand, if we hold that during the process the being in question does not lose its own specific difference in exchange for another, it would be illogical to speak of a transformation, since a change which preserves the substantial integrity of the being can never have as its result the production of a new being. All bodies, then, that are subject to such a change must contain, in spite of their unity, two constituent principles. The one is a specifying or determining principle whence spring the actuality and distinguishing marks of the body itself; and it is this principle which is born and dies at every step in the deeper transformations of matter. It is called substantial form. The other, the indeterminate complement of this, is the substratum which receives the various essential forms; and it is called first matter. These are the fundamental ideas in the Scholastic theory.

As a system it is not at every point the direct antithesis of the two other systems outlined above. It is true that, while Mechanism claims that the properties of bodies are nothing but local motion, the Scholastics admit the existence of qualities properly so called in all bodies, i. e. accidental determinations, fixed and destined for action. These properties are generated with the new substance; they cling to it indissolubly during its existence and they are its natural manifestation. But, on the other hand, the Scholastics concede to the mechanical theory that local motion plays a large part in the world, that it is the accompaniment and the measure of every exertion of material force. Hence they give Mechanism credit for assigning a quantitative value to the phenomena of nature by measuring the movement proportionate to each; while, on their side, they explain the activity at work in each case by taking into account the qualitative elements as well as the kinetic. Again, with the mechanical theory the Scholastic recognizes in every corporeal being an essential principle of passivity, of inertia, divisibility, and extension—in a word, of all the properties so highly prized by Mechanism; this principle is first matter. But the Scholastic theory adds a substantial form, i. e. a determining principle

and a root-cause of the activities and peculiar tendencies displayed by each individual body.

A similar partial agreement exists between Scholasticism and Dynamism. In the hylomorphic constitution of bodies the dynamic element has a preponderating role, represented by the substantial form; but since the corporeal being does not appear to be a source of energy pure and simple, the dynamic element is joined with first matter, of which passivity and extension are the natural outcome.

A fourth and last system is called Dynamic Atomism. The only real difference between it and Mechanism lies in the fact that it attributes to bodies forces distinct from local motion; but at the same time it maintains that they are purely mechanical forces. Matter, it asserts, is homogeneous and the atom incapable of transformation. This theory, proposed by Martin and Tongiorgi, and upheld nowadays by certain scientists, is a transition between the mechanical and the Scholastic system. Its partisans, in fact, are persuaded that a theory which denies the reality of qualitative energies inherent in matter and reduces them to local motion thereby makes the true explanation of natural phenomena impossible and hands over the universe to the whims of chance. Some Dynamists, therefore, to meet the obvious requirements of order in the world, seek in substance itself the reasons of its secondary principles of activity. But in this hypothesis it seems rather hard not to admit, as the Scholastics maintain, that diversity of substance is the only explanation of the constancy observed in the accidental differences of things.

The final cause of the material universe.—The last problem that cosmology attempts to solve is that of the final cause. It is intimately bound up with that of the first cause. Materialists like Häckel and Büchner, who refuse to see in the universe a plan or a purpose, can assign no goal to cosmic evolution. In their opinion, just as the world, during its eternal past, has undergone countless variations in form, so during its eternal future it is destined to ceaseless change. The laws of mechanics, the chance encounter of atoms and molecules, the capricious play of natural forces following no preconceived aim, will determine the number, nature, and form of the states through which matter is to pass. Pantheists and all who identify God with matter share as a rule the same view. For them the condition of the world is but the fatal result of purposeless evolution; so that the world is its own end, or rather is itself the term of its existence and activity.

Those who believe in the existence of a personal God can never admit that an all-wise being created without a purpose. And since a perfect and independent being can have no other than himself as the final aim of his action, it follows that the ultimate end of creation is to manifest the glory of the Creator, man being the intermediary, and, as it were, the high-priest of the material world. The welfare of man himself is the secondary purpose of creation. According to St. Thomas the world is a vast hierarchy of which inorganic matter is the base and man the summit. The mineral order ministers to the vegetable and this in turn to the animal, while man finds in all these the satisfaction of his needs and the adornment of his earthly life. Above all he finds in the material universe and in the service it renders him a means of rising to perfect happiness in the possession of God.

D. NYS.

Cossa, FRANCESCO, known sometimes as DEL COSSA, Italian painter of the School of Ferrara, b. about 1430; d. probably at Ferrara, 1485. Cossa is noted especially for his fresco work. The first record we have of him is in 1456 when he was an assistant to his father, Cristofano del Cossa, at that time employed in painting the carvings and statues on the high altar in the chapel of the bishop's palace at Ferrara. Cossa after this worked in conjunction with Cosimo Tura, decorating the summer retreat known as the Schifanoia, and of the frescoes which remain, three can be safely ascribed to him. They illustrate the manners and dress of the period and are rich in architectural details, somewhat less decorative and less fantastic than those of Tura, but stronger and grander than the latter's work. Considering himself, however, insufficiently remunerated by Duke Borso, Cossa left Ferrara for Bologna in 1470, where he obtained many commissions under the Bentivogli. Here he painted his two masterpieces, one, the Virgin and Child with two saints and a portrait of Alberto de' Catanei, produced in 1474; the other, the fresco of the Madonna del Baracano, representing the Virgin and Child with the portraits of Giovanni Bentivoglio and Maria Vinziguerra, painted in 1472. In these works Cossa reveals himself as a painter of great power and originality, stately in his conceptions, grand and massive in portraiture, broad in modelling, simple and severe in composition. In the National Gallery there is a fine picture by him representing St. Vincent Ferrer, an "Annunciation", in the Dresden collection, which has been attributed to Pollajuolo, and a fine profile portrait at Locko Park near Derby, said to represent Duke Ercole I of Ferrara. He executed some glass paintings in Bologna, the best of which is a beautiful circular window, in the church of San Giovanni in Monte, representing St. John in Patmos; this bears his signature.

GEORGE CHARLES WILLIAMSON.

Costa, LORENZO, Ferrarese painter, b. at Ferrara in 1460; d. at Mantua in 1535. He is believed to have been a pupil of either Tura or Cossa. At the age of twenty-three Costa established himself at Bologna, under the patronage of the Bentivogli family, in the same workshop as Francia. The two men were much influenced by each other; Francia worked as a goldsmith, but Costa had the greater imagination, wider knowledge, and more perfect skill in drawing. It is probable that his coming to Bologna was the cause of Francia's change of craft, and that but for this friendship the greater man would have remained all his life a goldsmith. Costa's earliest work in Bologna is the fresco in San Giacomo Maggiore (1480); his greatest, the altar-piece in San Giovanni in Monti (1497). The two friends united in painting the altar-piece for the church of the Misericordia, the centre and upper part of which still remain in Bologna, while the predella by Costa is at Milan. They worked for the same patrons, decorated the same walls of palace, church, and oratory, and both suffered when Bentivogli was driven from Bologna in 1509, and his palace became a heap of ruins. Costa then passed into the service of the Gonzaga family at Mantua. His work can be well studied in Bologna, but there are pictures by him also in Milan, Berlin, London, and Paris. His early frescoes are in the Schifanoia in Ferrara, and some of his latest in the Schalcheria Castle at Mantua. He himself engraved more than one plate after his pictures. His paintings are very much in the style of those by Francia, but the subjects are treated in a freer and more picturesque manner. The colouring is always energetic, the heads of the figures well modelled and

full of expression, the architectural backgrounds rich, varied, and accurate, and the perspective thoughtful and well planned. The draperies in Costa's work are far less hard than those in Francia's, and fall in easy and not in rigid folds.

GEORGE CHARLES WILLIAMSON.

Costadoni, GIOVANNI DOMENICO, frequently known as Dom Anselmo, his name in religion, an Italian Camaldolese monk, historian, and theologian, b. 6 October, 1714, at Venice; d. 23 January, 1785, in the same city. The son of a rich merchant, he sacrificed at an early date his prospects of success in the world and took the religious habit at St. Michael's monastery, situated on the island of Murano in the Venetian lagoon. Here he studied philosophy and theology with more than usual success. At the age of twenty-three he revealed his literary ability in a letter (*Lettera critica*) written in defence of certain Camaldolese writers, who had been attacked by Giusto Fontanini in his "Library of Italian Eloquence". Costadoni subsequently collaborated for eighteen years with the learned Mittarelli in the publication of the "Annales Camaldulenses" (Venice, 1755-73). Some archaeological papers due to his pen, such as "Dissertazione sopra il pesce come simbolo degli antichi cristiani", were published in the voluminous collection of historical essays edited by Calogerà, a monk of the same order. His works also include: "Avvisi ed istruzioni pratiche intorno ai principali doveri de' regolari" (Faenza, 1770; Venice, 1771); "Lettere consolatorie" (Venice, 1775); "Lettere sopra questione teologiche" (Venice, 1773). Costadoni's unpublished manuscripts were transferred, after his death, to St. Gregory's monastery at Rome, by order of the Camaldolese abbot, Mauro Cappellari (later Pope Gregory XVI).

N. A. WEBER.

Costa Rica, REPUBLIC OF, a narrow isthmus between Panama on the east and the Republic of Nicaragua on the north, the Caribbean Sea on the north-east and the Pacific Ocean on the south-west. Between latitudes north 9° and 11° and longitudes west of Greenwich 83° and 86°, its area is calculated at 18,400 square miles; the population in 1905 is given as 334,307, besides 3500 Indians. The principal city is San José, the capital, with 24,500 inhabitants; next comes Cartago with 7800, then Heredia with 7151. There are two ports on the Atlantic and two on the Pacific coast. Mountain chains traverse the territory in many directions, but the principal one runs through the whole length from north-west to south-east. Its tallest peak is called "Pico Blanco" and rises to 11,800 feet above sea-level. Costa Rica has six, partly active, volcanoes among which the tallest (Irazu) rises to a height of 11,600 feet and has been dormant for many years. The surface is in general very much broken, the mountains are eruptive or volcanic, and sedimentary deposits abut against them at a lower level. Many streams, some of which are navigable for a short distance, water the territory. The Pacific coast has two handsome gulfs: Nicoya in the north, and the Golfo Dulce near the frontier of Panama.

The climate is tropical. There are but two seasons: winter or the dry, and summer or the wet, season. Altitude and climate divide the country into three zones, the hot that rises from the shores on both sides to about 3000 feet; the temperate (between 3000 and 7500), and the cold higher up. Snowfalls, even on the highest summits, are very rare; the mean temperature

of the hot section is stated as varying between 72° and 82° Fahr; of the temperate zone, from 57° to 78 degrees. Mahogany, cedar, rosewood and other precious woods for building and decorative purposes are scattered through its forests, also dye-woods. Medicinal plants are numerous and india-rubber of the species called *Castilloa elastica*. Among resinous plants copal and the *Myroxylum*, producing Peru and tolu balsams, abound. The chief agricultural products are coffee, bananas, tobacco, cocoa. Cotton and indigo are also raised. Most of the cultivated plants were imported from Europe by the Spaniards. Nearly if not all larger mammals of the torrid zones of America are found. To entomologists Costa Rica is a rich field. There are mines of gold, silver, copper and lead. Gold was discovered as early as Columbus' last voyage in 1502, and the number of gold ornaments found in the hands of the Indians, as well as the auriferous sands of the rivers, gave the newly discovered country its name Costa Rica, "the rich coast". In 1815 the rich gold district of Monte del Aguacate was first brought to notice by Bishop Garcia of Nicaragua and Leon. No general mining statistics exist. Mining laws are rather confused, being a mixture of former Spanish ordinances with modern amendments. But mining-machinery is imported free of duty and neither the Government nor municipalities levy any taxes on mining property.

Costa Rica became independent of Spain in 1821 and was a member of the Central American confederacy from 1824 to 1848 when that confederacy was dissolved. In 1870-1871 a constitution was adopted which has been modified repeatedly since. The executive head of the republic is a president, but there have been several dictators. The president is elected, for four years, indirectly through electors chosen by the people, and cannot serve a second term. He is assisted by four secretaries. There is no vice-president. In case of the inability of the president to discharge his duties, he is replaced by one of three persons designated by Congress, at the first session in each presidential term. Congress consists of only one house. Its members are also indirectly chosen by the people for four years, one member for every 8000 inhabitants, and one-half are elected every two years. Members of the supreme court of justice are appointed by Congress. The territory is divided politically into five provinces at the head of each of which is a governor appointed by the president. Costa Rica has a civil code, a code of civil procedure and, since 1888, a judiciary law. Trial by jury takes place only in criminal cases.

By the Constitution, art. 51., "The Catholic Apostolic Roman is the religion of the state which contributes to its maintenance without impeding the exercise in the republic of any other religion not opposed to universal morality and good behaviour" (*buenas costumbres*). By the Concordat (7 October, 1852) the jurisdiction previously exercised from the time of the Spanish occupation by the ecclesiastical authorities in litigations involving Church possessions or the temporal rights of the Church, passed over to the civil tribunals, but it was stipulated at the same time that, in the courts of the second and the third instance, legal trial of criminal cases involving priests required the assistance as judicial assessors of ecclesiastics nominated by the bishop. In 1908, no Apostolic delegate having been appointed for Costa Rica since the year 1882, Pius X communicated to the republic his wish to re-establish the delegation there. The republic's representative at the Vatican answered that the government welcomed the idea, and begged His Holiness to give the new delegate the character of envoy to the republic, to which the pope assented. The envoy-extraordinary and Apostolic delegate named was Mgr. Giovanni Cagliera, titular Archbishop of Sebaste.

Up to 1850 the Bishop of Leon (Nicaragua) was also

administrator of Costa Rica. The first Bishop of Costa Rica, Anselmo Llorente y Lafuente, was consecrated in Guatemala, 7 September, 1851, and installed 5 January, 1852. Bishop B. A. Thiel (b. at Elberfeld, 1850; d. at San José, 1901) a Lazarist, who was professor of theology in Ecuador and banished for defending the Jesuits, was appointed Bishop of San José in 1880. He was an explorer, a student of Indian languages, and the founder of an ethnographic and biological museum at San José. He translated a number of religious works from German into Spanish and wrote "Idiomas de los Indios"; "Viajes" (1897) and "Datos cronol. para la Hist. ec.^{ca} de Costa Rica". There are forty-two parishes in the republic. The St. Vincent de Paul conferences are very active. In 1899 they had 1396 members. In San José there are six. Women's St. Vincent de Paul auxiliaries are organized in nearly all the cities. In 1899 they distributed \$26,208. Since the Plenary Council of Latin America (1899) *sponsalia* (see BETROTHAL) to be valid must be publicly recorded. In 1890 the public treasury contributed 19,404 pesos to the support of the Church. Primary education is free and compulsory. Its immediate direction belongs to the municipalities, the national executive, however, reserves the right of general supervision. Art. 53 of the Constitution permits every Costa Rican to give or to receive what instruction he pleases in any educational establishment not supported by public funds. The budget of public instruction rose from 137,677.77 in 1890 to 235,203 pesos in 1902, when there were six higher schools, one normal school, and 306 primary schools, the latter, with 17,746 pupils.

After Costa Rica was discovered by Columbus in 1502, Diego de Nicuesa attempted to colonize it in 1509, but it was fourteen years later when Francisco Hernandez made a settlement in the country, and its conquest was only gradually perfected after 1526. Several tribes of the isthmus spoke a language allied to the Chibcha of Colombia. Among these, it seems that the Talamanca and Guaymis were the most prominent. The former held the eastern coast, extending to the boundary of Nicaragua, the latter lived mostly in what is now the Republic of Panama. A tribe, to which the Spanish name of *Valientes* has been given, also belonged to Costa Rica. In culture, especially in the working of gold and silver, the Guaymis resembled the Chibcha. All these aborigines were grouped in small independent tribes and their resistance to the European invaders was protracted rather by natural obstacles than through actual power. During Spanish colonial times Costa Rica had sixty-two successive rulers,—governors (*adelantados*), etc. and was regarded as a province of Guatemala.

THIEL, *La Iglesia Católica en Costa Rica en Revista de c. l. en el Siglo XIX* (San José, 1902). For the earliest period of discovery and Spanish colonization of Costa Rica, the letters of Columbus are indispensable. AD. F. BANDELIER.

Coster, FRANCIS, theologian, b. at Mechlin, 16 June, 1532 (1531); d. at Brussels, 16 December, 1619. He was received into the Society of Jesus by St. Ignatius, 7 November, 1552. While still a young man he was sent to Cologne to lecture on Sacred Scripture and astronomy. His reputation as a professor was established within a very short time, and on the 10th of December, 1564, the university of Cologne conferred on him the degree of Doctor of Philosophy and Theology. He was ever ready to defend the teaching of the Catholic Church, which at this period was engaged in the struggle with heresy, and by word and by writing he brought many back to the true fold. He was for two terms provincial of the province of Belgium, for one term provincial of that of the Rhine, and assisted at three general congregations of his order. The catalogue of his writings (De Backer, I, 218) mentions forty-two titles. They include works on ascetical subjects, meditations on the Blessed Virgin, and sermons on the Gospel for each Sunday of the year. Probably the most famous was his "Enchiridion controversiarum præcipuarum nostri temporis de Religione" (Cologne, 1585, 1587, 1589, 1593). This was afterwards revised and enlarged by its author in 1596, 1605, 1608; and was translated into various languages. To each of the attacks made upon it by Protestant writers, such as Philip Marbach, Francisus Gommar, Lucas Osiander, Coster gave an able reply. His works directed against these opponents are entitled: "Liber de Ecclesiâ contra Franciscum Gommarum" (Cologne, 1604); "Apologia adversus Luca Osiandri hæretici lutherani refutationum octo propositionum catholicarum" (Cologne, 1606); "Annotationes in N. T. et in præcipua loca, quæ rapi possent in controversiam" (Antwerp, 1614).

G. E. KELLY.

Costume, CLERICAL.—To discuss the question of ecclesiastical costume in any detail would be impossible in an article like the present. No topic has formed the subject of so many synodal enactments, and in almost every country and every order of the clergy we find distinctive features which might call for special treatment. Only the broad outlines can therefore be dealt with here. It may be noted, however, that the more prominent items of clerical attire, e. g. BIRETTA; MANTELETTA; etc., have separate articles assigned to them.

History.—It seems that in the early centuries of Christianity no distinctive dress was adopted by ecclesiastics. Many indications point to this conclusion, e. g. the *lacerna*, or *birrus*, and (civil) dalmatic, associated with the martyrdom of St. Cyprian. The most explicit testimony is that afforded by a letter of Pope Celestine in 428 to certain bishops of Gaul, in which he rebukes them for wearing attire which made them conspicuous, and lays down the rule that "we [the bishops and clergy] should be distinguished from the common people [*plebe*] by our learning, not by our clothes; by our conduct, not by our dress; by cleanness of mind, not by the care we spend upon our person" (Mansi, "Concilia", IV, 465). In the East it would seem to have been the custom for ascetics and philosophers, whether Christian or not, to affect a special habit, but the Christian clergy generally did not profess asceticism in this distinctive way, and were content to wear the *birrus* (*stipos*) like the laity about them. This usage a canon of the Council of Gangra (340), especially when it is taken in conjunction with other facts (cf. Sozomen, III, 14), distinctly approves. "If any man," says the council, "uses the pallium [cloak] upon account of an ascetic life, and, as if there be some holiness in that, condemns those who with reverence use the birrus and other garments that are commonly worn, let him be anathema" (Hefele-

Leclercq, "Hist. des Conc.", I, 1037). At the other extremity of Christendom the documents that survive concerning St. Patrick and other early Celtic bishops present them to us as habitually dressed in the *casula* (chasuble), which was at that time not a distinctively liturgical attire, but simply an outer garment commonly worn by the humbler classes. In the sixth and following centuries we find that in Rome and in countries near Rome the civil dress of the clergy began markedly to differ from that of the laity, the reason probably being that the former adhered to the old Roman type of costume with its long tunic and voluminous cloak, representing the toga, whereas the laity were increasingly inclined to adopt the short tunic, with breeches and mantle, of the *gens braccata*, i. e. the Northern barbarians, who were now the masters of Italy. Probably this Roman influence made itself felt to some extent throughout Western Christendom.

The canons of the Council of Braga in Portugal (572) required the clergy to wear a *vestis talaris*, or tunic, reaching to the feet, and even in far-off Britain we find indications, both among the Celts and Anglo-Saxons, that undraped lower limbs were not regarded as seemly in the clergy, at any rate during their service at the altar. During the same period synodal decrees became gradually more frequent, restraining in various ways the tendency of the clergy to adopt the current fashion of worldly attire. By a German council of 742, priests and deacons are bidden to wear habitually not the *sagum*, or short military cloak, but the *casula* (chasuble), which even then had not become an exclusively liturgical dress. Perhaps the most interesting and significant enactment of this period is a letter of Pope John VIII (c. 875) admonishing the Archbishops of Canterbury and York to see that their clergy wore due ecclesiastical attire, and quoting the example of the English clergy in Rome who, on the eve of St. Gregory's feast, had given up their short cloaks and adopted the long Roman tunic reaching to the feet: "Apostolicæ sententia usque adeo Sedis prævaluit, ut volutarie omnes Anglorum clerici, sub ipsis vigiliis S. Gregorii, laicalem et sinuosum, sed et curtum, habitum deponentes, talares tunicas Romanas induerent" (Jaffé-Wattenbach, Reg. RR. PP. 2995). In the East the distinction between lay and clerical costume was somewhat slower in developing than in the West, probably because the influence of the Teutonic invaders was less acutely felt. In Justinian's legislation it seems clear that a distinctive dress was recognized as belonging to monks, but there is nothing to show that any similar distinction applied to the clergy at large. The Trullan council, however, in 691 prescribed that all who were enrolled among the clergy should use at all times the robes (*στολὰς*) appointed for those of their profession, under pain of excommunication for a week. Furthermore from the eighth century onwards we find almost universally numerous canons passed to restrain clerics from wearing rich dresses, bright colours, and extravagant ornaments. In Germany, at Aachen, in 816 the *cuculla* was forbidden them, as being distinctive of monks. On the other hand, at Metz, in 888, the laity were forbidden to wear the copes (*cappas*) belonging to the clergy, while in another synod presbyters were enjoined to wear their stoles always, as an indication of their priesthood. Such a bishop as St. Hugh of Lincoln still complied with this rule in the twelfth century but at the present day the practice is peculiar to the Holy Father alone.

In the later Middle Ages the dress of the clergy was regulated by the canon law, the *jus commune* of the Church at large, but with many supplementary enactments passed by local synods. The Fourth Lateran Council (1215) laid down the principle that clerics must wear garments closed in front and free from extravagance as to length (Clausula deferant desuper in-

documenta nimia brevitate vel longitudine non notanda. —Mansi, XXII, 1006). Ornamental appendages, cloth of red or green colour, brooches (*fibulæ*) to fasten their cloaks, and the wearing of sleeved copes (*cappæ manicatæ*), either at Office or at other times, are all forbidden by the same enactment. In England, the synod held under Cardinal Langton, in 1222, required that dignitaries and ordinary priests should be seen abroad becomingly attired in the "ecclesiastical habit", and should use "closed copes" (Mansi, XXII, 1161). These *cappæ clausæ* seem to be prescribed as an addition to the *habitus clericalis*, and were perhaps now imposed upon the ordinary secular clergy for the first time. In 1237 the national council, held under the presidency of the Legate Otho, declared that lay folk were scandalized at the dress of the clergy, which was not clerical at all, but more suited to knights (*non clericalis sed potius militaris*). Offenders in future were to be punished, and the bishops were to see that all in sacred orders used garments of fitting length and wore closed copes. Somewhat later the legatine council under Ottoboni insisted that all ecclesiastics, whether in Sacred orders or not, were to wear clothes of fitting length, coming at any rate below the middle of the shin (*saltem ultra tibiarum medium attingentes*). Further, all priests and beneficed clergy were to wear closed copes, except when on a journey, or for some other just reason (Wilkins, "Concilia", II, 4). Severe penalties were enacted against transgressors, but they do not seem to have produced any lasting effect, for numerous other decrees on the same subject were passed in England at a later date, notably in 1281 and in 1342. The proper dress of the medieval clergy was therefore the *vestis talaris*, and over this priests and dignitaries were bidden to wear the *cappa clausa*. The former of these must have been a sort of cassock, but made like a tunic, i. e. not opening, and buttoning down the front. The wearing of the closed cope was no doubt often evaded by the secular clergy. Such writers as Chaucer and Langland seem to lay so much emphasis upon the copes of the friars that it is difficult to believe that this mantle, resembling a liturgical cope, but partly at least sewn up in front, was as commonly worn by secular priests. That the cope was often of considerable length may be gathered from a passage in "Piers Plowman's Crede":—

His cope that biclypped him, wel clene was it
folden,

Of double-worsted y-dyght, down to the hele.

It would seem that the closed cope has a modern representative in the *cappa magna* of cardinals and bishops, and also in the chimere (etymologically descended from the Italian *zimarra*), the loose mantle now worn by the Anglican episcopate to which the well known lawn sleeves are attached. The wearing of a separate head-dress, or "coif", seems to have been prohibited to the inferior orders of the clergy except when on a journey; but of course doctors of theology and some other graduates had their caps of honour. Besides these we hear of the "liripipe", a sort of broad tippet or scarf sometimes drawn over the head, sometimes worn hanging loose on the shoulders. The dress of the clergy in other countries did not probably differ very greatly from that of medieval England. As already said, innumerable decrees were everywhere passed in provincial synods restraining extravagances, for every eccentric fashion—the peaked shoes, the partly-coloured dress, the headgear of flowers, the inordinately tight hose, etc.—was liable to find imitators among the clergy. One article of costume which occurs repeatedly on brasses and other funeral monuments, both in England and abroad, is the "almuce", a fur-lined tippet and hood, still retained at Rome and elsewhere by the canons of cathedral and collegiate churches, and now practically confined to them. Formerly the almuce was worn by university graduates,

and many other orders of the clergy. It is probably only a warmer variant of the hood, which almost everywhere survives as part of a university academic costume, and which is the familiar adjunct of the surplice for Anglican clergymen when officiating in the sanctuary. It will be readily understood that the indescribably cold and draughty condition of our old cathedrals rendered some such furred protection for the head and neck almost a necessity during the long hours of the night Offices. Naturally, the richness and amplitude of the fur lining varied in some measure with the dignity of the wearer. In funeral monuments the almuce is found constantly associated with the cope, also primarily a choir vestment.

Modern Usage.—The modern and more centralized legislation regarding clerical costume may be considered to begin with a constitution of Sixtus V. in 1589, insisting under the severest penalties that all clerics, even those in minor orders, should uniformly wear the *vestis talaris* and go tonsured. Offenders were to lose all title to their benefices or any other emolument which they held. Another edict issued under Urban VIII, in 1624, goes into greater detail. It directs that the cassock should be confined with a cincture, and that the cloak worn over it should normally, like the cassock, fall as low as the ankles. The under-dress, the hose included, should be modest, and dark in colour. All embroidery and lace upon collar or cuffs is forbidden. The hat shall be of approved shape, and a simple cord or ribbon shall form its only ornament. Infringements of these regulations are to be punished with a pecuniary fine. Another important Roman decree, issued in 1708, forbade clerics to wear a peruke covering any part of the forehead or ears and, while admitting the use of shorter garments when on a journey, required such garments in all cases to extend below the knees and to exhibit no eccentricities, such as large buttons and huge pockets. In 1725 Pope Benedict XIII made the wearing of lay costume by an ecclesiastic an offence of the most serious kind, which not only, according to the Bull of Sixtus V, entailed the forfeiture of all emoluments, but denied absolution to those delinquents who did not spontaneously surrender their benefices if they had been guilty of this offence. It would seem that this extreme rigour has never been upheld in practice by the Roman Congregations with whom the execution of such decrees ultimately lies. Mgr. Barbier de Montault, for example, remarks that, although infractions of the law of ecclesiastical costume are by no means allowed to pass with impunity, and though "the Sacred Congregation of the Council is wont to support the decrees of bishops which insist upon the wearing of the cassock, still so far as concerns the question of punishment it answers 'Let the bishop proceed with moderation'" (B. de Montault, "Le Costume" etc., I, 45). In English-speaking countries where the wearing of the tonsure is not obligatory, the rules affecting the costume of ecclesiastics are less rigid. The decrees on the subject of the First Synod of Westminster and the Third Plenary Council of Baltimore are in practical agreement. The latter says (§ 77), "We wish therefore and enjoin that all keep the law of the Church, and that when at home or when engaged in the sanctuary they should always wear the cassock (*vestis talaris*) which is proper to the clergy. When they go abroad for duty or relaxation, or when upon a journey, they may use a shorter dress, but still one that is black in colour, and which reaches to the knees, so as to distinguish it from lay costume. We enjoin upon our priests as a matter of strict precept, that both at home and abroad, and whether they are residing in their own diocese or outside of it, they should wear the Roman collar." The general introduction of the use of bicycles among the clergy has brought about a somewhat laxer practice regarding the length of the upper garments worn out of doors and the Second Synod of Maynooth (1900)

has recently found it necessary to insist, for Ireland, upon certain restrictions in this matter.

HERBERT THURSTON.

Cosway, **MARIA**, miniature-painter, b. in Florence, Italy, 1759; d. at Lodi, 5 January, 1838. Her maiden name was Hadfield, her father being an Englishman. She showed great talent in drawing at an early age, and when only nineteen was elected a member of the Academy of Fine Arts in her native city, where she had been educated at a Visitation convent. Her father dying in 1778 she went to England, at the invitation of her friend, Angelica Kauffman, who introduced her to society. She then met Richard Cosway, regarded as one of the most remarkable miniature-painters of the eighteenth century, whom she married in London, 18 January, 1781. In that year she first exhibited at the Academy, continuing to do so down to 1801, but her oil pictures, mythological and allegorical in subject, were not works of specially high merit, although they showed signs of genius. She was no mean exponent of the art of miniature-painting, however, and many of her copies of her husband's works are noteworthy. Her Sunday evening concerts in London are often mentioned by Horace Walpole and other writers of the day. She was passionately attached to her husband, and after his death disposed of his art treasures and went to Italy. Prior to his decease, Mrs. Cosway, had started in Lyons a school for girls at the earnest request of Cardinal Fesch, but in 1811, owing to the war, this was closed. In the following year she made a similar effort in Italy, acquiring a convent at Lodi, where she established her teachers from Lyons. Cosway repeatedly helped her in her scheme and gave her considerable sums of money towards it. After his decease she made her home in Lodi, bought the buildings outright, attached them to the neighbouring church, and merged the little teaching community she had established in that of the Dames Inglesi, a branch of which Francis I desired to establish in Italy. For her generosity the Emperor in 1834 created her a Baroness of the Austrian Empire and gave her a grant of arms. She devoted the whole of her time and means to her school. She is buried in the neighbouring church. The municipality erected a bust to her memory, and the school which she founded and endowed is still a flourishing institution for the education of girls. In the dining-room of it she erected a replica of the monument to the memory of her husband that she had Westmacott put up in Marylebone Church, London. In the library are preserved many of her husband's works together with books and furniture which had belonged to Cosway, and papers relative to her own and her husband's life. Her sister, Charlotte, married William Combe, the author of the "Tour of Dr. Syntax".

WILLIAMSON, *Richard Cosway, R.A., Miniature Painter* (London, 1897; new ed. 1905).

GEORGE CHARLES WILLIAMSON.

Cotelier (**COTELERIUS**), **JEAN-BAPTISTE**, patristic scholar and theologian, b. December, 1629, at Nîmes; d. 19 August, 1686, at Paris. The early education of this very gifted man was under the personal direction of his father, at one time a minister of the Reformed Church, but later a convert to Catholicity. So rapid was his progress in learning that he could fluently interpret the Bible in the original Hebrew and Greek before the General Assembly of the French clergy at

Mantes (1641). On the same occasion he showed his proficiency in mathematics, and made such a favourable impression on the clergy that they increased his father's pension from 600 to 1000 livres. To this sum 300 livres were added for the purchase of books. During the period of his theological studies at Paris (1641-47), Cotelier's brilliant intellectual qualities procured for him an introduction to the king (1644). He graduated as bachelor in theology in 1647 at the Sorbonne, of which he became a member in 1648, though he never received priestly ordination. In 1654, he accompanied Archbishop d'Aubusson de la Feuillade of Embrun to his diocese and became his counsellor. He returned, in 1659, to Paris and again devoted himself to study. With the philologist Du Cange he was commissioned in 1667 by Minister Colbert to investigate and catalogue the Greek manuscripts of the Royal Library. In 1676 he was appointed professor of the Greek language in the Collège Royal at Paris.

The editions of ancient writings prepared by Cotelier were, in chronological order: (1) "Homiliæ quatuor in Psalmos et interpretatio prophetiæ Danielis, græce et latine" (Paris, 1661). He attributed these unpublished homilies to St. John Chrysostom; other critics, owing to the diversity of style, hold a different opinion. (2) "SS. Patrum qui temporibus apostolicis floruerunt, Barnabæ, Clementis, Hermæ, Ignatii, Polycarpi opera edita et non edita, vera et supposita, græce et latine, cum notis" (Paris, 1672). This excellent edition is Cotelier's principal work. From its title was derived the designation of Apostolic Fathers for the earliest non-inspired Christian writers. Most of the copies of the work were consumed by a conflagration in the Collège Montaigu at Paris. Two revised editions were published by Leclerc (Clericus), one at Antwerp (1698), the other at Amsterdam (1724). Reprints of this last edition are found in Migne, P. G., I, II, V. (3) "Ecclesiæ Græcæ Monumenta, græce et latine" (Paris, 1677, 1681, 1686). The third volume of this series was published two days before the author's death. He had collected materials for a fourth volume which was edited (1688) by the Maurists, Pouget, Montfaucon, and Lopin, and is sometimes known as "Analecta Græca". Cotelier also left several volumes of manuscripts, which bear chiefly on Christian antiquity and are still preserved in the Bibliothèque Nationale at Paris. He was an extremely accurate scholar, of a modest and retiring nature and kindly disposition.

BALUZE, *Lettre to Bigot*, in **COTELIER-LECLERC**, *Patres Apostolici* (Amsterdam, 1724). I, after the preface; **NICÉRON**, *Mémoires*, IV, 243-49; **VON HEFELÉ** in *Kirchenlex.*, s. v.; **HURTER**, *Nomenclator* (Innsbruck, 1893), II, 471-74.

N. A. WEBER.

Cotenna, a titular see of Asia Minor. Strabo (XII, 570) mentions the Katenneis in Pisidia adjoining Selge (now Sürk) and the tribe of Homonades (east and north of Trogitis, Séidi Shêîhr Lake). Their city must be identified with the modern village of Godena or Gudene, on the Alaghir Tchai, in the vilayet of Konia. An inscription has been found showing that the people called themselves Kotenneis, so that the true name of the town was Kotenna. Hierocles mentions it as Kotana in Pamphylia. It appears as Kotaina in Parthey's "Notitia episcopatum", X and XIII, twelfth or thirteenth century, as a suffragan of Side. Six bishops are known: Hesychius in 381, Acacius in 431, Eugenius or Eusebius in 451, Flavianus in 536, Cosmas in 680, Macarius in 879. It has been said that the Kotenneis are the same as the Etenneis, mentioned by Polybius, V, 73, as living in Pisidia above Side, and who struck coins in the Roman times. The native name may have been Hetenneis, and the tribe afterwards divided into at least two districts, the northern taking the name Etenneis while the southern preferred Kotenneis. There was another see called Etenna or something

similar. A third district was perhaps also called Banaba or Manaua; for in 680 Cosmas appears as Bishop of "Kotenna and Manaua".

RAMSAY, *Hist. Geogr. of Asia Minor* (London, 1890), 418; LEQUIEN, *Oriens christianus*, I, 1009. S. PÉTRIDES.

Cotiæum, a titular see of Asia Minor. Kotiaion, according to its coins, better Cotaion, the city of Cotys, was an ancient city of Phrygia Salutaris. Æsop is said to have been born there. It was a centre of heresy from the second century onwards. Socrates (IV, xxviii) speaks of its Novatian bishop. At first a simple suffragan of Synnada, it became an autocephalous archbishopric, probably in the eighth century, and about the tenth appears as a metropolis with three suffragan sees, which were later increased to thirteen (?). Lequien (I, 851) mentions ten bishops, the last in the fourteenth century. The first is Cyrus, sent thither by Theodosius II, after four bishops had been slain by the inhabitants. The town preserves some ancient ruins, a Byzantine castle and church. It was taken and plundered by Timur-Leng (Tamerlane) in 1402. It is now the chief town of a sanjak in the vilayet of Brusa, and is called by the Turks Kutaya. It has about 22,000 inhabitants, including 4000 Greeks, 2300 Armenians, 700 Catholic Armenians, and a few Latins; it contains two schools. It is also the see of a non-Catholic Armenian bishop. During late centuries Kutaya has been renowned for its Turkish earthenware, of which fine specimens may be seen at the Imperial Museum in Constantinople.

Coton, PIERRE, a celebrated French Jesuit, b. 7 March, 1564, at Néronde in Forez; d. 19 March, 1626, at Paris. He studied law at Paris and Bourges,

entered the Society of Jesus at the age of twenty-five, and was sent to Milan to study philosophy. Here he became acquainted with St. Charles Borromeo. On his return to his native country he preached with remarkable success at Roanne, Avignon, Nîmes, Grenoble, and Marseilles. An acquaintance with Henry IV of France soon ripened into friendship, and the king having recalled the exiled Jesuits to France, their enemies could not pardon the influence Father Coton had in bringing this about, and an attempt was made to assassinate him. Some writers have pretended that Father Coton was not above suspicion on the doctrine of regicide, and when Henry IV was assassinated, they accused Father Coton of defending Ravillac, the king's murderer. But if his enemies at court had any knowledge that he held such views they failed to make it public.

Father Coton had for two years previous to the death of Henry been confessor to his son, the young Dauphin. In 1610 the biting satire "Anti-Coton, ou est prouvé que les Jésuites sont coupables du parricide d'Henri IV" was followed by many pamphlets

for and against the Society. It was an easy task for Father Coton to defend himself against these calumnies and produce proofs of his innocence, but very difficult for the author of the libel, who was said to be Pierre Dumoulin, a Protestant minister of Charenton, and an associate of the Calvinists, to substantiate any statement that he had advanced. Father Coton was continued in his capacity as confessor to the new king, Louis XIII, which duty he discharged until 1617, when he left the court at the age of fifty-four and withdrew to the novitiate at Lyons. He then traversed the provinces of the South as a missionary, and went to Milan, Loreto, and Rome to fulfil the vows the reigning king had made to the Blessed Virgin, St. Charles, and St. Peter. He returned to France as provincial of the Society and preached at Paris in the church of St. Gervaise, whither the king and the whole court flocked to hear him. Just at this period a book published by Santarelli, an Italian Jesuit, who attributed to the pope the power of deposing kings who were guilty of certain crimes, and under such circumstances of absolving their subjects from their allegiance, was the object of severe attacks from the many enemies of the Society of Jesus in France.

The doctrines which Santarelli expounded had been unwisely accepted in the Middle Ages, and were still further professed by the Ultramontane theologians, although they had become impossible in practice. This book, which in Italy was received in its true light, was in Paris, under the rule of Richelieu, construed into a provocation to regicide and rebellion. These false views were attributed to every member of the Society, and the Parliament demanded that all Jesuits residing in France should be called upon to sign a protestation disavowing all the doctrines contained in Santarelli's treatise. Father Coton was ill at the time, and the news conveyed to him aggravated his condition. On his death-bed he was visited by an envoy of Parliament, who informed him of the condemnation pronounced against Santarelli and the severe measures that threatened his brethren. The dying Jesuit murmured: "Is it possible that I who have served so faithfully the Kings of France should be looked upon at last as guilty of treason and a disturber of the peace?" His "Institution catholique" and "Genève plagiaire" are controversial works, as also his "Sacrifice de la Messe". For his other works see De Backer, 1st ed., II, p. 149.

G. E. KELLY.

Cotrone, DIOCESE OF (COTRONENSIS), a suffragan of Reggio. Cotrone is a city of the province of Catanzaro, in Calabria, Southern Italy, on the Ionian Sea. It is the ancient Croton, an Achæan colony founded c. 707 B. C., and long one of the most flourishing cities of Magna Græcia. Its inhabitants were famous for their physical strength, and for the simple sobriety of their lives. It was the birthplace of Milo, the famous athlete, and it was at Croton that Pythagoras founded his school. In 380 B. C. the city was taken by Dionysius the Elder of Syracuse and in 296 B. C. by Agathocles. Later it was pillaged by Pyrrhus. In the Second Punic War it was seized by Hannibal, but some time later became a Roman colony. About A. D. 550, it was unsuccessfully besieged by Totila, King of the Goths, and at a later date became a part of the Byzantine Empire. About 870 it was taken and sacked by the Saracens, who put to death the bishop and many people who had taken refuge in the cathedral. Later on it was conquered by Normans and thenceforth shared the fate of the Kingdom of Naples.

According to local legend the Gospel was preached there by St. Dionysius the Areopagite. Its first known bishop was Flavianus, during whose episcopate occurred the siege of the city by Totila. Other bishops were: Theodosios (642); Petrus (680); Theotimus (790); and Nicophorus (870). Worthy of note are: Antonio Sebastiano Minturno (1565), a polished writer and poet; the Spanish Dominican, Juan Lopez (1595); the Theatine, Tommaso dai Monti (1599), famous for his zeal; and Nicoforo Melisseno Commeno (1628), who had previously rendered signal service to the Holy See in the Orient and in France. The diocese has a population of 14,000, with 10 parishes, 29 churches and chapels, 24 secular priests, and 5 religious orders of women.

Cotter, J. B. See WINONA, DIOCESE OF.

Coucy, ROBERT DE, a medieval French master-builder and son of a master-builder of the same name, b. at Reims (or Coucy, according to some authorities); d. at Reims in 1311. In 1263 he was appointed successor to Hugues Libergier as director of the work of building the church of Saint-Nicaise at Reims, and between this date and 1279 he constructed the choir, chapels, and part of the transept; the church was afterwards destroyed during the Revolution. Some good illustrations of this building, begun in 1229 and considered one of the best Gothic churches of the great period in France, have been preserved. A nearly contemporary chronicle of the Abbey of Saint-Nicaise says that "Hugo Libergiers pronaon ecclesie perfectit. Robert de Coucy caput ecclesie construxit". After the death of his father, Robert de Coucy had also chief charge of the work on the cathedral at Reims, which was rebuilt after its destruction by fire in 1210. The new cathedral was begun in 1211, and the choir, constructed by Robert de Coucy the elder, was completed in 1241. The cathedral was built on a simple plan of a vast choir, no transepts, and a rather narrow nave. Viollet-le-Duc says: "This building has all the strength of the cathedral of Chartres without its heaviness; in short it combines the essential requirements of artistic beauty, power and grace; it is, besides, built of fine materials cunningly put together, and there is found in all its parts a painstaking care and a skill very rare at a period when men built with great rapidity and often with inadequate resources". In a labyrinth, or representation of a maze, which formerly existed in the pavement of the nave of the cathedral were effigies of the architects of the edifice from its foundation up to 1382; among these effigies, according to tradition, were those of the two Robert de Coucys, father and son. In the cloister of the Abbey of Saint-Denis at Reims Félibien noted the gravestone of Robert de Coucy, "Maistre de Notre-Dame et de Saint-Nicaise, qui trépassa en l'an 1311".

THOMAS H. POOLE.

Coudert, ANTOINE. See COLOMBO, ARCHDIOCESE OF.

Coudert, FREDERIC RENÉ, b. in New York, 1 March, 1832; d. at Washington, D. C., 20 December, 1903. He graduated from Columbia College in his native city in 1850, and on his majority was admitted

to practice in the courts. He became a leader of the Bar, being learned in the science of the law and skilled in its art and practice. During the controversy concerning American and British seal fisheries in the Bering Sea, and in the controversy concerning the disputed boundary between Venezuela and British Columbia, he acted as legal adviser for the United States Government. He was an orator not only in English, but also in the French, Spanish, and Italian languages, and was gifted with a manner and style singularly attractive, with ready wit and power of sarcasm. He bore testimony to his political principles

in periods of strain and controversy. He consented in 1876 to visit Louisiana for the purpose of urging the "Returning Board" of that politically distracted State to act justly respecting election returns which were to determine the presidential succession, and in 1892 and again in 1893 he was a prominent opponent of the courses taken by his own political party. Politics he seemed

FREDERIC RENÉ COUDERT

to regard as a means for carrying into effect certain principles, not as a means of office-seeking. He declined the Russian mission, a judgeship of the Court of Appeals of the State of New York, and a justiceship of the Supreme Court of the United States. He accepted (and it was the only public office he ever held) the inconspicuous and unsalaried membership in the Board of Education of the City of New York. As a Catholic he was always loyal to the Church; as the son of a French refugee he never forgot France. On two subjects he declared himself to be sensitive: the Bark of Peter and the land of his ancestors.

Addresses by Frederic R. Coudert (New York and London, 1905); *Annual Reports of the Association of the Bar of the City of New York* (New York, 1905); *U. S. Cath. Hist. Soc. Records and Studies* (New York, 1904).

CHARLES W. SLOANE.

Councils, GENERAL.—This subject will be treated under the following heads: I. Definition; II. Classification; III. Historical Sketch; IV. The Pope and General Councils; V. Composition of General Councils: (a) Right of participation; (b) Requisite number of members; (c) Papal headship the formal element of Councils; VI. Factors in the Pope's Co-operation with the Council: (a) Convocation; (b) Direction; (c) Confirmation; VII. Business Methods: (a) The facts; (b) The theory; VIII. Infallibility of General Councils; IX. Correlation of Papal and Conciliar Infallibility; X. Infallibility Restricted to Unanimous Findings; XI. Promulgation; XII. Is a Council above the Pope? XIII. Has a General Council Power to Depose a Pope?

I. DEFINITION.—Councils are legally convened assemblies of ecclesiastical dignitaries and theological experts for the purpose of discussing and regulating matters of church doctrine and discipline. The terms *council* and *synod* are synonymous, although in

the oldest Christian literature the ordinary meetings for worship are also called synods; and diocesan synods are not properly councils because they are only convened for deliberation. Councils unlawfully assembled are termed *conciliabula*, *conventicula*, and even *latrocinia*, i. e. "robber synods". The constituent elements of an ecclesiastical council are the following:—

- (a) A legally convened meeting of
- (b) members of the hierarchy, for
- (c) the purpose of carrying out their judicial and doctrinal functions,
- (d) by means of deliberation in common,
- (e) resulting in regulations and decrees invested with the authority of the whole assembly.

All these elements result from an analysis of the fact that councils are a concentration of the ruling powers of the Church for decisive action.

The first condition is that such concentration conform to the constitution of the Church: it must be started by the head of the forces that are to move and to act, e. g. by the metropolitan if the action is limited to one province. The actors themselves are necessarily the leaders of the Church in their double capacity of judges and teachers, for the proper object of conciliar activity is the settling of questions of faith and discipline. When they assemble for other purposes, either at regular times or in extraordinary circumstances, in order to deliberate on current questions of administration or on concerted action in emergencies, their meetings are not called councils but simply meetings, or assemblies, of bishops. Deliberation, with free discussion and ventilation of private views, is another essential note in the notion of councils. They are the mind of the Church in action, the *sensus ecclesie* taking form and shape in the mould of dogmatic definition and authoritative decrees. The contrast of conflicting opinions, their actual clash, necessarily precedes the final triumph of faith. Lastly, in a council's decisions we see the highest expression of authority of which its members are capable within the sphere of their jurisdiction, with the added strength and weight resulting from the combined action of the whole body.

II. CLASSIFICATION.—Councils are, then, from their nature, a common effort of the Church, or part of the Church, for self-preservation and self-defence. They appear at her very origin, in the time of the Apostles at Jerusalem, and throughout her whole history, whenever faith or morals or discipline are seriously threatened. Although their object is always the same, the circumstances under which they meet impart to them a great variety, which renders a classification necessary. Taking territorial extension for a basis, seven kinds of synods are distinguished:—

(1) *Œcumenical councils* are those to which the bishops, and others entitled to vote, are convoked from the whole world (*oikouménē*) under the presidency of the pope or his legates, and the decrees of which, having received papal confirmation, bind all Christians. A council, œcumenical in its convocation, may fail to secure the approbation of the whole Church or of the pope, and thus not rank in authority with œcumenical councils. Such was the case with the Robber Synod of 449 (*Latrocinium Ephesinum*), the Synod of Pisa in 1409, and in part with the Councils of Constance and Basle.

(2) The second rank is held by the *general synods of the East or of the West*, composed of but one-half of the episcopate. The Synod of Constantinople (381) was originally only an Eastern general synod, at which were present the four patriarchs of the East (viz. of Constantinople, Alexandria, Antioch, and Jerusalem), with many metropolitans and bishops. It ranks as œcumenical because its decrees were ultimately received in the West also.

(3) *Patriarchal, national, and primatial councils* represent a whole patriarchate, a whole nation, or the

several provinces subject to a primate. Of such councils we have frequent examples in Latin Africa, where the metropolitan and ordinary bishops used to meet under the Primate of Carthage; in Spain, under the Primate of Toledo, and in earlier times in Syria, under the Metropolitan—later Patriarch—of Antioch.

(4) *Provincial councils* bring together the suffragan bishops of the metropolitan of an ecclesiastical province and other dignitaries entitled to participate.

(5) *Diocesan synods* consist of the clergy of the diocese and are presided over by the bishop or the vicar-general.

(6) A peculiar kind of council used to be held at Constantinople; it consisted of bishops from any part of the world who happened to be at the time in that imperial city. Hence the name *συνόδοι ἐνδημούσαι* "visitors' synods".

(7) Lastly there have been *mixed synods*, in which both civil and ecclesiastical dignitaries met to settle secular as well as ecclesiastical matters. They were frequent at the beginning of the Middle Ages in France, Germany, Spain, and Italy. In England even abbesses were occasionally present at such mixed councils. Sometimes, not always, the clergy and laity voted in separate chambers.

Although it is in the nature of councils to represent either the whole or part of the Church organism yet we find many councils simply consisting of a number of bishops brought together from different countries for some special purpose, regardless of any territorial or hierarchical connexion. They were most frequent in the fourth century, when the metropolitan and patriarchal circumscriptions were still imperfect, and questions of faith and discipline manifold. Not a few of them, summoned by emperors or bishops in opposition to the lawful authorities (such as that of Antioch in 341), were positively irregular, and acted for evil rather than good. Councils of this kind may be compared to the meetings of bishops of our own times; decrees passed in them had no binding power on any but the subjects of the bishops present; they were important manifestations of the *sensus ecclesie* (mind of the Church) rather than judicial or legislative bodies. But precisely as expressing the mind of the Church they often acquired a far-reaching influence due, either to their internal soundness, or to the authority of their framers, or to both.

It should be noted that the terms *concilia plenaria*, *universalia*, or *generalia* are, or used to be, applied indiscriminately to all synods not confined to a single province; in the Middle Ages, even provincial synods, as compared to diocesan, received these names. Down to the late Middle Ages all papal synods to which a certain number of bishops from different countries had been summoned were regularly styled plenary, general, or universal synods. In earlier times, before the separation of East and West, councils to which several distant patriarchates or exarchates sent representatives, were described absolutely as "plenary councils of the universal Church". These terms are applied by St. Augustine to the Council of Arles (314), at which only Western bishops were present. In the same way the Council of Constantinople (382), in a letter to Pope Damasus, calls the council held in the same town the year before (381) "an œcumenical synod" i. e. a synod representing the *oikouménē*, the whole inhabited world as known to the Greeks and Romans, because all the Eastern patriarchates, though no Western, took part in it. The synod of 381 could not, at that time, be termed œcumenical in the strict sense now in use, because it still lacked the formal confirmation of the Apostolic See. As a matter of fact, the Greeks themselves did not put this council on a par with those of Nicæa and Ephesus until its confirmation at the Synod of Chalcedon, and the Latins acknowledged its authority only in the sixth century.

III. HISTORICAL SKETCH of ŒCUMENICAL COUNCILS.—The present article deals chiefly with the theological and canonical questions concerning councils which are œcumenical in the strict sense above defined. Special articles give the history of each important synod under the head of the city or see where it was held. In order, however, to supply the reader with a basis of fact for the discussion of principles which is to follow, a list is subjoined of the twenty œcumenical councils with a brief statement of the purpose of each.

(1) The First Œcumenical, or Council of Nicæa (325) lasted two months and twelve days. Three hundred and eighteen bishops were present. Hosius, Bishop of Cordova, assisted as legate of Pope Sylvester. The Emperor Constantine was also present. To this council we owe the Creed (*Symbolum*) of Nicæa, defining against Arius the true Divinity of the Son of God (*ὁμοούσιος*), and the fixing of the date for keeping Easter (against the Quartodecimans).

(2) The Second Œcumenical, or First General Council of Constantinople (381), under Pope Damasus and the Emperor Theodosius I, was attended by 150 bishops. It was directed against the followers of Macedonius, who impugned the Divinity of the Holy Ghost. To the above-mentioned Nicene Creed it added the clauses referring to the Holy Ghost (*qui simul adoratur*) and all that follows to the end.

(3) The Third Œcumenical, or Council of Ephesus (431), of more than 200 bishops, presided over by St. Cyril of Alexandria representing Pope Celestine I, defined the true personal unity of Christ, declared Mary the Mother of God (*θεοτόκος*) against Nestorius, Bishop of Constantinople, and renewed the condemnation of Pelagius.

(4) The Fourth Œcumenical, or Council of Chalcedon (451)—150 bishops under Pope Leo the Great and the Emperor Marcian—defined the two natures (Divine and human) in Christ against Eutyches, who was excommunicated.

(5) The Fifth Œcumenical, or Second General Council of Constantinople (553), of 165 bishops under Pope Vigilius and Emperor Justinian I, condemned the errors of Origen and certain writings (The Three Chapters) of Theodoret, of Theodore, Bishop of Mopuestia, and of Ibas, Bishop of Edessa; it further confirmed the first four general councils, especially that of Chalcedon whose authority was contested by some heretics.

(6) The Sixth Œcumenical, or Third Council of Constantinople (680–681), under Pope Agatho and the Emperor Constantine Pogonatus, was attended by the Patriarchs of Constantinople and of Antioch, 174 bishops, and the emperor. It put an end to Monothelism by defining two wills in Christ, the Divine and the human, as two distinct principles of operation. It anathematized Sergius, Pyrrhus, Paul, Macarius, and all their followers.

(7) The Seventh Œcumenical, or Second Council of Nicæa (787) was convoked by Emperor Constantine VI and his mother Irene, under Pope Adrian I, and was presided over by the legates of Pope Adrian; it regulated the veneration of holy images. Between 300 and 367 bishops assisted.

(8) The Eighth Œcumenical, or Fourth Council of Constantinople (869), under Pope Adrian II and Emperor Basil, numbering 102 bishops, 3 papal legates, and 4 patriarchs, consigned to the flames the Acts of an irregular council (*conciliabulum*) brought together by Photius against Pope Nicholas and Ignatius, the legitimate Patriarch of Constantinople; it condemned Photius who had unlawfully seized the patriarchal dignity. The Photian schism, however, triumphed in the Greek Church, and no other general council took place in the East.

(9) The Ninth Œcumenical Council (1123) was the first held in the Lateran at Rome under Pope Callis-

tus II. About 900 bishops and abbots assisted. It abolished the right, claimed by lay princes, of investiture with ring and crozier to ecclesiastical benefices and dealt with church discipline and the recovery of the Holy Land from the infidels.

(10) The Tenth Œcumenical Council (1139) was the Second Lateran held at Rome under Pope Innocent II with an attendance of about 1000 prelates and the Emperor Conrad. Its object was to put an end to the errors of Arnold of Brescia.

(11) The Eleventh Œcumenical Council (1179) was the third assembled at the Lateran, and took place under Pope Alexander III, Frederick I being emperor. There were 302 bishops present. It condemned the Albigenses and Waldenses and issued numerous decrees for the reformation of morals.

(12) The Twelfth Œcumenical Synod (1215) was the Fourth Lateran, under Innocent III. There were present the Patriarchs of Constantinople and Jerusalem, 71 archbishops, 412 bishops, and 800 abbots, the Primate of the Maronites, and St. Dominic. It issued an enlarged creed (*symbolum*) against the Albigenses (*Firmiter credimus*), condemned the Trinitarian errors of Abbot Joachim, and published 70 important reformatory decrees. This is the most important council of the Middle Ages; it marks the culminating point of ecclesiastical life and papal power.

(13) The First General Council of Lyons (1245) is the Thirteenth Œcumenical. Innocent IV presided; the Patriarchs of Constantinople, Antioch, and Aquileia (Venice), 140 bishops, Baldwin II, Emperor of the East, and St. Louis, King of France, assisted. It excommunicated and deposed Emperor Frederick II and directed a new crusade, under the command of St. Louis, against the Saracens and Mongols.

(14) The Fourteenth Œcumenical Council was held at Lyons (1274) by Pope Gregory X, the Patriarchs of Antioch and Constantinople, 15 cardinals, 500 bishops, and more than 1000 other dignitaries. It effected a temporary reunion of the Greek Church with Rome. The word *filioque* was added to the symbol of Constantinople and means were sought for recovering Palestine from the Turks. It also laid down the rules for papal elections.

(15) The Fifteenth Œcumenical Council took place at Vienne in France (1311–1313) by order of Clement V, the first of the Avignon popes. The Patriarchs of Antioch and Alexandria, 300 bishops (114 according to some authorities), and 3 kings—Philip IV of France, Edward II of England, and James II of Aragon—were present. The synod dealt with the crimes and errors imputed to the Knights Templars, the Fraticelli, the Beghards, and the Beguines, with projects of a new crusade, the reformation of the clergy, and the teaching of Oriental languages in the universities.

(16) The Council of Constance (1414–1418), the Sixteenth Œcumenical, was held during the great Schism of the West, with the object of ending the divisions in the Church. It only became legitimate when Gregory XII had formally convoked it. Owing to this circumstance it succeeded in putting an end to the schism by the election of Pope Martin V, which the Council of Pisa (1409) had failed to accomplish on account of its illegality. The rightful pope confirmed the former decrees of the synod against Wyclif and Hus. This council is thus only œcumenical in its last sessions (XLII–XLV inclusive) and with respect to the decrees of earlier sessions approved by Martin V.

(17) The Seventeenth Œcumenical Council met at Basle (1431), Eugene IV being pope, and Sigismund Emperor of the Holy Roman Empire. Its object was the religious pacification of Bohemia. Quarrels with the pope having arisen, the council was transferred first to Ferrara (1438), then to Florence (1439), where a short-lived union with the Greek Church was effected, the Greeks accepting the council's definition of

controverted points. The Council of Basle is only œcumenical till the end of the twenty-fifth session, and of its decrees Eugene IV approved only such as dealt with the extirpation of heresy, the peace of Christendom, and the reform of the Church, and which at the same time did not derogate from the rights of the Holy See.

(18) The Eighteenth Œcumenical, or Fifth Council of the Lateran, sat from 1512 to 1517 under Popes Julius II and Leo X, the emperor being Maximilian I. Fifteen cardinals and about eighty archbishops and bishops took part in it. Its decrees are chiefly disciplinary. A new crusade against the Turks was also planned, but came to naught, owing to the religious upheaval in Germany caused by Luther.

(19) The Council of Trent, the Nineteenth Œcumenical, lasted eighteen years (1545–1563) under five popes: Paul III, Julius III, Marcellus II, Paul IV, and Pius IV, and under the Emperors Charles V and Ferdinand. There were present 5 cardinal legates of the Holy See, 3 patriarchs, 33 archbishops, 235 bishops, 7 abbots, 7 generals of monastic orders, 160 doctors of divinity. It was convoked to examine and condemn the errors promulgated by Luther and other Reformers, and to reform the discipline of the Church. Of all councils it lasted longest, issued the largest number of dogmatic and reformatory decrees, and produced the most beneficial results.

(20) The Twentieth Œcumenical Council was summoned to the Vatican by Pius IX. It met 8 December, 1869, and lasted till 18 July, 1870, when it was adjourned; it is still (1908) unfinished. There were present 6 archbishop-princes, 49 cardinals, 11 patriarchs, 680 archbishops and bishops, 28 abbots, 29 generals of orders, in all 803. Besides important canons relating to the Faith and the constitution of the Church, the council decreed the infallibility of the pope when speaking *ex cathedra*, i. e. when, as shepherd and teacher of all Christians, he defines a doctrine concerning faith or morals to be held by the whole Church.

IV. THE POPE AND GENERAL COUNCILS.—The relations between the pope and general councils must be exactly defined to arrive at a just conception of the functions of councils in the Church, of their rights and duties, and of their authority. The traditional phrase, "the council represents the Church", associated with the modern notion of representative assemblies, is apt to lead to a serious misconception of the bishops' function in general synods. The nation's deputies receive their power from their electors and are bound to protect and promote their electors' interests; in the modern democratic State they are directly created by, and out of, the people's own power. The bishops in council, on the contrary, hold no power, no commission, or delegation, from the people. All their powers, orders, jurisdiction, and membership in the council, come to them from above—directly from the pope, ultimately from God. What the episcopate in council does represent is the Divinely instituted *magisterium*, the teaching and governing power of the Church; the interests it defends are those of the *depositum fidei*, of the revealed rules of faith and morals, i. e. the interests of God.

The council is, then, the assessor of the supreme teacher and judge sitting on the Chair of Peter by Divine appointment; its operation is essentially co-operation—the common action of the members with their head—and therefore necessarily rises or falls in value, according to the measure of its connexion with the pope. A council in opposition to the pope is not representative of the whole Church, for it neither represents the pope who opposes it, nor the absent bishops, who cannot act beyond the limits of their dioceses except through the pope. A council not only acting independently of the Vicar of Christ, but sitting in judgment over him, is unthinkable in the constitu-

tion of the Church; in fact, such assemblies have only taken place in times of great constitutional disturbances, when either there was no pope or the rightful pope was indistinguishable from antipopes. In such abnormal times the safety of the Church becomes the supreme law, and the first duty of the abandoned flock is to find a new shepherd, under whose direction the existing evils may be remedied.

In normal times, when according to the Divine constitution of the Church, the pope rules in the fullness of his power, the function of councils is to support and strengthen his rule on occasions of extraordinary difficulties arising from heresies, schisms, relaxed discipline, or external foes. General councils have no part in the ordinary normal government of the Church. This principle is confirmed by the fact that during nineteen centuries of Church life only twenty œcumenical councils took place. It is further illustrated by the complete failure of the decree issued in the thirty-ninth session of the Council of Constance (then without a rightful head), to the effect that general councils should meet frequently and at regular intervals; the very first synod summoned at Pavia for the year 1423 could not be held for want of responses to the summons. It is thus evident that general councils are not qualified to issue, independently of the pope, dogmatic or disciplinary canons binding on the whole Church. As a matter of fact, the older councils, especially those of Ephesus (431) and Chalcedon (451), were not convened to decide on questions of faith still open, but to give additional weight to, and secure the execution of, papal decisions previously issued and regarded as fully authoritative. The other consequence of the same principle is that the bishops in council assembled are not commissioned, as are our modern parliaments, to control and limit the power of the sovereign, or head of the State, although circumstances may arise in which it would be their right and duty firmly to expostulate with the pope on certain of his acts or measures. The severe strictures of the Sixth General Council on Pope Honorius I may be cited as a case in point.

V. COMPOSITION OF GENERAL COUNCILS.—(a) *Right of participation*.—The right to be present and to act at general councils belongs in the first place and logically to the bishops actually exercising the episcopal office. In the earlier councils there appear also the chorepiscopi (country-bishops), who, according to the better opinion, were neither true bishops nor an order interposed between bishops and priests, but priests invested with a jurisdiction smaller than the episcopal but larger than the sacerdotal. They were ordained by the bishop and charged with the administration of a certain district in his diocese. They had the power of conferring minor orders, and even the subdiaconate. Titular bishops, i. e. bishops not ruling a diocese, had equal rights with other bishops at the Vatican Council (1869–70), where 117 of them were present. Their claim lies in the fact that their order, the episcopal consecration, entitles them, *jure divino*, to take part in the administration of the Church, and that a general council seems to afford a proper sphere for the exercise of a right which the want of a proper diocese keeps in abeyance. Dignitaries who hold episcopal or quasi-episcopal jurisdiction without being bishops—such as cardinal-priests, cardinal-deacons, abbots *nullius*, mitred abbots of whole orders or congregations of monasteries, generals of clerks regular, mendicant and monastic orders—were allowed to vote at the Vatican Council. Their title is based on positive canon law: at the early councils such votes were not admitted, but from the seventh century down to the end of the Middle Ages the contrary practice gradually prevailed, and has since become an acquired right. Priests and deacons frequently cast decisive votes in the name of absent bishops whom they repre-

sented; at the Council of Trent, however, such procurators were admitted only with great limitations, and at the Vatican Council they were even excluded from the council hall.

Besides voting members, every council admits, as consultors, a number of doctors in theology and canon law. In the Council of Constance the consultors were allowed to vote. Other clerics have always been admitted as notaries. Lay people may be, and have been, present at councils for various reasons, but never as voters. They gave advice, made complaints, assented to decisions, and occasionally also signed the decrees. Since the Roman emperors had accepted Christianity, they assisted either personally or through deputies (*commissarii*). Constantine the Great was present in person at the First General Council; Theodosius II sent his representatives to the third, and Emperor Marcian sent his to the fourth, at the sixth session of which himself and the Empress Pulcheria assisted personally. Constantine Pogonatus was present at the sixth; the Empress Irene and her son Constantine Porphyrogenitus only sent their representative to the seventh, whereas Emperor Basil, the Macedonian, assisted at the eighth, sometimes in person, sometimes through his deputies. Only the Second and the Fifth General Synods were held in the absence of the emperors or imperial commissaries, but both Theodosius the Great and Justinian were at Constantinople while the councils were sitting, and kept up constant intercourse with them. In the West the attendance of kings, even at provincial synods, was of frequent occurrence. The motive and object of the royal presence were to protect the synods, to heighten their authority, to lay before them the needs of particular Christian states and countries.

This laudable and legitimate co-operation led by degrees to interference with the pope's rights in conciliar matters. The Eastern Emperor Michael claimed the right to summon councils without obtaining the pope's consent, and to take part in them personally or by proxy. But Pope Nicholas I resisted the pretensions of Emperor Michael, pointing out to him, in a letter (865), that his imperial predecessors had only been present at general synods dealing with matters of faith, and from that fact drew the conclusion that all other synods should be held without the emperor's or his commissaries' presence. A few years later the Eighth General Synod (Can. xvii, Hefele, IV, 421) declared it false that no synod could be held without the emperor's presence—the emperors had only been present at general councils—and that it was not right for secular princes to witness the condemnation of ecclesiastics (at provincial synods). As early as the fourth century the bishops greatly complained of the action of Constantine the Great in imposing his commissary on the Synod of Tyre (335). In the West, however, secular princes were present even at national synods, e. g. Sisenand, King of the Spanish Visigoths, was at the Fourth Council of Toledo (636) and King Chintilian at the fifth (638); Charlemagne assisted at the Council of Frankfort (794) and two Anglo-Saxon kings at the Synod of Whitby (*Collatio Pharensis*) in 664. But step by step Rome established the principle that no royal commissary may be present at any council, except a general one, in which "faith, reformation, and peace" are in question.

(b) *Requisite number of members.*—The number of bishops present required to constitute an œumenical council cannot be strictly defined, nor need it be so defined, for œumenicity chiefly depends on co-operation with the head of the Church, and only secondarily on the number of co-operators. It is physically impossible to bring together all the bishops of the world, nor is there any standard by which to determine even an approximate number, or proportion, of prelates necessary to secure œumenicity. All should be invited, no one should be debarred, a somewhat consid-

erable number of representatives of the several provinces and countries should be actually present: this may be laid down as a practicable theory. But the ancient Church did not conform to this theory. As a rule only the patriarchs and metropolitans received a direct summons to appear with a certain number of their suffragans. At Ephesus and Chalcedon the time between the convocation and the meeting of the council was too short to allow of the Western bishops being invited. As a rule, but very few Western bishops were personally present at any of the first eight general synods. Occasionally, e. g. at the sixth, their absence was remedied by sending deputies with precise instructions arrived at in a previous council held in the West. What gives those Eastern synods their œumenical character is the co-operation of the pope as head of the universal, and, especially, of the Western, Church. This circumstance, so remarkably prominent in the Councils of Ephesus and Chalcedon, affords the best proof that, in the sense of the Church, the essential constituent element of œumenicity is less the proportion of bishops present to bishops absent than the organic connexion of the council with the head of the Church.

(c) *Papal headship the formal element of councils.*—It is the action of the pope that makes the councils œumenical. That action is the exercise of his office of supreme teacher and ruler of the Church. Its necessity results from the fact that no authority is commensurate with the whole Church except that of the pope; he alone can bind all the faithful. Its sufficiency is equally manifest: when the pope has spoken *ex cathedra* to make his own the decisions of any council, regardless of the number of its members, nothing further can be wanted to make them binding on the whole Church. The earliest enunciation of the principle is found in the letter of the Council of Sardica (343) to Pope Julius I, and was often quoted, since the beginning of the fifth century, as the (Nicæan) canon concerning the necessity of papal co-operation in all the more important conciliary Acts. The Church historian Socrates (Hist. Eccl., II, xvii) makes Pope Julius say, in reference to the Council of Antioch (341), that the law of the Church (*καὶ νόμος*) forbids "the churches to pass laws contrary to the judgment of the Bishop of Rome", and Sozomen (III, x) likewise declares "it to be a holy law not to attribute any value to things done without the judgment of the Bishop of Rome". The letter of Julius here quoted by both Socrates and Sozomen directly refers to an existing ecclesiastical custom, and, in particular, to a single important case (the deposition of a patriarch), but the underlying principle is as stated.

Papal co-operation may be of several degrees: to be effective in stamping a council as universal it must amount to taking over responsibility for its decisions by giving them formal confirmation. The Synod of Constantinople (381) in which the Nicene Creed received its present form—the one used at Mass—had in itself no claim to be œumenical. Before Pope Damasus and the Western bishops had seen its full Acts they condemned certain of its proceedings at an Italian synod, but on receiving the Acts, Damasus, so we are told by Photius, confirmed them. Photius, however, is only right with regard to the Creed, or Symbol of Faith: the canons of this council were still rejected by Leo the Great and even by Gregory the Great (about 600). A proof that the Creed of Constantinople enjoyed papal sanction may be drawn from the way in which the Roman legates at the Fourth General Synod (Chalcedon, 451) allowed, without any protest, appeals to this Creed, while at the same time they energetically protested against the canons of the council. It was on account of the papal approbation of the Creed that, in the sixth century, Popes Vigilius, Pelagius II, and Gregory the Great

declared this council œcumenical, although Gregory still refused to sanction its canons. The First Synod of Constantinople presents, then, an instance of a minimum of papal co-operation impressing on a particular council the mark of universality. The normal co-operation, however, requires on the part of the head of the Church more than a *post-factum* acknowledgment.

The pope's office and the council's function in the organization of the Church require that the pope should call the council together, preside over and direct its labours, and finally promulgate its decrees to the universal Church as expressing the mind of the whole teaching body guided by the Holy Ghost. Instances of such normal, natural, perfect co-operation occur in the five Lateran councils, which were presided over by the pope in person; the personal presence of the highest authority in the Church, his direction of the deliberations, and approbation of the decrees, stamp the conciliary proceedings throughout as the function of the *Magisterium Ecclesie* in its most authoritative form. Councils in which the pope is represented by legates are, indeed, also representative of the whole teaching body of the Church, but the representation is not absolute or adequate, is no real concentration of its whole authority. They act in the name, but not with the whole power, of the teaching Church, and their decrees become universally binding only through an act, either antecedent or consequent, of the pope. The difference between councils presided over personally and by proxy is marked in the form in which their decrees are promulgated: when the pope has been present the decrees are published in his own name with the additional formula: *sacro approbante Concilio*; when papal legates have presided the decrees are attributed to the synod (*S. Synodus declarat, definit, decernit*).

VI. FACTORS IN THE POPE'S CO-OPERATION WITH THE COUNCIL.—We have seen that no council is œcumenical unless the pope has made it his own by co-operation, which admits of a minimum and a maximum, consequently of various degrees of perfection. Catholic writers could have saved themselves much trouble if they had always based their apologetics on the simple and evident principle of a sufficient minimum of papal co-operation, instead of endeavouring to prove, at all costs, that a maximum is both required in principle and demonstrable in history. The three factors constituting the solidarity of pope and council are the convocation, direction, and confirmation of the council by the pope; but it is not essential that each and all of these factors should always be present in full perfection.

(a) *Convocation*.—The juridical convocation of a council implies something more than an invitation addressed to all the bishops of the world to meet in council, viz.: the act by which in law the bishops are bound to take part in the council, and the council itself is constituted a legitimate tribunal for dealing with Church affairs. Logically, and in the nature of the thing, the right of convocation belongs to the pope alone. Yet the convocation, in the loose sense of invitation to meet, of the first eight general synods, was regularly issued by the Christian emperors, whose dominion was coextensive with the Church, or at least with the Eastern part of it, which was then alone convened. The imperial letters of convocation to the Councils of Ephesus (Hardouin, I, 1343) and of Chalcedon (Hardouin, II, 42) show that the emperors acted as protectors of the Church, believing it their duty to further by every means in their power the welfare of their charge. Nor is it possible in every case to prove that they acted at the formal instigation of the pope; it even seems that the emperors more than once followed none but their own initiative for convening the council and fixing its place of meeting. It is, however, evident that the Christian emperors cannot have

acted thus without the consent, actual or presumed, of the pope. Otherwise their conduct had been neither lawful nor wise. As a matter of fact, none of the eight Eastern œcumenical synods, with the exception, perhaps, of the fifth, was summoned by the emperor in opposition to the pope. As regards the fifth, the conduct of the emperor caused the legality of the council to be questioned—a proof that the mind of the Church required the pope's consent for the lawfulness of councils. As regards most of these eight synods, particularly that of Ephesus, the previous consent of the pope, actual or presumed, is manifest. Regarding the convocation of the Council of Chalcedon, the Emperor Marcian did not quite fall in with the wishes of Pope Leo I as to the time and place of its meeting, but he did not claim an absolute right to have his will, nor did the pope acknowledge such a right. On the contrary, as Leo I explains in his letters (Epp. lxxxix, xc, ed. Ballerini), he only submitted to the imperial arrangements because he was unwilling to interfere with Marcian's well-meant endeavours.

It is still more evident that convocation by the emperors did not imply on their part the claim to constitute the council juridically, that is, to give it power to sit as an authorized tribunal for Church affairs. Such a claim has never been put forward. The expressions *jubere* and *celebrare*, occasionally used in the wording of the convocation, do not necessarily convey the notion of strict orders not to be resisted; they also have the meaning of exhorting, inducing, bidding. The juridical constitution of the council could only emanate, and in fact always did emanate, from the Apostolic See. As the necessity of the bishops' meeting in council was dictated rather by the distressful condition of the Church than by positive orders, the pope contented himself with authorizing the council, and this he effected by sending his legates to preside over and direct the work of the assembled prelates. The Emperor Marcian in his first letter to Leo I declares that the success of the intended synod depends on his—the pope's—authorization, and Leo, not Marcian, is later called the *auctor synodi* without any restrictive qualification, especially at the time of the "Three Chapters" dispute, where the extension of the synod's authority was called in question. The law, therefore, at that period was the same as it is now as far as essentials are concerned: the pope is the sole convener of the council as an authoritative juridical assembly. The difference lies in the circumstance that the pope left to the emperor the execution of the convocation and the necessary measures for rendering the meeting possible and surrounding it with the *éclat* due to its dignity in Church and State. The material, or business, part of the councils being thus entirely in the hands of the emperors, it was to be expected that the pope was sometimes induced—if not forced—by circumstances to make his authorization suit the imperial wishes and arrangements.

After studying the principles it is well to see how they worked out in fact. Hence the following historical summary of the convocation of the first eight general councils:—

(1) Eusebius (Vita Constantini, III, vi) informs us that the writs of convocation to the First General Synod were issued by Emperor Constantine, but as not one of those writs has come down to us, it remains doubtful whether or not they mentioned any previous consultation with the pope. It is, however, an undeniable fact that the Sixth General Synod (680) plainly affirmed that the Council of Nicaea had been convened by the emperor and Pope Sylvester (Mansi, Coll. Conc., XI, 661). The same statement appears in the life of Sylvester found in the "Liber Pontificalis", but this evidence need not be pressed, the evidence from the council being, from the circumstances in which it was given, of sufficient strength to carry the point. For the Sixth General Council took place in Constan-

tinople, at a time when the bishops of the imperial city already attempted to rival the bishops of Old Rome, and the vast majority of its members were Greeks; their statement is therefore entirely free from the suspicion of Western ambition or prejudice and must be accepted as a true presentment of fact. Rufinus, in his continuation of Eusebius' history (I, 1) says that the emperor summoned the synod *ex sacerdotum sententiâ* (on the advice of the clergy); it is but fair to suppose that if he consulted several prelates he did not omit to consult with the head of all.

(2) The Second General Synod (381) was not, at first, intended to be œcumenical; it only became so because it was accepted in the West, as has been shown above. It was not summoned by Pope Damasus, as is often contended, for the assertion that the assembled bishops professed to have met in consequence of a letter of the pope to Theodosius the Great is based on a confusion. The document here brought in as evidence refers to the synod of the following year which was indeed summoned at the instigation of the pope and the Synod of Aquileia, but was not an œcumenical synod.

(3) The Third General Council (Ephesus, 431) was convoked by Emperor Theodosius II and his Western colleague Valentinian III; this is evident from the Acts of the council. It is equally evident that Pope Celestine I gave his consent, for he wrote (15 May, 431) to Theodosius that he could not appear in person at the synod, but that he would send his representatives. And in his epistle of 8 May to the synod itself, he insists on the duty of the bishops present to hold fast to the orthodox faith, expects them to accede to the sentence he has already pronounced on Nestorius, and adds that he has sent his legates to execute that sentence at Ephesus. The members of the council acknowledge the papal directions and orders, not only the papal consent, in the wording of their solemn condemnation of Nestorius: "Urged by the Canons and conforming to the Letter of our most holy Father and fellow servant Celestine the Roman bishop, we have framed this sorrowful sentence against Nestorius." They express the same sentiment where they say that "the epistle of the Apostolic See (to Cyril, communicated to the council) already contains a judgment and a rule (*ψῆφον καὶ τύπον*) on the case of Nestorius", and that they—the bishops in council—have executed that ruling. All this manifests the bishops' conviction that the pope was the moving and quickening spirit of the synod.

(4) How the Fourth General Synod (Chalcedon, 451) was brought together is set forth in several writings of Pope Leo I and Emperors Theodosius II and Marcian. Immediately after the Robber Synod, Leo asked Theodosius to prepare a council composed of bishops from all parts of the world, to meet, preferably, in Italy. He repeated the same request, first made 13 October, 449, on the following feast of Christmas, and prevailed on the Western Emperor Valentinian III together with his empress and his mother, to support it at the Byzantine Court. Once more (in July, 450) Leo renewed his request, adding, however, that the council might be dispensed with if all the bishops were to make a profession of the orthodox faith without being united in council. About this time Theodosius II died and was succeeded by his sister, St. Pulcheria, and her husband Marcian. Both at once informed the pope of their willingness to summon the council, Marcian specially asking him to state in writing whether he could assist at the synod in person or through his legates, so that the necessary writs of convocation might be issued to the Eastern bishops. By that time, however, the situation had greatly improved in the Eastern Church; nearly all the bishops who had taken part in the Robber Synod had now repented of their aberration and signed, in union with their orthodox colleagues, the "Epistola dogmatica"

of Leo to Flavian, by this act rendering the need of a council less urgent. Besides, the Huns were just then invading the West, preventing many Latin bishops, whose presence at the council was most desirable, from leaving their flocks to undertake the long journey to Chalcedon. Other motives induced the pope to postpone the synod, e. g. the fear that it might be made the occasion by the bishops of Constantinople to improve their hierarchical position, a fear well justified by subsequent events. But Marcian had already summoned the synod, and Leo therefore gave his instructions as to the business to be transacted. He was then entitled to say, in a letter to the bishops who had been at the council that the synod had been brought together "*ex præcepto christianorum principum et ex consensu apostolicæ sedis*" (by order of the Christian princes and with the consent of the Apostolic See). The emperor himself wrote to Leo that the synod had been held by his authority (*te auctore*), and the bishops of Mœsia, in a letter to the Byzantine Emperor Leo, said: "At Chalcedon many bishops assembled by order of Leo, the Roman pontiff, who is the true head of the bishops".

(5) The Fifth General Synod was planned by Justinian I with the consent of Pope Vigilius (q. v.), but on account of the emperor's dogmatic pretensions, quarrels arose and the pope refused to be present, although repeatedly invited. His *Constitutum* of 14 May, 553, to the effect that he could not consent to anathematize Theodore of Mopsuestia and Theodoret, led to open opposition between pope and council. In the end all was righted by Vigilius approving the synodal decrees.

(6, 7, 8) These three synods were each and all called by the emperors of the time with the consent and assistance of the Apostolic See. (See CONSTANTINOPLE, COUNCILS OF; NICÆA, COUNCILS OF.)

(b) *Direction*.—The direction or presidency of councils belongs to the pope by the same right as their convocation and constitution. Were a council directed in its deliberations and acts by anyone independent of the pope and acting entirely on his own responsibility, such a council could not be the pope's own in any sense: the defect could only be made good by a consequent formal act of the pope accepting responsibility for its decisions. In point of fact, papal legates presided over all the Eastern councils, which from their beginning were legally constituted. The reader will obtain a clearer insight into this point of conciliar proceedings from a concrete example, taken from Hefele's introduction to his "History of the Councils":—

Pope Adrian II sent his legates to the Eighth (Œcumenical Synod (787) with an express declaration to the Emperor Basil that they were to act as presidents of the council. The legates, Bishop Donatus of Ostia, Bishop Stephen of Nepesina, and the deacon Marinus of Rome, read the papal rescript to the synod. Not the slightest objection was raised. Their names took precedence in all protocols; they determined the duration of the several sessions, gave leave to make speeches and to read documents and to admit other persons; they put the leading questions, etc. In short, their presidency in the first five sessions cannot be disputed. But at the sixth session Emperor Basil was present with his two sons, Constantine and Leo, and, as the Acts relate, received the presidency. These same Acts, however, at once clearly distinguish the emperor and his sons from the synod when, after naming them, they continue: *conveniente sanctâ ac universali synodo* (the holy and universal synod now meeting), thus disassociating the lay ruler from the council proper. The names of the papal legates continue to appear first among the members of the synod, and it is they who in those latter sessions determine the matters for discussion, subscribe the Acts before anyone else, expressly as presidents of the

synod, whereas the emperor, to show clearly that he did not consider himself the president, would only subscribe after all the bishops. The papal legates begged him to put his and his son's names at the head of the list, but he stoutly refused and only consented, at last, to write his name after those of the papal legates and of the Eastern patriarchs, but before those of the bishops. Consequently Pope Adrian II, in a letter to the emperor, praises him for not having assisted at the council as a judge (*judez*), but merely as a witness and protector (*consocius et obsecundator*).

The imperial commissaries present at the synod acted even less as presidents than the emperor himself. They signed the reports of the several sessions only after the representatives of the patriarchs, though before the bishops; their names are absent from the signatures of the Acts. On the other hand it may be contended that the Eastern patriarchs, Ignatius of Constantinople, and the representatives of the other Eastern patriarchs, in some degree participated in the presidency: their names are constantly associated with those of the Roman legates and clearly distinguished from those of the other metropolitans and bishops. They, as it were, form with the papal legates a board of directors, fix with him the order of proceedings, determine who shall be heard, subscribe, like the legates, before the emperor, and are entered in the reports of the several sessions before the imperial commissaries. All this being granted, the fact still remains that the papal legates unmistakably hold the first place, for they are always named first and sign first, and—a detail of great importance—for the final subscription they use the formula: *huic sanctæ et universali synodo præsidens* (presiding over this holy and universal synod), while Ignatius of Constantinople and the representatives of the other patriarchs claim no presidency, but word their subscription thus: *suscipiens et omnibus quæ ab eâ judicata et scripta sunt concordans et definiens subscripsi* (receiving this holy and universal synod and agreeing with all it has judged and written, and defining I have signed). If, on the one hand, this form of subscription differs from that of the president, it differs no less, on the other, from that of the bishops. These, like the emperor, have without exception used the formula: *suscipiens (synodum) subscripsi* (receiving the synod I have signed), omitting the otherwise customary *definiens*, which was used to mark a decisive vote (*votum decisivum*).

Hefele gives similar documentary accounts of the first eight general synods, showing that papal legates always presided over them when occupied in their proper business of deciding questions on faith and discipline. The exclusive right of the pope in this matter was generally acknowledged. Thus, the Emperor Theodosius II says, in his edict addressed to the Council of Ephesus, that he had sent Count Candidian to represent him, but that this imperial commissary was to take no part in dogmatic disputes since "it was unlawful for one who is not enrolled in the lists of the most holy bishops to mingle in ecclesiastical inquiries". The Council of Chalcedon acknowledged that Pope Leo, by his legates, presided over it as "the head over the members". At Nicæa, Hosius, Vitus, and Vincentius, as papal legates, signed before all other members of the council. The right of presiding and directing implies that the pope, if he chooses to make a full use of his powers, can determine the subject matter to be dealt with by the council, prescribe rules for conducting the debates, and generally order the whole business as seems best to him. Hence no conciliar decree is legitimate if carried under protest—or even without the positive consent—of the pope or his legates. The consent of the legates alone, acting without a special order from the pope, is not sufficient to make conciliar decrees at once perfect and operative; what is necessary is the pope's own consent. For this reason no

decree can become illegitimate and null in law on account of pressure brought to bear on the assembly by the presiding pope, or by papal legates acting on his orders. Such pressure and restriction of liberty, proceeding from the internal, natural principle of order through the use of lawful power, does not amount to external, unnatural coercion, and, therefore, does not invalidate the Acts due to its exercise.

Examples of councils working at high pressure, if the expression may be used, without spoiling their output, are of frequent occurrence. Most of the early councils were convened to execute decisions already finally fixed by the pope, no choice being left the assembled Fathers to arrive at another decision. They were forced to conform their judgment to that of Rome, with or without discussion. Should papal pressure go beyond the limits of the council's dignity and of the importance of the matters under discussion, the effect would be, not the invalidation of the council's decrees, but the paralysing of its moral influence and practical usefulness. On the other hand, the fact that a synod is, or has been, acting under the leadership of its Divinely appointed head, is the best guarantee of its freedom from unnatural disturbances, such as intrigues from below or coercion from above. In the same way violent interference with the papal leadership is the grossest attack on the council's natural freedom. Thus the Robber Synod of Ephesus (449), though intended to be general and at first duly authorized by the presence of papal legates, was declared invalid and null by those same legates at Chalcedon (451), because the prejudiced Emperor Theodosius II had removed the representatives of the pope, and entrusted the direction of the council to Dioscurus of Alexandria.

(c) *Confirmation*.—Confirmation of the conciliar decrees is the third factor in the pope's necessary co-operation with the council. The council does not represent the teaching Church till the visible head of the Church has given his approval, for, unapproved, it is but a headless, soulless, impersonal body, unable to give its decisions the binding force of laws for the whole Church, or the finality of judicial sentences. With the papal approval, on the contrary, the council's pronouncements represent the fullest effort of the teaching and ruling Church, a *judicium plenissimum*, beyond which no power can go. Confirmation being the final touch of perfection, the seal of authority, and the very life of conciliar decrees, it is necessary that it should be a personal act of the highest authority, for the highest authority cannot be delegated. So much for the principle, or the question of right. When we look for its practical working throughout the history of councils, we find great diversity in the way it has been applied under the influence of varying circumstances.

(1) Councils over which the pope presides in person require no further formal confirmation on his part, for their decisions formally include his own as the body includes the soul. The Vatican Council of 1869–70 offers an example in point.

(2) Councils over which the pope presides through his legates are not identified with himself in the same degree as the former. They constitute separate, dependent, representative tribunals, whose findings only become final through ratification by the authority for which they act. Such is the theory. In practice, however, the papal confirmation is, or may be, presumed in the following cases:—

(a) When the council is convened for the express purpose of carrying out a papal decision previously arrived at, as was the case with most of the early synods; or when the legates give their consent in virtue of a special public instruction emanating from the pope; in these circumstances the papal ratification pre-exists, is implied in the conciliar decision, and need not be formally renewed after the council. It

may, however, be superadded *ad abundantiam*, as, e. g. the confirmation of the Council of Chalcedon by Leo I.

(b) The necessary consent of the Apostolic See may also be presumed when, as generally at the Council of Trent, the legates have personal instructions from the pope on each particular question coming up for decision, and act conformably, i. e. if they allow no decision to be taken unless the pope's consent has previously been obtained.

(c) Supposing a council actually composed of the greater part of the episcopate, concurring freely in a unanimous decision and thus bearing unexceptional witness to the mind and sense of the whole Church: The pope, whose office it is to voice infallibly the mind of the Church, would be obliged by the very nature of his office, to adopt the council's decision, and consequently his confirmation, ratification, or approbation could be presumed, and a formal expression of it dispensed with. But even then his approbation, presumed or expressed, is juridically the constituent factor of the decision's perfection.

(3) The express ratification in due form is at all times, when not absolutely necessary, at least desirable and useful in many respects:—

(a) It gives the conciliar proceedings their natural and lawful complement, the keystone which closes and crowns the arch for strength and beauty; it brings to the front the majesty and significance of the supreme head of the Church.

(b) Presumed consent can but rarely apply with the same efficacy to each and all of the decisions of an important council. A solemn papal ratification puts them all on the same level and removes all possible doubt.

(c) Lastly the papal ratification formally promulgates the sentence of the council as an article of faith to be known and accepted by all the faithful; it brings to light and public view the intrinsic œcumenicity of the council; it is the natural, official, indisputable criterion, or test, of the perfect legality of the conciliar transactions or conclusions. If we bear in mind the numerous disturbing elements at work in and around an œcumenical council, the conflicting religious, political, scientific, and personal interests contending for supremacy, or at least eager to secure some advantage, we can easily realize the necessity of a papal ratification to crush the endless chicanery which otherwise would endanger the success and efficacy of the highest tribunal of the Church. Even they who refuse to see in the papal confirmation an authentic testimony and sentence, declaring infallibly the œcumenicity of the council and its decrees to be a dogmatic fact, must admit that it is a sanative act and supplies possible defects and shortcomings; the œcumenical authority of the pope is sufficient to impart validity and infallibility to the decrees he makes his own by officially ratifying them. This was done by Pope Vigilius for the Fifth General Synod. Sufficient proof for the sanatory efficacy of the papal ratification lies in the absolute sovereignty of the pope and in the infallibility of his ex-cathedra pronouncements. Should it be argued, however, that the sentence of an œcumenical council is the only absolute, final, and infallible sentence, even then, and then more than ever, the papal ratification would be necessary. For in the transactions of an œcumenical council the pope plays the principal part, and if any deficiency in his action, especially in the exercise of his own special prerogatives, were apparent, the labours of the council would be in vain. The faithful hesitate to accept as infallible guides of their faith documents not authenticated by the seal of the fisherman, or the Apostolic See, which now wields the authority of St. Peter and of Christ. Leo II beautifully expresses these ideas in his ratification of the Sixth General Council: "Because this great and universal

synod has most fully proclaimed the definition of the right faith, which the Apostolic See of St. Peter the Apostle, whose office we, though unequal to it, are holding, also reverently receives: therefore we also, and through our office this Apostolic See, consent to, and confirm, by the authority of Blessed Peter, those things which have been defined, as being finally set by the Lord Himself on the solid rock which is Christ."

No event in the history of the Church better illustrates the necessity and the importance of papal co-operation and, in particular, confirmation, than the controversies which in the sixth century raged about the Three Chapters. The Three Chapters were the condemnation (1) of Theodore of Mopsuestia, his person, and his writings; (2) of Theodoret's writings against Cyril and the Council of Ephesus; (3) of a letter from Ibas to Maris the Persian, also against Cyril and the council. Theodore anticipated the heresy of Nestorius; Ibas and Theodoret were indeed restored at Chalcedon, but only after they had given orthodox explanations and shown that they were free from Nestorianism. The two points in debate were: (1) Did the Council of Chalcedon acknowledge the orthodoxy of the said Three Chapters? (2) How, i. e. by what test, is the point to be settled? Now the two contending parties agreed in the principle of the test: the approbation of the council stands or falls with the approbation of the pope's legates and of Pope Leo I himself. Defenders of the Chapters, e. g. Ferrandus the Deacon and Facundus of Hermiane, put forward as their chief argument (*prima et immobilis ratio*) the fact that Leo had approved. Their opponents never questioned the principle but denied the alleged fact, basing their denial on Leo's epistle to Maximus of Antioch in which they read: "Si quid sane ab his fratribus quos ad S. Synodum vice meâ, præter id quod ad causam fidei pertinebat gestum fuerit, nullius erit firmitatis" (If indeed anything not pertaining to the cause of faith should have been settled by the brethren I sent to the Holy Synod to hold my place, it shall be of no force). The point of doctrine (*causa fidei*) referred to is the heresy of Eutyches; the Three Chapters refer to that of Nestorius, or rather to certain persons and writings connected with it.

The bishops of the council, assembled at Constantinople in 533 for the purpose of putting an end to the Three Chapters controversy, addressed to Pope Vigilius two Confessions, the first with the Patriarch Menas, the second with his successor Eutychius, in which, to establish their orthodoxy, they profess that they firmly hold to the four general synods as approved by the Apostolic See and by the popes. Thus we read in the *Confessio* of Menas: "But also the letters of Pope Leo of blessed memory and the Constitution of the Apostolic See issued in support of the Faith and of the authority (*firmitas*) of the aforesaid four synods, we promise to follow and observe in all points and we anathematize any man, who on any occasion or altercation should attempt to nullify our promises." And in the *Confessio* of Eutychius: "*Suscipimus autem et amplectimur epistolas præsulum Romanæ Sedis Apostolicæ, tam aliorum quam Leonis sanctæ memoriæ de fide scriptas et de quatuor sanctis conciliis vel de uno eorum*" (We receive and embrace the letters of the bishops of the Apostolic Roman See, those of others as well as of Leo of holy memory, concerning the Faith and the four holy synods or any of them).

VII. BUSINESS METHODS.—The way in which councils transact business now demands our attention. Here as in most things, there is an ideal which is never completely realized in practice.

(a) *The facts*.—It has been sufficiently shown in the foregoing section that the pope, either in person or by deputy, directed the transaction of conciliar business. But when we look for a fixed order or set of rules regulating the proceedings we have to come down to the

Vatican Council to find an official *Ordo concilii œumenici* and a *Methodus servanda in primâ sessione*, etc.

In all earlier councils the management of affairs was left to the Fathers and adjusted by them to the particular objects and circumstances of the council. The so-called *Ordo celebrandi Concilii Tridentini* is a compilation posterior to the council, written by the conciliar secretary, A. Massarelli; it is a record of what has been done, not a rule of what should be done. Some fixed rules were, however, already established at the reform councils of the fifteenth century as a substitute for the absent directing power of the pope. The substance of these rulings is given in the "Cærimoniale Romanum" of Augustinus Patritius (d. 1496). The institution of "congregations" dates from the Council of Constance (1415). At earlier councils all the meetings of the Fathers were called indiscriminately *sessiones* or *actiones*, but since Constance the term *session* has been restricted to the solemn meetings at which the final votes are given, while all meetings for the purpose of consultation or provisory voting are termed congregations.

The distinction between general and particular congregations likewise dates from Constance, where, however, the particular congregations assumed a form different in spirit and composition from the practice of earlier and later councils. They were simply separate assemblies of the "nations" (first four, then five) present at the council; their deliberations went to form national votes which were presented in the general assembly, whose decisions conformed to a majority of such votes. The particular congregations of more recent councils were merely consultative assemblies (committees, commissions) brought together by appointment or invitation in order to deliberate on special matters. At Trent there were congregations of prelates and congregations of theologians, both partly for dogma, partly for discipline. The congregations of prelates were either "deputations", i. e. committees of specially chosen experts, or conciliary groups, usually three, into which the council divided for the purpose of facilitating discussion.

The official *ordo* of the Vatican Council confirmed the Tridentine practice, leaving, however, to the initiative of the prelates the formation of groups of a more private character. The voting by "nations", peculiar to the reform councils, has also been abandoned in favour of the traditional voting by individuals (*capita*). At the Vatican Council there were seven "commissions" consisting of theologians from all countries, appointed a year before the actual meeting of the assembly. Their duty was to prepare the various matters to be laid before the council. The object of these congregations is sufficiently described by their titles: (1) *Congregatio cardinalitatis directrix*; (2) *Commissio cærimoniarum*; (3) *politico-ecclesiastica*; (4) *pro ecclesiis et missionibus Orientis*; (5) *pro Regularibus*; (6) *theologica dogmatica*; (7) *pro disciplinâ ecclesiasticâ* (i. e. a general directive cardinalatial congregation, and several commissions for ceremonies, politico-ecclesiastical affairs, the churches and missions of the Orient, the regular orders, dogmatic theology, ecclesiastical discipline). On the basis of their labours were worked out the *schemata* (drafts of decrees) to be discussed by the council. Within the council itself there were seven "deputations": (1) *Pro recipiendis et expendendis Patrum propositionibus* (appointed by the pope to examine the propositions of the Fathers); (2) *Judices excusationum* (Judges of excuses); (3) *Judices quarælarum et controversiarum* (to settle questions of precedence and such like); (4) *deputatio pro rebus ad fidem pertinentibus* (on matters pertaining to faith); (5) *deputatio pro rebus disciplinæ ecclesiasticæ* (on ecclesiastical discipline); (6) *pro rebus ordinum regularium* (on religious orders); (7) *pro rebus ritus orientalis et*

apostolicis missionibus (Oriental rites and Apostolic missions).

All these deputations, except the first, were chosen by the council. Objections and amendments to the proposed *schemata* had to be handed in in writing to the responsible deputation which considered the matter and modified the *schema* accordingly. Anyone desiring further to improve the modified draft had to obtain from the legates permission to propose his amendments in a speech, after which he put them down in writing. If, however, ten prelates decided that the matter had been sufficiently debated, leave for speaking was refused. At this stage the amendments were collected and examined by the synodal congregation, then again laid before the general congregation to be voted on severally. The votes for admission or rejection were expressed by the prelates standing or remaining seated. Next the *schema*, reformed in accordance with these votes, was submitted to a general congregation for approval or disapproval *in toto*. In case a majority of *placets* were given for it, it was accepted in a last solemn public session, after a final vote of *placet* or *non placet* ("it pleases", or "it does not please").

(b) *The theory*.—The principle which directs the practical working of a council is the perfect, or best possible, realization of its object, viz. a final judgment on questions of faith and morals, invested with the authority and majesty of the whole teaching body of the Church. To this end some means are absolutely necessary, others are only desirable as adding perfection to the result. We deal first with these latter means, which may be called the ideal elements of the council:

(1) The presence of all the bishops of the world is an ideal not to be realized, but the presence of a very great majority is desirable for many reasons. A quasi-complete council has the advantage of being a real representation of the whole Church, while a sparsely attended one is only so in law, i. e. the few members present legally represent the many absent, but only represent their juridical power, their ordinary power not being representable. Thus for every bishop absent there is absent an authentic witness of the Faith as it is in his diocese. (2) A free and exhaustive discussion of all objections. (3) An appeal to the universal belief—if existing—witnessed to by all the bishops in council. This, if realized, would render all further discussion superfluous. (4) Unanimity in the final vote, the result either of the universal faith as testified to by the Fathers, or of conviction gained in the debates. It is evident that these four elements in the working of a council generally contribute to its ideal perfection, but it is not less evident that they are not essential to its substance, to its conciliary effectiveness. If they were necessary many acknowledged councils and decrees would lose their intrinsic authority, because one or other or all of these conditions were wanting. Again, there is no standard by which to determine whether or not the number of assisting bishops was sufficient and the debates have been exhaustive; nor do the Acts of the councils always inform us of the unanimity of the final decisions or of the way in which it was obtained. Were each and all of these four elements essential to an authoritative council no such council could have been held, in many cases, when it was none the less urgently required by the necessities of the Church. Authors who insist on the ideal perfection of councils only succeed in undermining their authority, which is, perhaps, the object they aim at. Their fundamental error is a false notion of the nature of councils. They conceive of the function of the council as a witnessing to, and teaching of, the generally accepted faith; whereas it is essentially a juridical function, the action of judges as well as of witnesses of the Faith. This leads us to consider the essential elements in conciliar action.

MEMORIAL OF THE VATICAN COUNCIL
IN COURT OF THE PONS VATICAN

From the notion that the council is a court of judges the following inferences may be drawn: (1) The bishops, in giving their judgment, are directed only by their personal conviction of its rectitude; no previous consent of all the faithful or of the whole episcopate is required. In unity with their head they are one solid college of judges authoritatively constituted for united, decisive action—a body entirely different from a body of simple witnesses. (2) This being admitted, the assembled college assumes a representation of their colleagues who were called but failed to take their seats, provided the number of those actually present is not altogether inadequate for the matter in hand. Hence their resolutions are rightly said to rest on universal consent: *universali consensu constituta*, as the formula runs. (3) Further, on the same supposition, the college of judges is subject to the rule obtaining in all assemblies constituted for framing a judicial sentence or a common resolution, due regard being paid to the special relations, in the present instance, between the head and the members of the college: the co-operative verdict embodies the opinion of the majority, including the head, and in law stands for the verdict of the whole assembly; it is *communi sensu constitutum* (established by common consent). A majority verdict, even headed by papal legates, if disconnected from the personal action of the pope, still falls short of a perfect, authoritative pronouncement of the whole Church, and cannot claim infallibility. Were the verdict unanimous, it would still be imperfect and fallible, if it did not receive the papal approbation. The verdict of a majority, therefore, not endorsed by the pope, has no binding force on either the dissentient members present or the absent members, nor is the pope bound in any way to endorse it. Its only value is that it justifies the pope, in case he approves it, to say that he confirms the decision of a council, or gives his own decision *sacro approbante concilio* (with the consent of the council). This he could not say if he annulled a decision taken by a majority including his legates, or if he gave a casting vote between two equal parties. A unanimous conciliar decision, as distinct from a simple majority decision, may under certain circumstances, be, in a way, binding on the pope and compel his approbation—by the compelling power, not of a superior authority, but of the Catholic truth shining forth in the witnessing of the whole Church. To exert such power the council's decision must be clearly and unmistakably the reflex of the faith of all the absent bishops and of the faithful.

To gain an adequate conception of the council at work it should be viewed under its twofold aspect of judging and witnessing. In relation to the faithful the conciliar assembly is primarily a judge who pronounces a verdict conjointly with the pope, and, at the same time, acts more or less as witness in the case. Its position is similar to that of St. Paul towards the first Christians: *quod accepistis a me per multos testes*. In relation to the pope the council is but an assembly of authentic witnesses and competent counsellors whose influence on the papal sentence is that of the mass of evidence which they represent or of the preparatory judgment which they pronounce; it is the only way in which numbers of judges can influence one another. Such influence lessens neither the dignity nor the efficiency of any of the judges; on the other hand it is never required, in councils or elsewhere, to make their verdict unassailable. The Vatican Council, not excluding the fourth session in which papal infallibility was defined, comes nearer than any former council to the ideal perfection just described. It was composed of the greatest number of bishops, both absolutely and in proportion to the totality of bishops in the Church; it allowed and exercised the right of discussion to an extent perhaps never witnessed before; it appealed to a general tradition, present and past, containing the effective principle of

the doctrine under discussion, viz. the duty of submitting in obedience to the Holy See and of conforming to its teaching; lastly it gave its final definition with absolute unanimity, and secured the greatest majority—nine-tenths—for its preparatory judgment.

VIII. INFALLIBILITY OF GENERAL COUNCILS.—All the arguments which go to prove the infallibility of the Church apply with their fullest force to the infallible authority of general councils in union with the pope. For conciliar decisions are the ripe fruit of the total life-energy of the teaching Church actuated and directed by the Holy Ghost. Such was the mind of the Apostles when, at the Council of Jerusalem (Acts, xv, 28), they put the seal of supreme authority on their decisions in attributing them to the joint action of the Spirit of God and of themselves: *Visum est Spiritui sancto et nobis* (It hath seemed good to the Holy Ghost and to us). This formula and the dogma it enshrines stand out brightly in the deposit of faith and have been carefully guarded throughout the many storms raised in councils by the play of the human element. From the earliest times they who rejected the decisions of councils were themselves rejected by the Church. Emperor Constantine saw in the decrees of Nicæa "a Divine commandment" and Athanasius wrote to the bishops of Africa: "What God has spoken through the Council of Nicæa endureth for ever." St. Ambrose (Ep. xxi) pronounces himself ready to die by the sword rather than give up the Nicene decrees, and Pope Leo the Great expressly declares that "whoso resists the Councils of Nicæa and Chalcedon cannot be numbered among Catholics" (Ep. lxxviii, ad Leonem Augustum). In the same epistle he says that the decrees of Chalcedon were framed *instruente Spiritu Sancto*, i.e. under the guidance of the Holy Ghost. How the same doctrine was embodied in many professions of faith may be seen in Denzinger's (ed. Stahl) "Enchiridion symbolorum et definitionum", under the heading (index) "Concilium generale representat ecclesiam universalem, eique absolute obediendum" (General councils represent the universal Church and demand absolute obedience). The Scripture texts on which this unshaken belief is based are, among others: "But when he, the Spirit of truth, is come, he will teach you all truth . . ." (John, xvi, 13); "Behold I am with you [teaching] all days, even to the consummation of the world" (Matt., xxviii, 20); "The gates of hell shall not prevail against it [i.e. the Church]" (Matt., xvi, 18).

IX. PAPAL AND CONCILIAL INFALLIBILITY.—Papal and conciliar infallibility are correlated but not identical. A council's decrees approved by the pope are infallible by reason of that approbation, because the pope is infallible also *extra concilium*, without the support of a council. The infallibility proper to the pope is not, however, the only formal adequate ground of the council's infallibility. The Divine constitution of the Church and the promises of Divine assistance made by her Founder, guarantee her inerrancy, in matters pertaining to faith and morals, independently of the pope's infallibility: a fallible pope supporting, and supported by, a council, would still pronounce infallible decisions. This accounts for the fact that, before the Vatican decree concerning the supreme pontiff's ex-cathedra judgments, œcumenical councils were generally held to be infallible even by those who denied the papal infallibility; it also explains the concessions largely made to the opponents of the papal privilege that it is not necessarily implied in the infallibility of councils, and the claims that it can be proved separately and independently on its proper merits. The infallibility of the council is intrinsic, i.e. springs from its nature. Christ promised to be in the midst of two or three of His disciples gathered together in His name; now an œcumenical council is, in fact or in law, a gathering of all Christ's co-workers for the salvation of man through true faith and holy

conduct; He is therefore in their midst, fulfilling His promises and leading them into the truth for which they are striving. His presence, by cementing the unity of the assembly into one body—His own mystical body—gives it the necessary completeness, and makes up for any defect possibly arising from the physical absence of a certain number of bishops. The same presence strengthens the action of the pope, so that, as mouthpiece of the council, he can say in truth, "it has seemed good to the Holy Ghost and to us", and consequently can, and does, put the seal of infallibility on the conciliar decree irrespective of his own personal infallibility.

Some important consequences flow from these principles. Conciliar decrees approved by the pope have a double guarantee of infallibility: their own and that of the infallible pope. The council's dignity is, therefore, not diminished, but increased, by the definition of papal infallibility, nor does that definition imply a "circular demonstration" by which the council would make the pope infallible and the pope would render the same service to the council. It should, however, be borne in mind that the council without the pope has no guarantee of infallibility, therefore the conciliar and the papal infallibilities are not two separate and addible units, but one unit with single or double excellence. An infallible statement of Divine truth is the voice of Christ speaking through the mouth of the visible head of His mystical body or in union, in chorus, with all its members. The united voice of the whole Church has a solemnity, impressiveness, and effectiveness, an external, circumstantial weight, which is wanting in simple *ex-cathedra* pronouncements. It works its way into the minds and hearts of the faithful with almost irresistible force, because in the universal harmony each individual believer hears his own voice, is carried away by the powerful rhythm, and moved as by a Divine spell to follow the leaders. Again, the bishops who have personally contributed to the definitions have, in that fact, an incentive to zeal in publishing them and enforcing them in their dioceses; nay the council itself is an effective beginning of its execution or enforcement in practice. For this reason alone, the holding of most Eastern councils was a moral necessity; the great distance between East and West, the difficulty of communication, the often keen opposition of the Orientals to Old Rome made a solemn promulgation of the definitions on the spot more than desirable. No aids to effectiveness were to be neglected in that centre of heresies.

These considerations further account for the great esteem in which conciliar definitions have always been held in the Church, and for the great authority they universally enjoyed without any detriment to, or diminution of, the authority of the Apostolic See. From of old it has been customary to place side by side, in the rule of faith, the authority of the councils and that of the popes as substantially the same. Thus, we read in the formula, or profession of faith, imposed by Pope Hormisdas (514-23) on the Eastern bishops implicated in the schism of Acacius: "The first [step towards] salvation is to keep the rule of orthodox [*rectæ*] faith and in no wise to deviate from the constitutions of the Fathers [i.e. councils]. But the words of Our Lord to St. Peter (Thou art Peter . . .) cannot be passed over, for what He said has been verified by the events, since in the Apostolic See the Catholic religion has always been preserved without spot or stain. Wishing by no means to be separated from this hope and faith, and following the constitutions of the Fathers, we anathematize all heresies, especially the heretic Nestorius, in his time Bishop of Constantinople, who was condemned in the Council of Ephesus by Blessed Celestine, Pope of Rome, and by Cyril, Bishop of Alexandria . . . We receive and approve all the letters of Leo, Pope,

which he wrote concerning the Christian religion, as we have stated before, following in all things the Apostolic See and professing [*prædicantes*] all its constitutions. And therefore I hope to be worthy to be with you [the pope] in the one communion which this Apostolic See professes, in which lies the entire, veracious, and peaceful solidity of the Christian religion. . . ." It should be noted that in this formula the infallibility of the Apostolic See is the centre from which radiates the infallibility of the councils.

X. SUBJECT MATTER OF INFALLIBILITY.—The subject matter of infallibility, or supreme judicial authority, is found in the definitions and decrees of councils, and in them alone, to the exclusion of the theological, scientific, or historical reasons upon which they are built up. These represent too much of the human element, of transient mentalities, of personal interests to claim the promise of infallibility made to the Church as a whole; it is the sense of the unchanging Church that is infallible, not the sense of individual churchmen of any age or excellence, and that sense finds expression only in the conclusions of the council approved by the pope. Decisions referring to dogma were called in the East *διδασκαλίας* (constitutions, statutes); those concerned with discipline were termed *κανόνες* (canons, rules), often with the addition of *τῆς εὐταξίας* (of discipline, or good order). The expressions *θεσμοί* and *ῥυθμοί* apply to both, and the short formulae of condemnation were known as *ἀναθεματισμοί* (anathemas).

In the West no careful distinction of terms was observed: *canones* and *decreta* signify both dogmatic and disciplinary decisions. The Council of Trent styled its disciplinary edicts *decreta de reformatione*; its dogmatic definitions *decreta*, without qualification, where they positively assert the points of faith then in dispute, and *canones* when, in imitation of the ancient anathematisms, they imposed an *anathema sit* on those that refused assent to the defined propositions. An opinion too absurd to require refutation pretends that only these latter canons (with the attached anathemas) contain the peremptory judgment of the council demanding unquestioned submission. Equally absurd is the opinion, sometimes recklessly advanced, that the Tridentine *capita* are no more than explanations of the *canones*, not proper definitions; the council itself, at the beginning and end of each chapter, declares them to contain the rule of faith. Thus Session XIII begins: "The Holy Synod forbids to all the faithful in future to believe, teach, or preach concerning the Holy Eucharist otherwise than is explained and defined in the present decree", and it ends: "As, however, it is not enough to speak the truth without discovering and refuting error, it has pleased the Holy Synod to subjoin the following canons, so that all, now knowing the Catholic doctrine, may also understand what heresies they have to beware against and avoid." The same remark applies to the chapters of the Vatican Council in its two Constitutions, as appears from the concluding words of the *proœmium* of the first Constitution and from the initial phrases of most chapters. All that may be conceded is that the chapters of both councils contain the *doctrina catholica*, i.e. the authorized teaching of the Church, but not always and invariably *dogmata formalia*, i.e. propositions of faith defined as such.

XI. PROMULGATION.—Promulgation of conciliar decrees is necessary because they are laws, and no law is binding until it has been brought unmistakably to the knowledge of all it intends to bind. The decrees are usually promulgated in the name of the synod itself; in cases of the pope presiding in person they have also been published in the form of papal decrees with the formula: *sacra universalis synodo approbante*. This was done first at the Third Lateran Council, then at the Fourth and Fifth Lateran, and also partly at the Council of Constance.

XII. IS A COUNCIL ABOVE THE POPE?—The Councils of Constance and of Basle have affirmed with great emphasis that an œcumenical council is superior in authority to the pope, and French theologians have adopted that proposition as one of the famous four Gallican Liberties. Other theologians affirmed, and still affirm, that the pope is above any general council. The leading exponents of the Gallican doctrine are: Dupin (1657-1719), professor at the Sorbonne in Paris ("Dissertatio de concilii generalis supra Romanum Pontificem auctoritate", in his book on the ancient discipline of the Church, "De antiquâ Ecclesiæ disciplinâ dissertationes historicae"); and Natalis Alexander, O. P. (1639-1724), in the ninth volume of his great "Historia Ecclesiastica" (Diss. iv ad sæculum XV). On the other side Lucius Ferraris (Bibliotheca Canonica, s. v. Concilium) and Roncaglia, editor and corrector of Natalis Alexander's history, stoutly defend the papal superiority. Hefele, after carefully weighing the main arguments of the Gallicans (viz. that Pope Martin V approved the declaration of the Council of Constance, and Pope Eugene IV the identical declaration of the Council of Basle, affirming the superiority of an œcumenical synod over the pope), concluded that both popes, in the interests of peace, approved of the councils in general terms which might imply an approbation of the point in question, but that neither Martin nor Eugene ever intended to acknowledge the superiority of a council over the pope. (See Hefele, Concilien-geschichte, I, 50-54.)

The principles hitherto set forth supply a complete solution to the controversy. General councils represent the Church; the pope therefore stands to them in the same relation as he stands to the Church. But that relation is one of neither superiority nor inferiority, but of intrinsic cohesion: the pope is neither above nor below the Church, but in it as the centre is in the circle, as intellect and will are in the soul. By taking our stand on the Scriptural doctrine that the Church is the mystical body of Christ of which the pope is the visible head, we see at once that a council apart from the pope is but a lifeless trunk, a "rump parliament", no matter how well attended it be.

XIII. CAN A COUNCIL DEPOSE THE POPE?—This question is a legitimate one, for in the history of the Church circumstances have arisen in which several pretenders contended for papal authority and councils were called upon to remove certain claimants. The Councils of Constance and Basle, and Gallican theologians, hold that a council may depose a pope on two main grounds: (1) *ob mores* (for his conduct or behaviour, e. g. his resistance to the synod); (2) *ob fidem* (on account of his faith or rather want of faith, i. e. heresy). In point of fact, however, heresy is the only legitimate ground. For a heretical pope has ceased to be a member of the Church, and cannot, therefore, be its head. A sinful pope, on the other hand, remains a member of the (visible) Church and is to be treated as a sinful, unjust ruler for whom we must pray, but from whom we may not withdraw our obedience.

But the question assumes another aspect when a number of claimants pretend to be the rightful occupants of the Apostolic See, and the right of each is doubtful. In such a case the council, according to Bellarmine (Disputationes, II, xix, de Conciliis) has a right to examine the several claims and to depose the pretenders whose claims are unfounded. This was done at the Synod of Constance. But during this process of examination the synod is not yet œcumenical; it only becomes so the moment the rightful pope assents to its proceedings. It is evident that this is no instance of a legitimate pope being deposed by a legitimate council, but simply the removal of a pretender by those on whom he wishes to impose his will.

Not even John XXIII could have been deposed at Constance, had his election not been doubtful and himself suspected of heresy. John XXIII, moreover, abdicated and by his abdication made his removal from the Apostolic See lawful. In all controversies and complaints regarding Rome the rule laid down by the Eighth General Synod should never be lost sight of: "If a universal synod be assembled and any ambiguity or controversy arise concerning the Holy Church of the Romans, the question should be examined and solved with due reverence and veneration, in a spirit of mutual helpfulness; no sentence should be audaciously pronounced against the supreme pontiff of the elder Rome" (can. xxi, Hefele, IV, 421-22).

SCHIEBER wrote copiously and learnedly in defence of the Vatican Council; his article in the *Kirchenlexicon*, written in 1883, contains the marrow of his previous writings, while HEFELE'S *History of the Councils* is the standard work on the subject. For a deeper study of the councils a good collection of the *Acta Conciliorum* is indispensable. The first ever printed was the very imperfect one of MERLIN (Paris, 1523). A second and richer collection, by the Belgian Franciscan PIERRE CRABBE, appeared in 1538 at Cologne, in 3 vols. Complete editions were published as time went on: SURIUS (Cologne, 1567, 5 vols.); BOLANUS (Venice, 1585, 5 vols.); BINIUS (Cologne, 1606), with historical and explanatory notes from Baronius—re-published 1618, and in Paris, 1636, in 9 vols.; the Roman collection of general councils with Greek text, arranged by the Jesuit SIRMOND (1608-1612), in 4 vols.—each council is preceded by a short history. On Bellarmine's advice Sirmond omitted the Acts of the Synod of Basle. This Roman collection is the foundation of all that followed. First among these is the Paris *Collectio Regia*, in 37 vols. (1644). Then comes the still complete collection of the Jesuits LABBE and COSSART (Paris, 1674), in 17 folio vols., to which BALUZE added a supplementary volume (Paris, 1683 and 1707). Most French authors quote from LABBE-BALUZE. Yet another and better edition is due to the Jesuit HARDOUIN; it is of all the most perfect and serviceable. LABBE—later Archbishop of Luçon, his native town—with the help of many Italian scholars, brought out a new collection of 31 volumes, which, had it been finished, would have surpassed all its predecessors in merit. Unfortunately it only comes down to the fifteenth century, and, being unfinished, has no indexes. To fill this gap, WELTER, a Paris publisher, took up (1900) the new collection proposed (1870) by V. Palmé. To a facsimile reprint of the 31 volumes of MANSI (Florence-Venice, 1757-1797) he added 19 supplementary volumes, furnishing the necessary indexes, etc. The *Acta et Decreta sacrorum conciliorum recentiorum Collectio Lacensis* (Freiburg im Br., 1870-90), published by the Jesuits of Maria-Laach, extends from 1682 to 1869. An English translation of HEFELE'S standard *History of the Christian Councils*, by W. R. CLARK, was commenced in 1871 (Edinburgh and London); a French translation by the Benedictines of Farnborough is also in course of publication (Paris, 1907). Among the latest authors treating of councils are WEINZ, *Jus Decretalium* (Rome, 1899), I, II; GIETTL, *Synopsis rerum moralium et juris canonici*, s. v. *Concilium*.

J. WILHELM.

Counsels, EVANGELICAL (OF COUNSELS OF PERFECTION).—Christ in the Gospels laid down certain rules of life and conduct which must be practised by every one of His followers as the necessary condition for attaining to everlasting life. These precepts of the Gospel practically consist of the Decalogue, or Ten Commandments, of the Old Law, interpreted in the sense of the New. Besides these precepts which must be observed by all under pain of eternal damnation, He also taught certain principles which He expressly stated were not to be considered as binding upon all, or as necessary conditions without which heaven could not be attained, but rather as counsels for those who desired to do more than the minimum and to aim at Christian perfection, so far as that can be obtained here upon earth. Thus (Matt., xix, 16 sq.) when the young man asked Him what he should do to obtain eternal life, Christ bade him to "keep the commandments". That was all that was necessary in the strict sense of the word, and by thus keeping the commands which God had given eternal life could be obtained. But when the young man pressed further, Christ told him: "If thou wilt be perfect, go sell what thou hast, and give to the poor". So again, in the same chapter, He speaks of "eunuchs who have made themselves eunuchs for the kingdom of heaven", and added, "He that can receive it, let him receive it".

This distinction between the precepts of the Gospel,

which are binding on all, and the counsels, which are the subject of the vocation of the comparatively few, has ever been maintained by the Catholic Church. It has been denied by heretics in all ages, and especially by many Protestants in the sixteenth and following centuries, on the ground that, inasmuch as all Christians are at all times bound, if they would keep God's Commandments, to do their utmost, and even so will fall short of perfect obedience, no distinction between precepts and counsels can rightly be made. The opponents of the Catholic doctrine base their opposition on such texts as Luke, xvii, 10, "When ye have done all that is commanded you, say, we are unprofitable servants". It is impossible, they say, to keep the Commandments adequately. To teach further "counsels" involves either the absurdity of advising what is far beyond all human capacity, or else the impiety of minimizing the commands of Almighty God. The Catholic doctrine, however, founded, as we have seen, upon the words of Christ in the Gospel, is also supported by St. Paul. In I Cor., vii, for instance, he not only presses home the duty incumbent on all Christians of keeping free from all sins of the flesh, and of fulfilling the obligations of the married state, if they have taken those obligations upon themselves, but also gives his "counsel" in favour of the unmarried state and of perfect chastity, on the ground that it is thus more possible to serve God with an undivided allegiance. Indeed, the danger in the Early Church, and even in Apostolic times, was not that the "counsels" would be neglected or denied, but that they should be exalted into commands of universal obligation, "forbidding to marry" (1 Tim., iv, 3), and imposing poverty as a duty on all.

The difference between a precept and a counsel lies in this, that the precept is a matter of necessity while the counsel is left to the free choice of the person to whom it is proposed. It is fitting, therefore, that the New Law, which is a law of liberty, should contain counsels of this kind, which would have been out of place in the Old Law, which was a law of servitude. The precepts of the New Law have for their scope the ordinance of those matters which are essential for the obtaining of life eternal—the gift which it is the special object of the New Law to place within the reach of its followers. But the counsels show the means by which that same end may be reached yet more certainly and expeditiously. Man is, in this life, placed between the good things of this world and the good things of eternity, in such a way that the more he inclines to the first the more he alienates himself from the second. A man who is wholly given up to this world, finding in it the end and object of his existence, loses altogether the goods of eternity, of which he has no appreciation. So in like manner, the man who is wholly detached from this world, and whose thoughts are wholly bent on the realities of the world above, is taking the shortest way to obtain possession of that on which his heart is fixed. The children of this world are in their generation wiser than the children of light, but the case is reversed if a larger view be taken.

Now the principal good things of this world easily divide themselves into three classes. There are the riches which make life easy and pleasant, there are the pleasures of the flesh which appeal to the appetites, and, lastly, there are honours and positions of authority which delight the self-love of the individual. These three matters, in themselves often innocent and not forbidden to the devout Christian, may yet, even when no kind of sin is involved, hold back the soul from its true aim and vocation, and delay it from becoming entirely conformed to the will of God. It is, therefore, the object of the three counsels of perfection to free the soul from these hindrances. The soul may indeed be saved and heaven attained without following the counsels; but that end will be reached more

easily and with greater certainty, if the counsels be accepted and the soul does not wholly confine herself to doing that which is definitely commanded. On the other hand, there are, no doubt, individual cases in which it may be actually necessary for a person, owing to particular circumstances, to follow one or more of the counsels, and one may easily conceive a case in which the adoption of the religious life might seem, humanly speaking, the only way in which a particular soul could be saved. Such cases, however, are always of an exceptional character. As there are three great hindrances to the higher life, so also the counsels are three, one to oppose each. The love of riches is opposed by the counsel of poverty; the pleasures of the flesh, even the lawful pleasures of holy matrimony, are excluded by the counsel of chastity; while the desire for worldly power and honour is met by the counsel of holy obedience. Abstinence from unlawful indulgence in any of these directions is forbidden to all Christians as a matter of precept. The further voluntary abstinence from what is in itself lawful is the subject of the counsels, and such abstinence is not in itself meritorious, but only becomes so when it is done for the sake of Christ, and in order to be more free to serve Him.

To sum up: it is possible to be rich, and married, and held in honour by all men, and yet keep the Commandments and to enter heaven. Christ's advice is, if we would make sure of everlasting life and desire to conform ourselves perfectly to the Divine will, that we should sell our possessions and give the proceeds to others who are in need, that we should live a life of chastity for the Gospel's sake, and, finally, should not seek honours or commands, but place ourselves under obedience. These are the Evangelical Counsels, and the things which are counselled are not set forward so much as good in themselves, as in the light of means to an end and as the surest and quickest way of obtaining everlasting life. (See ASCETICISM; MONASTICISM; RELIGIOUS ORDERS.)

All writers on dogmatic or moral theology touch on the subject more or less directly. The following especially may be consulted: ST. THOMAS, *Summa Theol.*, I-II, Q. cviii; II-II, Q. cxxvi; SUAREZ, *Opera* (ed. 1858), XV, p. 38; MACCARR, *Dict. d'ascétisme*, s. v.; MALDONATUS, *Commentary on Matt.*, xix.

ARTHUR S. BARNES.

Counterpoint (Lat. *contrapunctum*; Ger. *Kontra-punkt*; Fr. *contrepoint*; It. *contrapunto*), from *punctum*, "point"—as a note was formerly called in music—and *contra*, "against"; originally, *punctum contra punctum*, or *nota contra notam*—"point against point", or "note against note". The term *counterpoint* originated in the fourteenth century, though the art designated by it had been practised for several centuries previous. The desire for harmony, that is, the simultaneous sounding with the *cantus firmus*, tenor, or theme, of one or more voices on different intervals, first found expression in the so-called diaphony or "Organum" of Hucbald (840-930 or 932), [H. E. Woolridge in his "Oxford History of Music" (1901), vol. I, p. 61, quotes from a treatise "De divisione naturæ", by Scotus Erigena (d. 880), a passage, describing the *organum*, which would indicate that diaphony, even in contrary motion, was in use in England previous to Hucbald's innovation, though proof of its general use in the British Isles is wanting.]

In the twelfth century, in France, the custom arose, and became general among singers, of improvising one or more independent melodies above the liturgical melody, or *cantus firmus*. This was known as *déchant*, or *discantus*. In England the *gymel*, or *cantus gemellus* (twin song), flourished at an even earlier date. The *gymel* consisted in adding the interval of the third both above and below the *cantus firmus*. Later, the third below was transposed an octave higher, giving rise to the *falso-bordone*, *fauz-bourdon*, or false bass.

All these sporadic attempts at polyphony culminated, in the fourteenth century, in the addition of different melodies to the *cantus firmus* in accordance with well-formulated laws of counterpoint which are still valid at the present day. The aim was the perfect integrity and independence of the various melodies in their flow, from which, of course, resulted passing dissonances, but these were continually solved into consonances on the accented notes of the measure. During the course of the following century contrapuntal skill reached unprecedented heights among both the numerous masters of the Netherlands and those of England; but it served its highest purpose and bore its ripest fruit in the Roman school of the sixteenth century. The polyphony for four, five, six, eight, or more parts, produced in that century, with its prevailing consonance and unifying and life-giving principle, the *cantus firmus* (generally a Gregorian melody), is, in a sense, an image of the congregation or of the Church itself. We have unity in variety: each voice singing its own melody and still harmonizing with every other voice, just as every member of the Church aspires to the same ideal according to his own nature and capacity. When monody came into fashion at the end of the sixteenth and the beginning of the seventeenth century, the study and practice of counterpoint was almost entirely neglected, but it received a new and wonderful development at the hands of Händel and Bach. For a time contrapuntal art served masters other than the Church and her liturgy, but with the revived observance of her laws in regard to music, and with the study and revival, during the past sixty years, of her greatest musical treasures, counterpoint in accordance with its original principles, has come into its own again and is bearing fruit as it did of yore.

Counter-Reformation, THE.—The subject will be considered under the following heads: I. Significance of the term; II. Low ebb of Catholic fortunes; III. St. Ignatius and the Jesuits, pioneers of the new movement; IV. The Council of Trent; V. Three great reforming popes; VI. The missions; VII. Progress in European States; VIII. Ecclesiastical literature; IX. Close of the period and retrospect.

I. SIGNIFICANCE OF THE TERM.—The term *Counter-Reformation* denotes the period of Catholic revival from the pontificate of Pope Pius IV in 1560 to the close of the Thirty Years' War, 1648. The name, though long in use among Protestant historians, has only recently been introduced into Catholic handbooks. The consequence is that it already has a meaning and an application, for which a word with a different nuance should perhaps have been chosen. For in the first place the name suggests that the Catholic movement came after the Protestant; whereas in truth the reform originally began in the Catholic Church, and Luther was a Catholic Reformer before he became a Protestant. By becoming a Protestant Reformer, he did indeed hinder the progress of the Catholic reformation, but he did not stop it. It continued to gain headway in the Catholic South until it was strong enough to meet and roll back the movement from the North. Even if our Catholic reform had been altogether posterior to the Protestant, we could not admit that our reform movement owed its motive power or its line of action to the latter, in the way that modern reform movements among Orientals are due to the influence of European thought. For the principles of the Protestant Reformation are to Catholics principles leading to deformation and to the perpetuation of abuses, such as the subversion of Church to State, or the marriage of the clergy, to say nothing of doctrinal error.

Both the continuance and correction of the same abuse cannot be due to the same movement. Moreover, it will be seen that the Catholic reform was not even originally due to reaction from Protestantism, in the way in which inert nations are sometimes spurred by initial defeats to increased energy, which in the end may even make them victorious. Though this reaction undoubtedly had its effect on certain Catholic reformers, it had little or no influence on the leaders or on the best representatives of the movement, as, for instance, on St. Ignatius, its pioneer, or on St. Philip Neri and St. Vincent de Paul, exemplars of its maturity.

Another point to be noticed is that, though we assign certain dates for the beginning and end of the period under consideration, there has never been any break in the striving of the Church against the heresies which arose in the sixteenth century. In this sense the Counter-Reformation began in the time of Luther and is not even yet closed. But while the points of similarity between this period and those which preceded and followed it might be dwelt upon at some length, and must occasionally be called to mind, there is no reason for rejecting the term, or for denying that it corresponds with a real and important historical period. Historical periods, it will be remembered, are never sharply cut off, during the actual course of events, from what goes before and comes after, as they are described in books; for history in the concrete is always continuous. In this case the limits of the period are to be measured not by reversals of reforming policy and methods, but by the increased or decreased energy with which such reformation is pursued. When there is intense zeal on the part of many for making reforms, then is the "period" of reform. Similarly this "period" ceases when such zeal becomes rare, or only mediocre in intensity, even though it does really continue here and there in some individuals or classes. It would be a misrepresentation of the heroes of the Counter-Reformation to describe their reforms as having differed from those of the older opponents of Protestantism, except in degree, in earnestness, thoroughness, adaptability to altered circumstances, etc. Their predecessors had been clear in the condemnation and punishment of error. They had preached, pleaded, threatened, even fought, but they did not remodel their ways seriously everywhere, in small things and in great. They did not institute new and vast schemes of education, or alter the constitutions of their States. They did not succeed in awakening the enthusiasm of their party, or in encouraging whole classes to make heroic sacrifices, or heroic efforts. But there did come a time when there was such heroism on a large scale, when whole classes, as for instance episcopates, new religious orders, and even the laity (as in England during the persecutions), were filled with enthusiasm; when martyrs were numerous; when great writers, preachers, and leaders abounded; when education was attended to from the highest motives and with the greatest interest; when the old duties of life were discharged with an alertness, a faith, a meaning which were new; when for a time Catholic rulers and whole States rose superior to considerations of self-interest.

The span of time during which this enthusiasm lasted may be justly considered as an historical period, and it is that which we call the period of the Counter-Reformation. It may also be well to note at the outset that this period is the harder to follow, not only because of its continuity with previous and succeeding periods, but also because it did not commence or end at the same time in any two countries, and in each land began, grew strong, and died away, through different causes, in different ways and degrees, and at different times. Broadly considered, however, the dates assigned above will be shown to be perfectly accurate.

II. LOW EBB OF CATHOLIC FORTUNES.—“From the time of St. Peter there has not been a pontificate so unfortunate as mine. How I regret the past! Pray for me.” Such were the sad words of Pope Paul IV to Father Laynez, as he lay dying in August, 1559 (Oliver Manare, *Commentarius de rebus Soc. Jesu*, Florence, 1886, 125). It never looks darker, it is said, than just before dawn; the prospects of Catholicism at that moment did indeed seem gloomy to the watchers in the Vatican. Luigi Mocenigo, Venetian ambassador at Rome, sent thence to the signory this report on the situation: “In many countries, obedience to the pope has almost ceased, and matters are becoming so critical that, if God does not interfere, they will soon be desperate . . . Germany . . . leaves little hope of being cured. Poland is in almost as hopeless a state. The disorders which have just lately taken place in France and Spain are too well known for me to speak of them, and the Kingdom of England . . . after returning a short time since to her old obedience, has again fallen into heresy. Thus the spiritual power of the pope is so straitened that the only remedy is a council summoned by the common consent of all princes. Unless this reduces the affairs of religion to order, a grave calamity is to be feared.” Another Venetian diplomatist (and these men were reckoned among the most acute of their day) wrote not long after, that Cardinal Morone, when leaving for the council, told him that “there was no hope” (Albéri, *Relazioni degli ambasciatori Veneti*, 1859, II, iv, 22, 82). Though Morone’s prophecy was soon falsified by the events about to be described, his words must be considered as conclusive proof that even the bravest and best-informed in Rome regarded the situation with profound discouragement, and it will be worth while to seek an explanation by going back to Mocenigo’s words. At the same time, without attempting an account of the Reformation itself, notice may be taken of what had hitherto been done in order to stem the religious revolution.

Germany.—Even before the Protestant Reformation the holding of synods and provincial councils had been frequent, and they had always been attentive to points requiring reform. After it, the popes had sent thither a succession of legates and nuncios, such as Aleander, Campeggio, Cajetan, Contarini, Morone, who had upon the whole been men of conspicuous sincerity, vigour, and prudence. There had also been found among the German Catholics many men of splendid eloquence and zeal, of holy life and ceaseless labour, such as Tetzl, Johann von Eck, Miltitz, Nausea, Jerome Emser, Julius Pflug, Johann Gropper, who had striven courageously and most effectively on the Catholic side. The Emperor Charles V (q. v.) had laboured upon the whole with marked devotion in favour of Catholicism, though his Italian policy, it is true, had frequently been repugnant to the wishes and the interests of the Roman pontiffs. But now he was gone, and his successors, Philip II of Spain and Ferdinand of Austria, whether their energy and devotion or the power which they wielded be considered, were far inferior to him as champions and protectors of Catholicism. There had, of course, been some, indeed many, improvements on the Catholic side. The German episcopate, once so worthless, now numbered many noble characters, of whom Otto von Truchsess, Bishop of Augsburg and afterwards cardinal, was the most brilliant representative. The Dominican and Franciscan friars had showed from the first to advantage; always ready to meet the foe, they everywhere encouraged and strengthened the men of their own side, and prevented many defections (see N. Paulus, *Die deutschen Dominikaner im Kampf gegen Luther*, 1903). The first Jesuits too had won many notable successes. Thus while on the one hand it was evident that there was still life in the Church of Germany, while there was no intrinsic impossibility in carrying

further the good that had begun, on the whole the outlook was as dark as the retrospect. No bulwark against Protestantism had yet been found. Attempts to conclude a “religious peace” or an “Interim”, at the various diets of Nuremberg, Speyer, Ratisbon, and Augsburg seemed to effect nothing better than to give the Protestants breathing time for fresh organization, and so prepare the way for new attacks and victories. The Turks were pressing on Hungary and Austria from the south-east; the French, allying themselves with the Reformers, had invaded the German West, and had annexed the “three bishoprics” Metz, Verdun, and Toul. Charles had then made large sacrifices to get the Protestants to agree to “the religious peace of Augsburg” (1555), in order to combine all forces against France. The alliance was made, but was unsuccessful; the French retained their conquests; Charles retreated; the power of Catholic Germany seemed to be under an eclipse. Mocenigo might well say that “Germany leaves little hope of being cured”.

Poland.—“Poland is in almost as hopeless a state.” Protestantism had latterly gained ground rapidly. In 1555 a “national synod” had been held, which had requested the marriage of priests, Communion under both kinds, Mass in Polish, the abolishment of “annates”. Such demands had but too often proved the forerunners of a lapse to Protestantism, and in fact in 1557 the weak King Sigismund Augustus had allowed “liberty” of conscience in Danzig and some other towns. There were waverers even among the clergy and the bishops, like James Uchanski, Archbishop of Gnesen and Primate of Poland in 1562. Fortunately the evil was not yet deeply rooted in the country. There had been no sweeping confiscations of church property, nor apostasies among the actual rulers. The great bishop and cardinal, Stanislas Hosius, was rising to fame, and behind him stood a number of zealous clergy, who would in due time renew the face of the Church. Still for the moment the state of the country was very serious. (See Krause, *Die Reformation und Gegenreform. im ehemaligen Königreiche Polen*, Posen, 1901.)

France and Spain.—“The disorders in France and Spain are too well known for me to speak of them.” The first open revolt of the Huguenots, styled the *Tumulte d’Amboise*, had taken place just before Mocenigo wrote. Hitherto, France though allying herself with the heretics of Germany, had preserved her own religious peace. But the converts to Protestantism were numerous and well organized, and counted not a few of the highest nobility and of the blood royal, especially princes of the House of Bourbon, to which the crown was destined to fall ere very long. The ruling sovereign, Francis II, was but a boy, and though for the moment the House of Lorraine and the family of the Guises brought victory to the Catholics, the position was one of evident danger, and was soon to result in a long series of wars of religion.

The troubles of Spain were in a sense rather foreign than domestic. It was true that there had been some defections, as Enzinas (Dryander), Servetus, and Valdez. Though not numerous, these had been sufficient to cause much alarm and suspicion, so much so that the Archbishop of Toledo himself, Bartolomé Carranza (q. v.) was put on his trial. (Cf. Schäfer, “Gesch. des spanischen Protestantismus”, *Güterloh*, 1902; Menendez y Pelayo, “Historia de los heterodoxos Españoles”, Madrid, 1880–82.) The proceedings lasted a long term of years, but in the end nothing could be proved against him. There was also danger from the Moriscos. But what gave most cause for anxiety to serious thinkers was the linking of the Netherlands, Naples, and so many parts of Italy to the Spaniards. The latter were everywhere unpopular, and the Reformers were beginning, especially in the Netherlands, to pose as patriots, with

results very unfortunate for Catholicism. For instance, King Philip had arranged with the Holy See in 1559 for certain changes in the Flemish sees. Mechlin, Cambrai, and Utrecht were made archbishoprics, and fourteen smaller districts were formed into bishoprics. This measure, wise and commendable in itself, was badly received when it came from Spanish rulers. The redistribution of benefices, which had to be made in order to endow the new sees, caused complaints which grew constantly louder, and in the end proved one of the chief causes of the revolt of the Netherlands.

England.—Of all the countries of Europe none changed sides with such appalling facility as England. At first she had seemed the least likely of any to revolt. She had been peaceful and contented; the observance of the canons compared favourably with that in many other countries; her king was emphatically on the side of the Church, until "the Gospel light first shined in Boleyn's eyes". Then it was found that the absolute power of the sovereign was easily greater than any other force in the realm. There were some glorious martyrs (see FISHER; HOUGHTON; MORE) and, in general, sufficient resistance to show that the country, as a whole, clung to its old faith, and would never have changed but for force. When that force was applied, the change was shamefully rapid and complete. When Queen Mary gained the upper hand, there was remarkably little difficulty found in the much more arduous task of restoring the old order, in spite of the church property, which had been confiscated, and had already been redistributed into thousands of hands. Only about two years were available for the actual restoration of the Church, and though the work was carried out in a way that was not very conciliating, yet the Marian establishment proved itself more stable, when tried in the fire of Elizabeth's persecution, than the ancient Church when attacked by King Henry. In neither case, however, could the Church withstand the power of the Crown; and again the resistance, though sufficient to be reckoned a magnificent protest against the royal tyranny, was entirely inadequate to hinder the dictates of the Tudor sovereign and her powerful ministers. The Marian reaction movement should not be reckoned under the Counter-Reformation proper, for it was in effect almost entirely a restoration of old methods and old ideas, and derived its force from the old religious feelings of the land. These had lain dormant while beaten down by overwhelming force, but rose again as soon as that repression ceased.

Scotland and Ireland.—These countries were probably included by Mocenigo under England, though their condition was in reality widely different. Scotland, unlike England, was perhaps of all countries in Europe the most likely to take up the Reformation. Bloody and incessant feuds had sadly demoralized monastic life, and rendered church government extremely difficult, while the rough barons had intruded their illegitimate children into a large number of the livings, abbeys, and episcopal sees. Yet Scotland resisted for a generation the reformation which Henry and Edward strove with all their might to impose upon her. Elizabeth's efforts were more subtle and more successful. Mary of Guise, Queen Regent of Scotland, relied almost entirely upon the French arms for the maintenance of royal and religious authority. It was represented to the nobility that this was an insult and an injury to those on whom the government of Scotland should naturally have fallen, the House of Hamilton and the nobility of the land. Moreover the Calvinists in France had won over many young Scottish soldiers and students in Paris, notably the Earl of Arran who stood but two or three steps from the throne. The revolution took place, and though the regent might have held her own if England had been neutral, there could be no doubt

as to the issue when Elizabeth actively supported the rebels with money, men, and ships. The ninth clause of the Treaty of Edinburgh (6 July, 1560) stipulated that "the matter of religion be passed over in silence", which in effect left to the Scottish Protestants, with England at their back, absolute power to do what they liked. The estates of the Church were seized by the laity, and (except in the inaccessible North) every vestige of Catholic observance was forcibly banished from the land. It was the last national revolt from the Church, and was the more lamentable because of Scotland's previous constancy.

As to Ireland, Rome probably knew nothing except the darkest features. The Marian bishops and indeed all the Anglo-Irish of the Pale had thrown in their lot with Elizabeth, though she had as yet made few changes. Officially the state of Ireland seemed as bad as that of England. Communication with the Irish beyond the Pale was most difficult to keep up; it had probably not yet been opened.

Scandinavia and Italy.—Mocenigo said nothing of these nations. The former was so far away from Roman influence that the Counter-Reformation never reached it. Of the latter he would surely have given a better account than of any other European nation. A couple of generations back, when the pagan Renaissance was at its height, it might have been, or at least seemed, otherwise. There was then corruption in high places, as everyone could see, but the miseries of war had checked the spread of luxury, which had not permeated far down among the people, and better conditions resulted (Cantù, *Gli eretici d'Italia*, Turin, 1865-67). At every papal election better men were chosen, and the College of Cardinals certainly contained more enlightened reformers than could be found in any other body. Aleander, Contarini, Morone, Pole, Sadoleto may be named as good examples of their class. There were many admirable prelates like Gian Matteo Giberti, Bishop of Verona. Moreover, several new and efficient religious orders had lately come into existence, the Capuchins, Theatines, and Barnabites, while St. Jerome Emiliani had formed the Clerics Regular known as the Somaschi.

Pope Paul IV (Giovanni Pietro Caraffa) was himself a representative of the best traditions of the Italian Church immediately before the Council of Trent. He was holy and sincere, business-like and energetic, as he had proved before his elevation to the papacy. But the virtues of a great reformer are not always the virtues most needed in a ruler. Like St. Pius V, on certain occasions, Paul IV was sometimes rash in having recourse to medieval methods. His Bull against nepotism was a reform of the utmost importance, yet he was betrayed, in a great measure by nepotism, into the fatal war against Spain (1557-58), the misfortunes and disturbances of which affected the cause of Catholicism so adversely throughout Western Europe. Because of this war Mary Tudor's reign closed in gloom, the Netherlands were distracted, intercourse with the pope was practically interrupted for England, Flanders, and Spain, and the Reformers in France maintained that the evils of the time were due to the ambition of the popes. As soon as the Peace of Paris was concluded, in 1559, the evils which had hitherto been working unperceived became evident. While England fell away, followed by Scotland, France and the Netherlands were found to be deeply infected by heresy; the Holy See had either no representatives in those countries to combat the evil, or they were so out of favour as to have little or no power. This explains the words of Paul IV on his death-bed, quoted above, which so vividly describe the unfortunate condition of the Church at this moment.

III. ST. IGNATIUS AND THE JESUITS, PIONEERS OF THE NEW MOVEMENT.—But though Paul IV did not advert to it, the Catholic reaction had already made

considerable progress. The number of great men among the cardinals, and the foundation of the Capuchins, Theatines, and other orders, have already been mentioned as symptomatic of the improvement. Then there appeared Ignatius and the Jesuits, so conspicuous in the new movement. And here it may be well to notice how very different the evolution of the Protestant Reformers (even of those who were most conscientious) was from that of the vocation of this Catholic leader. The monk Luther and many like him began by denouncing abuses. The abuses were serious, no doubt, but from the nature of the case abuses in matters of or matters themselves holy and laudable. Yet so violent did the accusers become that they gradually forgot any good there was connected with the object derided, though the good perhaps in reality far outweighed the evil. Then came attacks upon the persons who maintained or defended the thing impugned, or who failed to make the changes demanded, and they were almost always declared to have virtually or actually betrayed or deserted the Church itself. Finally the reformer, setting himself up as the true standard of orthodoxy, fell to self-exaltation, and at last rebelled and separated from the Church, which he had originally intended to serve.

The soldier, Ignatius, in the enforced leisure after his wound at Pampeluna (1521) bethought himself of serving Christ as a captain. The idea slowly took possession of him and aroused a lofty spiritual ambition. The imitation and service of Christ were to be most thorough. He would first educate himself as well as his age would allow, become a priest, induce the best of his companions to join him, and then go to the Holy Land and imitate the Saviour's life as literally and exactly as possible. This was a humble but sublime ideal, capable of appealing to and satisfying the most earnest souls, and sure to lead to great efforts. There was no preoccupation here about the reform of abuses, nor indeed any temporal concern whatever, even the most praiseworthy. For twelve years Ignatius, now a middle-aged man, laboured at the education and the sanctification of himself and of the few followers who threw in their lot with him, and the plan would have been completed as it had been conceived, had not war with the Turks kept him and his companions waiting for several months at Venice, unable to proceed to Palestine. Then he turned to Rome, which he reached in November, 1537, and never left again. The services of his small band of companions were soon in great request; they were the "handy men" of the hour, with heads and hearts ready for any work. In a short time they had been heard of and seen everywhere. Though few in number they had carried the Gospel to Abyssinia, India, and China, the ends of the known world. They had faced and fought the most redoubted heretics; they had preached to the poor and tended the sick in the darkest purlieus of the manufacturing cities. They had not indeed as yet the great colleges which afterwards made them famous, nor did people feel their force as a corporate body, but this only made their position as the pioneers, or advance guard of the Church, the more noteworthy. If so few preachers could do so much, their calls on others to join in the struggle roused multitudes to confidence, energy, and fresh efforts. (See SOCIETY OF JESUS.)

IV. THE COUNCIL OF TRENT.—The Council had been originally summoned in the year 1537, and sixteen sessions were held during the next fourteen years. In 1552 it was prorogued for the third or fourth time, and so serious were the quarrels throughout Europe that its conclusion was almost despaired of. "The only remedy", said Mosenigo, "is a council summoned by the common consent of all princes." Yet there was small chance that the factious, unbearing princes of those days would give up their own views and interests. Still, for the common good, it had to

be attempted, and when the bishops met again in 1561 they came with hearts resolved to do their utmost. But "the consent of all the princes" was not easy to obtain. If they had known of Elizabeth's secret dealings with the French Court (Foreign Calendars, 1561, nn. 682, 684), they might have put a very sinister interpretation on the proposals with which the Cardinal of Lorraine and other Gallicans were constantly interrupting the progress of business. At last Cardinal Morone and the Cardinal of Lorraine paid personal visits to the emperor and the pope. A better understanding between the clerical and the state parties ensued, and so the council was concluded, with much more expedition and satisfaction than had seemed possible. While the politicians had been squabbling, the theologians had been doing their work well, and when the decrees came to be promulgated, there was general admiration at the amount of definition that had been accomplished. Though there had been so many rumours of quarrels and divisions, the points on which all were agreed were surprisingly numerous and formed a striking contrast to the contradictions and feuds among the Protestant sects, which were becoming ever more conspicuous and bitter. No council that had ever been held had pronounced so clearly nor on so many useful points. Moreover, the Catholic bishops and representatives of various countries had come to know one another as never before, and when they separated they returned to their flocks with a new perception of the unity of the Church, and edified by the sincere holiness of her hierarchy. From this time we find that a certain readiness for compromise, and apprehension of change, which was once widespread, has passed away. Though, for instance, many had wished the laity to receive the Chalice, in order to stay further defections, and though the council and the Holy See had allowed it for certain countries, it was now found that the concession was unnecessary, and it was not made use of. The decrees, at least those which regarded doctrine, were everywhere received with approval. The disciplinary decrees, on the other hand, were not accepted without serious qualifications by the Catholic sovereigns. Spain withheld "the privileges of the Spanish Crown"; France at first refused them altogether as inconsistent with the Gallican Liberties, a refusal significant of the danger of Regalism which was to beset the Church of France for generations to come. [Cf. besides the decrees of the council (Rome, 1564, *et seq.*), the valuable publication of the Görres Society, "Concilium Tridentinum, Diariorum, actorum, epistularum, Tractatum nova collectio", I, "Diariorum pars prima", ed. S. Merkle (Freiburg, 1901), and "Actorum pars prima", ed. S. Ehses (Freiburg, 1904).]

V. THREE GREAT REFORMING POPES.—The popes are as a rule, and from the nature of their position, extremely conservative, but it was characteristic of the Counter-Reformation that after the Council of Trent three popes of great reforming energy should be elected in close succession.

(1) *St. Pius V.*—The great achievement of this pope was the example which he gave of heroic virtue. In the language of the day, "he made his palace into a monastery, and was himself a model of penance, asceticism, and prayer". He inspired all about him with his own high views, and new life and strength were soon seen in all parts of the papal administration. Many and notorious had been the corruptions which had crept in during the reigns of the easy-going humanistic popes who had preceded him. They had indeed passed severe laws, after the fashion of the time, hoping to maintain good order by occasional severities and the constant dread of heavy penalties, but with lax administration such a method of government produced deplorable results. Pius V applied the laws with an unflinching regularity to rich and

noble, as well as to mean and poor. His rigour and vigour were sometimes excessive, no doubt, but this would not have seemed very reprehensible in those days. There had been a popular outcry for "reform in the head as well as in the members", but it had seemed hopeless to expect it, considering the strong conservative traditions of the Roman Court. Now that the seemingly unattainable had been accomplished, occasional excesses in the manner of its attainment were easily forgiven, if they were not actually relished, as signs of the thoroughness with which the desired change had been made. Esteem for the papacy rose, papal nuncios and legates faced with firmness the powerful sovereigns to whom they were sent, and strove with dignity for the correction of abuses. Reforms were more easily accepted by inferiors when superiors had already embraced them. Even Protestants mentioned Pope Pius with respect. Bacon spoke of "that excellent Pope *Pius Quintus*, whom I wonder his successors have not declared a saint" ("Of a Holy War", in his Works, ed. of 1838, I, 523; the words however are put into the mouth of another). Though the forces against Pope St. Pius were powerful, and the general position was everywhere so critical that extreme caution might have seemed the best policy, his fearless enforcement of existing church law was on the whole wonderfully successful. Thus, though his Bull excommunicating and depriving Elizabeth (1570) was in one sense ill-timed and a failure, on the other hand its results in the spiritual sphere were admirable. It broke the English Catholics of their subservience to Elizabeth's tyranny over their consciences in a way which no milder measure could have done.

(2) *Gregory XIII* became a leader of the reform movement by virtue of qualities very different from those of his predecessor. He was a kindly, sociable man, who had risen to fame as a lecturer on canon law, and his successes were due to his zeal for education, piety, and the machinery of government, rather than to anything magnetic or inspiring in his personal influence. He was bountiful in his support of the Jesuit missions, and in his grants to seminaries and colleges. The German, English, and Greek colleges, and many others owe him their foundation Bulls, and much of their funds. He sent out missionaries at his own expense to all parts of the world. Though he had no great genius for politics, he had an admirable secretary, Ptolemeo Galli, Cardinal of Como, whose papers remain to this day models of perspicacity and order. Standing nunciatures were now established at Catholic courts in lieu of the old special envoys (Vienna, 1581; Cologne, 1584), and with the happiest results. Thus, when Gebhard Truchsess (q. v.) the Archbishop of Cologne, turned Protestant and tried (1582) to carry over his electorate with him, the nuncios on all sides organized a vigorous counter-attack, which was completely successful. Since then Cologne has been a tower of strength to the Catholicism of North-Western Europe. The reform of the Calendar was another piece of large-minded and far-sighted office work, if it may be so described, which reflected much credit on the pope who organized it. Gregory was also most generous in granting Indulgences, and he encouraged works of piety on a large scale. He took an active part in the celebration of the Holy Year of Jubilee in 1575, and the pilgrims, who had flocked in thousands to the Eternal City, returned to spread throughout Europe the satisfaction they had felt at the sight of the good pontiff performing in person the long religious ceremonies, leading processions, or tending poor pilgrims with his own hands.

(3) *Sixtus V.*—Like Pius V, Gregory XIII was too much of an enthusiast for abstract theories and medieval practices to be an ideal ruler; he was also a poor financier, and, like many other good lawyers, was

somewhat deficient in practical judgment. It was exactly on these points that his successor, Sixtus V, was strong. Where Gregory, at the end of his reign, was crippled by debts and unable to restrain the bandits, who dominated the country up to the gates of Rome, Sixtus, by dint of good management, was soon one of the richest of popes, whose word was law in every corner of his States. He finished St. Peter's, and erected the obelisk of Nero before it. He built the Vatican Library and that wing of the palace, which the popes have inhabited ever since, while he practically rebuilt the Quirinal and Lateran Palaces. He constructed the aqueduct known as the *Aqua Felice*, the Via Sistina, the hospital of San Girolamo and other buildings, though his reign only lasted five and a half years. Sixtus was large-minded, strong, and practical, a man who did not fear to grapple with the greatest problems, and under him the delays (reputed to be perpetual) of the Eternal City seemed to be changing to briskness, almost precipitation.

As the Council of Trent had given Catholics, just when they most needed it, an irrefragable testimony to the unity and catholicity of their Faith, so these three pontiffs, with their varying excellences, showed that the papacy possessed all the qualifications which the faithful expected in their leaders, virtues which afterwards repeated themselves (though not quite so often or so frequently) in succeeding popes, especially in Clement VIII, Paul V, and Urban VIII. Now at all events, the tide of the Counter-Reformation was running in full flood, and nowhere can its course and strength be better studied than in the missions.

VI. THE MISSIONS.—While persecution and war, politics and inveterate custom, hampered progress in Europe, the wide continents of America, Asia, and Africa offered a freer outlet for the spiritual energy of the new movement. Beginning with St. Francis Xavier (q. v.), there are among the Jesuits alone quite a multitude of apostles and martyrs, confessors and preachers of the first order. In India and China, Antonio Criminala, Roberto de' Nobili, Ridolfo Acquaviva, Matteo Ricci, Adam Schall. In Japan, after Padre Valignano's great successes, ensued the terrible persecution in which there perished by heroic death almost eighty Jesuits, to say nothing of others. Abyssinia and the Congo were evangelized by Fathers Nuñez, Baretto, and Sylveira. In North America there were heroic struggles to convert the Indians (see BRÉBETFF; LALLEMANT), and in South America St. Peter Claver's work for the slaves from Africa and the reductions of Paraguay. The Franciscan and Dominican friars and the secular clergy were in the field before the Jesuits in Central America (where Las Casas has left an unperishing name); elsewhere also they were soon in the front rank. Later on in the period there are St. Vincent de Paul (q. v.) and his zealous apostolic followers and (1622) the Roman Congregation "De Propaganda Fide", with its organized missionaries (see PROPAGANDA, COLLEGE OF).

In order to appreciate the connexion of the aforesaid names with the movement under consideration, we must remember that these apostles were not only showing forth in their heroic labours and sufferings the true nature of the Counter-Reformation; they were also winning many new converts to it by their preaching, while their letters raised to the highest pitch the enthusiasm of generous souls at home (see Cros, "St. François Xavier, Sa vie et Ses lettres", Paris, 1900; also "Lettres Edifiantes et Curieuses", 34 vols., Paris, 1717, sqq.).

VII. PROGRESS IN EUROPEAN STATES.—Whilst in distant lands the new spirit found to some extent a free field, its progress in Europe was very largely dependent on the varying fortunes of the Catholic and Protestant political powers. Here it will only be possible to indicate the chief stages in that pro-

gress, and it must be remembered that controversies have arisen at one time or another even about the leading facts.

Germany and Austria.—Here it is evident that in the first named country the losses of the Catholics did not cease with the Religious Peace of Augsburg in 1555. The Protestants, as the occasion arose, had not hesitated to avail themselves of religious troubles in various episcopal sees and had possessed themselves of two archbishoprics (Magdeburg and Bremen), and of 12 important bishoprics. It was only by recourse to arms that Cologne was saved in 1583; and the freedom of Strasburg and Aachen was in grave danger. There were also many defections among the lesser princes, and so long as Maximilian II (1564–76) was emperor, his Protestant proclivities prevented the Catholics from acting with the vigour and authority which became their number and their cause. For the alarming condition of Northern Germany about 1600 see “Röm. Quartalschrift” (1900), p. 385 sqq. So serious did the general position become, that St. Peter Canisius (q. v.) rhetorically compared the Catholic countries of Bavaria and the Tyrol to the two tribes of Israel, which alone were saved while all the others were carried off captive (see O. Braunsberger, *Canisii Epistolæ ad Acta*, Freiburg, 1896–1905, I–IV). Indeed, Albert V of Bavaria (1550–79) seemed almost the only Catholic prince who could make head against the Protestants. He used his authority freely to exclude Protestants from posts of trust, etc., an example afterwards imitated by other Catholic princes (see Knöpfler, *Die Kelchbewegung in Bayern unter Albrecht V*, Munich, 1901). There was more satisfactory progress among the Catholics themselves. A new generation of bishops was growing up. Though it was impossible to put an immediate end to the abuses of “patronage” practised by the nobility and the princes, the proportion of men chosen for their capacity and virtues had everywhere increased. Otto von Truchsess, Bishop of Augsburg, has been mentioned, and with him may be classed Julius Echter von Mespelbrunn, Bishop of Würzburg (said to have reconciled some 60,000 souls), Cardinal Klessel, Archbishop of Vienna, Theodor von Fürstenberg, Ernst von Mengersdorf, Dietrich von Raitenau, of Paderborn, Bamberg, and Salzburg respectively, and many others. They were truly “columns of the church”, whose influence was felt far beyond the limits of their dioceses. Far-reaching, too, were the good results effected by the Catholic writers, Tanner, Gretscher (Gretser), Laymann, Contzen, and by preachers and missionaries, especially Canisius, called the *malleus hæreticorum*, and other Jesuits and Dominicans. The Jesuit colleges also increased steadily and were productive of great and permanent good.

At last with the reign of Rudolph II as emperor (1576–1612) came the occasion for the Counter-Reformation in Germany and Austria. Wherever the House of Hapsburg had influence the Catholic princes and lords began to exercise the same right of reformation (*Reformationsrecht, Jus reformandi*) in behalf of the Church, which the Protestants had hitherto used against her. But the latter ere long became suspicious. In 1608 they joined in an offensive and defensive “union” which the Catholics answered by their “League”. In this way the opposing parties soon drifted into the Thirty Years War (q. v.) which lasted from 1618 to 1648. Though the Catholic allies commenced at the greatest disadvantage, they gradually won the upper hand. By the end of 1631 they seemed so secure of their superiority, that Ferdinand II by his “Restitutionsedict” (Edict of Restitution) recalled the Church lands seized by Protestants since the Religious Peace of Augsburg in 1555, and in particular the aforesaid two archbishoprics and twelve bishoprics. The political power of the Catholics now stood at the highest point it reached during the Counter-

Reformation. But a reaction soon set in; France and Sweden joined hands with the Protestants, and the Catholics had neither the enthusiasm nor the unity of purpose to maintain their advantage. The Peace of Münster and Osnabrück, in 1648, disastrous and humiliating as it was for Germany politically, was also most injurious to Catholicism. (See WESTPHALIA, TREATY OF.) Church lands were freely secularized, and distributed, as the price of peace, to lay lords who practically had the right of dictating to their subjects the religion they might profess. The secular authorities, even in Catholic countries, claimed and exercised a right of *placet* in the choice of bishops, which was in the long run most injurious. Amid the distractions of war, the deceits of victory, and the miseries of defeat, the fervour of the Counter-Reformation had evaporated.

France.—If the Counter-Reformation had much to fear and to suffer from the politics of secular princes, it was from France that it had most to dread. The wars of Francis I with the Emperor Charles V had given the Reformation an occasion for spreading. France had been the chief difficulty at the Council of Trent. In France the struggle between Catholicism and Protestantism was carried on with great bitterness and cruelty. Though the eventual victory of the Counter-Reformation was very extensive, it was nowhere later in coming; nowhere had there been such danger of a great disaster. This was due to the closeness of the connexion of Church with State. In virtue of the so-called Gallican Liberties (q. v.) the king and nobles exercised undue influence over the appointment of bishops, abbots, and clergy, and ecclesiastical administration in general. But the later rulers of the House of Valois, as also Catherine de' Medici were miserably wanting in principle, and all efforts at reform under such leaders ended in turmoil and strife. Margaret of Valois, sister of Francis I, had favoured Protestantism, and it soon infected the House of Bourbon (Kings of Navarre), into which she had married, and which claimed the succession to the French throne. Henry II had shamelessly allied himself with Protestant powers abroad, while he burned heretics at home. Heresy spread among the princes of the blood and the highest nobility, who drew their retainers after them. Hence the numberless quarrels and the seven bloody “Wars of Religion” (1562, 1567, 1569, 1573, 1577, 1580, 1587–93). Both sides were cruel, but the barbarities of the Calvinists were especially revolting to Catholic feelings. In battle the Catholics were generally victorious, but in the negotiations for peace the Protestants gained more and more concessions. This was in great measure due to the unprincipled “see-saw” policy of Catherine de' Medici (q. v.), who cynically inclined first to one side, then to another. At last Henry III having assassinated the Catholic leaders of the House of Guise, was himself assassinated, and the throne was claimed by Henry of Navarre. But as he was a Huguenot, the Catholic people of France would not accept him, and the war dragged on, with disastrous effects to French power, until Henry IV became a Catholic in 1593, and was absolved by Pope Clement VIII in 1595. France recovered with wonderful rapidity on the restoration of peace, and it was now that the Catholic revival began in earnest, reaching its highest point in the following reign.

Clement VIII had laid down four principal conditions for absolving King Henry: (1) the heir to the throne must be educated as a Catholic; (2) a convent or monastery was to be established in every province in reparation for the numbers which had been destroyed; (3) Catholic worship must be introduced even into Huguenot towns; (4) the Council of Trent must be proclaimed. The Counter-Reformation in France may be said to have followed the lines here laid down. Thus (1) Louis XIII, the son and heir of

Henry IV, was educated by Père Coton (q. v.), and it was through him that most of the good traditions of the French kings in exercising their ecclesiastical patronage took shape. He was also remarkable, perhaps almost singular, among the old French kings for the purity of his domestic relations. Thus, though he died comparatively young, and though he was completely eclipsed by his omnipotent prime minister Richelieu (q. v.), he was no unfit person to preside over and to protect a movement of religious reform. (2) That reform reached its highest development in the multiplication of religious congregations and orders. In his "Mémoires" Richelieu says of the reign of Louis XIII, "Le vrai siècle de Saint Louis était revenu, qui commença à peupler ce royaume de maisons religieuses". The most distinguished founder and director of such congregations was St. Vincent de Paul, whose religious organizations, beginning in 1617, reached such astonishing extension in the period immediately following. Besides these, there were the foundations or reforms of Saint-Maur (Benedictine); Port-Royal; Brothers of Charity; Congregation of Notre Dame (1607); of the Visitation (1610); the Ursulines (1612); the French Oratory by Cardinal de Berulle. Moreover the Barnabites, Capuchins, and Carmelites developed new provinces, and established many new houses. St. Peter Fourier founded the Canons Regular of St. Saviour. The Jesuits, who had previously had only thirteen colleges, now increased greatly both in numbers and influence, but amid many contradictions and acrimonious controversies with the University and the Parlement of Paris. The Society, however, was effectively supported by the Crown, and at Paris the Collège de Clermont, afterwards Louis-le-Grand, became one of the chief centres of the Counter-Reformation. (3) The re-establishment of Catholicism in the districts left under the power of the Huguenots through the Edict of Nantes (1598) proceeded slowly and was attended with difficulty. But the French monarchs had many reasons for exacting obedience from their often insubordinate Protestant subjects. Eventually La Rochelle, after a celebrated siege, was reduced by force (1628). Though their quasi-independence was now gone, and with it their political importance, the Counter-Reformation did not lead to the abolition of religious liberty for the Huguenots, which was fully confirmed by the Edict of Nîmes in 1629. (4) There was much reluctance to admit the Council of Trent, and an obstinate insistence on the Gallican Liberties which proved eventually a calamity for the French Church.

On the one hand we find great names among the bishops of this period, such as St. Francis of Sales, Cardinals de Berulle and de la Rochefoucauld, Honoré de Laurens, Archbishop of Embrun, Philippe de Cospéan, Bishop of Nantes. Synods were frequent, the education of the priests was much improved. In 1642 St. Vincent of Paul opened the Collège des Bons Enfants, which served as a model for seminaries in many other dioceses; while M. Olier between 1642 and 1645 carried into execution his idea of the Grand Séminaire of Saint Sulpice. The clergy in general reached so high a level that the period may be regarded as one of the brightest in the history of the Gallican Church. On the other hand the great influence of the State and of the nobility in the selection of abbots and bishops, especially for the highest and most wealthy sees, could not but be injurious. We sometimes hear of prelates, like the Cardinal de Retz, who were a shame to their order, and still more of worldly prelates, like the Cardinal Richelieu, who though not proved to be immoral, lowered the ideals of ecclesiastical devotion to the Church, which had given the Counter-Reformation so much of its first vigour. Other weak points in the progress of the Counter-Reformation in France may be studied in the careers of Edmond Richer and of the Abbé de Saint

Cyran, Du Verger de la Hauranne, and in the rise of the Jansenists. (See JANSENISM.)

Spain and Portugal.—Turning now to Spain and Portugal, we see the Counter-Reformation winning here its most signal spiritual victories. There can be no question that the saints of Spain who flourished at this period, the theologians, canonists, and spiritual writers whom it educated, were more remarkable than those produced by any other country, e. g. St. Ignatius, St. Teresa, St. Francis Borgia, St. John of God, St. Peter of Alcántara, St. John of the Cross, St. Francis of Solano, John of Avila, Maldonado, Navarro, Salmeron, Toledo, Gregory of Valencia, Sanchez, Suarez, Juan a Santo Tomaso, Ripalda, Barbosa. These form a galaxy of brilliant names, which in their sphere have never been surpassed. The Spanish and Portuguese colonies in South America and the East Indies were also ennobled by missionaries, whose heroism, self-devotion, and energy were beyond compare. Starting from Las Casas, whose chief achievements, however, belong to an earlier period, mention must be made of the reductions of Paraguay and the first missions to the Philippines, while the majority of the spiritual labourers in India, China, and Japan were also furnished by the Spanish Peninsula. But here again, as in France, it was in great measure the absolutism of the Crown which prevented the triumph of the new movement from being as complete and permanent as it might have been. A series of second-rate sovereigns, an indifferent bureaucratic government, slavery, and a very bad colonial system, brought on the premature decay not only of the temporal, but also of the spiritual, greatness of these countries. Though the Inquisition was established in several European countries, it was more active in Spain than elsewhere.

Italy.—This country had from the first been ready for the Counter-Reformation, and in the papacy and the Council of Trent had, as it were, opened the field to reform. Nowhere did the course of the movement progress more uniformly, or last longer. This is best seen in the papal Curia, where the College of Cardinals continued to be thoroughly representative of the best talent and virtue in the Church and where the Sacred Congregations worked with an efficiency and steadfastness never known before. But in truth, wherever it is possible to look into the religious life of the nation, a remarkably high level of fervour will be recognized. St. Charles Borromeo did not lack followers among the bishops, as the great names of Sirleto, Paleotto, Arigoni, Rusticucci, and many others testify. The detailed accounts that have come down to us of the Jubilees of 1575 and 1600, give us a glimpse of a whole community sensible to, and familiar with, works of piety and charity on a very large scale. Among the new congregations of this period mention should be made of the Scolopi, founded in 1600 by St. Joseph of Calasanza (Calasancius). The most serious set-back was the quarrel of Paul V with Venice, 1606 to 1607, and the constant friction with unsympathetic Spanish rulers of Milan, and of the Two Sicilies, about the immunities of the clergy and the administration of ecclesiastical property. In the former case the pope may have precipitated the quarrel by the vigour with which he took extreme measures. But when the hostilities had commenced the Venetians showed an ominous tendency to ally themselves with the Gallicans and even with English heretics. The quarrel, however, only lasted one year. Such men as Paolo Sarpi and Antonio de Dominis were found but seldom. The "Index Librorum Prohibitorum" of 1564 may appropriately be mentioned here, though it applies to and illustrates all countries.

England.—Turning now to England we find the spirit of the Counter-Reformation suddenly bursting into most vigorous life at the preaching of Blessed Edmund Campion in 1580. The organization of the

mission was due to the magnanimous soul of Cardinal Allen, whose noble sentiment *oportet meliora non expectare sed facere* (Letters, p. 367) conceived as it was in the face of overwhelming persecution, gives us the measure of his lofty spirit. "This Church here", wrote Campion, "shall never fail, so long as priests and pastors shall be found for the sheep, rage man or devil never so much." So it fell out. Allen's seminary, first at Douai, then at Reims, sent forth, year after year, its small quota of missionaries, and the Jesuits, with the lesser seminaries, added a few more. It was an heroic struggle, for no persecution can be heavier than that of the law remorselessly applied in a law-loving country. But the courage of the whole Catholic body (numerically small) rose to the occasion, and if there were many failures, as also some serious quarrels and scandals, there was an astonishingly high average of courage and perseverance. In time their worst persecutors died off, and calmer days ensued, but at the close of the period the Puritans were renewing Elizabeth's cruelties, and priests' blood was flowing almost as fast as ever. This same religious enthusiasm manifested itself during the last decade or so of the period, in the foundation of new convents, orders, etc., on the Continent. The movement roughly corresponded with the similar movement in France. The name of Mary Ward (q. v.) is one of the most noteworthy in England. The mission of the English Jesuits to Maryland (q. v.) in spite of home trials is another manifestation of the same spirit.

Ireland.—During Elizabeth's reign the Irish were almost always engaged in a struggle for life against the ever increasing forces of the English "planters". Sometimes they had their hour of victory, but there never had been time for reform. The process of the Irish martyrs claims about a hundred sufferers in this reign, headed by Dermot O'Hurley, Archbishop of Cashel. There were also many missionaries of note, the earliest of whom was David Wolfe, S. J., sent by Pope Pius V; there were also several heroic bishops like Richard Creagh of Armagh, and many notable Franciscans and Jesuits.

But it was not until the comparative peace under King James that it was possible to fill up the gaps in the episcopate, to found colleges on the Continent, at Paris, Salamanca, Lisbon, Douai, etc. (only one or two had commenced earlier), to organize anew the religious orders (especially the Franciscans). The old life revived in many secluded sanctuaries at home; synods were actually held at Kilkenny, Dublin, and Armagh, and elsewhere literary life was reawakening. (See *FOUR MASTERS*; *WADDING*, *LUKE*.) There were many notable bishops like Peter Lombard, David Rothe, etc. Though the persecution never wholly ceased (Bishop Cornelius O'Devany, 1612, and some sixty others were martyred during this period), the Counter-Reformation made great progress, and there were moments when it seemed about to triumph, as, for example, in 1625 and 1641-49. But at the close of the period Cromwell was to blot out with cruelties worse than those of the Tudors all the good that had been accomplished.

Scotland and Scandinavia.—The Counter-Reformation can hardly be said to have affected Scotland and Scandinavia, so complete had been the victory of Protestantism. Yet while Queen Mary reigned in Scotland there had been renewed signs of life. Fathers de Gouda, Edmund Hay, James Gordon, S. J., Bishop Leslie, and Ninian Winzet are the more notable names of this period. Mention must also be made of John Ogilvie, S. J., martyred in 1615, and the heroic resistance made by many Catholic nobles to the tyranny of the Kirk. There was no local ecclesiastical superior or government, the mission depending directly on the Holy See till 1653; but there were some small Scottish colleges for the secular clergy at Rome, Douai, Paris, and Madrid. In Scandinavia the fall of Catholicism

did not come about in a day or a generation—Father Possevin, S. J., as also several papal nuncios strove hard to avert it—but the Counter-Reformation as a movement did not reach any of its peoples.

The Netherlands.—In the Netherlands every effort was made to exterminate Catholicism in the United Provinces, which had revolted from Spain, contrary to the repeated promises of the Prince of Orange. Still considerable numbers retained their faith—their spiritual needs being cared for by missionaries—though it was impossible to keep up the ancient hierarchy. In Catholic Flanders the revival ran a more or less uniformly prosperous course. Amongst the great prelates and writers of this period were Lindanus, Bishop of Roermond, Justus Lipsius, Leonard Lessius, Cornelius a Lapide, Martin Becan, Thomas Stapleton (an Englishman), etc. But the controversies occasioned by Baius form a less pleasant episode, and the wars at the end of this period were most injurious. Campaigns and battles ruined the country, and the final terms of peace notably reduced its power.

Poland.—In this country there was a long struggle between Catholicism, which was held by the Crown and the people, and Protestantism, which filtered in from the neighbouring Protestant countries and universities, and was affected by many of the faction-loving nobles and the merchants. Catholicism at last gained the decided upper hand, through the efforts of Stanislas Hosius and other bishops, preachers like Scarga, and the Jesuit colleges. King Sigismund II and Wladislaus IV, co-operating with a series of very active and able papal nuncios, ensured the Church's victory; the Protestants, however, still retained much power.

VIII. ECCLESIASTICAL LITERATURE.—The high spirit of this period manifested itself in literature in many characteristic forms. The age was one of the greatest for theology the world has ever known. It suffices to recall the names of Bellarmine, Baronius, Suarez, Vasquez, Petavius, and many others who have been alluded to already. More characteristic still were the writers on personal or interior reform, foremost among them St. Ignatius, whose "Spiritual Exercises", for their profound spiritual and practical wisdom, must be placed in a class apart. Similarly distinguished writers were St. Francis of Sales (declared, in 1877, a Doctor of the Church), St. Teresa, Scupoli, Blossius, Louis of Granada, M. Olier, Alfonso Rodriguez. The teachings of the Church were set forth in the admirable catechisms of Canisius (1555-60) and of the Council of Trent (1566). To the same period belong the revised editions of the Vulgate (1590-98), the Roman Breviary (1568), the Roman Missal (1570), the Roman Martyrology (1582), the Corpus Juris Canonici (1582), the Decretum of Gratian (1582). Father Campion's "Decem Rationes" (1581) and Father Person's "Christian Directory", exercised an extensive influence, doctrinal and religious, on contemporary opinion, which was also deeply affected by the religious poems of Tasso and Calderon, of Southwell and Crashaw. The music of the age also partook in the revival, as is testified by the great name of Palestrina and the pleasant memories of the exercises of the Oratory of St. Philip Neri.

IX. CLOSE OF THE PERIOD AND RETROSPECT.—It has been said before that a period of fervour and zeal comes to an end when that zeal dies down to mediocrity in many countries, or among the large majority of people. This had taken place by the year 1648. In Germany the period is generally said to close in 1618, but elsewhere, i. e. in France and in Ireland, the tide of fervour was still flowing in many places, while in Rome and Italy it was still fairly strong. But this does not prevent our regarding the broad movement as having spent itself. Though the level of education had risen, the diminution in the number of men of genius was marked.

There were but few new foundations; some great missions (Japan, Abyssinia, the Congo) were given up or in full decline, though others still were growing and flourishing. And the reason was that the interior fervour, the enthusiasm had cooled down. The same thing was true also about the Protestants. An age of fair mediocrity had taken the place of the fiercely keen ardour of the previous century. In this there was no wonder. It is the ordinary course of human nature to slacken down after unusual effort, to wax cool after an effervescence of excitement. What was not ordinary, what was on the contrary one of the strangest things in the history of the world, was the display of life and vigour which had been given by the Church just when she seemed to be about to fall behind, and to be beaten out of the field by her rivals. Under such circumstances the Counter-Reformation may be regarded as one of the most striking proofs of the inherent vitality of the Church which Providence has ever vouchsafed, only to be paralleled by her triumph over the persecutions of the Roman Empire, the invasions of the Barbarians, or the subversive forces of the French Revolution.

This wide-spreading subject has occasioned an immense literature, no adequate account of which can be given here, though its classifications may be followed by referring to THE CATHOLIC ENCYCLOPEDIA, where the various persons and subjects mentioned above are treated in detail. Very few writers, however, have studied the broad but subtle influence of ideas, in virtue of which this revival originated, passed from land to land, grew, flourished and failed. No Catholic writer has described the whole movement with adequate fullness. (1) The best contemporary witnesses were the Roman nuncios, whose special business it was to study these subjects and to report upon them. But few of their papers are however yet published, except those relating to Germany. The reports of the nuncios to Germany (*Nunziaturberichte aus Deutschland*) are being edited (since 1892), partly by the Prussian and Austrian Historical Institutes at Rome and partly by the Görres Gesellschaft; DE HINOJOSA, *Los despachos de la diplomacia pontificia en España* (Madrid, 1896); CAUCHIE, *Instructions générales aux nonces de Flandre, 1596-1595; POLLEN, Papal Negotiations with Mary Queen of Scots, 1561-1567* (London, 1901); HÜBNER, *State-Quint* (Paris, 1870); PASTOR, *History of the Popes from the Close of the Middle Ages*; JANSSEN, *History of the German People*, with criticisms of MAURENBRECHER, *Gesch. der Kathol. Reformation* (1880, only one volume published), and counter criticism by DITTRICH in *Jahrbuch der Görres Ges.*, ii, 610. There are several monographs on the details of the progress, first of the Reformation, then of the Counter-Reformation, in particular parts of Germany, e. g. WIEDEMANN, *Gesch. der Reformation und Gegenreformation im Lande unter der Enns* (5 vols., 1879-86); others by GINDELY (Bohemia), KELLER (Westphalia), LOSEBETH (Austria), MAYER (Switzerland), MEYER (Schleswig), etc.; DUHR, *Gesch. der Jesuiten in den Ländern deutscher Zunge* (1907); DROYSSEN, *Gesch. der Gegenreformation* (1903, in ONCKEN, *Allgemeine Geschichte*). French history is the hardest to follow. Consult VICOMTE DE MEAUX, *Luttes religieuses en France* (Paris, 1879), and *La réforme et la politique Française en Europe, jusqu'à la paix de Westphalie* (Paris, 1889); PERRENS, *L'église et l'état en France sous Henri IV* (1873); COUZARD, *Une ambassade à Rome sous Henri IV* (1902); PRAT, *Recherches sur la C. de Jésus du temps du P. Cotton, 1561-1626* (1876); CHENON, *La Cour de Rome et la réforme cath.*, in LAVISSE AND RAMBAUD, *Histoire Générale* (Paris, 1897), V. A more objective treatment of the period is to be desired. For the ecclesiastical writers of the period, see HURTER, *Nomenclator*; SOMMERVOGEL, *Bibl. de la C. de J.* (1890-1900); HILGERS, *Der Index der verbotenen Bücher* (Freiburg, 1904).

J. H. POLLEN.

Court (IN SCRIPTURE).—I. OPEN SPACE.—The word *court*, in the English Bible, corresponds to the Hebrew חצר (*hazér*) enclosed space. The latter is used to designate: (1) an encampment of nomads; (2) a space protected by a stockade or palisades, or by a rampart of stones or earth, hence a village; (3) the court-yards of the houses or temples. In the first sense the Hebrew term is, in the D.V., rendered in various ways: "castle" (Gen., xxv, 16), "cities of the desert" (Is., xlii, 11), "private places" (i. e. places of ambush near the settlements, Ps. ix, 8). The word *village* usually expresses the second meaning (Lev., xxv, 31; Jos., xiii, xv, xvi, etc.; I Par., iv, 33, etc. However, in Ex., viii, 13, *village* is a mistranslation for *court-yard*). In connexion with this sense it may not be amiss to notice that the Hebrew word, either in the form *Hazér*, or in the slightly different

form *Hāzôr*, was not infrequently used in proper names. One of the first encampments of the Hebrews after their departure from the foot of Mount Sinai was at a place called Haseroth (Num., xi, 34). There was a Chanaanite city of Asor near the waters of Merom (Jos., xi, 5; Josephus, Ant. Jud., V, v, 1); this city, taken and burned by Josue (Jos., xi, 10, 11), was allotted to the tribe of Nephtali (Jos., xix, 36), but probably rebuilt by the Chanaanites (Judges, iv, 2), fortified by Solomon (III K., ix, 15), and seized by Theglathphalasar (IV K., xv, 29). This Asor or Aser was, according to the Greek text, the native place of Tobias (Tob., i, 2), and at a short distance from it Jonathan Machabeus defeated the army of Demetrius (I Mach., xi, 67). We read (Jos., xv, 23) of another Asor, called Eseron, in Jos., xv, 3, and Hesron, xv, 25 on the southern frontier of Juda. The same text (xv, 25) even mentions in the same borders a New Asor. A third Asor existed, at least after the Captivity, near Jerusalem, in the territory of Benjamin (II Esd., xi, 33). Among the compound proper names may be mentioned: Hasar Adar (D. V., "the town called Adar", Num., xxxiv, 4); Asergadda (Jos., xv, 27); Hasersusa or Hasarsusim (Jos., xix, 5; I Par., iv, 31); Hasar Enon (D. V., "court of Enan", Ez., xlvii, 17; xlviii, 1; "village of Enan", Num., xxxiv, 9, 10); Hasersual or Hasarsuhal (Jos., xv, 28; xix, 3; II Esd., xi, 27; I Par., iv, 28); Hasar hattikhon (D. V., "the house of Tichon", Ez., xlvii, 16); Baalhasor (II K., xiii, 23); Enhasor (Jos., xiii, 37).

The recent excavations in Syria and Palestine, as well as the modern customs inherited from olden times, give precise indications concerning the house-courts, not seldom alluded to in Holy Writ. When, as occurs frequently, the house does not open directly on the street, there is a first court-yard extending between the outer wall and the building. From this outer court an entrance doorway leads into the inner court, around which the various apartments are located. The inner court sometimes contains in the centre a well (II K., xvii, 18) or a fountain surrounded with fine trees; the walls, porches, and verandas are usually covered with vines and creepers, and an awning may be stretched overhead to keep off the sun. From the narration of the Passion we may infer that such was the arrangement in the high-priest's house. While Jesus was being tried in one of the halls, the servants and ministers had gathered around a fire of coals in the inner court; thither Peter came to warm himself, and there he denied his Master. From the judgment-hall, Jesus turning (Luke, xxii, 61) could easily look outside (Matt., xxvi, 69) on Peter. Then the latter, smitten with remorse, betook himself to the outer court (Mark, xiv, 68; D. V., "before the court", a literal translation of the awkward Latin rendering: *ante atrium*), there to weep freely. Royal residences displayed, on a larger scale and in a more elaborate way, a similar general arrangement. The Bible speaks of the courts of the palaces of Solomon (III K., vii, 9, etc.), Ezechias (IV K., xx, 4), and Sedecias (Jer., xxxii, 2, 12; xxxiii, 1; xxxvi, 20; xxxviii, 6), as well as those of Assuerus at Susan (Esth., ii, 11; iv, 11; v, 2; etc.) and of Seleucus at Tyre (II Mach., iv, 46).

In connexion with sacred places, courts are most frequently mentioned. We learn from Ex., xxxviii, 9 sq. that the place of meeting in the wilderness was a court, a hundred cubits long and fifty cubits wide, encompassed by pillars supporting hangings of fine twisted linen. The sacred precincts contained, besides the tabernacle and its furniture, the altar of holocausts and the brazen laver (Ex., xl, 6, 7). Still more famous are Solomon's constructions. All the buildings erected by this prince on Mount Sion were surrounded by a wall encompassing what may be styled "the greater court". Southernmost in the lowest court were the public halls, namely: the "house of the

forest of Libanus", the "Porch of pillars", and the throne-hall; farther in from the throne-hall (III K., vii, 8, Heb. text) and on a higher level another court, called "middle court", IV K., xx, 4 (Heb.; D. V., "the middle of the court"), contained the king's mansion and the house built for Pharaoh's daughter (III K., vii, 8). North of the middle court, on the top of the hill, was the "inner court" (III K., vi, 36), also called "upper court" (Jer., xxxvi, 10) and "court of the priests" (II Par., iv, 9). No information is supplied by the Sacred Text about the extent and form of this latter court. Judging, however, from the second and third temples, it would seem to have been rectangular; the rabbis say that it measured 135 (N. to S.) by 187 (E. to W.) cubits; but these figures, obtained from the traditions concerning the second temple, can claim no certainty. The floor of the inner court was paved with stones (II Par., vii, 3; IV K., xvi, 17, has no reference to this point; *pavement* in the English Bibles ought to be understood here: stone basement). The descriptions of III K. and II Par. mention no gates, but some must have existed; one, very likely, on the south side, connecting the temple court with the middle court, and others probably on the north and east sides for the accommodation of the people. At any rate, that some time before the Exile there were gates is evidenced by such passages as Jer., xxxviii, 14; IV K., xxv, 18 (cf. Jer., lii, 24). An eastern gate is said (I Par., ix, 18) to have existed; it was called "the king's gate". To Joatham is attributed (IV K., xv, 35) the construction of "the highest gate of the house of the Lord", most probably the same as the "upper gate of Benjamin" of Jer., xx, 2, or the "new gate" of Jer., xxvi, 10, xxxvi, 10, and perhaps also the "gate of the altar" of Ez., viii, 5; all these passages point out a gate on the north side. Within the inner court were the temple proper, the altar of holocausts, the brazen sea, and lavers. All the walls encircling these various courts "were made of three rows of hewn stones and one row of cedar beams" (III K., vii, 12). Modern archaeologists are inclined to attribute to the son of David these courses of huge stones which may be seen in various places of the walls of the Haram esh-Sherif.

We possess little information concerning the second temple; but there are reasons to believe that, with the exception of the temple-house, which was certainly smaller, the arrangement and dimensions were about the same as those of Solomon's temple. In Herod's time the temple area was extended towards the north, according to some; towards the south, in the opinion of others, so that the outer court had probably the same form and dimensions as the actual Haram. This court was surrounded by a high wall covered with spikes. Along the walls on the inside, north, west, and east (Solomon's Porch), were double porticoes, and on the south a triple portico, the "royal porch". Eight gates gave access from the outside: four on the west, two on the south (Huldah gates), one on the east, and one on the north (Tadhi gate); between the gates, along the outer walls, halls and chambers had been erected, among which we may mention the Beth-Din, or meeting-place of the Sanhedrin. Within this outer court, towards the north, a wall forty cubits high, limited the inner court. All around this wall extended a terrace (the *חיל*, *hel*) ten cubits wide and reached by a flight of fourteen steps. A stone parapet, about a cubit high, encircled the inner edge of the *חיל*, to which thirteen openings gave access; on the parapets tablets warned, under penalty of death, the non-Jews against trespassing. From the *חיל* nine gates and stairways led the Israelites into the inner courts. On the inside, along the walls, twenty-five cubits high (the ground was some fifteen cubits higher than the court of the Gentiles), ran porticoes, and cells for sundry purposes had been erected between the gates. The walls of the inner

court encompassed two distinct spaces: the eastern part, called "the women's court", which, among other things, contained the boxes for the various collections; thence a gate, preceded by a flight of fifteen steps, led to the western part, or "men's court". There a balustrade separated the "priests' court", containing the temple proper and the altar of holocausts and all their appurtenances, from the place assigned to the lay people.

II. ATTENDANCE OF A KING.—In the English Bible the word *court* is occasionally used also to mean the retinue of a person of high rank and authority (Gen., xlv, 16; IV K., vii, 9; Esth., xi, 3). It then stands generally for the Hebrew word *בית*, "house", the only word which, in the sacred language, might in some instances, receive the sense with which we are now concerned. The Latin Bible in such places usually has the noun *aula*, and once in the N. T. *exercitus* (Luke, xxiii, 11). Although mention of a court is seldom made in connexion with the kings of Israel and Juda, they nevertheless naturally had their court, consisting, besides their family and body-guard, of counsellors, secretaries, recorders, chancellors, ministers, superintendents of public works, governors of the house, even the high dignitaries of the temple. Glowing descriptions are given of the splendour of the court of such kings as David (II K., xxiii; I Par., xi) and Solomon (Cant., iii, 7, 8); they furnished to later Jewish writers the colours wherewith to describe the glory of the palace of God. For Yahweh is king, not only over Israel, but over the whole world, and as becomes a king, he must have his court. This is constituted by the innumerable host of the angels, ever ready to do his will. Several (seven, in the received text) unceasingly stand in His presence; legions of seraphim surround his throne, as a body-guard; thousands of heavenly spirits form his council (Tob., xii, 15; Is., vi, 2, 6; Pss. lxxxii, lxxxix). Ecclesiastical writers, developing this idea, oftentimes describe the heavenly court, made up not only of the angels, but also of the host of all those blessed souls who enjoy the beatific vision. On the other hand the courts of the Temple have sometimes been regarded by mystic writers as a figure of the souls striving for Christian perfection: the brazen laver represents the purifying penance, whereas the altar of holocausts signifies Christian mortification and its necessary sacrifices.

CHARLES L. SOUVAY.

Courtenay, WILLIAM, Archbishop of Canterbury, b. in the parish of St. Martin's, Exeter, England, c. 1342; d. at Maidstone, 31 July, 1396; was the son of Hugh Courtenay, Earl of Devon, and Margaret, daughter of Humphrey Bohun, Earl of Hereford. He studied at Oxford, where he took the degree of D.C.L. In 1367 he was elected chancellor of the university. On this occasion the university successfully resisted the Bishop of Lincoln's claim to the right of confirming its choice, and later Courtenay obtained from Urban V a Bull declaring a chancellor's election valid without the confirmation of the diocesan. After holding prebends in the churches of Exeter, Wells, and York, he was elected Bishop of Hereford and consecrated, 17 March, 1370. As bishop his support was given to the Prince of Wales and Bishop Wykeham against the anti-clerical movement led by John of Gaunt, Duke of Lancaster, and later his efforts to suppress the Lollards were unceasing. In the Convocation of 1373 he strongly opposed the granting of a subsidy to the king until the latter should try to remedy the evils then afflicting the Church. Courtenay was

transferred to the See of London, 12 Sept., 1375. In 1377 Pope Gregory XI issued a Bull of excommunication against the Florentines, and Courtenay published it at Paul's Cross. The result was that the Florentines in London were attacked by the populace; the magistrates had to interfere, and the king extended his protection to the foreigners. Courtenay was accused of violating the law by publishing the Bull. When called upon to retract what he had published, his answer was made through an official, who declared from the pulpit that the bishop's words had been misunderstood, and there the matter ended. When the Convocation was summoned in 1377, the archbishop, in the interests of John of Gaunt, omitted to summon the Bishop of Winchester. Courtenay protested against this and succeeded in getting Wykeham's rights recognized. Then followed his attempts to repress the Lollards, and Wyclif was cited to appear before the archbishop at St. Paul's. Wyclif came accompanied by John of Gaunt, who insisted upon a seat being provided for the accused; an altercation ensued which resulted in the court breaking up in confusion. Courtenay's authority alone restrained the citizens from using violence towards Lancaster. Again, in obedience to the pope, 18 Dec., he summoned Wyclif, but nothing came of the summons, and the Lollards continued to increase in numbers and influence. Some think that about this time the pope offered to create Courtenay a cardinal; whether this was so or not, he was never raised to that dignity, but on 30 July, 1381, he became Archbishop of Canterbury. Then followed his appointment to the chancellorship of the kingdom 10 Aug., 1382, an office which he shortly afterwards resigned (18 Nov., 1382).

Urged by Parliament he again turned his attention to the Lollards, calling a council which condemned their heretical opinions. Rigge, the Chancellor of Oxford and a leading Lollard, retracted and sued for pardon on his knees, but on his return to the university continued as before. The Oxford Lollards were finally brought to submission on 18 Nov., when the recantation of their leaders was received at St. Frideswide's. The archbishop then obtained a statute commanding sheriffs and other officers of the king to imprison heretics when certified as such by a bishop. Though this law was repealed the next year, he still had the royal sanction allowing bishops to detain heretics in their own prisons. After the subjugation of Oxford he turned to Leicester (1389), placed the town under an interdict, and in the end received the recantation of the leaders. About 1382 he began a general visitation of his province and met with much opposition; his interference was appealed against by the Bishops of Exeter and Salisbury, though both finally submitted. The Benedictine abbots also organized a strong opposition to his proposed visitation of Gloucester College, Oxford (1389); on his arrival he was treated with due respect, but they so firmly refused to acknowledge his right that he abandoned his design. Though a strong defender of the rights of the Church in England, he was always true and loyal to the pope. He so fearlessly condemned the extravagance of the king that he once (1385) had to take refuge in Devonshire to escape the royal anger. When the relations between king and Parliament became so strained as almost to lead to war, it was Courtenay who acted as mediator and averted the danger. He was first buried at Maidstone, where he had founded the College of St. Mary and All Saints; afterwards his body was removed to Canterbury and buried, in the king's presence, at the feet of the Black Prince, near the shrine of St. Thomas.

G. E. HIND.

Courts, ECCLESIASTICAL.—I. JUDICIAL POWER IN THE CHURCH.—In instituting the Church as a perfect society, distinct from the civil power and entirely independent of it, Christ gave her legislative, judicial, and executive power to be exercised over her members without any interference on the part of civil society. It does not fall within our scope to prove that the Church is a perfect society, consequently endowed with the above-mentioned power. If one admits the Divine institution of the Church, and the authenticity and authority of the Gospels, he must acknowledge that Christ so constituted His Church as to enable her rulers to make laws and regulations for the faithful conducive to the attainment of eternal happiness. Moreover, as John XXII (1316-34) wisely remarks: "It would be folly to make laws unless there were some one to enforce them" (Cap. un. de Judiciis, II, 1, in Extravag. Comm.). It is evident, therefore, that Christ in conferring legislative power upon the Church also gave judicial and coercive power. In proof of this we have, besides theological arguments, the practice of the Church which explicitly claimed such power, as well in the beginning (II Cor., x, 8; xiii, 2 sqq., etc.) as during the subsequent centuries of her existence; and, moreover, made frequent use of it. Suffice it to recall the institution of canonical penances, the constitutions and laws of so many pontiffs and councils, containing not only positive enactments, but also sanctions to be incurred *ipso facto* by the rebellious and obstinate, or to be inflicted upon them at the discretion of ecclesiastical superiors.

Now the infliction of punishment certainly presupposes evidence of the crime, since, according to the natural law, no one should be condemned until his guilt has been established. Hence the Church, in making use of her powers of legislation and coercion, must have also exercised judicial power. It is, moreover, historically evident that the Church often exercised these powers either through the Roman pontiff alone, by the agency of his delegates, or through councils, individual bishops, or other judges, ordinary or delegated. St. Paul plainly refers to a perfect judicial procedure when he cautions his disciple Timothy (I Tim., v, 19) not to receive an accusation against a priest except in the presence of two or three witnesses. In the next century, Marcion, after being expelled from the clergy, vainly appealed to the Apostolic See for restoration to his office. In the trial, degradation, and excommunication of Paul of Samosata by the Council of Antioch (c. 268) we meet with a formal ecclesiastical trial. The Council of Elvira (c. 300) threatens with excommunication every accuser of a bishop, a priest, or a deacon who fails to prove his charge. The Third Council of Carthage (397) discusses regulations regarding appeals, and the Fourth Council of Carthage (398) prescribes the manner in which bishops are to exercise judicial authority. Finally, in the Apostolic Constitutions, which certainly are representative of the ancient practice of the Church, we find that certain days are set for conducting trials; the mode of procedure and other details are also clearly set forth. For later periods evidence abounds.

II. THE HISTORICAL DEVELOPMENT OF THIS POWER.—In the early centuries, when the Christians were still few in number; when their new faith and new moral life constrained the followers of Christ to carry out all His precepts (especially the one by which He wished them to be distinguished from all other men in this period); and when there existed, generally, among the faithful one heart and one soul,

Monumenta Academica, ed. ANSTEE (London, 1868), I, 229; *Fasciculi Zizaniorum*, ed. SHIRLEY (London, 1858), xcix, 272-5, 304-9, 356, 493; Hook, *Lives of Archbishops of Canterbury* (London, 1860-73), IV, 315-98; STRUBB, *Constitutional History of England* (London, 1857-80), II, 428-38, 460-88; III, 330, 356; FOXE, *Acts and Monuments* (London, 1684) I, 495-

it was customary, in case a controversy arose, to appear before the bishop and accept his decision. This was in accordance with the grave admonition of St. Paul (I Cor., vi, 1), who urged the faithful not to appear as litigants before the civil courts. Though in such cases the bishops often assumed the rôle of friendly arbiters rather than strict judges, we should not infer that they never conducted a strict trial. Tertullian (Apol., xxxix) furnishes us with information on this point in these words addressed to the pagans: "*Ibidem* [in ecclesiâ] etiam exhortationes castigationes et *censura* divina: nam et *judicatur* magno cum pondere, ut apud certos de *Dei* conspectu", i. e. the Church is wont to warn and punish, is a Divinely appointed censor, whose weighty decisions are accepted as rendered in the presence of God. Many similar utterances from the Fathers and the councils could easily be cited. It was, of course, impossible for the ecclesiastical magistrates (the bishops) to make use at that time of the legal solemnities introduced at a later period. Though rather summary, the judicial proceedings of the primitive episcopal tribunals were trials in the strict sense of the word. In the work of Bishop Fessler concerning the early history of canonical procedure (*Der kanonische Process . . . in der vorjustinianischen Periode*, Vienna, 1860) may be found details of interest concerning the ecclesiastical trials of Montanus, Origen, Fortunatus, Paul of Samosata, Athanasius, and others.

When the Christians obtained control of the civil power of Rome, the reasons that moved St. Paul to persuade or command the faithful to avoid the civil tribunals were, of course, no longer pertinent. Gradually the Church allowed the faithful to submit their differences either to ecclesiastical or to civil tribunals. From the beginning of the new era the bishops shared with the secular magistrates the power of settling the disputes of the faithful. Constantine the Great published two constitutions (321, 331) wherein he not only permits laymen to have their cases tried before their bishops, but also decrees that all cases which until then were wont to be tried by the prætorian, i. e. by the civil, law should, when once settled before the episcopal courts, be considered as finally adjudicated. It was rightly established, however, that not all cases could be submitted to the civil courts, nor could all persons have recourse to them. To decide a controversy the judge must first have jurisdiction over the matters in question and the parties engaged in the controversy. A private individual, for instance, could not hand down a decision, nor could he compel others to abide by it. In the case of a secular judge, his jurisdiction comes from the civil authority. In purely spiritual matters the latter is powerless, since God has committed them exclusively to the Church. In this domain the civil power has neither legislative nor judicial authority. Whatever, therefore, concerns the Faith, Divine worship, the sacraments, or ecclesiastical discipline is foreign to the civil order. With regard to such matters the Church has ever asserted her exclusive judicial authority [c. 1, dist. 96; c. 8, de arbitriis, X. (I, 43); c. 2, de iudiciis, X. (II, 1)]. This solemn contention of the ecclesiastical power was recognized and confirmed by the Roman emperors in their civil constitutions [Cod. Theod., de religione (XVI, 2), an. 399; VII, De episcop. audientiâ, C. (I, 4)]. Likewise, not all persons are to be judged by secular courts. The Church could not permit her clergy to be judged by laymen; it would be utterly unbecoming for persons of superior dignity to submit themselves to their inferiors for judgment. The clergy, therefore, were exempt from civil jurisdiction, and this ancient rule was sanctioned by custom and confirmed by written laws. On this point the Church has always taken a firm stand; concessions have been

wrung from her only where greater evils were to be avoided. Thus, in Christian antiquity, a Council of Aquileia condemned the bishop, Palladius, for demanding a civil trial, and a Council of Mileve decreed that clerics who strive to bring their lawsuits or disputes before secular judges should be deprived of their clerical dignity and removed from their offices. Innocent III reprehended the Archbishop of Pisa [c. 12, De foro competenti, X. (II, 2)] for maintaining that at least in temporal matters a cleric could renounce his right of exemption and appear before a secular court. Such action, said Innocent, was unlawful even when the conflicting parties agreed to submit the matter to civil magistrates. The ecclesiastical exemption was not a personal privilege; it belonged to the entire ecclesiastical body and could not be renounced by individuals.

Matters purely spiritual, as explained above, fall within the exclusive jurisdiction of ecclesiastical law. In addition to these there were in the past, and are still, cases in which the natural and spiritual elements are so conjoined, as Lega remarks in his excellent work "*De iudiciis ecclesiasticis*", that they take on juridically another nature and give rise to different rights. To make this clearer, the author, in addition to the example drawn from certain effects of matrimony, borrows from the ancient canonists the illustration of a contract entered into by lay persons and confirmed by oath. Here, to the obligation of justice is added that of religion, and we easily recognize a twofold juridical element, bringing the matter in question, at least as far as the value or execution of the contract is concerned, within the ecclesiastical as well as the civil domain. Were it a question only of the value of the oath, the matter would, of course, be a purely spiritual one. There is another order of cases in which the issues are purely temporal. Over these the Church never claimed an essential right to the exclusion of civil power. Even in the Middle Ages she recognized the principle that ecclesiastical judges are incompetent in such cases unless urgent necessity or custom should require otherwise. If, in medieval times, the Church exercised jurisdiction in regard to the temporal concerns of orphans, widows, or other persons of unfortunate condition, no equitable mind will see therein a usurpation of civil jurisdiction on the part of the ecclesiastical authorities. The true and adequate explanation lies in the peculiar necessities of the age, the deficient administration of justice, and the undue power exercised by the rich and mighty. Rather does it redound to the honour of the Church that she then assumed the defence of the poor against the wealthy and powerful, and came to the aid of those who were deprived of all human help. It must also be mentioned that in medieval and later times ecclesiastical magistrates were often vested with civil power legitimately acquired, and exercised it, not as ecclesiastics, but as civil magistrates.

III. THE SUBJECT OF JUDICIAL POWER IN THE CHURCH.—Since the judicial power flows from the legislative, it is clear that the former resides primarily and chiefly in those who possess the latter. The common welfare, evidently, does not require that every person endowed with legislative power in a social organization should therefore enjoy the fullness of such power; so also it is obvious that not every one possessed of judicial power in a society has at once the right to exercise it upon all members of that society. It was this exigency of the common welfare that made it necessary to fix the limits of the jurisdiction of magistrates even in civil societies. We know, for instance, that in primitive Roman society there was in every district one magistrate who was supreme, and who had undivided jurisdiction in the province allotted to him, but none beyond its limits [Bks. 1 and 9, De off. proc., D. (I, 16)]. This first limitation of the

magistrate's power was based on territory; later on there followed another limitation based on the importance, or "quantity", of the case or controversy. Hence, in later Roman law the plaintiff had to inquire not only what territory came under the jurisdiction of his judge, but also what "quantity", or gravity of matter [Bk. 19 sq., 1, De Jurisdic., D. (II, 1)]. In later times these principles have been retained and even partially increased and extended by our civil codes; they serve even yet to justify many special courts, e. g. courts for aqueducts, for commercial disputes, etc. These various arrangements are not altogether foreign to ecclesiastical law; indeed, in many cases it has adopted them outright. Thus, it is not only by Divine disposition that the Roman pontiff is the supreme judge in the Universal Church—as he is also its sovereign legislator—and that the bishops are the law-givers and judges in their respective dioceses; but it is also by ecclesiastical ruling that certain cases are reserved to the Roman pontiff. These were first called by Innocent I (401–17), in his epistle to Victorius of Rouen, *causæ majores* (greater cases); other cases are reserved to the bishops, to the exclusion of inferior magistrates and judges; and others, finally, to the various Roman Congregations. It was likewise by ecclesiastical law that in former times certain matters were reserved to provincial councils, particularly in the African Church (Concil. Hipponense, 393); this custom, however, was never sanctioned by a general law.

Many facts go to prove that this limitation of ecclesiastical authority, a necessary consequence of the primacy conferred by Christ on Peter and his successors, was introduced in the earliest ages of the Church; a brief mention of some will suffice. About the year 96, we find the celebrated letter of the Corinthians to St. Clement of Rome, of which Eusebius makes mention (Hist. eccl., III, xv), and which he calls "in every respect excellent and praiseworthy". This letter disclosed to St. Clement the causes of the discords in Corinth and asked for a remedy. In the second century the Montanists brought their grievances before the Roman pontiff; deceived at first, he restored them to their standing in the Church, but later condemned them. Many other similar occurrences could be enumerated; let it suffice to mention the letter of Marcellus, Bishop of Ancyra, in which he clears himself before Pope Julius I (337–52) and makes profession of his faith; also the letter of the Arian Bishops, Valens and Ursacius, in which they retract their accusations against Athanasius and sue for pardon. In ecclesiastical law, cases affecting civil rulers or cardinals, also criminal cases of bishops, are still reserved exclusively to the Roman pontiff. In the Church, however, judicial authority is vested (by Divine right) not only in the Roman pontiff and the bishops, but in others also, though in a more or less restricted form. In former times, there was the provincial council, with judicial authority in not a few cases, also the court of the archdeacon, distinct from that of the bishop, and with these the courts of inferior judges, whose authority was based on custom or, more generally, on privilege. In place of these earlier judges we have now the vicars-general (q. v.), who, however, constitute but one court with their bishop and judge-delegates, representative either of bishops or, more particularly, of the sovereign pontiff.

IV. CLASSIFICATION OF ECCLESIASTICAL COURTS.—In every society courts may be classified in two ways, according to the twofold manner in which justice may be administered. Thus it may happen that in a certain society the administration of justice is so established that a controversy is not ended by one sentence, but several appeals may be made. The defendant, if unwilling to abide by the decision

of the first tribunal, may then appeal from a lower to a higher court, and this appeal may be renewed as often as the law allows it; thus there may be two, three, or even more courts wherein a case may be tried. It may also happen that any given controversy must be settled by one judicial sentence, even though diverse tribunals exist, because the cases, on account of their "quantity"—to use the terminology of the Roman law—i. e. on account of their varying importance, come under the cognizance of various judges and tribunals. In this case separate tribunals are so arranged that there exists a highest and a lowest, between which there may be a third or even several other tribunals. Or again a mixed system may prevail, in which are found both systems of regulating the administration of justice.

In the Church it is precisely this last intermediate system that prevails. For, as we have already seen, there are certain *causæ majores* reserved to the judgment of the Roman pontiff exclusively; and as he has no superior there can be no higher court of appeal, nor, indeed, is it becoming that his judgment be reconsidered by any other, much less that it be revised. In these cases, therefore, there can be but one court of judgment. Nevertheless it may be well to remark here that, as the Roman pontiff does not generally judge personally, but through delegates who give sentence in his name, he usually allows a hearing of the case by different judges, if it should happen that one of the contending parties, not satisfied with the first judgment, requests this revision from the pontiff himself. All other ecclesiastical cases, however, in which inferior courts give judgment admit of an appeal to higher ecclesiastical authority, and one may appeal not once only, but twice. Hence in ecclesiastical law there are, generally speaking, three courts of judgment, neither more nor less. This assertion admits of one exception, viz., when there is question of the validity of a marriage, or of similarly important matters, appeal to a fourth court is then at times admitted. In the twelfth and thirteenth centuries, however, vicars-general succeeded the archdeacons, and after the Council of Trent, during the seventeenth and eighteenth centuries, the archdeacons' courts ceased to exist. Consequently the first ecclesiastical court is now regularly that of the bishop or of his vicar-general. The second court is that of the metropolitan. But if it should happen that the bishop who gave judgment in the first court is himself the metropolitan or an exempt bishop, or if the case was, in the first instance, brought before a provincial council, then the tribunal of first appeal is none other than the tribunal of second and last appeal, and this is always and for all parties the tribunal of the Roman pontiff. In this case, therefore, only two appeals are possible. This is the provision made by the common law, though sometimes an approved custom—more frequently an express privilege—provides differently. Thus, for instance, in the Austro-Hungarian Empire the ecclesiastical court of Prague is the court of appeal for the Archdioceses of Vienna and Salzburg; for Prague it is Olmütz; for Olmütz, Vienna. So, too, in Latin America, if the first two sentences do not agree, an appeal may be taken in the third instance to the bishop who resides nearest to the one who first gave judgment. This was decreed by Leo XIII in his Encyclical "Trans Oceanum", 18 April, 1897. It must be borne in mind, however, that, owing to the special pre-eminence of the Roman pontiff, an appeal may always be made from the tribunal of an inferior judge to his tribunal immediately, thus passing over the intermediate courts, to which, according to the general rules, the appeal must otherwise be directed.

What has been said above applies to the ecclesiastical discipline now in force. It must be

added that in the Eastern Church the title of metropolitan is generally, though not always, a merely honorary title, the metropolitan power being almost entirely in the hands of the patriarch himself; it is consequently to him that an appeal lies from the judgment of the bishop. With regard to the ancient ecclesiastical discipline it is worthy of remark that in former times an appeal was allowed from the tribunal of the metropolitan to that of the primate or patriarch. Actually, with exception of the Primate of Hungary in certain cases, this primate's court no longer exists. Where appeals are possible, the courts are said to be subordinate one to the other, and are so in fact; hence, for instance, a metropolitan court can, by a genuine order or mandate, require such data from the inferior court as may seem to it necessary for a proper cognizance of the case. Here we must carefully note the difference which oftentimes exists between subordinate courts in ecclesiastical and in civil law. In the latter the superior court frequently exercises a certain, true, disciplinary power over the inferior court, either by instituting an inquiry into its proceedings, or by delegating a substitute, if the inferior judge should be prevented from exercising his office or should be found incapable. All this is foreign to ecclesiastical law, in which the courts of suffragan sees are subject to the metropolitan court in such matters only as regard the appeal actually before the metropolitan. In all other matters the episcopal courts are quite independent of metropolitan authority. Other courts, however, whether metropolitan or episcopal, are in no way subordinate, but are entirely independent of one another, though this does not relieve them from the obligation of mutual assistance. Thus it may often happen that the administration of justice in one locality necessitates proceedings in the territory of another judge. Should this happen, the court which has the case in hand may request the court of the locality in which some proceeding necessary to the administration of justice or to a proper cognizance of the case must be instituted (e. g. the examination of witnesses or the execution of a summons) to see to its performance. And the court to which such a petition has been addressed through requisitional letters by another court is obliged to render this *subsidium iuris*, or legal assistance, unless the request be evidently unlawful. But the obligation arises, not from the authority of the court requesting assistance, but from the authority of the common law, which so ordains. This is evidently just, for all such courts are courts of one ecclesiastical society, the one Catholic Church, whose welfare demands that in it justice be rightly administered.

V. CONSTITUTION OF THE COURTS.—In ecclesiastical law the Roman pontiff and the bishops, as also the metropolitans in cases of appeal, likewise all those who in their own right (*ordinario iure*) exercise judicial power in the Church, may pronounce sentence personally in all cases brought before their tribunal. They may also, if they think fit, entrust the hearing of the case to judges delegated by them; and they may thus delegate, not only one person, but also several, either—to use the canonical terms—in *solidum* or *collegialiter*. If they were delegated in *solidum*, or severally, then he who first took the case in hand must examine it and pronounce judgment. But if they are to proceed *collegialiter*, we have a true college of judges, in which, therefore, everything is to be observed which the law prescribes and the nature of things demands in the exercise of collegiate acts. We have many examples, both in ancient and modern times, of judges who had thus to proceed as a college. We have already made mention of the ancient discipline that prevailed, principally in the African Church, and according to which certain

graver cases were to be referred to provincial councils. This regulation was retained, partially at least, by the Council of Trent. It decreed that the more important criminal cases of bishops should be reserved to the pope, whilst those of lesser importance are left to the cognizance of provincial councils. This is also the origin of the celebrated tribunal called the *Rota Romana*.

The Roman congregations themselves are simply collegiate courts whenever they exercise judicial authority. In not a few dioceses the so-called *Officialatus* (*Officialités*) exist, which also administer justice as a college. Gregory XVI erected in the various dioceses of the States of the Church courts for criminal cases which were truly collegiate bodies and proceeded as such; though herein the pope acted, not as pope, but as temporal sovereign. Hence this case does not properly belong to canon law. In these courts the number of judges is not definitely fixed, though there are usually, besides the president, two or four judges, seldom more than six. Therefore it is generally the rule that the number of judges be uneven, as the case might otherwise often be left undecided. A majority of votes decides, especially in giving sentence; if the votes for both sides are equal the case (*per se*) remains undecided. In this event, however, it is often provided that the vote of the president shall be decisive, or that the case shall be decided in favour of the defendant and not of the plaintiff, unless the case be a privileged one, v. g., if the validity of a marriage is in question. What the powers of the president are in a college of judges must be gathered from the decree which established the court in question, or also from the latter's practice and tradition. It is to be noted that sometimes a court resembles a college of judges without being such in fact. Thus a bishop can order his vicar-general in giving judgment in certain cases, particularly in those of greater moment, to appoint assessors, whose counsel he must hear before pronouncing sentence. In this case it is evident that there is no real college of judges, as only the vicar-general can pronounce sentence; still the case must be examined by the assessors, who can and ought to manifest to the judge all which they think may conduce to a just sentence.

The Judge.—It is evident that in every trial the judge has the leading rôle, whether this judge be an individual or a college, and his obligation is to apply the law between the two contending parties, or to pronounce what is conformable to established right and equity; and as his office is to see to the execution of the law, he has the right to require from the contending parties reverence and obedience. For this same reason he is empowered to do whatever is necessary to make his jurisdiction effective, and therefore to use moderate coercion towards obtaining the same end. This coercion can be exercised not only against the contending parties, if they are disobedient, but also against others who have an accessory part in the trial, e. g. the procurators and advocates. In his capacity as a public person the judge is worthy of public confidence; hence the presumption is in his favour that the legal formalities have been properly observed in his judicial proceedings, and that what he testifies as judge is true. Canon law commonly requires that in ecclesiastical tribunals there shall be other persons present besides the judge: thus there are always a notary and a defender of the marriage bond in matrimonial cases, and a fiscal promoter (*promotor fiscalis*) in the great majority of criminal cases. Ordinarily other persons are admitted, not by mandate, but through permission of the law, for the rapid and better administration of justice, v. g. assessors and auditors.

The Notary (actuarius), whose presence was

decreed by Innocent III in the Fourth Lateran Council [cap. 38, c. 11 de probat., X. (II 19)], is a public person whose obligation it is to transcribe with fidelity the acts of the case. As this office is merely that of a clerk, and does not include any judicial power or jurisdiction, it may be held in ecclesiastical courts even by a layman. Still, clerics are not excluded from this office, nor does cap. 8, "Ne clerici vel monachi", etc., X. (III, 50) contradict this, as there it is a question only of clerics who hold such office for the sake of pecuniary profit; nor is the contrary affirmation of Fagnani of any weight, as it is not supported by conclusive reasons. This is shown also by the actual practice of ecclesiastical courts. It is sufficient here to call to mind the notaries of ancient times who wrote down the acts of the martyrs, those who were employed in the councils, and still more the class of the prothonotaries, who have recently been divided by Pius X (21 Feb., 1905) into four classes, and rank among the highest prelates.

The Auditor is sometimes a delegated judge, to whom is entrusted a certain amount of jurisdiction, v. g. the formal opening of a case (*contestatio litis*); in the practice of the present day he would be called an instructing judge. He may also be an ordinary official to whom has been assigned, but without any jurisdiction, a part of the proceedings, e. g. the simple examination of the witnesses; he is then properly called auditor. It follows from all this that the duties and powers of the auditor must be deduced from the mandate itself. It was customary to have auditors even in the Middle Ages, especially in the Roman Curia, and there still remains some vestige of this office in the auditors of the *Rota Romana*, who after the time of Gregory IX formed a special college (Durandus, in Speculum).

Assessor.—The title of assessor has also a twofold meaning, i. e., he may be a judge in a collegiate tribunal (Dig. I, 22; Cod. I, 51), or one who assists the presiding judge in interpreting the law. In the latter meaning assessors are simply advisers of the judge, who aid him to obtain a full knowledge of the case and by their advice help him to decide justly.

There are some other inferior ministers of the judge in an ecclesiastical court, whose names it will be sufficient to mention, e. g. the *apparitores*, *tabelliones*, *cursores* (sheriffs, reporters, messengers), etc., according to the different customs of the courts.

Fiscal Promoter.—After having spoken of the judges and of those who assist them in the administration of justice in the different courts, it is necessary to say a few words on the fiscal promoter (*promotor fiscalis*), since he plays an important part, especially in criminal cases. Although not on the side of the judge, as, by public authority, he rather takes the place of accuser or public prosecutor, still he contributes greatly to the end for which the courts were established. The fiscal promoter (*fiscus*, public treasury)—though perhaps, if we attend to the most important part of his office, a better title would be "promoter of justice"—is a person who, constituted by ecclesiastical authority, exercises in the ecclesiastical courts and in his own name the office of a public prosecutor, especially in criminal cases (Instr. S. C. Episc. et Reg., 11 Jan., 1880, art. 13). If we wish to include in the definition all that is comprehended in his office, he might be defined as a public person legitimately appointed to defend the rights of his church, especially in court. Pèriès, in his article "Le procureur fiscal ou promoteur" (Revue des sciences ecclésiastiques, April, 1897), rightly says that the whole office of the fiscal promoter may be summed up in three points: solicitude for the observance of discipline, particularly among the clergy; attendance at the processes of beatification and canonization in episcopal courts; and defence of the validity of mar-

riage and of religious profession. All these functions, it is true, are not always carried out by one and the same person; they are all, however, included in the full idea of the *promotor fiscalis*, for it is this official's duty to defend the rights of the Church, the decency of Divine service, the dignity of the clergy, the holiness of matrimony, and perseverance in the perfect state of life.

It is unnecessary here to say more about the plaintiff and the defendant in ecclesiastical courts, or about the persons appointed to assist both, e. g. advocates and procurators.

VI. THE COMPETENCE OF ECCLESIASTICAL JUDGES.

—As already explained, there are different kinds of judges and courts in the ecclesiastical forum. Nevertheless contending parties cannot choose their judge; the trial must be conducted by the proper judge (*proprius iudex*), i. e. by one who can exert his jurisdiction against the accused: in other words, he must be a competent judge. Moreover, as the accused is brought to court against his will, it is further necessary that the judge have the power to summon him and oblige him to appear. There are four chief titles by which an accused party comes under the jurisdiction of a certain judge: residence or domicile, contract, situation of object in dispute, place of crime committed. It is self-evident that, if in the civil courts it was necessary for the proper administration of justice to place territorial limitations to the exercise of jurisdiction, this same restriction was much more necessary in canon law, since the jurisdiction of the Church extends to the entire world. Otherwise great confusion would have resulted and the administration of justice itself would have suffered, since it would have been very difficult to hear many cases if, as is often the case, the persons and matters concerned were at a great distance from the court. For this reason the famous principle of the Roman law: "He who acts as judge out of his district can be disobeyed with impunity" [*extra territorium jus dicenti impune non paretur*, § 20, De iurisdic., D. (II, 1)], adopted also by modern civil codes, was accepted in canon law. This territorial character of certain courts affects not only persons, but also things (*res*) and rights (*jura*); competent judges, therefore, have power not only over persons, but also over things situated in their territory. In both civil and criminal cases, therefore, all persons are subject to the judge of their place of residence (*iudex domicilii*). This residential forum is considered the most natural of all, therefore the ordinary and general forum for all cases, so that a person may be summoned to trial by the judge within whose jurisdiction he resides, whether the offence was committed within that territory or not. Hence it is accepted that the jurisdiction of such a judge always concurs with the jurisdiction of any other judge or any other forum.

A person may also "acquire" forum, i. e. become subject to trial in any place by reason of a crime committed there; in other words, his own act brings him within the jurisdiction of a judge of a given place who can punish him, and of whom he would otherwise be independent. It is easy to see the reasonableness of this; for it is just that where a person has given scandal by his bad conduct he should there make amends for it by accepting the deserved punishment. Again it is much easier to establish the fact and inquire into the authorship of a crime in the very place where it has been committed. Thus a person who makes a contract in a certain place thereby acquires right of forum in the same place, though not one of its citizens nor in any sense a resident, provided, of course, he be present in that locality (c. 1, § 3, De foro competenti, II, 2, in 6°), it being much easier to adjudicate disputes about a contract in the place where it was entered into. Finally the possessor of a chattel (*res*) may be summoned before the judge of

the territory where the object in question is situated, because it is only natural that where a chattel is in question (*actio realis*), precisely such chattel, and not the person, should be taken chiefly into consideration; thereby, also, the trial becomes more easy and rapid. In addition there are other (extraordinary) ways by which a person can obtain "right of forum" in a certain place; it will suffice to indicate them briefly. Besides the "forum" that everybody is considered to have in the Roman Curia, there is also the "forum" granted by reason of the prorogation or suspension of a case, to which should be added the prevention (quashing of indictment) and transfer of a case.

VII. ECCLESIASTICAL PROCEDURE.—Two methods of judicial procedure are recognized in canon law: one ordinary, also called full and solemn; the other simple, extraordinary, and summary. In the ordinary procedure all the solemnities prescribed by the law are observed. These are described in the second book of the "Decretals" of Gregory IX, devoted entirely to the conduct of ecclesiastical courts. They may be summarized as follows:—The party intending to bring suit must first send to the judge a written petition manifesting his intention, and setting forth his claim. If the judge thinks the claim reasonable and therefore worthy of a hearing, he issues a summons (*citatio*) calling the accused before his court. In modern civil codes a private citizen can oblige his fellow-citizen to present himself before the judge for the examination of a case. Though found in the Roman law of the Twelve Tables, the canon law does not recognize in the private individual any such right, and holds to the later procedure of Roman law, that dates from Ulpian and Paulus, and was afterwards confirmed by the laws of Justinian. According to this procedure, the summoning of the accused implies power of jurisdiction, and must therefore proceed from the judge himself. Generally an ecclesiastical judge ought not to be satisfied with one summons; it should be repeated three times before the accused can be considered contumacious. However, if in the summons itself it be clearly stated that it must be considered as final, a repetition of the summons is not necessary. The defendant, being summoned, must appear before the judge, and, unless the case be a criminal one, instituted to bring about the legal punishment of the guilty party, or one of certain other exceptional cases, he may, after hearing the cause of the summons, immediately enter a counter-plea against the plaintiff before the same judge.

When the defendant is summoned, whether it be his wish to enter a counter-plea or not, he must appear along with the plaintiff before the judge, and within the time fixed by the latter. When they have come before the judge, the plaintiff states clearly and precisely what he demands of the defendant, and the defendant on his part either admits the justice of the plaintiff's demand, in which case he must make complete satisfaction, or he denies it (at least in part), and makes known his wish to contest the matter judicially; we then have a contested case (*lis contestata*). Such a contestation accomplishes two things: first, it fixes precisely the object of the trial, and second, the parties bind themselves by a quasi-contract to prosecute the trial, and agree from that moment to accept all the obligations imposed by the sentence, including the obligation of the condemned party to make payment: in a word, they agree to abide by the legitimate finding of the court. Then follows the "oath of calumny" (*juramentum calumnie*), i. e. if demanded by either party. This oath covers the entire case, and can therefore be taken but once in the course of the same trial. Its object is the credibility which both plaintiff and defendant are anxious to maintain, convinced as each is that he has a just case. By this oath

each party affirms that he will continue the trial solely for the purpose of litigation, and not of calumny; he promises, moreover, to observe good faith throughout the proceedings. To this oath is added another, namely, to tell the truth, and also an oath of malice or fraud (*juramentum malitie*). This latter would not be called for with reference to the entire case, but only to some part of the proceedings, if ever a presumption arose against one of the litigants as acting from malice or fraud. In modern canonical procedure the "oath of calumny" is no longer called for. At this stage, the judge fixes a period within which the parties must set forth their arguments in defence of their rights; this period can easily be extended by the judge at the request of one of the parties, should he declare that he has not yet been able to produce all his evidence. Thereupon the case is argued, and the judge must weigh all the evidence brought forward by the contestants, whether this evidence be written or oral. If after this the parties, on being questioned, answer that they have no further arguments to make, the judge declares that the time for producing evidence is closed. The aforesaid judicial interrogatory and declaration are known as the *conclusio in causa*, or the last act of the judicial hearing of the case, and with it expires the time allowed for submission of evidence.

To this period of argumentation succeeds the interval during which the judge studies and weighs the arguments advanced. During this time the judge may ask the parties to supply declarations and explanations of their evidence. If, in spite of this, the judge is unable to form a morally certain judgment as to the rights of the plaintiff or of the defendant, he must request that the proceedings be supplemented by further proofs; if, notwithstanding, the case is still doubtful, he must decide that the plaintiff has not established his claim. If, on the other hand, the judge can arrive at a decision from the proceedings and from the evidence adduced, he must legally acquit or condemn the defendant by a definitive sentence, this being precisely the legal decision of the judge concerning the case proposed by the litigants. What has been said thus far holds good for a solemn ecclesiastical trial. In a summary trial, as already stated, some of these solemnities may be omitted. To begin with, the formal written petition may be omitted. The plaintiff may present his petition orally, and the chancellor of the court makes record of it in the acts of the proceedings. Nor are three judicial summons required; one suffices, even though it be not expressly stated that it must be considered peremptory and final. The solemn declaration of mutual purpose to pursue the case to a legal ending is likewise omitted, being implicitly contained in the articles on which the mutual argumentation of the case is based. The proceedings may continue even on days when the court would not otherwise sit (*tempore feriato*). As far as possible, all postponements (*dilationes*) are avoided. The formal declaration of the judge that the hearing is closed is not necessary, and sentence may be pronounced without the usual solemn formalities; it must, however, be written, and the parties must have previously been cited by at least one summons.

Those things, however, which are demanded in all trials by the natural law or the common usage of nations must not be omitted in this summary trial. The promise under oath to speak the truth is never dispensed with. Each litigant may present a full argumentation (*positiones et articuli*) of his case, and may produce his evidence. Finally, the judicial interrogatory of the two parties cannot be omitted, whether it takes place at the request of the litigants, or because the judge considers it his duty.

Summary proceedings are commonly entered upon for one of two reasons: either because the cases are of such a nature as to demand prompt settlement (alimony or necessary support, marriage cases, and many cases of ecclesiastics, e. g. elections, offices and benefices); or because the cases are of minor importance, slight and easily remediable injuries, comparable to civil lawsuits for trifling debts. In all such cases the judge is allowed to base his sentence on evidence somewhat less conclusive than would be called for in cases of greater importance (*semiplena probatio*). Summary procedure is now frequently employed in criminal cases of clerics; the canon law, however, by an instruction of the Congregation of Bishops and Regulars (11 June, 1880), restricts its use to countries whose bishops have formally obtained the right to proceed according to said instruction, originally granted to the bishops of France. In 1883 the Congregation of Propaganda extended its use to the bishops of the United States of America. (See also the decrees of the First Plenary Council of South America, art. 965-991.)

It may be asked, finally, what influence has the Roman law exercised on the canonical procedure described above? It is certain, on the one hand (Fessler, op. cit.), that the judicial procedure of the canon law was already quite elaborate in form when, early in the sixth century, the Emperor Justinian published his "Institutes", "Digest", and "Code". On the other hand, it is very evident that Roman law, and particularly that of Justinian, has exercised a very great influence upon canon law; it is universally admitted as one of the subsidiary sources (*fontes*) of canon law, especially in court procedure. The canon law, however, has wisely perfected certain enactments of the Roman law. Thus, the right of provisional possession, *institutum possessorium* in the Roman law, was amplified and highly developed by canon law, which gave additional legal protection in the case of actual possession obtained by injunction (*interdictum*) of the magistrate. The possessory interdict (*unde vi*), it is well known, was granted by Roman law for immovable objects only; the canon law extended it to movable objects, and even to abstract rights (*jura incorporalia*). Moreover, whereas by Roman law only a strictly legal suit (*actio spoli*) was open to a person despoiled of his goods, the canon law allowed him an additional plea in equity (*exceptio spoli*). In addition, in the Roman law, a suit lay only against the despoiler (*spoliante*) or the one who ordered or approved the act (*spolium mandantem, ratihabentem*), whereas the canon law permitted the entering of suit against any third person found in possession of the plaintiff's goods, whether such detention were in good faith or not.

BENEDETTO OJETTI.

Cousin, JEAN, a French painter, sculptor, etcher, engraver, and geometrician, b. at Soucy, near Sens, 1500; d. at Sens before 1593, probably in 1590. Cousin began his long art-life in his native town with the study of glass-painting under Hympe and Grassot. At the same time he was diligently applying himself to this branch of art, wherein he was to become a master, the young man became a great student of mathematics and published a successful book on the

subject. He also wrote on geometry in his student-days. In 1530 Cousin finished the beautiful windows for the Sens cathedral, the subject chosen being the "Legend of St. Eutropius". He had also painted the windows of many of the noble châteaux in and around the city. The latest date on any of his Sens work, 1530, points to this as the year he went to Paris, where he began work as a goldsmith; but the amount and kind of his productions in the precious metals are alike unknown.

In Paris Cousin continued his eminent career as a glass-painter, and his masterpiece, the windows of the Sainte-Chapelle in Vincennes, are considered the finest examples of glass-painting in all France. He subsequently devoted himself to painting in oil, and is said to be the first Frenchman to use the "new medium". For this and other reasons Cousin has been called "The Founder of the French School"; but his work in oil, while graceful, refined, reserved, and even classically severe, is more that of an Italian "Eclectic" than of a "founder of a national school". Pictures attributed to him, all of much merit, are found in several of the large European collections, but, excepting "The Last Judgment", none is known to be authentic. "The Last Judgment" is fine in composition, noble in conception, and beautiful and harmonious in colour, strongly suggesting Correggio. For a long time this masterpiece, which won him the name of the "French Michelangelo", lay neglected in the sacristy of the church of the Minims, Vincennes, until it was rescued by a priest and became one of the important works in the Louvre. It is also celebrated for being the first French picture to be engraved.

In the sixteenth century Cousin's renown came from his historical and glass-paintings; to-day he is best known as an illustrator of books. He made many fine designs for woodcuts and often executed them himself. The "Bible", published in 1596 by Le Clerc, and the "Metamorphoses" and "Epistles" of Ovid (1566 and 1571 respectively) contain his most celebrated work as an illustrator. Cousin etched and engraved many plates after the manner of Mazzuola of Parma, to whom the invention of etching has been ascribed; but he excels all his contemporaries in facility of execution and classical breadth and simplicity of idea and feeling. His etched work approaches in excellence the oil-paintings of the great masters. Cousin's sculptures are full of strength and dignity. The mausoleum of Admiral Philippe de Chabot is the best piece of French sculpture of the sixteenth century; the strikingly beautiful tomb of Louis de Brezé (Rouen) is another celebrated achievement. In addition to his early writings on mathematics, he published, in 1560, a learned treatise on perspective, and, in 1571, an excellent work on portrait-painting. During his life Cousin successfully pursued every branch of the fine arts, and enjoyed the favour of, and worked for four kings of France: Henry II, Francis II, Charles IX, and Henry III. Among his paintings, in addition to the "Last Judgment", mention should be made of the miniatures in the prayer book of Henry II now in the Bibliothèque Nationale; among his etchings and engravings, the "Annunciation" and the "Conversion of St. Paul"; among his woodcuts, the "Entrée de Henry II at Catherine de Médicis at Rouen" (1551).

LEIGH ILLIST.

Cousse-maker, CHARLES-EDMOND-HENRI, French historian of music, b. at Bailleul, department of Nord, France, 19 April, 1805; d. at Lille, 10 January, 1876. Cousse-maker rendered great service to musical science by bringing to the notice of students the early development and history of harmony and counterpoint, as shown by the treatment of these divisions of music in that section of the "Musica Enchi-

riadis" in which diaphony is treated. This he did in a work on Hucbald, who lived from about 840 to 930, was a monk of the monastery of Saint-Amand, and wrote the "Enchiriadis" as well as other works on music. While pursuing his law studies in Paris, Cousse-maker studied singing under Pellegrini and Payer and harmony under Reicha. Even after entering upon his career as a lawyer at Douai, he took a course in counterpoint under Victor Lefebvre. His early ambition to become a composer, especially of church music, did not produce permanent results, as most of his productions in that field remain in manuscript. While acting as judge at Bergues, Hazebrouck, Cambrai, Dunkerque, and Lille successively, he pursued studies and made researches which resulted in works of the highest historical importance and of permanent value. His writings have had an important part in the revival of true church music that began some sixty years ago, and in the restoration, which has not yet reached its culmination, of the chant. The pioneer nature of Cousse-maker's labours in many fields explains and condones to some extent the fact that he was not always correct in his deductions. Thus his assertion (*Histoire de l'harmonie*, c. ii, pp. 158-159) that the neums "have their origin in the accents of the Latin language", an assumption which became the basis for the so-called oratorical rhythm in plain chant, was disproved long ago by the mensuralist school of chant rhythm and, more recently, by the Rev. J. Thibaut in his work "Origine byzantine de la notation neumatique de l'église latine" (Paris, 1907). Cousse-maker's most noted musico-historical works are: "Mémoires sur Hucbald" (1841); "Histoire de l'harmonie au moyen âge" (1852); "Les harmonistes des XII^e et XIII^e siècles" (1864); "Œuvres complètes du trouvère Adam de la Halle" (1872); "Joannis Tinctoris Tractatus de Musica", and his collection in four volumes, intended to be a continuation of Gerbert's "Scriptores", of writings by medieval authors entitled: "Scriptorum de musica medii ævi nova series a Gerbertino altera" (1866-76). Besides these, Cousse-maker published numerous essays and magazine articles on historical, technical, and æsthetic questions in regard to music.

JOSEPH OTTEN.

Coustant, PIERRE, a learned Benedictine of the Congregation of Saint-Maur, b. at Compiègne, France, 30 April, 1654; d. at the Abbey of Saint-Germain-des-Prés near Paris, 18 October, 1721. After receiving his classical education in the Jesuit College at Compiègne, he entered the Benedictine monastery of Saint-Rémi at Reims as novice at the age of seventeen, and took vows on 12 August, 1672. He made his philosophical and theological studies partly at Saint-Rémi, partly at the monastery of Saint-Médard in Soissons whither he was sent to study philosophy under François Lamy. In 1681 his superiors sent him to the Abbey of Saint-Germain-des-Prés to assist his confrère Thomas Blampin in editing the works of St. Augustine. Coustant's chief contribution to this publication, which still remains the best edition of St. Augustine's works, consisted in the separating of the spurious from the genuine writings. He also aided his fellow Benedictines Edmond Martène and Robert Morel in making the indexes for the fourth volume containing the commentaries on the Psalms. In an appendix to the fifth volume he collected all the spurious homilies and traced them to their true sources.

The learning and acumen which Coustant displayed in his share of the edition of St. Augustine's works did not remain unnoticed by the Abbot General of the Maurist Congregation. When Mabillon suggested a new edition of the works of St. Hilary of Poitiers, it was Coustant whom the abbot general selected for

this difficult undertaking. There was before this time practically only one edition of this great Gallic Doctor of the Church, namely the defective and uncritical one published by Erasmus (Basle, 1523). The subsequent editions of Miræus (Paris, 1544), Lipsius (Basle, 1550), Grynaeus (Basle, 1570), Gillotius (Paris, 1572), and the one issued by the Paris Typographical Society in 1605 were little more than reprints of the Erasmus text. After making himself thoroughly conversant with St. Hilary's terminology and train of thought, Coustant compared numerous manuscripts with a view to restoring the original text. In an extensive general preface he proved the Catholicity of Hilary's doctrine concerning the birth of Christ from the Virgin Mary, the Holy Eucharist, Grace, the Last Judgment, the Holy Trinity, and other Catholic dogmas. The preface is followed by two biographical sketches of the saint, the former of which was composed by Coustant himself from the writings of Hilary, while the latter is a reproduction of the life written by Fortunatus of Poitiers. Each treatise is preceded by a special preface stating its occasion and purpose, and the time when it was written. Difficult and obscure passages are explained in foot-notes. This edition of St. Hilary is a model work of its kind and ranks as one of the most esteemed literary productions of the Maurist Congregation. It was published in one folio volume at Paris in 1693 and bears the title: "Sancti Hilarii Pictavorum episcopi opera ad manuscriptorum codices gallicos, romanos, belgicos, nec non ad veteres editiones castigata, aliquot aucta opusculis", etc. The work was republished with a few additions by Scipio Maffei (Verona, 1730) and by Migne, P. L., IX and X.

Coustant's love for study did not prevent him from being an exemplary monk. Though often overwhelmed with work, he was punctual in attending the common religious exercises and found time for private works of piety. After completing the edition of St. Hilary's works he requested his superiors to release him temporarily from literary labours and to allow him to devote more of his time to prayer and meditation. The wish was granted, though not as he expected. He was appointed prior of the monastery of Nogent-sous-Coucy. After three years he was, upon his own urgent request, relieved from the priorate and returned to Saint-Germain-des-Prés. For some time he worked on the new edition of the Maurist Breviary; then he assisted his confrère Claude Guesnié in making the elaborate general index to the works of St. Augustine.

Immediately upon the publication of St. Augustine's works in 1700, Coustant was entrusted by his superiors with the editing of a complete collection of the letters of the popes from St. Clement I to Innocent III (c. 88-1216). To understand the colossal labour which such an undertaking entailed, it must be borne in mind that very little had been done in this direction before. There were, indeed, the papal decretals from Clement I to Gregory VII, collected by Cardinal Antonio Caraffa and published by Antonio d'Aquino in 1591, but they were incomplete and their chronological order was frequently incorrect. There were also the "Annales" of Baronius and the "Concilia antiqua Galliae" of the Jesuit Jacques Sirmond, and other works containing scattered letters of the popes; but no one had ever attempted to make a complete collection of papal letters, much less to sift the spurious from the authentic, to restore the original texts and to order the letters chronologically.

After devoting more than twenty years to this gigantic undertaking, Coustant was able to publish the first volume in 1721. It contains the letters from the year 67 to the year 440, and is entitled "Epistolæ Romanorum Pontificum et quæ ad eos scriptæ sunt a S. Clemente I usque ad Innocentium III, quotquot reperiri potuerunt. . . ." (Paris, 1721). In the ex-

tensive preface of 150 pages Coustant explains the origin, meaning and extent of the papal primacy and critically examines the existing collections of canons and papal letters. The letters of each pope are preceded by a historical introduction and furnished with copious notes, while the spurious letters are collected in the appendix. Coustant had gathered a large amount of material for succeeding volumes, but he died the same year in which the first volume was published. Simon Mopinot, who had assisted Coustant in the preparation of the first volume, was entrusted with the continuation of the work, but he also died (11 October, 1724) before another volume was ready for publication. About twelve years later, Ursin Durand undertook to continue the work; in his case the Jansenistic disorders in which he became involved prevented the publication of the material he had prepared. Finally the French Revolution and the dissolution of the Maurist Congregation gave the death-blow to the great undertaking. A new edition of Coustant's volume was brought out by Schönmeyern (Göttingen, 1796); a continuation, based chiefly on Coustant's manuscripts and containing the papal letters from 461–521, was published by Thiel (Braunschweig, 1867). There are extant in the Bibliothèque Nationale at Paris fourteen large folio volumes containing the material gathered by Coustant and his Benedictine continuators. Coustant also took part in the controversy occasioned by Mabillon's "De Re Diplomatica" between the Jesuit Germon and the Maurist Benedictines. In two able treatises he defends himself and his confrères against Germon who disputed the genuineness of some sources used in the Benedictine edition of the works of St. Hilary and St. Augustine.

MICHAEL OTT.

Coustou, NICOLAS, French sculptor, b. at Lyons, 9 January, 1658; d. at Paris, 1 May, 1733. He was the son of a wood-carver, from whom he received his first instruction in art. At the age of eighteen he went to Paris, and studied under the tutorship of his uncle, the sculptor Coysevox. On the occasion of Colbert's last visit to the Royal Academy, Coustou received from his hands the gold medal for sculpture (Colbert prize), which enabled him to go to Rome as a pensioner from 1683 to 1686. Here he applied himself especially to the study of Michelangelo and Algardi, hoping to unite in his own work the strength of the one and the grace of the other. On his return he settled in Paris, and showed his independence by declining to submit to the decrees of the ruling school of sculpture. The design made by him for a public monument being refused, he appealed directly to the king, who decided in his favour and awarded him the commission. Nicolas was joined by his younger brother Guillaume, also a sculptor, whom he admitted to a share in his labours, so that it is not always easy to ascribe particular works definitely to one or the other. In 1720 Nicolas was appointed rector of the academy of painting and sculpture and held his post until his death, shortly before which he was also made chancellor of the academy. Coysevox and the Coustous formed a school in French sculpture and were distinguished by grace, naturalness and truth to life. Many of the works of Nicolas were destroyed in the fury of the Revolution, but a number still remain. Chief among them are the "Union of the Seine and Marne"; the "Huntsman Resting" (called in French

"Berger Chasseur"); "Daphne Pursued by Apollo". All of these are now in the garden of the Tuileries; further, the statues of Julius Cæsar and Louis XV in the Louvre, and the "Descent From the Cross" in the choir of Notre-Dame, Paris, one of his best efforts. There are also statues by Coustou at Versailles and Marly. A good terra-cotta bust of him by his brother Guillaume is in the Louvre.

M. L. HANDLEY.

Coutances, DIOCESE OF (CONSTANTIENSIS), comprises the entire department of La Manche and is a suffragan of the Archbishopric of Rouen. It was enlarged in 1802 by the addition of the former Diocese of Avranches and of two archdeaconries from the Diocese of Bayeux; since 1854 its bishops have held the title of Bishop of Coutances and Avranches.

CATHEDRAL AND TOWN, COUTANCES

DIOCESE OF COUTANCES.—The catalogue of the bishops of Coutances, as it was made out about the end of the eleventh century, gives as the first bishops St. Ereptiolus and St. Exuperatus (fourth century). Leontianus, the first bishop historically known, attended the Council of Orléans in 511. Coutances counted among its prelates Saint Lô (Lauto), prominent in the great councils of the middle of the sixth century; St. Rumpharius, apostle of Barfleur (d. about 586); St. Frémond (Frodomundus), who, assisted by Thierry III, founded a monastery and a church in honour of the Blessed Virgin in 679 at Ham, near Valognes; Blessed Geoffroy de Montbray (1049–1093), friend of William the Conqueror, whose episcopate was signalized by the building of the cathedral of Coutances, to which purpose he devoted large sums of money that he had gathered in Apulia, and also by the founding of the Benedictine Abbeys of Lessay, Saint-Sauveur-le-Vicomte, and Montebourg, and of the canonries of Cherbourg; Hugues de Morville (1202–1238), organizer of charities in the diocese and founder in 1209 of the celebrated Hôtel-Dieu of Coutances; Philibert de Montjeu (1424–1439), who presided over the deputation of theologians sent by the Council of Basle to the Bohemians and Moravians in order to reconcile them to the Church, and Giuliano della Rovere (1476–1478), afterwards pope under the name of Julius II. The account book of Thomas Marest, curé of Saint-Nicolas of Coutances (1397–1433), is very interesting for the history of social life during the Hundred Years' War. The Huguenots took possession of the city in 1562, but were banished in 1575. Through the efforts of the Venerable Père Eudes the cathedral of Coutances was the first church in the world to have an altar dedicated to the Sacred Heart.

DIOCESE OF AVRANCHES.—Nepos, the first bishop known to history, assisted at the Council of Orléans in 511. Among its bishops Avranches included: St. Pair, or Paternus (d. 565), a great founder of monasteries, notably that of Sessiacum, near Granville, which took the name of Saint-Pair; St. Leodevaldus (second half of sixth century); St. Ragert-rannus, Abbot of Jumièges (about 682); St. Aubert, who in 708 founded the Abbey of Mont Saint-Michel; Robert Ceneau (1533–1560), author of numerous works against the Calvinists; and Pierre-Daniel Huet (1689–1699), a celebrated savant who assisted Bossuet in educating the son of Louis XIV and directed the publication of the Delphin edition of the classics. Between 875 and 990, in the troubled period caused by the victories of the Bretons and the incursions of the Normans, the archbishops of Rouen were titulars of the See of Avranches. In the Middle Ages the bishops of Avranches were at the same time barons of Avranches, barons of Saint-Philbert-sur-Rilles, and proprietors of numerous domains in England and Jersey. The school of Avranches, in which Lanfranc taught and Anselm studied, was famous in the eleventh century. The cathedral where, in September, 1171, Henry II of England swore before the legates of Alexander III that he was entirely innocent of the murder of St. Thomas Becket was a beautiful monument of the eleventh and twelfth centuries. It collapsed during the Revolution. (See MONT SAINT-MICHEL.)

The Diocese of Coutances and Avranches honours in a special way St. Pientia (Pience), put to death in the third century for having facilitated the burial of St. Nicasius, the apostle of Vexin, and conspicuously honoured in the liturgy of Avranches; St. Floxel, born in the district of Cotentin, and martyred at the beginning of the fourth century; St. Scubilio, companion of the bishop St. Pair, and founder of the monastery of Mandane on Mont Tombe (subsequently Mont Saint-Michel); Sts. Sénier, Gaud, and Fragaize, monks of Sessiacum; St. Germanus of Scotland, who, in the fifth century, evangelized the Saxon colonies of the district of Bessin; St. Severus, the shepherd (sixth century), who was perhaps Bishop of Avranches; the monk St. Marcouf (sixth century), founder of an abbey called after him, and whose name is borne by an island to which he retired each Lent for extraordinary mortification; St. Hélier, disciple of St. Marcouf, beheaded in a grotto at Jersey; St. Ortaire, Abbot of Landelles (end of sixth century); St. Paternus of Coutances, monk at Sessiacum, then at Sens, and finally assassinated (eighth century); St. Leo of Carentan, born about 810, a protégé of Louis the Debonair and martyred at Bayonne; the English hermit St. Clair (ninth century); St. Guillaume Firmat (eleventh century), hermit, pilgrim to the Orient, and patron of the collegiate church of Mortain; Blessed Thomas Hélie of Biville, chaplain to St. Louis (thirteenth century); Julie Postel, known in religion as Sœur Marie-Madeleine (1756–1846), a native of Barfleur, declared Venerable in 1897.

Many men worthy of mention in ecclesiastical history were natives of this diocese: Alexandre de Villedieu (thirteenth century), canon of Avranches and author of a Latin grammar universally studied during the Middle Ages; the learned but visionary Guillaume Postel (d. 1581), professor of mathematics and Oriental languages in the Collège de France; the Franciscan friar Feuardent (1539–1610), prominent in the Wars of the League; Cardinal du Perron (1556–1618), who converted Henry IV; the Calvinistic publicist Benjamin Basnage (1580–1652); the physician Hamon (1618–1687), well known in the history of Jansenism; Jean de Launoy (1603–1678), celebrated for his critical work in ecclesiastical history; Marie des Vallées, the demoniac (d. 1656), who made a great sensation in her day and whose sayings

were gathered into four volumes by the Venerable Père Eudes, who had exorcised her; the Abbé de Beauvais (1731–1790) and the Jesuit Neuville (1693–1774), both great preachers; the Abbé de Saint-Pierre (1658–1743), author of the “*Paix perpétuelle*”, and the Eudist Le Franc, superior of the Coutances seminary in the eighteenth century and the first Catholic publicist to write against Freemasonry.

Before the enforcement of the law of 1901 there were in the diocese Oratorians, Sulpicians, Eudists, and a local congregation of Brothers of Mercy of the Christian Schools, founded in 1842 (mother-house at Montebourg), and there are Trappists still at Bricquebec. The diocese includes several congregations of women: the Tertiary Sisters of Our Lady of Mount Carmel, founded in 1686; the Sisters of the Sacred Heart of Jesus, founded in the seventeenth century by Père du Pont, a Eudist, and in 1783 placed under the patronage of the Sacred Heart, being the oldest French congregation known by that title; the Sisters of Mercy of the Christian Schools, founded in 1802 at Saint-Sauveur-le-Vicomte by the Venerable Sœur Postel. Diocesan missionaries are installed at Biville, near the tomb of Blessed Thomas Hélie, a much frequented place of pilgrimage.

In 1900 the diocese included in religious institutions, 28 infant schools, 1 orphanage for boys and girls, 3 boys' orphanages, 24 girls' orphanages, 6 industrial schools, 35 hospitals, hospices, and asylums, 30 houses of nursing sisters, and 3 insane asylums. The statistics for the end of 1905 (close of the Concordat period) indicate a population of 491,372, with 61 pastorates, 612 succursal parishes (mission churches), and 284 curacies, then remunerated by the State.

Gallia Christiana (ed. nova, 1759), XI, 466–509, 562–3, 863–911, 983, and *Instrumenta*, 105–24, 217–82. *L'Histoire chronologique des évêques d'Avranches* de maître Julien Nicole (1669) and *L'Histoire ecclésiastique du diocèse de Coutances*, also written in the seventeenth century by René Toussaint de Billy (1643–1709), curé de Mesnil-Opac, are works of sufficient historic value to have been republished in our day, the first by Beaurepaire, the second by Héron (Rouen, 1884–6). GEORGES GOYAU.

Couturier, Louis-Charles, Abbot of the Benedictine monastery of Saint-Pierre at Solesmes and President of the French Congregation of Benedictines; b. 12 May, 1817, at Chemillé-sur-Dôme in the Diocese of Tours; d. 29 October, 1890, at Solesmes. He was educated at the *petit séminaire* of Combrée in Anjou and at the *grand séminaire* of Angers, and was ordained priest 12 March, 1842. After teaching history at Combrée from 1836 to 1854, he entered, in the latter year, the Benedictine monastery of Saint-Pierre at Solesmes, then newly restored by Dom Guéranger.

CATHEDRAL, COUTANCES

His religious zeal and ascetical learning endeared him to the latter, who appointed him master of novices one month after his profession, and towards the end of 1861 made him prior of the monastery. As prior, Couturier was so esteemed that on the death of Guéranger he was unanimously elected Abbot of Saint-Pierre (11 February, 1875). Pius IX appointed him consultor of the Sacred Congregation of the Index, and granted him and his successors the privilege of wearing the *cappa magna*.

Couturier was a worthy successor of the great Guéranger. Despite the persecutions of the French Government, which turned the reign of Couturier into a veritable martyrdom for the abbot and his community, the monks of Solesmes not only upheld but even enhanced the high prestige for piety and learning which they had gained during the rule of Guéranger. Couturier and his monks were forcibly expelled from their monastery by the French Government on 6 November, 1880, and, having attempted to reoccupy it, they were driven out a second time on 29 March, 1882. During the remainder of Couturier's life the community lived in three separate houses in the town of Solesmes, using the parochial church as their abbey church. Nevertheless the community continued to flourish. By word and example Abbot Couturier encouraged the numerous learned writers among his monks, and contributed to the spread of the Benedictine Order by restoring old and deserted monasteries and by fostering the foundations made by Guéranger. On 28 March, 1876, he raised the priory of St. Mary Magdalene at Marseilles to the dignity of an abbey; in 1880 he restored and repeopleed the monastery of Silos in Spain; in July, 1889, he established the priory of Saint-Paul at Wisques, in the Diocese of Arras; and on 15 September, 1890, shortly before his death, he reopened the ancient monastery of Glanfeuil in the Diocese of Angers, deserted since the beginning of the French Revolution in 1789. His literary labours are confined chiefly to his collaboration in the publication of "Les Actes des Martyrs", a French translation of the Acts of the martyrs from the beginning of the Christian Era to our times. The third edition of the work appeared in four volumes (Paris, 1900).

MICHAEL OTT.

Covarruvias (or COVARRUBIAS Y LEYVA), DIEGO, b. in Toledo, Spain, 25 July, 1512; d. in Madrid, 27 Sept., 1577. According to his biography by Schott (in the Geneva, 1679, edition of Covarruvias), his maternal grandfather was the architect of the Toledo cathedral. His master in law, both canonical and civil, was the famous Martin Aspilcueta (q. v.), who was wont to glory in having such a disciple. At the age of twenty-one, Covarruvias was appointed professor of canon law in the University of Salamanca. Later on he was entrusted with the work of reforming that institution, already venerable for its age, and the legislation which he drew up looking to this end remained in effect long after his time. Such was the recognized eminence of his legal science that he was styled the Bartholo of Spain. His vast legal learning was always set forth with a peculiar beauty of diction and lucidity of style, says Von Scherer (see below). His genius was universal, and embraced all the sciences subsidiary to, and illustrative of, the science of law. If report be true, the large library of Oviedo, where at the age of twenty-six he became professor, did not contain a single volume which he had not richly annotated. In 1549 Covarruvias was designated by Charles V for the archiepiscopal See of San Domingo in the New World, whither, however, he never went. Eleven years later he was made Bishop

of Ciudad Rodrigo in Spain. In this capacity he attended the Council of Trent, where, according to the statement of his nephew, conjointly with Cardinal Ugo Buoncompagni (afterwards Gregory XIII), he was authorized to formulate the famous reform-decrees (De Reformatione) of the council. Pressure of other duties having prevented Cardinal Buoncompagni from doing his part of the work, the task devolved upon Covarruvias alone. The text of these far-reaching decrees, therefore, formally approved by the council, we apparently owe to him. (Von Scherer, in *Kirchenlexikon*, III, 1170, doubts the accuracy of this tradition.) Having returned to Spain, Covarruvias was in 1565 transferred to the See of Segovia. Up to this time his extraordinary talents had been discovered in matters more or less scholastic only; they were hereafter to reveal themselves also in practical affairs of state. Appointed in 1572 a member of the Council of Castile, he was two years later raised to the presidency of the Council of State. In the discharge of this office he was eminently successful. While president of the Council of State he was nominated by Philip II for the Bishopric of Cuenca, but death prevented him from assuming the duties of this new see. The principal work of Covarruvias is his "Variarum resolutionum ex jure pontificio regio et cæsareo libri IV". He wrote also on testaments, betrothal and marriage, oaths, excommunication, prescription, restitution, etc. Quite distinct in character from his other productions is his numismatic treatise, "Veterum numismatum collatio cum his quæ modo expenduntur", etc. (1594). His complete works have been several times edited, the Antwerp edition (5 vols., 1762) being the best. Among his manuscripts have been found notes on the Council of Trent, a treatise on punishments (De poenis) and an historical tract, "Catalogo de los reyes de España y de otras cosas", etc.

JOHN WEBSTER MELODY.

Covenanters, the name given to the subscribers (practically the whole Scottish nation) of the two Covenants, the National Covenant of 1638 and the Solemn League and Covenant of 1643. Though the Covenants as national bonds ceased with the conquest of Scotland by Cromwell, a number continued to uphold them right through the period following the Restoration, and these too are known as Covenanters. The object of the Covenanters was to band the whole nation together in defence of its religion against the attempts of the king to impose upon it an episcopal system of church government and a new and less anti-Roman liturgy. The struggle that ensued was a struggle for supremacy, viz.: as to who should have the last word, the King or the Kirk, in deciding the religion of the country. How this struggle arose must first be briefly explained.

The causes of this Protestant conflict between Church and State must be sought in the circumstances of the Scottish Reformation. (For a summary of the history of the Scottish Reformation down to 1601 see ch. ii of Gardiner's "History of England".) Owing to the fact that Scotland, unlike England, had accepted Protestantism, not at the dictates of her rulers, but in opposition to them, the Reformation was not merely an ecclesiastical revolution, but a rebellion. It was, therefore, perhaps no mere chance that made the Scottish nation, under the guidance of John Knox and later of Andrew Melville, adopt that form of Protestantism which was, in its doctrine, farthest removed from Rome, to which their French regents adhered, and which in its theory of church government was the most democratic. Presbyterianism meant the subordination of the State to the Kirk, as Melville plainly told James VI at Cupar in 1596, on the famous occa-

sion when he seized his sovereign by the sleeve and called him "God's silly vassal". In the Church, king and beggar were on an equal footing and of equal importance; king or beggar might equally and without distinction be excommunicated, and be submitted to a degrading ceremonial if he wished to be released from the censure; in this system the preacher was supreme. The civil power was to be the secular arm, the instrument, of the Kirk, and was required to inflict the penalties which the preachers imposed upon such as contemned the censure and discipline of the Church. The Kirk, therefore, believing that the Presbyterian system, with its preachers, lay elders, and deacons, kirk sessions, synods, and general assemblies, was the one, Divinely appointed means to salvation, claimed to be absolute and supreme. Such a theory of the Divine right of Presbytery was not likely to meet with the approval of the kings of the Stuart line with their exaggerated ideas of their own right Divine and prerogative. Nor could a Church where the ministers and elders in their kirk sessions and assemblies judged, censured, and punished all offenders high or low, craftsman or nobleman, be pleasing to an aristocracy that looked with feudal contempt on all forms of labour. Both noble and king were therefore anxious to humble the ministers and deprive them of some of their influence. James VI was soon taught the spirit of the Presbyterian clergy; in 1592 he was compelled formally to sanction the establishment of Presbytery; he was threatened with rebellion if he failed to rule according to the Gospel as interpreted by the ministers. If his kingly authority was to endure, James saw that he must seek for some means by which he could check their excessive claims. He first tried to draw together the two separate representative institutions in Scotland—the Parliament, representing the king and the nobility, and the General Assembly, representing the Kirk and the majority of the nation—by granting to the clergy a vote in Parliament. Owing, however, to the hostility of clergy and nobility, the scheme fell through. James now adopted that policy which was to be so fruitful of disaster; he determined to re-introduce episcopacy in Scotland as the only possible means of bringing the clergy to submit to his own authority. He had already gone some way towards accomplishing his object when his accession to the English throne still further strengthened his resolve. For he considered the assimilation of the two Churches both in their form of government and in doctrine essential to the furtherance of his great design, the union of the two kingdoms.

By 1612 James had succeeded in carrying out the first part of his policy, the re-establishment of diocesan episcopacy. Before his death he had also gone a long way towards effecting changes in the ritual and doctrine of Presbyterianism. On Black Saturday, 4 Aug., 1621, the Five Articles of Perth were ratified by the Estates. Imposed as these were upon an unwilling nation by means of a packed Assembly and Parliament, they were to be the source of much trouble and bloodshed in Scotland. Distrust of their rulers, hatred of bishops, and hatred of all ecclesiastical changes was the legacy bequeathed by James to his son. James had sowed the wind and Charles I was soon to reap the whirlwind. Charles' very first action, his "matching himself with the daughter of Heth", i. e. France (see Leighton, "Sion's Plea against Prelacy", quoted by Gardiner, "Hist. of England, ed. 1884, VII, 146), aroused suspicion as to his orthodoxy, and in the light of that suspicion every act of his religious policy was interpreted, wrongly we know, as some subtle means of favouring popery. His wisest course would have been to annul the hated Five Articles of Perth, which to Scotchmen were but so many injunctions to commit idolatry. In spite of concessions, however, he let it be known that the Articles were to remain (Row, *Historie of the Kirk of Scotland*, p. 340; Balfour, An-

nals, II, 142; Privy Council Register, N. S., I, 91-93). Further, he took the unwise step of increasing the powers of the bishops; five were given a place in the Privy Council; and Archbishop Spottiswoode was made President of the Exchequer and ordered as primate to take precedence of every other subject. This proceeding not merely roused the indignation of Protestants, who in the words of Row considered bishops "bellie-gods", but it further offended the aristocracy, who felt themselves thus slighted. But a persecution of the Kirk and the preachers would not have brought about a rebellion. Charles could always count on his subservient bishops, and on the nobles ever willing to humble the ministers. But he now took a step which alienated his only allies. James had always been careful to keep the nobles on his side by lavish grants of the old church lands. By the Act of Revocation, which passed the Privy Seal, 12 October, 1625 (Privy Council Register, I, 193), Charles I touched the pockets of the nobility, raised at once a serious opposition, and led the barons to form an alliance with the Kirk against the common enemy, the king. It was a fatal step and proved "the ground-stone of all the mischief that followed after, both to this king's government and family" (Balfour, *Annals*, II, 128). Thus, before he had set foot in Scotland, Charles had offended every class of his people. His visit to Scotland made matters worse; Scotchmen were horrified to see at the coronation service such "popish rags" as "white rochets and white sleeves and copes of gold having blue silk to their foot" worn by the officiating bishops, which "bred great fear of inbringing of popery" (Spalding, *Hist. of the Troubles in England and Scotland, 1624-45*, I, 36). Acts, too, were passed through Parliament which plainly showed the king's determination to change the ecclesiastical system of Scotland. Scotland was therefore ready for an explosion.

The spark was the New Service Book. Both Charles and Laud had been shocked at the bare walls and pillars of the churches, all clad with dust, sweepings, and cobwebs; at the trafficking that went on in the Scottish churches; at the lengthy "conceived prayers" often spoken by ignorant men and not infrequently as seditious as the sermons (Baillie, O. S. B., writing in 1627, cited by Wm. Kintoch, "Studies in Scottish Ecclesiastical History", pp. 23, 24; also, "Large Declaration", p. 16). The king desired to have decency, orderliness, uniformity. Hence he ordered a new service book, prepared by himself and Laud, to be adopted by Scotland. The imposition of the New Service Book was a piece of sheer despotism on the part of the king; it had no ecclesiastical sanction whatever, for the General Assembly, and even the bishops as a body, had not been consulted; neither had it any lay authority, for it had not the approval of Parliament; it went counter to all the religious feeling of the majority of the Scottish people; it offended their national sentiment, for it was English. Row summed up the objections to it by calling it a "Popish-English-Scottish-Mass-Service-Book" (op. cit., p. 398). There could, therefore, be very little doubt as to how Scotland would receive the new liturgy. The famous riot in St. Giles', Edinburgh, 23 July, 1637 (account of it in the King's "Large Declaration" and Gordon's "Hist. of Scots Affairs", I, 7), when at the solemn inauguration of the new service somebody, probably some woman, threw the stool at the dean's head, was but an indication of the general feeling of the country. From all classes and ranks and from every part of the country except the north-east, the petitions came pouring into the Council for the withdrawal of the liturgy. Every attempt to enforce the prayer book led to a riot. In a word, the resistance was general. The Council was powerless. It was suggested therefore, that each of the four orders—nobles, lairds, burghers, and ministers—should choose four commissioners to represent them and transact

business with the Council, and that then the crowd of petitioners should return to their homes. Accordingly four committees or "Tables" (Row, pp. 485, 6) were chosen, the petitioners dispersed, and the riots in Edinburgh ceased. But this arrangement also gave the opposition the one thing necessary for a successful action, a government. The sixteen could, if only united, direct the mobs effectively. The effect of having a guiding hand was at once seen. The demands of the supplicants became more definite and peremptory and on 21 December the Tables presented the Council a collective "Supplication" which not only demanded the recall of the liturgy, but, further, the removal of the bishops from the Council on the ground that, as they were parties in the case, they should not be judges (Balfour, *Annals*, II, 244-5; *Roths, Relation*, etc., pp. 26 sqq., gives an account of the formation of the "Tables"). The supplicants, in other words, looked upon the quarrel between king and subjects as a lawsuit.

Charles' answer to the "Supplication" was read at Sterling on 19 February, 1638. He defended the prayer book and declared all protesting meetings illegal and treasonable. A counter proclamation had been deliberately prepared by the supplicants and no sooner had the king's answer been read than Lords Home and Lindsay, in the name of the four orders, lodged a formal protestation. The same form was gone through in Linlithgow and Edinburgh. By these formal protestations the petitioners were virtually setting up a government against a government, and as there was no middle party to appeal to, it became necessary to prove to the king that the supplicants, and not he, had the nation behind them. The means was ready to hand. The nobility and gentry of Scotland had been in the habit of entering into "bands" for mutual protection. Archibald Johnston of Warristoun is said to have suggested that such a band or covenant should now be adopted, but not as heretofore by nobles and lairds only, but by the whole Scottish people; it was to be a national covenant, taking as its basis the Negative Confession of Faith which had been drawn up by order of James VI in 1581. The great document was composed. After reciting the reason of the band, that the innovations and evils contained in the supplications have no warrant in the word of God, they promise and swear "to continue in the profession and obedience of the aforesaid religion, that we shall defend the same and resist all those contrary errors and corruptions, according to our vocation, and to the uttermost of that power that God hath put in our hands all the days of our life". Yet, whilst uttering oaths that seem scarcely compatible with loyalty to the king, they likewise promised and swore "that we shall, to the uttermost of our power with our means and lives, stand to the defence of our dread sovereign, his person and authority, in the defence of the foresaid true religion, liberties and laws of the kingdom" (*Large Declaration*, p. 57), and they further swore to mutual defence and assistance. In these professions of loyalty the Covenanters, for so we must now call the supplicants, were probably sincere; during the whole course of the struggle the great majority never wished to touch the throne, they only wished to carry out their own idea of the strictly limited nature of the king's authority. Charles was to be king and they would obey, if he did as they commanded.

The success of the Covenant was great and immediate. It was completed on 28 February and carried for signature to Greyfriars church. Tradition tells how the parchment was unrolled on a tombstone in the churchyard and how the people came in crowds weeping with emotion to sign the band. This strange scene was soon witnessed in almost every parish of Scotland, if we except the Highlands and the North-East. Several copies of the Covenant were distributed for signature. "Gentlemen and noblemen carried

copies of it in portmanteaus and pockets requiring subscriptions thereunto, and using their utmost endeavours with their friends in private for to subscribe." "And such was the zeal of many subscribers, that for a while many subscribed with tears on their cheeks"; and it is even said "that some did draw their blood, and used it in place of ink to underwrite their name" (*Gordon, Scots Affairs*, I, 46). Not all, however, were willing subscribers to the Covenant. For many persuasion was sufficient to make them join the cause; others required rougher treatment. All those who refused to sign were not merely looked upon as ungodly, but as traitors to their country, as ready to help the foreign invader. And "as the greater that the number of subscribers grew, the more imperious they were in exacting subscriptions from others who refused to subscribe, so that by degrees they proceeded to contumelies and reproaches, and some were threatened and beaten who durst refuse, especially in the greatest cities" (*ibid.*, p. 45). No blood, however, was shed till the outbreak of the war. Ministers who had refused to sign were silenced, ill-treated, and driven from their homes. Toleration and freedom of conscience was hated by both parties and by none more fanatically than by the Scottish Presbyterians. Scotland was in truth a covenanted nation. A few great landowners, a few of the clergy, especially the Doctors of Aberdeen who feared that their quiet studies and intellectual freedom would be overwhelmed, stood aloof from the movement. Many, no doubt, signed in ignorance of what they were doing, some because they were frightened, but more still because they were swayed by an overpowering excitement and frenzy. Neither side could now retreat, but Charles was not ready for war. So to gain time he made a show of concession and promised a General Assembly. The Assembly met at Glasgow 21 Nov., and at once brought matters to a head. It attacked the bishops accusing them of all manner of crimes; in consequence Hamilton, as commissioner, dissolved it. Nothing daunted, the Assembly then resolved that it was entitled to remain in session and competent to judge the bishops, and it proceeded to pull down the whole ecclesiastical edifice built up by James and Charles. The Service Book, Book of Canons, the Articles of Perth were swept away; episcopacy was declared forever abolished and all assemblies held under episcopal jurisdiction were null and void; the bishops were all ejected and some excommunicated; Presbyterian government was again established.

War was now inevitable. In spite of their protestations of loyalty the Covenanters had practically set up a theory in opposition to the monarchy. The question at issue, as Charles pointed out in his proclamation, was whether he was to be king or not. Was he supreme head of the Church or was he not? Toleration was the only basis of compromise possible; but toleration was deemed a heresy by both parties, and hence there was no other course but to fight it out. In two short wars, known as the Bishops' Wars, the Covenanters in arms brought the king to his knees, and for the next ten years Charles was only nominally sovereign of Scotland. A united nation could not be made to change its religion at the command of a king. The triumph of the Covenants, however, was destined to be short-lived. The outbreak of the Civil War in England was soon to split the Covenanting party in twain. Men were to be divided between their allegiance to monarchy and their allegiance to the Covenant. Scotchmen in spite of their past actions still firmly adhered to the monarchical form of government, and there cannot be much doubt that they would much rather have acted as mediators between the king and his Parliament than have interfered actively. But the royalist successes of 1643 alarmed them. Presbyterianism would not endure long in Scotland if Charles won. For this reason the majority of the

nation sided with the Parliament, but it was with reluctance that the Covenanters agreed to give the English brotherly assistance. This assistance they were determined to give only on one condition, namely, that England should reform its religion according to the Scottish pattern. To this end England and Scotland entered into the Solemn League and Covenant (17 Aug., 1643). It would have been well for Scotland if she had never entered the League to enforce her own church system upon England. If she had been satisfied with a simple alliance and assistance, all would have been well. But by materially helping the English Parliament to win at Marston Moor she had helped to place the decision of affairs of state in the hands of the army, which was predominantly Independent and hated presbyters as much as bishops. If the Scotch had recrossed the Tweed in 1646 and left the Parliament and the army to fight out for themselves the question of ecclesiastical government, England would not have interfered with their religion; but the Covenanters thought it their duty to extirpate idolatry and Baal-worship and establish the true religion in England, and so came in conflict with those who wielded the sword. The result was that England not only did not become Presbyterian, but Scotland herself became a conquered country. In military matters the Covenanters were successful in England, but in their own country they were sorely tried for a year (1644) by the brilliant career of Montrose (an account of the year of Montrose is given in A. Lang, *Hist. of Scot.*, III, v). On account of the nature of the troops engaged, the encounters were fought with a vindictive ferocity unknown in the English part of the Civil War. Not merely was the number of slain very great, but both sides slaked their thirst for vengeance in plunder, murder, and wholesale massacres. In this respect the Covenanters must bear the greater share of blame. The Catholic Celts whom Montrose led undoubtedly committed outrages, especially against their personal enemies the Campbells, during the winter campaign of Inverlochy (Patrick Gordon, *Britane's Distemper*, pp. 95 sqq.), but restrained by Montrose they never perpetrated such perfidy as the Covenanters after Philiphaugh, and the slaughter of three hundred women, "married wives of the Irish". Montrose's success and the fact that he was a leader of Scoto-Irish lashed the hatred of the preachers into fury. They raved for the blood of the Malignants. The preachers, with a fanaticism revoltingly blasphemous and as ferocious as that of Islam, believed that more blood must be shed to propitiate the Deity (Balfour, *Annals*, III, 311).

The victory of Philiphaugh (13 Sept., 1645) removed the immediate danger to the Covenanters and likewise extinguished the last glimmer of hope for the Royalist cause, which had suffered irreparable defeat a few weeks earlier at Naseby. But the very triumph of the Parliamentary forces in England was fatal to the cause of the Solemn League and Covenant. The victory had been gained by the army which was not Presbyterian but Independent, and capable now of resisting the infliction of an intolerant and tyrannical church government upon itself and upon England. When, therefore, the Scottish army recrossed the Tweed, February, 1647, it was with its main purpose unfulfilled. England had not been thoroughly reformed; heresy, especially in the army, was still rampant. The Solemn League and Covenant had been a failure, and the Scots had fought in vain. Worse than this, the Covenanters themselves were divided. The success of the Covenant had been due to the alliance between the Kirk and the nobility. The latter had joined the cause from jealousy of the authority of the bishops and from fear of the loss of their estates by the Act of Revocation. But now, bishops there were none, and the nobility were still in possession of their estates. Since the causes for further co-operation were thus wanting, the feudal instincts of

the nobility, love of monarchical government, contempt for the lower orders to which the majority of the Kirk belonged, naturally reasserted themselves. To this must be added their intense jealousy of Argyll, who owed his influence to the support he gave the Kirk. A Royalist party began thus to be formed among the Covenanters. The cleavage in their ranks was shown in the dispute over the question of the surrender of Charles I to the Parliament (1646). Hamilton had pressed the Estates to give the king honour and shelter in Scotland, but Argyll, backed by the preachers, opposed him. There must be no uncovenanted king in Scotland. The breach was widened when Charles fell into the hands of the heretical army. To many it now seemed best to support the king, for if the army should prove successful Presbyterianism would be lost. Accordingly Scottish commissioners, Loudoun, Lanark, and Lauderdale visited Charles at Carisbrooke and signed the hopeless and foolish "Engagement" (27 Dec., 1647). In Scotland the Engagers had a large following, and a majority in the Estates. In the Parliament the Hamiltonian party could carry all before it and was ready to take immediate action for the king. But the Kirk, with Argyll and some ten nobles, remained immovably on the other side. They would not defile themselves by making common cause with the uncovenanted. The preachers cursed and thundered against the Engagers and the levies that were being raised for an invasion of England. Scotland thus divided against itself had not much chance against the veterans of Cromwell and Lambert. After Preston, Wigan, and Warrington (17-19 Aug., 1648) the Scottish Royalist forces were no more. The destruction of Hamilton's force was a triumph for the Kirk and the anti-Engagers. But an event now occurred that once more divided the nation. On 30 January, 1649, Charles I was executed. Scotchmen of whatever party looked upon the deed as a crime and as a national insult. The day after the news reached Scotland, they proclaimed Charles II King, not only of Scotland, but of England and Ireland. The acceptance of Charles II, however, had been saddled with the condition that he should pledge himself to the two Covenants. After some hesitation and after the failure of all his hopes to use Ireland as a basis of an invasion of England Charles II swore to the Covenants, 11 June, 1650.

To the more extreme portion of the Covenanters this agreement with the king seemed hypocrisy, an insult to Heaven. They knew that he was no true convert to the Covenants, that he had no intention of keeping them, that he had perjured himself, and they refused to have dealings with the king. Argyll with the more moderate wing, still anxious to avoid a definite rupture with the extremists, had perforce to make concessions to these feelings; he made the unfortunate prince walk through the very depths of humiliation (Peterkin, *Records*, p. 599). This split was to prove fatal. Only a united Scotland could have defeated Cromwell. Instead, to propitiate the Deity, Charles was kept apart from the army, and while every available man was wanted to meet the soldiers of Cromwell, the fanatics were "purging" the army of all Royalists and Malignants (op. cit., p. 623). To allow them to fight would be to court disaster. How could Jehovah give victory to the children of Israel, if they fought side by side with the idolatrous Amalekites? The purgings of the army went merrily on daily, and the preachers promised in God's name a victory over the erroneous and blasphemous sectaries. Like the Scots Cromwell also looked upon war as an appeal to the god of battles, and the judgment was delivered at Dunbar, 3 Sept., 1650. "Surely it's probable the Kirk has done their do. I believe their king will set up upon his own score now." This was Cromwell's comment upon his victory and he was right. The rout of Dunbar destroyed the ascendancy of the Covenanters. The preachers had promised victory, but Jehovah had sent

them defeat. The extremists, under such leaders as Johnston of Warristoun, James Guthrie, and Patrick Gillespie, attributing their defeat to the unholy alliance with the Malignants grew in vehemence and presented to the Committee of Estates (30 Oct., 1650) a "Remonstrance" arraigning the whole policy of Argyll's government and refusing to accept Charles as their king "till he should give satisfactory evidence of his real change" (*ibid.*). Seeing his power gone with the "Remonstrants" or "Protesters", Argyll determined definitely to go over to the king; Malignant and Covenanter had joined hands. In answer to the Remonstrance the Committee of Estates passed, 25 November, a resolution condemning it and resolved to crown Charles at Scone. On 1 January, 1651 the coronation took place. Cromwell's answer was the battle of Worcester, 3 September, 1651. For nine years Scotland was a conquered country kept under by the military saints. It was a sad time for the Presbyterians. The English soldiers allowed all Protestants, as long as they did not disturb the peace, to worship in their own way. In October, 1651, Monk forbade the preachers to impose oaths and covenants on the lieges, and prohibited the civil magistrates from molesting excommunicated persons, or seizing their goods, or boycotting them. Lest the Remonstrants and Revolutioners, who all the while with ever increasing bitterness quarrelled as to which was the true inheritor of the Covenants, should cause trouble to the commonwealth, the General Assembly was broken up (July, 1653), and all such assemblies forbidden for the future (Kirkton, Secret and True History of the Church of Scotland, p. 54).

Dunbar, Worcester, and the Cromwellian domination destroyed the ascendancy of the Covenanters. But not on that account did the extreme wing, the Remonstrants, abate a jot of their pretensions; they still believed in the eternally binding force of the two Covenants. On the other hand neither had the king fully learnt the lesson from his father's fate. Like him he considered it his right to force his ecclesiastical views upon his people. Episcopacy was restored, but without the prayer book, and the meetings of synods were forbidden. Partly because he had the support of the nobility and gentry, partly because even many Presbyterians had wearied of the strife, and partly because of his dishonesty Charles succeeded in gaining his ends, but at the cost of straining to the utmost his relations with his subjects. It only required the attempt of James II to introduce hated Catholicism into the country to sweep the Stuarts forever from the throne of Scotland. The history of the Covenanters from the Restoration to the Revolution is the history of a fierce persecution varied with occasional milder treatment to win the weaker members to the moderate side. As the Covenanters would no longer meet in the churches they now began to meet in their own homes and have private conventicles. Against these proceedings an Act was passed (1663) declaring preaching by "ousted" ministers seditious, and it was rigorously enforced by quartering soldiers under Sir James Turner in the houses of recusants. (For Turner's methods see *Lauderdale Papers*, II, 82.) Driven from their homes the Covenanters took to holding their gatherings in the open air, in distant glens, known as field-meetings or conventicles. The Pentland Rising (1666) was the result of these measures and proved to the Government that its severities had been unsuccessful. On the advice of Lauderdale Charles issued Letters of Indulgence, June, 1669, and again in August, 1672, allowing such "ousted" ministers as had lived peaceably and orderly to return to their livings (*Wodrow, Hist. of the Sufferings, etc.*, II, 130). These indulgences were disastrous to the Conventiclers, for many of the ministers yielded and conformed. Stung by the secessions the remnant became more irreconcilable; their sermons were simply political party ora-

tions denunciatory of king and bishops. They were especially wroth against the indulged ministers; they broke into their houses, bullied and tortured them to force them to swear that they would cease from their ministrations. These Lauderdale determined to crush by a persecution of the utmost severity. Soldiers were quartered in the disaffected districts (the West and South-West), ministers were imprisoned, and finally, as conventicles still increased, a band of half-savage Highlanders, "*The Highland Host*" (*Lauderdale Papers*, III, 93 sqq.), was let loose on the wretched inhabitants of the Western Lowlands, where they marauded and plundered at will.

The Covenanters now became reckless and wild, for again torn asunder by the "cess" controversy (a dispute arose as to whether it was lawful to pay the tax or "cess" raised for an unlawful object, the carrying on of a Government persecuting the true Kirk) they were but a remnant of the once powerful Kirk, and every year became less capable of effectual resistance. They patrolled the country in arms protecting conventicles; and their leaders, Welsh, Cameron, and others, went about as "soldiers of Christ", organizing rebellion, even murdering the soldiers of Claverhouse, who was engaged in dispersing the conventicles. The murder of Archbishop Sharpe (2 May, 1679), regarded by them as a glorious action and inspired by the spirit of God, was the signal for a general rising in the Western Lowlands. At Rutherglen they publicly burnt the Acts of the Government which had overthrown the Covenants, and at Loudoun Hill, or Drumlog, defeated the troops under Claverhouse. It was therefore deemed necessary to send a strong force under Monmouth to suppress the rebellion. At Bothwell Bridge (22 June, 1679) the insurgents were utterly defeated. There followed a third Act of Indulgence which again cut deep into the ranks of the Covenanters. But in spite of persecution and secessions a minority continued faithful to the Covenant and the fundamental principles of Presbyterianism. Under the leadership of Richard Cameron and Donald Cargill, and styling themselves the "Society People", they continued to defy the royal authority. At Sanquhar they published a declaration, 22 June, 1680 (*Wodrow*, III, 213) disowning the king on the ground of "his perjury and breach of covenant to God and his Kirk". At a conventicle held at Torwood (1680) Cargill solemnly excommunicated the king, the Duke of York, Monmouth, and others (*ibid.*, III, 219). These proceedings served no further purpose than to embitter parties and make the Government all the more determined to extirpate the sect. But what roused the Government more than anything else was the "Apologetical Declaration" (*ibid.*, IV, 148) of October, 1684, inspired by Renwick who had taken up the standard of Cameron. The document threatened that anyone connected with the Government, if caught, would be judged and punished according to his offenses. These threats were carried out by the Cameronians or Renwickites; they attacked and slew dragoons, and punished such of the conformist ministers as they could get hold of. It was at this period that the "killing time" properly began. Courts of justice were dispensed with and officers having commissions from the Council were empowered to execute anyone who refused to take the oath of abjuration of the Declaration. With the accession of James II to the English throne the persecution waxed fiercer. An Act was passed which made attendance at field-conventicles a capital offence. Claverhouse carried out his instructions faithfully, many were summarily executed, while many more were shipped off to the American plantations. The last victim for the Covenant was James Renwick (Jan., 1688). His followers kept to their principles and even at the Revolution they refused to accept an uncovenanted king; one last brief day of triumph and of vengeance they had, when they "rab-

bled" the conformist curates. The day of the Covenantants had long since passed. How much the ancient spirit of Presbyterianism was broken was clearly seen by the subservient letter in which James was thanked for the Indulgence of 1687, for allowing all "to serve God after their own way and manner" (Wodrow, IV, 428, note). The majority had learned to submit to compromise, and thus at the Revolution the Scottish nation forgot the Covenants and was allowed to retain Presbyterianism. The strife of a century between Kirk and State had come to an end. Both sides in the struggle had in fact lost and won. The king had been defeated in his attempt to dictate the religion of his subjects; Presbyterianism became the established religion. But it had been equally proved that the subjection of the State to the Church, the supremacy, political as well as ecclesiastical, of the Kirk, was an impossibility. In this the Covenants had failed.

NOEL J. CAMPBELL.

Covetousness, generally, an unreasonable desire for what we do not possess. In this sense, it differs from concupiscence only in the implied notion of non-possession, and thus may cover all things which are sought after inordinately. Classified under this general head, we may have covetousness of honours, or pride; of the flesh, or concupiscence properly so called; of riches, or covetousness proper (Lat. *avaritia*), or avarice. When covetousness of the flesh or of wealth has for its object that which is already the lawful possession of another, it falls under the ban of the Ninth or Tenth Commandment of God; and such desires, wilfully indulged, partake, as we are told by the Lord (Matt., v), in their malice, of the nature of the external acts themselves. For he who deliberately desires the possession of another man's lawful wife or goods has already in his heart committed the sin of adultery or theft. In its specific meaning, covetousness looks to riches in themselves, whether of money or of property, whether possessed or not, and pertains less to their acquisition than to their possession or accumulation. Thus defined, it is numbered among the sins which are called capital, because it is, as St. Paul says (Tim., vi), a *radix omnium peccatorum*.

The capital sin of covetousness is in reality rather a vice or inclination to sin, which is sinful only in that it proceeds from the unholy condition of original sin in which we are born, and because it leads us into sin. And so far is the desire—natural in us all—to acquire and hold possessions from being reproved as offensive by God, that, if kept within the bounds of reason and justice and resisted triumphantly in its inordinate cravings, it is positively meritorious. Even when indulged, covetousness is not a grievous sin, except in certain conditions which involve offence of God or the neighbour, e. g. when one is prepared to employ, or does actually employ, illicit or unjust means to satisfy the desire of riches, holds to them in defiance of the strict demands of justice or charity, makes them the end rather than the means of happiness, or suffers them to interfere seriously with one's bounden duty to God or man. Nourished and developed into an unrestricted habit, it becomes the

fruitful mother of all manner of perfidy, heartlessness and unrest.

JOHN H. STAPLETON.

Covington, DIOCESE OF (COVINGTONENSIS), comprises that part of Kentucky, U. S. A., lying east of the Kentucky River, and of the western limits of Carroll, Owen, Franklin, Woodford, Jessamine, Garrard, Rockcastle, Laurel, and Whitley Counties, an area of 17,286 square miles. It was established 29 July, 1853, by the division of the Diocese of Louisville, then embracing the whole State of Kentucky. This portion of the State had been ministered to by a body of clergy conspicuous for ability, learning, and devotion to duty. White Sulphur, the first organized congregation in this jurisdiction, rejoiced in the zealous administration of a Kenrick, who in later

CATHEDRAL, COVINGTON, KENTUCKY

years graced the metropolitan See of Baltimore, and of a Reynolds, destined to become successor of the great Bishop England of Charleston. Lexington was growing into an important parish under the watchful guidance of Rev. John McGill, afterwards Bishop of Richmond, Virginia. All of the clergy manifested in their lives the glorious traditions of Flaget, Badin, David, and Nerinckx, whose successors they were. Catholic immigration has been almost exclusively confined to two nationalities: German and Irish. The former compose a large majority of the Catholic population of the cities and towns along the Ohio River, while the latter have sought the interior of the diocese. In Covington and Newport German Catholics predominate, while in Lexington, Frankfort, and Paris, the Irish are in the majority. Lying south of Mason and Dixon's Line, although rich in raw material, the diocese has been handicapped by a lack of industrial and mineral development. Within its confines there is a total population of about 900,000, of whom 54,423 are Catholic. The attitude of non-Catholics is uniformly respectful, considerate, and kind.

BISHOPS.—(1) The choice of the Holy See for the first bishop of the new diocese fell upon the Rev. GEORGE ALOYSIUS CARRELL, S. J., rector of St. Francis Xavier's Church, Cincinnati. He was born in Philadelphia, 13 June, 1803, ordained priest 20 December, 1827, and entered the Society of Jesus 19 August, 1835. He was consecrated 1 November, 1853, at Cincinnati. The burden resting on the shoulders of the new bishop of a diocese sparsely settled by 8000 Catholics, without influence or material resources, was a heavy one; but at his death (25 Sept., 1868), after fourteen years of zealous labours, he left it thoroughly organized with a Catholic population three times as great as he found there, a self-sacrifice

ing clergy, a devoted people, and many educational and eleemosynary institutions.

(2) The second bishop, AUGUSTUS MARIE TOEBBE, was born 15 January, 1829, at Meppen, Hanover, Germany, and ordained priest 14 September, 1854, at Cincinnati. He was consecrated 9 January, 1870, and died 2 May, 1884. He contributed largely to the increase of the parishes of the diocese and the growth of Catholicism.

(3) CAMILLUS PAUL MAES, his successor, was born in Belgium, 13 March, 1846, studied at the American College, Louvain, for the Diocese of Detroit, where he was chancellor when appointed to the See of Covington. He was consecrated 25 January, 1885, and soon cleared off a diocesan debt of \$150,000. He next undertook to replace the old cathedral, rapidly tottering to decay, with a magnificent Gothic pile in the most prominent part of the city. Bishop Maes also found time to care for the remote population dwelling in the mountainous parts of the diocese. Few people of the diocese were blessed with an abundance of wealth. James Walsh was a conspicuous benefactor, who made possible the first parochial school, and later enabled Bishop Maes to begin the erection of the cathedral. His son, Nicholas Walsh, followed generously in the footsteps of his father. Mrs. Mary Howard Preston, a zealous convert, gave the necessary funds to start the great work of the missions to non-Catholics in Eastern Kentucky.

STATISTICS.—The Catholic population (1908) is 54,423 (10,162 families). The clergy number 77 (63 secular, 9 regular). There are 74 churches, 38 stations, and 9 chapels; 3 orphan asylums (204 inmates); 2 hospitals (2962 patients); 2 homes for aged poor (351 inmates); 7 female academies (1491 pupils); 37 parochial schools (7782 pupils, of these 3744 are in Covington).

The religious communities in the diocese include: *Men*—Benedictine Fathers, five charges, and the Marist Brothers. *Women*—Sisters of St. Benedict, Sisters of Charity, Sisters of St. Francis, Sisters of the Poor, Sisters of the Good Shepherd, Sisters of Notre Dame, Sisters of Providence, Loretto Sisters, Visitation Nuns.

JAMES L. GOREY.

Cowgill, J. R. See LEEDS, DIOCESE OF.

Cowl (κουκούλιον, *cucullus*, *cuculla*, *cucullio*.—Ducange, "Gloss.", s. v.), a hood worn in many religious orders. The name was originally used for a kind of bag in which grocers sold their wares (*ibid.*), then for an article of dress that was like it in shape. The *lacerna* or *byrrhus* (our cope), the usual cloak for outdoor wear until far into the Middle Ages, had a cowl fixed behind, that could be drawn over the head. So also had the *pænula* (chasuble)—Wilpert, "Gewandung der Christen", pp. 13, 45, etc.; Braun, "Liturg. Gewandung", pp. 240, 348). Juvenal (VI, 118) and Martial (XI, 98) refer to the *cucullus* of the *lacerna*. Sozomen says that monks covered their heads with a hood called *cucullus* (H. E., III, xiii), and Palladius tells us the same fact about St. Ephrem and the disciples of Pachomius (Hist. Laus., XIII). Both St. Jerome (Ep. xxii, ad Eustochium) and Cassian (De habitu mon., I, iv) refer to it as part of a monk's dress. St. Benedict ordered two kinds of cowls for his monks, a warm one for winter and a light one for summer (Regula S. Ben., iv). The cowl became a great cloak with a hood. Benedict of Anagni forbade his monks to wear one that came below the knees (Ardo, Vita Ben. Anian., xl). The Benedictines, Cistercians, and all the old monastic orders now use the cowl, a great mantle with a hood that can be thrown back over the shoulders, as a ceremonial dress

for choir; the Franciscans have a smaller hood fixed to their habit; canons wear it on their mozzetta, and bishops and cardinals on the cappa. With the Augustinians and Servites it is still a separate hood not attached to anything. Ducange (s. v.) says the name is a diminutive of *casula*—"quasi minor cella". A cowl fixed to a cloak is still commonly worn in Tyrol, parts of Austria and Hungary, etc. *Cucullata congregatio* occurs occasionally as a general name for monastic orders (Ducange). The colour of the cowl is that of the habit, black among Benedictines, white with the Cistercians, etc.

DUCANGE, *Glossarium mediæ et infimæ Latinitatis*, s. v. *Cucullus*; WILPERT, *Die Gewandung der Christen in den ersten Jahrhunderten* (Cologne, 1898), 13, 45, etc.; BRAUN, *Die liturgische Gewandung im Occident und Orient* (Freiburg im Br., 1907), 240, 348.

ADRIAN FORTESCUE.

Coxcie, MICHEL, Flemish painter, imitator of Raphael, known as the Flemish Raphael; b. at Mechlin, 1499; d. there 1592. There are several spellings for his name: *Cocxie*, *Coxcie*, *Coxis*, *Coacien*, *Coacqyen*. He was a pupil of his father, and afterwards studied under Van Orley, with whom he visited Rome in 1532, where he made the acquaintance of Vasari. There he married his first wife, Ida van Hasselt, with whom he returned to Mechlin, in 1539, and the same year became a member of the Academy of that place. In 1561 he was in Brussels, and after that back in Mechlin, where, at the age of seventy, in 1569, he married his second wife, Jeanne van Schelle. By his first wife he had three children, Anne, a sculptor, William, and Raphael, painters; by his second, two sons, Michiel, a painter, and Conrad. Coxcie painted several large works for the Emperor Charles V and for Philip II, King of Spain, to whom he was court painter. He designed thirty-two subjects from the fable of Cupid and Psyche, which were engraved, and, in conjunction with Van Orley, he directed the execution of some tapestry made from the designs of Raphael. He copied part of the great Van Eyck altar-piece for Philip II of Spain, and portions of his copy are in Berlin and Munich and the remainder in Ghent. Several of his paintings are to be seen at Brussels, Antwerp, Bruges, Berlin, Madrid, St. Petersburg, and Vienna. In his paintings he bestowed special care on the figures of women, and they are well modelled and invariably graceful. In male figures he too often exaggerated the anatomy and selected awkward and unreasonable attitudes. His composition is very Italian in character, sometimes too academic in line and grouping, but agreeable in effect. His best works are signed and dated and are remarkable for their splendid colouring and harmonious result.

GEORGE CHARLES WILLIAMSON.

Coysevox, CHARLES-ANTOINE, a distinguished French sculptor, b. at Lyons, 29 Sept., 1640; d. at Paris, 10 Oct., 1720; he belonged to a family originally from Spain. At the age of seventeen he executed a much admired Madonna. In 1671 he was employed by Louis XIV on various sculptures at Versailles and at Marly. He was elected a member of the Academy in 1676, and had among his pupils his two nephews, Nicolas and Guillaume Coustou. Coysevox made two bronze statues of Louis XIV, the "Charlemagne" at Saint-Louis des Invalides, and other famous works, but his most famous is probably "La Renommée" at the entrance of the Tuileries—two winged horses bearing Mercury and Fame. Napoleon is said to have delighted in the sculptor's fancy that the horse of Mercury should have a bridle, but not that of Fame. Coysevox also produced some fine sepulchral monuments for the churches of Paris. We owe him a special debt for his contemporary portraits.

LÜBKE, *History of Sculpture*, tr. BENNETT (London, 1878); DILKE, *French Architects and Sculptors of the XVIII Century* (London, 1900).

M. L. HANDLEY.

Cozza, Lorenzo, Friar Minor, cardinal, and theologian, b. at San Lorenzo near Bolsena, 31 March, 1654; d. at Rome, 18 January, 1729. He filled the position of lector at Naples and Viterbo, where he became guardian of the convent. Cardinal Sacchetti chose Cozza as his confessor and adviser, thus giving rise to a friendship that lasted through life. While in the Orient, whither he had been sent as superior of the Franciscan monastery in Jerusalem, Cozza found leisure to compose several important works, and as legate of the supreme pontiff he reconciled the Maronites and the Patriarch Jacobus Petrus of Antioch, who had long been at variance with the Holy See. In 1715 he returned to Rome, in 1723 was elected minister general, and on 9 December, 1726, was made cardinal by Benedict XIII. The remaining years of his life were passed at Rome in quiet and study in the little convent of St. Bartholomew on the Island. His writings include "Historia polemica de Græcorum schismate" (Rome, 1719-20); "Commentarii historico-dogmatici" (Rome, 1707); and "Terra Sancta vindicata a calumniis", the last still unpublished.

MARCELLINO DA CIVEZZA, *Saggio di Bibliografia Sanfrancescana* (Prato, 1879), 129-130, n. 166; GOLUBOVICH, *Serie dei Superiori di Terra Santa* (Jerusalem, 1898), 98, n. 168; HURTER, *Nomenclator*, II, 1001; CARDELLA, *Memorie storiche dei cardinali della S. Romana Chiesa* (Rome, 1792), VIII, 223.

STEPHEN M. DONOVAN.

Cozza-Luzi, Giuseppe, Italian savant, Abbot of the Basilian monastery of Grottaferrata near Rome; b. 24 Dec., 1837, at Bolsena in the Province of Rome; d. there 1 June, 1905. In early youth he entered the ancient monastery of which he became abbot in 1882. Pius IX was attracted by his scholarship, as was later Leo XIII. In 1898 he was freed from all official cares and devoted himself thenceforth to his beloved studies. He won distinction by his edition of several ancient Vatican MSS., and was also learned in the history of art and in archaeology. Under his direction was executed the phototype edition of the Codex Vaticanus, (q. v.) (*Vetus et Novum Testamentum* c. Cod. Vaticano 1209 phototyp., 5 vols. fol., Rome, 1889), also a Vatican codex of the Prophets (*ibid.*, 1889), and from a Vatican MS. the miniatures of Giulio Clovio to Dante's "Paradiso". Nearly all the copies of these artistic publications perished at the burning of the Danesi establishment in Rome. Together with the well-known Scriptural scholar, Carlo Vercellone (q. v.), he supervised the printing of the Greek text of the Codex Vaticanus (see *CODEx VATICANUS*), in five volumes (Rome, 1868-81); he also edited other Scriptural MSS., e. g. the Greek codex of Daniel in the Chigi Library at Rome. His most important scientific work was the publication of some fragments of the "Geography" of Strabo (Rome, 1884), originally discovered by Cardinal Mai (q. v.), who was, however, unaware of their importance. We owe also to Cozza-Luzi the publication of the eighth and ninth volumes of Mai's "Nova Bibliotheca Patrum", and a part of the cardinal's correspondence.

Among the theological treatises of Cozza-Luzi is an important study on the evidence of the Greek liturgies to the papal supremacy (*De Rom. Pont. auctorit. doctrinali testim. liturg. ecclesie græce*, Rome, 1870). He wrote also on the antiquities of his native Bolsena, on the cathedral of Orvieto, the Vatican collection of Assyrian antiquities, etc. Among his more interesting publications is an edition of the Greek version of St. Gregory the Great's account of St. Benedict (*Historia S. P. N. Benedicti a Pontif. Gregorio I descripta et a Zacharia græce reddita*, Tivoli, 1880). Many of his writings are scattered in various Italian periodicals, ecclesiastical and historical. Though possessed of a strong intellect and a broad culture he often lacked scientific accuracy and it is regrettable that no organic plan dominated his numerous studious

researches. As yet there exists no biography of him. *Onoranze rese a Giuseppe Cozza-Luzi* (Rome, 1898) contains a list of his principal writings.

U. BENIGNI.

Cracow (Pol. *Krakow*), THE PRINCE-BISHOPRIC OF (*Cracoviensis*); comprises the western portion of Galicia in Austria, and borders on the Diocese of Kielce in Russian Poland, Breslau in Prussia, Tarnow in Galicia, and Zips in Hungary.

It has long been disputed at what time the Diocese of Cracow was created. There is no doubt that it was already in existence in the year 1000; for at that time Poppo, its bishop, was made a suffragan to Radzym (the Latin *St. Gaudentius*) the first Archbishop of Gnesen (Thietmar Chronicon, IV, in P. L., CXXXIX, 1226). Father Augustine Arndt, S. J. (*Zeitschrift für kath. Theologie*, XIV, 45-47, Innsbruck, 1890) adduces some reasons in support of the opinion that the Diocese of Cracow was founded by the Polish King Miesceslaw I as early as 984, and that Poppo, who had been tutor of Duke Henry of Bavaria until 983, became its first bishop; but most authorities agree that it was not created until 1000 or shortly before. There are extant five lists of the bishops of Cracow. The oldest was compiled about 1266 (*Mon. Germ. Hist.: Script.*, XIX, 608), the second, shortly before 1347 (*Mon. hist. Polon.* III, 801); the others are of a later date. During the invasion of the Bohemians in 1039, and the succeeding period of anarchy, all ecclesiastical documents were lost, and the names and dates of the bishops of Cracow up to Bishop Aaron (1046-1059) are very unreliable. Prochorus and Proculphus, who are mentioned in the lists as predecessors of Poppo, are entirely legendary. Three of the bishops of Cracow are publicly venerated: St. Stanislaus Szczepanowski (1072-1079), who suffered martyrdom at the hands of King Boleslaw, canonized in 1253, patron of Poland and of the Dioceses of Cracow and Posen; Blessed Vincent Kadlubek (1208-1218), the earliest Polish historian of Poland, resigned his see and entered the Cistercian monastery of Jedrzejow in 1218, died 8 March, 1223, beatified in 1764; John Prandotha (1242-1266), who drove the heretical Flagellants from his diocese, and was venerated until the seventeenth century, when his veneration ceased, owing to a misinterpretation of the Bull "De cultu servorum Dei" issued by Pope Urban VIII, 5 July, 1634. Other renowned bishops were: Mattheaus (1143-1165) a historian; Zbigniew Olesnicki (1423-1455), a great statesman and fearless opponent of the Hussites, created cardinal in 1439; and George Radziwill (1591-1600), founder of seminaries and hospitals.

Originally the Diocese of Cracow seems to have comprised the towns and districts of Sandomir, Cracow, and Lublin, and the castellanies of Sieradz, Spicimir, Rozpoza, Lenczyce, and Wolborg; but its area underwent various changes. From the year 1443 to 1795 the Bishops of Cracow were at the same time sovereign dukes of Severia, a territory situated between Silesia and Cracow. Before the first partition of Poland in 1772 the Diocese of Cracow comprised the whole of Little Poland, Sieradz, a large portion of Silesia, and part of the present Diocese of Zips (Scepsum). In 1772 it lost its territory south of the Vistula (Diocesis Cisvistulana), which in 1783 constituted the new Diocese of Tarnow. In 1790 the new Diocese of Lublin and in 1805 the new Diocese of Kielce were severed from its remaining territory. Pope Pius VII made Cracow an exempt diocese in 1815 and restored to it a portion of the Diocese of Kielce in 1817, which portion, however, was returned to Kielce in 1846, so that then the Diocese of Cracow was confined to the city Cracow and two deaneries south of the Vistula. From 1851 to 1879 the diocese was ruled by administrators. Under Albin Dunajewski, who became bishop in 1879, it was somewhat enlarged

towards the south, in 1880 and again in 1886. In 1889 it was made a prince-bishopric, and a year later Prince-Bishop Dunajewski was raised to the cardinalate. John Puzyna de Koziel was made Prince-Bishop of Cracow in 1895, and Anatole Nowak auxiliary bishop in 1900. The diocese numbers 197 parishes, 181 vicariates, 457 diocesan and 223 regular priests, 850,000 Catholics, 4000 Protestants, and 60,000 Jews. The Emperor of Austria has the privilege of appointing the prince-bishop, after consulting with the bishops of Galicia. The cathedral chapter includes 3 prelates (dean, scholasticus, and custos) and 6 canons. The most important educational institution in the diocese is the Cracow University (Uniwersitet Jagiellonski), founded by Casimir the Great in 1364 and approved by Pope Urban V the same year. The diocese has also an ecclesiastical seminary, various colleges, and minor institutions of learning. The cathedral of Cracow is one of the most venerable structures in Europe. Here lie buried most of the Polish kings, the two national heroes, Kosciuszko and Poniatowski, the greatest Polish poet, Mickiewicz, and many other noble sons of Poland; here also are preserved the relics of St. Stanislaus (see above). It is of Gothic architecture, originally built probably by Miesław I about 966, where now stands the church of St. Michael and where St. Stanislaus suffered martyrdom; rebuilt on its present site by Ladislaus Herman, King of Poland (1083–1102); restored by Nancker Oksza, Bishop of Cracow (1320–1326); rebuilt in the eighteenth century in barocco style; and renovated from 1886–1901. It contains the beautiful chapel of Sigmund, the best specimen of the Renaissance style in Eastern Europe, built by Bartolommeo da Firenze in the sixteenth century and renovated in 1894. The Church of St. Mary, a Gothic structure built 1226–1397 and restored in the fourteenth century, has on its high altar a large Gothic wood-carving representing the death of the Blessed Virgin, the masterpiece of Veit Stoss.

The chief charitable institution is the Archconfraternity of Mercy, founded by the Jesuit Peter Skargo (d. 1618), which distributes alms to the poor and is the owner of a *mont-de-piété*. There are also: another *mont-de-piété*; an asylum for old men and women, three orphan asylums, an insane asylum, various hospitals and workhouses. All these establishments are subject to the diocesan authorities. The Catholic press is represented by two dailies, two weeklies edited by priests, three monthlies published by religious, and two monthly magazines of high literary standard. They are all in Polish.

The following religious orders and congregations of men are engaged in parish, educational, or charitable work: Augustinians, Brothers of Mercy, Camaldolese, Canons Regular of the Lateran, Canons Regular of the Holy Sepulchre, Carmelites, Discalced Carmelites (2 houses), Capuchins, Cistercians (Abbey of Mogila), Conventual Franciscans, Observant Franciscans (here called Bernardines (3 houses), Reformed Franciscans (3 houses), Dominicans, Hermits of St. Paul, Jesuits (2 houses), Lazarists (3 houses), Piarists, Resurrectionists. The religious orders and congregations of women are represented by the following: Augustinians, Benedictines, Bernardines, Canonesses of the Holy Ghost de Saxia, Discalced Carmelites, Clarisses, Daughters of Divine Love, Dominicans, Franciscans, Premonstratensians, Resurrectionists, Salesians, Servite Tertiaries, Ursulines, Sisters of St. Albert, Sisters of St. Charles Borromeo, Sisters of St. Felix, Sisters of the Holy Family, Sisters of the Mother of Mercy, Sisters of Nazareth, Sisters of the Presentation, Vincentian Sisters, Servants of the Sacred Heart of Jesus.

MICHAEL OTT.

THE UNIVERSITY OF CRACOW.—The first documentary evidence regarding the scheme that King Casimir the Great conceived of establishing a university dates from 1362. Urban V favoured the plan, and King Casimir issued the charter of the university, 12 May, 1364. It was modelled after the schools of Padua and Bologna, consequently the faculty of law and the study of Roman law held the first place. The pope gave his approval, 1 September, 1364, but excluded theology. Casimir's school, however, was re-founded during the reign of Jagiello and Hedwig of the house of Anjou. The consent of Boniface IX was given, 11 February, 1397, and King Jagiello signed the charter, 26 July, 1400. The university now included all four faculties and was, therefore, patterned on that of Paris. The first chancellor was Bishop Peter Wysz of Cracow, who also gave the opening lecture. The first professors were Bohemians, Germans, and Poles, most of whom had been trained at Prague. In the first year the number of matriculated students was 205; in the course of the fifteenth century it rose to 500.

The university took an active part in the ecclesiastical controversies of the fifteenth century and showed itself a strong supporter of the conciliar doctrine: *concilium supra papam* (i.e. a council is above the pope). It maintained nevertheless a strictly Catholic position during the Hussite troubles. In the struggle between the Nominalists and Realists it took but little part, Realism having almost exclusive sway at the school. Still the effect on the university of the active intercourse with the West was, at the time, but slight and transient. King Jagiello died in 1434; in the period following, the university was controlled by its powerful chancellor, Zbigniew Olesnicki, who was also Bishop of Cracow from 1423 to 1455. A circle of learned men who followed the new tendencies gathered around him. Among these scholars was Poland's great historian, Dlugosz. At the time of the Council of Basle the university and its chancellor were partisans of the council, and Olesnicki even accepted the cardinalate from Felix V. After the Union of Florence Olesnicki went over to the side of Nicholas V, but the university did not submit to the control of the Church until 1449. The age of Olesnicki was one of great scholars, among whom were: the physician and astronomer, Martin Krol; the decretalist, Johann Elgot; the theologians, Benedict Hesse and Jacobus of Paradyz. St. John Cantius, student and later professor of theology, was distinguished for virtue even more than for learning. He was born at Kenty, 1397; died, 1473; was canonized by Clement XIII, 1767; his feast is observed 20 October. Olesnicki showed favour to men who were not Poles, suppressed the Hussite tendencies with a firm hand, and was very generous to the university. He died in 1455.

The causes which finally brought the university into line with the new tendencies were various. Poland was then the great power of Eastern Europe, the court of Casimir of the Jagellon dynasty was a brilliant one, and Cracow was a very rich city. It was, therefore, not surprising that many famous men were drawn to this centre. From 1470 to 1496 Callimachus was preceptor in the royal household. Attracted by the fame of Callimachus, Conrad Celtes, the celebrated Humanist, made his appearance at Cracow before the end of the century. Printing also soon had its representatives here; towards the close of the fifteenth century Haller established his press in Cracow and began his patronage of art and letters. In this way the number of those who followed the new humanistic tendencies of the West continually increased, but unfortunately there was also an increase in profligacy. In 1492, John I Albert, the pupil and friend of Callimachus, ascended the throne of Poland; he did not,

however, fulfil the expectations excited by him. Callimachus died in 1496; as time went on the seed which he and Celles had sown produced its fruit, as is shown in Rhagius Sommerfeld, also called *Æsticampianus*, and in Heinrich Bebel. Thus, at the opening of the sixteenth century, the classic writers were more and more read, at first outside of the lecture-rooms of the university, in the students' halls. In 1520 the study of Greek was introduced into the university, the professors being Constanzo Claretti, Wenzel of Hirschberg, and Libanus. Hebrew was also taught in spite of the opposition to the "Judaizers"; and the notorious Italian, Francesco Stancari, arrived at Cracow in 1546.

DECLINE OF THE UNIVERSITY.—In the midst of this progress signs of decay were visible, though the decline did not originate in the university itself. The national policy of Poland, the founding of the universities of Wittenberg and Frankfurt-on-the-Oder, and a strong anti-German tendency, caused the University of Cracow to lose its original cosmopolitan character and to become rather a national Polish university; thus a gradual decline ensued. Nevertheless it maintained during this period a remarkably high standing. Such scholars as Martin Krol, Martin Bylica, and finally Adalbert Brudzewski made the school famous as a seat of astronomical studies while the name of Nicholas Copernicus, the pupil of Brudzewski, sheds upon it undying lustre. Elementary studies were taught, consequently students of from fourteen to sixteen years of age entered from Hungary, Moravia, Silesia, Prussia, and the provinces of the Polish crown. At first the students lived in private houses, but gradually halls were established in which "commons" were provided, and a clerical dress was worn. The expenses of these halls were covered by the fees which the students paid for board, matriculation, room rent, and fuel. The rector of the university was chosen by a committee of doctors and masters. Up to 1419 a rector was chosen for the whole year, but from this date until 1778 one was selected for each semester. Other officers were: the curators who watched over the rights and privileges of the university, the procurator and notarius, and the *consiliarii* who had to decide in case of an appeal. From the start the professors lived together in colleges, and were divided according to faculties. They had a common table, decided as to the reception of members, and bestowed the positions of canon and prebend, of which each faculty, with the exception of the medical, had often as many as twelve at its disposal. During the seventeenth and eighteenth centuries the fortunes of the university sank to a very low ebb. J. Górski, in his "Apology" (1581), and Petrycy give as the chief reasons for this the utter insubordination of the students, complete indifference of the professors to the advances of learning in the West, and lack of means for the support of the university. Above all, there arose after the opening of the seventeenth century, a bitter conflict on the part of the university against the Jesuits, who, on the strength of their constitutional privileges, had opened schools in Cracow, Posen, Lemberg, and other places, to protect Polish youth against the advances of Protestantism. The university, however, appealed to a privilege, the *jus exclusivis*, and demanded the closing of the Jesuit institutions. For nearly one hundred and fifty years this conflict was carried on with incredible tenacity. The common people, nobility, clergy, kings, bishops, and popes were drawn into it, and the struggle ended in the discomfiture of the Jesuits (cf. Zaleski, *Jezuici w Polsce*, II, III). When, towards the close of the eighteenth century, national misfortunes overtook the country, and the three Partitions of Poland put an end to Polish freedom, the life of the university came to a complete standstill. It is true that Bishop Sołtyk, and after him the energetic Kołtataj, undertook a thor-

ough reform by breaking with the medieval routine and giving prominence to the natural sciences. But the political conditions in the decades following these efforts were unfavourable to quiet and serious study.

MODERN TIMES.—After Cracow had become, in 1846, a part of the Austrian Empire, the central Government at Vienna endeavoured to make the university more German, but did nothing to improve it. A new era did not open for the school until 1861, when Francis Joseph I permitted Polish to be again used as the language of instruction and official life, and the Government allowed a new building to be erected for the university. The number of professors and students now increased each year. While, in 1853 there were only 47 professors, of whom 37 were regular professors, 2 assistant professors, and 8 docents, in 1900, the fifth centennial of the university, there were 103 professors; of this number 48 were regular, 36 assistant professors, and 19 docents and lecturers. In 1907 the professors numbered 115. In 1853 there were 175 students; in 1893, 1320; in 1907, over 2700. The university library contains 250,000 works in 330,000 volumes; 5500 manuscripts in 7000 volumes (some of them very valuable and as yet unpublished); about 10,000 coins, and 1200 atlases. The university has a college of the physical sciences, and a medical college for anatomical and physiological lectures; the medical school is entirely modern in its equipment and possesses very fine collections. There are also surgical, gynaecological, and ophthalmic clinics, besides one for internal and nervous diseases; an agricultural institute is in process of construction. Among the distinguished scholars connected with the university (1908) are: Professor Obszewski, the discoverer of a new method for liquifying gases, the surgeon Professor Kader, and Professor Wicherkiwicz, the oculist.

OSCAR RUDSKI.

Craigie, PEARL MARY TERESA, better known, under the pseudonym which first won her fame, as JOHN OLIVER HOBBS, English novelist, dramatist, and convert; b. 3 November, 1867; d. 13 August, 1906. She was the eldest daughter of John Morgan Richards, a successful man of business in Boston, Massachusetts, U. S. A., and of Laura Hortense Arnold, a lady of distinguished colonial descent. Her father came of an intensely Calvinistic stock long settled in and about New York and New Jersey; and her grandfather, the Rev. James Richards, D.D., was a preacher and theological writer of some distinction in his time. In February, 1887, before she had completed her twentieth year, Miss Richards was married to Mr. Reginald Walpole Craigie, an English gentleman of good connexions. The union, however, proved an uncongenial one, and Mrs. Craigie soon sought and obtained a legal separation with the right to the custody of her child. In 1892, as the result, it would seem, of much private and independent reflection, she was received into the Church. She had begun to turn her thoughts seriously to literature some time before this event; for already in 1891 she had ventured before the public under the pseudonym which she insisted on retaining long after her identity was known, and challenged the puzzled critics by a book to which she gave the uncon-

ventional title of "Some Emotions and a Moral". Success waited upon her from the start: "The Sinner's Comedy" (1892); "A Study in Temptations" (1893); "A Bundle of Life" (1894); "The Gods, Some Mortals, and Lord Wickenham" (1895); "The Herb Moon" (1896); "The School for Saints" (1897); "Robert Orange" (1900); "A Serious Wooing" (1901); "Love and the Soul Hunters" (1902); "Tales About Temperaments" (1902); "The Vineyard" (1904); "The Flute of Pan" (1905); "The Dream and the Business" (published after her death in 1906);—these with plays like "Journeys End in Lovers Meeting: Proverb," in one act, written for Miss Ellen Terry (1894); "The Ambassador", produced at the St. James's theatre in London (1898); "Osborn and Ursyne", a tragedy in three acts, published in the "Anglo-Saxon Review" (1899); "A Repentance", a drama in one act, produced at the St. James's Theatre and afterwards at Carisbrooke Castle (1899); "The Wisdom of the Wise", produced at the St. James's Theatre (1900); and "The Bishop's Move" (1902), of which she was author only in part, represent the sum of her considered work, the output she preferred to be judged by. As she grew older in the wisdom of her art, the religious quality which seems to lie inevitably behind all her theory of life emerged more and more into prominence. It reached its height in "The School for Saints" and its sequel "Robert Orange". Whether in literary form or in artistic intention she never rose beyond the achievement of these two books. They are intensely serious, intensely human, and almost too religious; yet they are modern and alive. Mrs. Craigie was in the full enjoyment of a well deserved fame, yet hardly at the acme of her powers, when death came to her suddenly from heart disease.

CORNELIUS CLIFFORD.

Craniotomy. See ABORTION; EMBRYOTOMY.

Crashaw, RICHARD, poet, Cambridge scholar and convert; d. 1649. The date of his birth is uncertain. All that can be affirmed positively is that he was the only child of a one-time famous Puritan divine, William Crashaw, by a first marriage, and that he was born in London, probably not earlier than the year 1613. Of the mother nothing is known except that she died in her child's infancy, while his father was one of the preachers in the Temple; and not even her family name has been preserved to us. William Crashaw, the father, was born in Yorkshire of a prosperous stock, which had been settled for some generations in or about Handsworth, a place some few miles to the east of the present town of Sheffield. He was a man of unchallenged repute for learning in his day, an argumentative but eloquent preacher, strong in his Protestantism, and fierce in his denunciation of "Romish falsifications" and "besotted Jesuitries". He married a second time in 1619, and was once more made a widower in the following year. Richard, the future poet, could scarcely have been more than a child of six when this event took place; but the relations between the boy and his step-mother, brief as they must have been, were affectionate to an unusual degree. She was but four and twenty when she died in child-birth early in October, 1620, and she was buried in White-chapel. No other details of this period of Crashaw's life have come down to us, but the few to which reference has been made make it abundantly evident that neither his poetic gifts nor the strange bias which he afterwards displayed for the more mystical side of Christianity can be explained altogether by heredity or even by early environment.

Owing to the elder Crashaw's fame as a Temple preacher and the scarcely less notable distinction which must have attached to him as a hard-hitting Protestant pamphleteer, it was only natural that, in

the then state of public opinion, a career should in time be opened to his promising son. On the nomination of Sir Randolph Crewe and Sir Henry Yelverton, the latter one of the judges of the King's Bench, the boy was placed on a foundation in the Charterhouse School where he was brought under the influence of Robert Brooke, a master of high ideals and great practical success. The elder Crashaw died in 1626, leaving his son unprovided for; but the influence of his friends was exerted in the boy's behalf, and on 6 July, 1631, some five years after his father's death, Richard entered Pembroke Hall in Cambridge. He did not formally matriculate as a scholar until 26 March of the following year, when he succeeded in getting elected to a pensionership. That he had lived for some time at Pembroke previous to his actual election on one of the foundations there seems to be proved by the poems composed on the death of William Herrys (or Harris) which took place in October, 1631. Life at Cambridge was not niggardly to Crashaw in spite of the improvidence which led him to deplete his uncertain resources by spending his little all on books. From this time forth books and friends and religion were to make up the staple of existence for him.

It is significant of the essential aloofness of his spirit, during even the chief formative years of his life, that his poems contain no reference to his early London house or to his family. Brooke, his kindly Charterhouse master, however, he commemorates more than once in affectionate terms both in Latin and in English; and the ties of university friendship seem ever to have been strong with him. Benjamin Laney, the Master of Pembroke, a man of Laudian views, who came into his own, after the Cromwellian troubles were over, by being appointed successively to the Sees of Peterborough, Lincoln, and Ely; John Tournay, the High Churchman, tutor of his college, who was refused a divinity degree because of his temerity in attacking the Lutheran doctrine of justification by faith alone; Nicholas Ferrer, the enthusiast who dreamed of reviving the cenobitical idea in the Anglican Church in his home at Little Gidding; Cosin, the Royalist master of Peterhouse; John Beaumont, the author of "Psyche"; and most characteristic of all, perhaps tenderest of all, and certainly not the least notable of the "Metaphysicians", the poet, Abraham Cowley;—these were the intimates who watched the ripening of those Cambridge years during which Crashaw achieved his titles to permanent fame. His feeling for the remote and more learned sense of words, which accounts in part for the defects as well as for the felicities of his poetic style, had manifested itself early in his academic career; and he had been but a short while at the university before he was known as an adept in five languages. His knowledge of Greek and Latin was above the average, even for a generation distinguished in no small degree for its classical scholarship, and one famous line on the Miracle of the Marriage Feast of Cana in his "Epigrammatum Sacrorum Liber", issued from the University Press in 1634, will probably be quoted as long as the Latin tongue retains its spell over Western Christianity: "Nympha pudica Deum vidit, et erubuit". (The conscious water saw its Lord, and blushed.) Cf. Aaron Hill's translation, 1688-1750. The year in which the "Epigrammatum Sacrorum Liber" appeared was the year in which Crashaw took his bachelor's degree. He could scarcely have been more than twenty-one at the time, and two years later, possibly on the promise of a more lucrative fellowship, he joined his friend Dr. Cosin at Peterhouse and proceeded M.A. in 1638.

For the details of his life during the next ten or eleven years we are indebted largely to the conjectures of the late Dr. Grosart, based upon the chance statements of his friends and an entry here and there in registers and diplomatic correspondence; that it was a life sincerely devoted to religious meditation is proved by the pre-

and Pauline was introduced into the brilliant society of the Restoration. In 1830 her father was given the post of ambassador to Rome, where he was accompanied by his family. It was probably in Naples that she met Augustus Craven, son of Keppel Craven and grandson of the Margravine of Anspach, who in 1830 had been appointed attaché to the British Legation at Naples. Their marriage was celebrated, 24 August, 1834, in the chapel of the Acton Palace, Naples, and a few days afterwards Augustus Craven was received into the Church. In 1836 Mr. and Mrs. Craven returned to England, whence they went successively to Lisbon, Brussels (1838), and Stuttgart (1843), where Mr. Craven held diplomatic appointments. Up to this time Mrs. Craven's life had been intimately bound up with those of her immediate family, whom the world has come to know and love in the pages of "Le Récit d'une Sœur". She took a keen interest in English politics, and in 1851 wrote a protest against an attack in the House of Commons on conventual life as it was being revived in England.

In 1851 Mr. Craven made an unsuccessful stand for Parliament, which caused him severe financial losses. In 1853 the Cravens took up their residence at Naples in the Palazzino Chiatamone, or as it came to be called, the Casa Craven, formerly occupied by Mr. Craven's father, who had died in 1851. During the years that followed, this became the centre of the brilliant Neapolitan society depicted in Mrs. Craven's "Le mot de l'énigme". By 1864 she had arranged the mass of materials for "Le Récit d'une Sœur", and had begun "Anne Severin". "Le Récit" appeared in January, 1866. In March, 1868, the first part of "Anne Severin" began in "Le Correspondant", and Lady Fullerton commenced the translation.

The winters of 1868-69 and 1869-70 were spent in Rome, and at the Craven apartments numbers of distinguished people met, among them many of the prelates present at the Vatican Council. Mrs. Craven's best known novel, "Fleurange", appeared in 1872 simultaneously at Paris in "Le Correspondant" and at New York in English through the efforts of Father Hecker in "The Catholic World". This work was crowned by the Academy. It was followed in 1874 by "Le mot de l'énigme". In the same year Mrs. Craven's answer to Gladstone's article in the "Contemporary Review", entitled "Ritualism and Ritual", and his subsequent pamphlet, appeared in "Le Correspondant" on the same day as Cardinal Newman's "Letter to the Duke of Norfolk".

After 1870 Mrs. Craven's life was spent chiefly in Paris, varied by lengthy visits to English friends, and more particularly to Monabri, the beautiful chalet of Princess Sayn Wittgenstein, between Lausanne and Ouchy, where the Empress Augusta was also a frequent guest. The life of Natalie Narischkin, on which Mrs. Craven had long been at work, appeared in 1876. Mr. Craven died at Monabri, 4 October, 1884, and was buried at Boury. During the remaining seven years of Mrs. Craven's life she was busy with various articles for reviews, but chiefly with her last novel, "Le Valbriant", and the life of her friend, Lady Georgiana Fullerton, published in 1888, and adapted by Father Coleridge in his life. On 5 June, 1890, she was attacked by a species of paralysis, which after ten months, during which she was deprived of speech, resulted in her death.

F. M. RUDGE.

Crayer, GASPARD DE, Flemish painter, b. at Antwerp, 1582; d. at Ghent, 1669. He was a pupil of Raphael van Coxcie, but speedily surpassed his master, and was appointed painter to the Governor of the Low Countries at Brussels, was given a considerable pension, and employed in the churches

and public edifices of that place. He resigned his position, however, and removed to Ghent, where he painted his most celebrated works. Of his picture of the "Centurion and Christ", painted for the refectory of the abbey at Affligem, Rubens is said to have declared: "Crayer, nobody will surpass you". He was one of the most eminent Flemish painters, and, although not a man of profound genius, was a perfect draughtsman and an admirable colourist. His compositions are simple, correct, and pleasing, his colouring clear and fresh, comparable only in his own school to that of Van Dyck. In many of his important works he employed De Vadder and Achtschellinck to paint the landscapes, he himself being responsible for the composition and figures. His chief work is the "Death of the Virgin" in Madrid, and his principal portrait is that of the Cardinal Infant Don Ferdinand, brother of the King of Spain, on horseback. There are several of his paintings at Brussels, three in Ghent, one at Antwerp, and others at Amsterdam, Munich, Nancy, Paris, St. Petersburg, and Rotterdam. His portrait was painted by Van Dyck and engraved by Pontius, and he himself is said to have been responsible for more than one woodcut.

GEORGE CHARLES WILLIAMSON.

Creagh, RICHARD, Archbishop of Armagh, Ireland, b. at Limerick early in the sixteenth century; d. in the Tower of London, in 1585. The son of a merchant, he followed the same calling in his youth and made many voyages to Spain. A providential escape from shipwreck led him to embrace a religious life, and after some years of study abroad he was ordained priest. Returning to Ireland, he taught school for a time at Limerick. He refused nominations for the Sees of Limerick and Cashel, but the papal nuncio, David Wolfe, determined to conquer his humility, named him for the primacy when it became vacant, and would accept no refusal. Creagh was consecrated at Rome, and in 1564 returned to Ireland as Archbishop of Armagh. Shane O'Neill was then the most potent of the Ulster chiefs. From the first he and Creagh disagreed. O'Neill hated England; Creagh preached loyalty to England in the cathedral of Armagh, even in his presence. O'Neill retorted by burning down the cathedral. Creagh then cursed him and refused to absolve him because he had put a priest to death. Shane retaliated by threatening the life of the primate, and by declaring publicly that there was no one on earth he hated so much, except the Queen of England, whom he confessed he hated more. In spite of all this, Creagh was arrested and imprisoned by the English. Twice he escaped, but he was retaken and in 1567 lodged in the Tower of London, and kept there till his death. From his repeated examinations before the English Privy Council his enmity to Shane O'Neill and his unwavering loyalty to England were made plain. But his steadfastness in the Faith and his great popularity in Ireland were considered crimes, and in consequence the Council refused to set him free. Not content with this his moral character was assailed. The daughter of his jailer was urged to charge him with having assaulted her. The charge was investigated in public court, where the girl retracted, declaring her accusation absolutely false. It has been said that Creagh was poisoned in prison, and this, whether true or false, was believed at the time of his death. His grand-nephew, Peter Creagh, was Bishop of Cork about 1676. He was imprisoned for two years in consequence of the false accusations of Titus Oates, but

acquitted (1682), was transferred to the Archdiocese of Tuam in 1686. He followed James II to the Continent, was appointed Archbishop of Dublin in 1693, but was never able to return and take possession. He became Coadjutor Bishop of Strasburg, where he died (July, 1705).

E. A. D'ALTON.

Creation (Lat. *creatio*).—I. DEFINITION.—Like other words of the same ending, the term *creation* signifies both an action and the object or effect thereof. Thus, in the latter sense, we speak of the "kingdoms of creation"; "the whole creation", and so on. In the former sense the word sometimes stands for productive activity generally (e. g. to *create* joy, trouble, etc.), but more especially for a higher order of such efficiency (e. g. artistic creation). In technically theological and philosophical use it expresses the act whereby God brings the entire substance of a thing into existence from a state of non-existence—*productio totius substantiæ ex nihilo sui et subjecti*. In every kind of production the specific effect had as such no previous existence, and may therefore be said to have been educed *ex nihilo sui*—from a state of non-existence—so far as its specific character is concerned (e. g. a statue out of crude marble); but what is peculiar to creation is the entire absence of any prior subject-matter—*ex nihilo subjecti*. It is therefore likewise the production *totius substantiæ*—of the entire substance. The preposition *ex*, "out of", in the above definition does not, of course, imply that *nihil*, "nothing", is to be conceived as the material out of which a thing is made—*materia ex qua*—a misconception which has given rise to the puerile objection against the possibility of creation conveyed by the phrase, *ex nihilo nihil fit*—"nothing comes of nothing". The *ex* means (a) the negation of preajacent material, out of which the product might otherwise be conceived to proceed, and (b) the order of succession, viz., existence after non-existence. It follows, therefore, that (1) creation is not a change or transformation, since the latter process includes an actual underlying pre-existent subject that passes from one real state to another real state, which subject creation positively excludes; (2) it is not a procession within the Deity, like the inward emission of the Divine Persons, since its term is extrinsic to God; (3) it is not an emanation from the Divine Substance, since the latter is utterly indivisible; (4) it is an act which, while it abides within its cause (God), has its term or effect distinct therefrom; formally immanent, it is virtually transitive; (5) including, as it does, no motion, and hence no successive-ness, it is an instantaneous operation; (6) its immediate term is the substance of the effect, the "accidents" (q. v.) being "con-created"; (7) since the word *creation* in its passive sense expresses the term or object of the creative act, or, more strictly, the object in its entitative dependence on the Creator, it follows that, as this dependence is essential, and hence inamissible, the creative act once placed is coextensive in duration with the creature's existence. However, as thus continuous, it is called conservation, an act, therefore, which is nothing else than the unceasing influx of the creative cause upon the existence of the creature. Inasmuch as that influx is felt immediately on the creature's activity, it is called concurrence. Creation, conservation, and concurrence are, therefore, really identical and only notionally distinguished. Other characteristics there are, the more important of which will come out in what follows.

II. HISTORY OF THE IDEA.—1. The idea of creation thus outlined is intrinsically consistent. Given a personal First Cause possessing infinite power and wisdom, creative productivity would a priori be necessarily one of His perfections, i. e. absolute independence of the external limitations imposed by a material subject whereon to exert His efficiency. Besides, the fecundity which organic creatures possess, and which, in the present supposition, would be derived from that First Cause, must be found typically and eminently in its source. But creative productivity is just the transcendent exemplar of organic fecundity. Therefore, a priori, we should look for it in the First Cause. How the creature is produced, how something comes from nothing, is of course quite unimaginable by us, and extremely difficult to conceive. But this is scarcely less true of any other mode of production. The intimate nexus between cause and effect is in every case hard to understand. The fact, however, of such a connexion is not denied except by a few theorists; and even they continually admit it in practice. Consequently the indistinctness of the notion of creation is no valid reason for doubting its inner coherence. Moreover, though the idea of creation is not, of course, based upon immediate experience, it is the product of the mind's endeavour, aided by the principle of sufficient reason, to interpret experience. Creation, as will presently appear, is the only consistent solution that has ever been given to the problem of the world's origin.

2. On the other hand, though the idea of creation is self-consistent and naturally attainable by the mind interpreting the world in the light of the principle of causality, nevertheless such is not its actual source. The conception has a distinctly theological origin. The early Christian writers, learning from Revelation that the world was produced from nothing, and seeing the necessity of having a term to designate such an act, chose the word *create*, which theretofore had been used to express any form of production, e. g. *creare consulem* (Cicero). The theological usage afterwards passed into modern language. Probably the idea of creation never entered the human mind apart from Revelation. Though some of the pagan philosophers attained to a relatively high conception of God as the supreme ruler of the world, they seem never to have drawn the next logical inference of His being the absolute cause of all finite existence. The truth of creation, while not a mystery—not supernatural in its very nature (*quoad essentiam*)—is supernatural in the mode of its manifestation (*quoad modum*). Implicitly natural, it is explicitly revealed. The distinct conception of his created origin which primitive man, as described in Genesis, must have received from his Creator was gradually obscured and finally lost to the majority of his descendants when moral corruption had darkened their understanding; and they substituted for the Creator the fantastic agencies conjured up by polytheism, dualism, and pantheism. The overreaching sky was conceived of as divine, and the heavenly bodies and natural phenomena as its children. In the East this gradually gave rise to the identification of God with nature. Whatever exists is but the manifestation of the One—i. e. Brahma. In the West the forces of the universe were separately deified, and a more or less esoteric conception of the Supreme Being as the father of the gods and of man was feebly held by some of the Egyptians and probably by the Greek and Roman sages and priests. The Creator, however, did not leave Himself without witness in the race of men. The descendants of Sem and Abraham, of Isaac and Jacob, preserved the idea of creation clear and pure; and from the opening verse of Genesis to the closing book of the Old Testament the doctrine of creation runs unmistakably outlined and absolutely undefiled by any extraneous element. "In the beginning God created the heavens and the earth." In this, the first, sentence of the Bible we see the fountain-head of the

stream which is carried over to the new order by the declaration of the mother of the Machabees: "Son, look upon heaven and earth, and all that is in them: and consider that God made them out of nothing" (II Mach., vii, 28). One has only to compare the Mosaic account of the creative work with that recently discovered on the clay tablets unearthed from the ruins of Babylon to discern the immense difference between the unadulterated revealed tradition and the puerile story of the cosmogony corrupted by polytheistic myths. Between the Hebrew and the Chaldean account there is just sufficient similarity to warrant the supposition that both are versions of some antecedent record or tradition; but no one can avoid the conviction that the Biblical account represents the pure, even if incomplete, truth, while the Babylonian story is both legendary and fragmentary (Smith, "Chaldean Account of Genesis", New York, 1875). Throughout the New Testament, wherein God's creative activity is seen to merge with the redemptive, the same idea is continuous, now reaffirmed to the Greek pagan in explicit forms, now recalled to the Hebrew believer by expressions that presuppose it too obvious and fully admitted to need explicit reiteration.

3. The extra-canonical books of the Jews, notably the Book of Enoch and the Fourth Book of Esdras, repeat and expand the teaching of the Old Testament on creation; the Fathers and Doctors of the early Church in the East and West everywhere proclaim the same doctrine, confirming it by philosophical arguments in their controversies with Paganism, Gnosticism and Manichæism; while the early Roman symbols, that of Nicæa and those of Constantinople repeat, in practically unvarying phrase, the universal Christian belief "in God the Father Almighty, Creator of Heaven and earth, of all things visible and invisible".

4. After the controversy with Paganism and the Oriental heresies had waned, and with the awakening of a new intellectual life through the introduction of Aristotle into the Western schools, the doctrine of creation was set forth in greater detail. The revival of Manichæism by the Cathari (q. v.) and the Albigenses (q. v.) called for a more explicit expression of the contents of the Church's belief regarding creation. This was formulated by the Fourth Lateran Council in 1215 [Denzinger, "Enchiridion", 428 (355)]. The council teaches the unity of the creative principle—*unus solus Deus*; the fact of creation out of nothing (the nature of creation is here for the first time, doubtless through the influence of the schools, designated by the formula, *condidit ex nihilo*); its object (the visible and invisible, the spiritual and material world, and man); its temporal character (*ab initio temporis*); the origin of evil from the fact of free will.

5. The conflict with the false dualism and the emanationism introduced into the schools by the Arabian philosophers, especially Avicenna (1036) and Averroes (1198), brought out the more philosophically elaborated doctrine of creation found in the works of the greater Scholastics, such as Blessed Albert, St. Thomas, and St. Bonaventure. The Aristotelean theory of causes is here made use of as a defining instrument in the synthesis which is suggested by the well-known distich:—

Efficiens causa Deus est, formalis idea,
Finalis bonitas, materialis hyle

(Albert. Magn., Summa, I, Tr. xiii; Q. liv, Vol. XXXI, p. 551 of Bosquet ed., Paris, 1895). On these lines the Schoolmen built their system, embracing the relation of the world to God as its efficient cause, the continuance of creation in God's conservation thereof and His concurrence with every phase of the creature's activity; the conception of the Divine idea as the archetypal cause of creation; the doctrine that God is moved to create (speaking by analogy with the finite will) by His own goodness, to which He gives expression in creation in order that the rational creature recognizing

it may be led to love it and, by a corresponding mental and moral adjustment thereto in the present life, may attain to its complete fruition in the life to come; in other words that the Divine goodness and love is the source and final cause of creation both active and passive. Thus the application, by a constantly sustained analogy of the three causes—efficient, final, and formal (archetypal)—results in the Scholastic philosophy of creation. There being no previously existing material cause (*hyle*) of creation, the application of the fourth cause appears in the Scholastic theory on potency and *materia prima*, the radical and undifferentiated constituent of nature.

6. The idea of creation developed by the Scholastics passed without substantial change along that current of modern thought which preserved the essential elements of the Theistic-Christian world-view—that of Descartes, Malebranche, Leibniz—and of course along the continuous stream of traditional teaching within the Catholic Church. In the opposing current it disappears with Spinoza, and gives way to realistic Pantheism; with Fichte, Schelling, and Hegel, its place is taken by some phase of varying idealistic Pantheism; while in our own day Agnosticism (Spencer), materialistic Monism (Häckel), and spiritualistic Monism (Neo-Hegelianism and the New Theology) have been put forward as substitutes. Amongst recent Catholic theologians there is a practically uniform tendency to interpret the traditional and Scriptural data as postulating the creative act to account for the origin of unembodied spirits (the angels), of the primordial matter of the universe, and of the human soul. The development of the universe, the introduction of plant and animal life, the formation of the first human bodies can be explained by the administrative or formative activity of God, an activity which is sometimes called second creation (*secunda creatio*), and does not demand the creative act as such. Catholic philosophers develop the purely rational arguments for these same positions, except for the origin of the angelic world, which of course lies beyond the sphere of philosophy. The remainder of this article will offer a summary of the aforesaid theological and philosophical positions and their bases.

III. ARGUMENTS FOR CREATION.—1. For the doctrine of the Church on the origin of the spiritual world the reader is referred to the article ANGEL.

2. That the material of which the universe is composed was created out of nothing is the implicit, rather than specifically explicit, statement of the Bible. The Scriptural teaching on God and the relation of the universe to Him unmistakably affirms creation. God alone is declared to be underived, self-existent (Ex., iii, 14), and in comparison with Him all things else are as nothing (Wisdom, xi, 23; Is., xl, 17). God is said to be the beginning and end of all things (Is., xlviii, 12; Apoc., i, 8); all things else are from Him, and by Him, and in Him (Rom., xi, 36; I Cor., viii, 6; Coloss., i, 16). God is the absolute and independent sovereign (Ps. xlix, 12, and Is., xlv, 24; Heb., i, 10). That these texts equivalently assert that God is the Creator of all things finite is too obvious to call for further comment. The most explicit Scriptural statement respecting the created origin of the universe is found in the first verse of Genesis: "In the beginning God created heaven and earth". The objects here designated evidently comprise the material universe; whether the originative act is to be understood as specifically creative, depends upon the meaning of the Hebrew verb *bara*. On this point the following interpretations by unimpeachable authority may be adduced. Gesenius says: "The use of this verb [*bara*] in *Kal*, the conjugation here employed, is entirely different from its primary signification (to cut, shape, fashion); it signifies rather the new production of a thing than the shaping or elaborating of the pre-existing material. That the first verse of Genesis teaches

that the original creation of the world in its rude and chaotic state was from nothing while the remaining part of the chapter teaches the elaboration and distribution of the matter thus created, the connection of the whole section shows sufficiently clearly" (The-saurus, p. 357 b). Mühlán and Volck in the new edition of Gesenius' "Handwörterbuch" say: "*Bara* is used only of Divine creation and never with an accusative of the material". Dillmann (Gen., c. i) notes: "The Hebrews use only the conjugation *Piel* (intensive) in speaking of human 'forming' or 'shaping', while on the other hand they use only *Kal* in speaking of creation of God". Delitzsch says: (Gen., p. 91) "The word *bara* in its etymology does not exclude a previous material. It has, as the use of *Kal* shows, the fundamental idea of cutting or hewing. But as in other languages words which define creation by God have the same etymological idea at their root, so *bara* has acquired the idiomatic meaning of a divine creating, which, whether in the kingdom of nature, or of history, or of the spirit, calls into being that which hitherto had no existence. *Bara* never appears as the word for human creation, differing in this from the synonyms *asah*, *yatzar*, *yalad*, which are used both of men and of God; it is never used with an accusative of the material, and even from this it follows that it defines the divine creative act as one without any limitations, and its result, as to its proper material, as entirely new; and, as to its first cause, entirely the creation of divine power." Again Kalisch observes (Gen., p. 1): "God called the universe into being out of nothing; not out of formless matter coeval with Himself" (Geikie, Hours with the Bible, I, 16).

3. The patristic teaching as to the created origin of the world is too explicit and well known to require citation here. The few ambiguous expressions occurring in the works of Origen and Tertullian are more than counterbalanced by other unmistakable declarations of these same writers, while their at most exceptional divergencies are as nothing in comparison with the unanimous and continuous teaching of the other Fathers and Doctors of the Church.

4. Approaching the problem of origin from the purely rational side, we find the field preoccupied almost from the beginning of the history of philosophy by two directly opposite solutions: one maintaining that the world-matter is self-existent, undervived from any extraneous source, and hence eternal; the world has therefore attained its present complex condition by a gradual evolutionary process from an original, simple, undifferentiated state (materialistic Monism); the other asserting that the world is derived from an extraneous cause, either by emanation from or evolution of the Divine being (Pantheism) or by creation (Creationism). Creationism, though an essentially philosophical solution, is never found divorced from Revelation. Materialistic Monism includes a varying number of philosophies; but all agree in maintaining that the world-matter is eternal, unproduced, and absolutely indestructible. They differ in that some attribute the formation of the universe to chance (the ancient Atomists), others to a sort of ubiquitous cosmical life or world-soul (Anaxagoras, Plato, Panpsychists, Fechner, Lotze, Paulsen), others to forces essentially inherent in matter (Feuerbach, Büchner, Hæckel). Against materialistic Monism Catholic philosophers (Creationists) argue thus: The world-matter is not self-existent; for what is self-existent is essentially necessary, immutable, absolute, infinite. But the world-matter is not necessary; its essence as such furnishes no reason why it should exist rather than not exist, nor why it is definitely determined as to number, extension, and space. It is not immutable, for it undergoes incessant change; not absolute, since it depends upon the natural forces which condition its states; not infinite as to extent, since, being extended, it is numerable, and hence finite; nor in-

finite in active power, since it is inert and essentially limited by external stimulation. The aggregate of natural forces must also be finite, otherwise there could be no change, no laws of inertia, no constancy and equivalence of energy. The world-substance is not eternal. For that substance must be conceived either as possessing eternal motion or not. If eternally active it would have passed through an infinite number of changes, which is self-contradictory. Moreover, the supposed evolutionary process would not have begun so late as geology teaches that it did, and would long since have come to an end, i. e. to a static equilibrium of forces according to the law of entropy. If the primal matter was not endowed with an eternal activity, evolution could not have begun—not from within, the law of inertia forbidding; nor from without, since the materialistic hypothesis admits no extraneous cause. Moreover, since chance is no cause, but the negation thereof, some reason must be assigned for the differentiation of the original material into the various chemical elements and compounds. That reason may be supposed either intrinsic or extrinsic to the primary matter. If intrinsic, it does not explain why just these elements (or compounds) in kind and number become differentiated; if extrinsic, the supposition contradicts the very basis of materialism which negates transmaterial agency.

A similar line of argument may be used to prove the impossibility of explaining, on the materialistic hypothesis, the order prevailing everywhere throughout the universe. To the counter argument that, given an infinite series of atomic arrangements, the present order must needs result, it may be answered: (a) the origin of both atoms and motion still remains unexplained; (b) an infinite series of combinations would demand infinite time, while geology indicates a limited time for the earth's formation; (c) some sort of order might result from a chance concurrence of atoms, but no constant and universal order; (d) the present order presupposes some disposition of the elements for this rather than another order. Now the question still remains: Whence came precisely this disposition, and why did not the atoms concur in a way unfavourable to a continuous evolution, since the number of possible arrangements of an infinite number of atoms must be infinite?

The hypothesis of a world-soul exhibits another group of inconsistencies. If the universe were "informed" by a principle of life, there would not be that essential difference between inanimate and animate bodies which both science and philosophy establish; inanimate bodies would manifest signs of life, such as spontaneous and immanent activity, organs, etc. The materialistic principle, "No matter without force, no force without matter" (Büchner), though, with some obvious qualification, true as to its first part, is untrue as to its second. Force is the proximate principle of action, and may be or not be, but it is not of necessity conjoined with matter. The principle of action in man is not intrinsically dependent on matter.—For the development of these and more serious arguments against materialistic Monism see "Institutiones Philosophiæ Naturalis", by Willems or Pesch.

Pantheistic differs from materialistic Monism in asserting a being, in some sense unitary, which unfolds itself in the material universe and in human consciousness. That such a being is called "God" is an obvious misuse of language. Moreover, God is indivisible, spiritual, eternal, necessary, immutable, omnipresent, absolute, and cannot, therefore, "evolve" into a universe of matter which possesses just the contrary attributes. For a like reason bodies cannot be modes, either real (Spinoza) or logical (Hegel), of the divine substance. Since, then, the world-material is not self-existent, but produced, and that not from some antecedent material (for such a supposition would

only defer and not solve the problem); since, moreover, the world-substance has not emanated from the divine nature, it follows that it must have been produced by some extraneous cause, from no pre-existing material, i. e. it must have been created. That that extraneous cause is God, the self-existent, necessary, absolute, infinite, and consequently personal Deity, is proved from the finality and order manifest in the cosmos that has developed from the original material, which order demands an efficient and a directive cause of supreme if not infinite intelligence; and from the further fact that the creative act can proceed only from a truly infinite and therefore personal agent, as will be shown towards the end of this article.

To the question: In what condition was the world-matter created, whether homogeneous or differentiated into various specific substances? neither Revelation nor science gives answer. Until lately the practically universal opinion of Catholic philosophers favoured an original essential differentiation of the elements. Since, however, the tendency of physico-chemical experimentation and inference now points with some probability to a radical homogeneity of matter, and since philosophy is bound to reduce the world to its fewest and simplest principles, the opinion seems justified that the original matter was created actually undifferentiated, but with inherent potency toward elemental and, subsequently, compound diversification through the action, reaction, and grouping of the ultimate particles.

When—probably through some such processes as are suggested by the well-known nebular hypothesis (Kant, Laplace) and by the inductions of geology—the material universe was disposed for the simplest forms of life, then God said: "Let the earth bring forth the green herb, and such as may seed, and the fruit tree yielding fruit after its kind, which may have seed in itself upon the earth. And it was so done" (Gen., i, 11)—the work of the third creative day. At a subsequent, "God created the great whales and every living and moving creature, which the waters brought forth, according to their kinds, and every winged fowl according to its kind" (ib., 21)—the work of the fifth day. And again, "God said: Let the earth bring forth the living creature in its kind, cattle and creeping things, and beasts of the earth, according to their kinds. And it was so done. And God made the beasts of the earth according to their kinds, and cattle, and every thing that creepeth on the earth after its kind" (ib., 24, 25)—part of the work of the sixth day. In these simple words the inspired author of Genesis describes the advent of life, plant and animal, on our earth. It does not fall within the scope of the present article to discuss the various meanings that have been assigned to "the days of creation". Suffice it to say that Catholic exegetes are allowed the widest liberty of interpretation compatible with the obvious substance and purport of the sacred narrative, viz., that God is "the creator of heaven and earth". Accordingly, we find some theologians following St. Augustine (In Gen. ad litt., I), that the six days signify only a logical (not a real) succession, i. e. in the order in which the creative works were manifested to the angels. Others interpret the days as indefinite cosmical periods. Others, though these are at present a vanishing number, still follow the literal interpretation. An immense amount of time, patient research, and ingenuity has been spent in the task of harmonizing the successive stages of terrestrial evolution, as deciphered by geologists from the records of the rocks, with the Mosaic narrative; but the highest tribute to the success of these efforts is that they more or less graphically corroborate what must be already *a priori* certain and evident, at least to the believer, that between the truth of Revelation and the truth of science there is, and can be, no discord. But whatever may be thought of the effort to vindicate in

detail the parallelism claimed to exist between the geological succession of living forms and the order described in the Bible, it is certain that some general parallelism exists; that the testimony of the strata corroborates the story of the Book, according to which the lowliest forms of plant life, "the green herb", appeared first, then the higher, "the seed-bearing tree", followed in turn by the simpler animal types, the water creature and the winged fowl, and finally by the higher organisms, "the beasts of the earth and the cattle".

IV. CREATION AND EVOLUTION.—If now, from the general interpretation of the Biblical account of creation, we turn to the biologic-philosophical problems which it suggests, and which revert to it for what solution it may have to offer, we find Catholic thinkers exercising an equally large liberty of speculation. "Considered in connection with the entire account of creation", says a recent eminent Jesuit exegete, "the words of Genesis cited above proximately maintain nothing else than that the earth with all that it contains and bears, together with the plant and animal kingdoms, has not produced itself nor is the work of chance; but owes its existence to the power of God. However, in what particular manner the plant and animal kingdoms received their existence: whether all species were created simultaneously or only a few which were destined to give life to others: whether only one fruitful seed was placed on mother earth, which under the influence of natural causes developed into the first plants, and another infused into the waters gave birth to the first animals—all this the Book of Genesis leaves to our own investigation and to the revelations of science, if indeed science is able at all to give a final and unquestionable decision. In other words, the article of faith contained in Genesis remains firm and intact even if one explains the manner in which the different species originated according to the principle of the theory of evolution" (Knabenbauer, "Stimmen aus Maria-Laach", XIII, 74; cf. Muckermann, "Attitude of Catholics towards Darwinism and Evolution", 78.) The two general biological problems connected with the Biblical cosmogony are the origin of life and the succession of organisms. Concerning both these problems all that Catholic Faith teaches is that the beginnings of plant and animal life are due in some way to the productive power of God. Whether, with St. Augustine and St. Thomas, one hold that only the primordial elements, endowed with dispositions and powers (*rationes seminales*) for development, were created in the strict sense of the term, and the rest of nature—plant and animal life—was gradually evolved according to a fixed order of natural operation under the supreme guidance of the Divine Administration (Harper, "Metaphysics of the School", II, 746); or whether, with other Fathers and Doctors of the School, one hold that life and the classes of living beings—orders, families, genera, species—were each and all, or only some few, strictly and immediately created by God—whichever of these extreme views he may deem more rational and better motivated, the Catholic thinker is left perfectly free by his faith to select. It is well known that the theory of spontaneous generation of certain animalculæ, worms, insects, etc. was held by theologians and philosophers alike until comparatively recent times, until, indeed, experimental evidence demonstrated the opposite thesis. The establishment of the universal truth of biogenesis (q. v.), *omne vivum ex vivo*, was then seen to corroborate the teaching of the Bible, that life, plant and animal, is due to the Divine productive agency. Since the characteristics of living substance are contrary to those of the non-living substance, the characteristics of life being spontaneity and immanent activity, those of inanimate matter being inertia and transitive activity, the Divine efficiency, to which the origin and differentiation of life are ascribed, has received the distinctive name of *administration*. The idea conveyed by the

latter term is thus explained by a philosopher who has drawn it out from the suggestion supplied by St. Thomas. (De Potentiâ, Q. iv.) Though God can operate as He does in the creative act, without the co-operation of the creature, it is absolutely impossible for the creature to elicit even the smallest act without the co-operation of the Creator. Now the Divine Administration includes this and more, two things, namely, as regards the present subject. The one is the constant order, the natural laws, of the universe. Thus, e. g., that all living things should be ordinately propagated by seed belongs to the Divine Administration. The second, which may be called exceptional, relates to the initial organisms, the first plant, fish, bird, and beast, upon which hereditary propagation must have subsequently succeeded. That these original pairs should have been evolved out of the potency of matter without parentage—that the matter, otherwise incapable of the task, should have been proximately disposed for such evolution—belongs to a special Divine Administration. In other words, God must have been the sole efficient cause—utilizing, of course, the material cause—of the organization requisite, and hence may strictly be said to have formed such pairs, and in particular the human body, out of the pre-existent matter (Harper, op. cit., 743). It need hardly be said that the distinctions between creation and co-operation, administration and formation, are not to be considered as subjectively realized in God. They are only so many aspects which the analytical mind must take note of in the fundamental and essential relation of dependence—contingency—in which the creature stands to the First Cause. For a sympathetic account of the relation of Evolutionism to Creationism, the reader may be referred to Muckermann (who has popularized Wasmann's technical illustrations of specific transformations among the ant-guests), Harper, Mivart, Guibert, Didiot, Farges, etc., mentioned in the bibliography below. A more vigorous criticism of Evolutionism is to be found in the works of Gerard, Gutberlet, Pesch, Willems, Hunter, Thein, and Hughes.

V. FINAL CAUSE OF CREATION.—Since the production of something from nothing, the bridging of the chasm between non-existence and existence demands infinite power, and since the reason for the action of an infinite being must lie within that being Himself, the primary subjective motive of creation must be the Creator's love of His own intrinsic goodness. The love of that absolute good is conceived by us as "inducing" the Creator to give it an extrinsic embodiment (creation in its passive sense, the universe). The type-idea according to which this embodiment is constructed must exist within the Creator's intelligence and as such is called the "exemplary" or archetypal cause of creation (passive). The objective realization hereof is the absolutely final objective end, or final cause, of creation. In the material universe this realization, exhibited in the purposiveness of each individual part conspiring to the purposiveness of the whole, remains imperfect and is but a vestige of the original design. In the rational creature it reaches a certain completeness, inasmuch as man's personality, with its intellectual and volitional endowments, is a sort of (analogous) "image" of the Creator, and, as such, a more perfect realization of the creative plan. Moreover, in man's consciousness the creative purpose comes to explicit manifestation and reflective recognition. His intelligent reaction thereon by reverential attitude and orderly conduct realizes the absolutely final purpose of creation, the actual "formal glorifying" of the Creator, so far as that is possible in the present life. But even as the orderly or normal activity of the individual organisms and subordinate parts of the universe develop and complete those organisms and parts, so man's rational conduct perfects him and, as a consequence, results in a state of happiness, the full complement whereof is attainable, however, only

in a life beyond the present. This completion and happiness of man are said to be the relatively ultimate end of creation, and thereby the creative plan is absolutely completed, the Creator finally explicitly formally glorified by the return of the creation, carried up by and in man to conscious inter-communion with the Source and End of the creative act. Lactantius thus sums up the hierarchy of finality in creation: "The world was made that we might be born. We were born that we might know God. We know Him that we may worship Him. We worship Him that we may earn immortality. We are rewarded with immortality that, being like unto the angels, we may serve Our Father and Lord forever, and be the eternal kingdom of God" (Instit., VII, vi). When man is said to be the (relatively) ultimate end of creation, this obviously does not exclude other coexistent and subordinate purposes.

VI. CREATION THE PREROGATIVE OF GOD ALONE.—The Fourth Lateran Council defined that "God is the sole principle of all things visible and invisible, the creator of all" [Denzinger, op. cit., 428 (355)]; and the Bible throughout ascribes the creative act to Him alone: "I am the Lord, that make all things . . . and there is none with me" (Is., xlv, 24; cf. xl, 25; Ps cxxxv, 4). As to the question, whether it is intrinsically possible for a creature to be endowed with creative power, theologians answer with a distinction. (1) No creature can possibly be a principal cause of creation. This is the unanimous teaching of the Fathers. The philosophical reasons are: (a) the creative act, being absolutely independent of material and instrument, supposes an absolutely independent subject (agent); (b) the term of the creative act is the complete substance of the effect (spiritual or material), and the act can extend indefinitely to whatever is intrinsically possible, while the act of the created agent reaches only to the accidents, or partial constituents, of bodies, and is definitely limited in range; (c) the creative act produces its effects by will alone; it is immanent, while its term is extraneous; it is as unlimited as is the extent of will power; it is instantaneous. No finite cause can thus operate. (2) Some theologians (Peter the Lombard and Suarez) have thought that a creature might be used by God as an instrumental cause of creation. The general opinion, however, is to the contrary, on the ground that since creation excludes *materia ex qua* there is no subject whereon the dispositive influence of an instrument could be exerted.

God was absolutely free to create or not to create, and to create the present or any possible world. This is an article of Catholic Faith defined by the Vatican Council (Can., De Deo Creante, v). It is the explicit teaching of Scripture, God "worketh all things according to the counsel of his will" (Eph., i, 11), and of the Fathers generally. It is an obvious rational deduction from the infinitude and absolute self-sufficiency of God. The creative act, as a subjective aspect of the Divine Will, is necessary, but the external positing of a term is free. This doctrine of creative freedom excludes the exaggerated optimism of Leibniz and others, who held that God was bound to create the best possible world. The Divine act must be perfect, but the effect need not, and indeed cannot, be absolutely perfect; the creature being necessarily finite, a more perfect creature is always possible and creatable by infinite power. The world is the very best possible for the Creator's purpose; it is relatively, not absolutely, perfect. (See OPTIMISM.)

VII. THE WORLD WAS CREATED IN TIME, NOT FROM ETERNITY.—The Vatican Council defined that God created *ab initio temporis*. The opening words of Genesis, "In the beginning God created", are echoed in similar phrases throughout the Bible. The Fathers reiterate the same teaching. As to the question, whether eternal creation is intrinsically pos-

sible, St. Thomas, in his solicitude that infidels might have no ground to cavil with the arguments which believers assign for the temporal origin of creation (passive), says: "That the world has not always existed is held by faith alone, and cannot be demonstrated" (Summa, I, Q. xli, a. 2). St. Bonaventure and many others maintain that the inherent impossibility of eternal creation is demonstrable. Arguments too subtle for discussion here are adduced by both sides of the controversy.

VIII. SPECULATIVE AND PRACTICAL POSITION OF THE DOCTRINE OF CREATION.—From what has been said it follows that belief "in God the Creator of heaven and earth" is the theoretical basis of all religious and theological truth, the real foundation underlying all other truths concerning God, and the objective principle whence all other truths proceed. The Incarnation completes in the supernatural order the creative purpose and plan by the Divine Personal Idea, the Word, assuming to Himself man's nature, wherein the natural order of creation is synthesized, and thus carrying back completely the whole creation to its origin and end. The Redemption, the Church, and the sacramental system are obviously the extension of the Incarnation, and so, through the medium of the latter mystery, follow from creation. The proposition that the Infinite is the absolutely primary source of all other reality is also the first philosophical truth, not of course in our order of attainment but in itself. All created being, truth, goodness, beauty, perfection are eminently contained in the Creator's essence, conceptually in His creative intelligence, potentially in His creative omnipotence, and are determined to their measure of actual objective existence by the creative will. The real distinction of the finite from the Infinite opposes every form of exaggerated monism, while the entitative contingency and dependence of the creature on the Creator refutes an exaggerated dualism. A rational mediating dualistic monism is based on the truth of creation. Lastly, the end and purpose of creation sets before man the first ideal and norm of life; and thus the final reason of the distinction between right and wrong conduct is found in the conformity of the one and the difformity of the other with the original exemplar in the Creator's mind. Acting up to his complete nature, man is at once self-consistent and accordant proximately with the created copy and hence mediately accordant with the original pattern in the eternal design of his Creator.

F. P. SIEGFRIED.

Creationism (Lat. *creatio*).—(1) In the widest sense, the doctrine that the material of the universe was created by God out of no pre-existing subject. It is thus opposed to all forms of Pantheism. (2) Less widely, the doctrine that the various species of

living beings were immediately and directly created or produced by God, and are not therefore the outcome of an evolutionary process. It is thus opposed to Transformism.

(3) In a restricted but more usual sense, the doctrine that the individual human soul is the immediate effect of God's creative act. It is thus opposed to Traducianism. The first two acceptations of the term are treated in the article CREATION; the third alone is here considered. The proposition that the human soul is immediately created by God is a corollary of the soul's spirituality. Certain psychical phenomena, viz. intellectual and volitional—especially when these regard immaterial objects—indicate that their radical principle subsists essentially and intrinsically independent of the purely corporeal organism. This transmaterial subsistence supposes a corresponding mode of origin; for that the soul must have had a beginning follows obviously from its finitude and contingency. That origin cannot be: (a) by way of emanation from God, as Pantheists declare, since the Divine substance, being absolutely simple, cannot be subject to any emissional process; (b) nor by spiritual generation from the souls of parents—as the German theologian Frohschammer (1821–1893) maintained—because human souls, being essentially and integrally simple and indivisible, can give forth no spiritual germs or reproductive elements; (c) still less by physical generation (as corporeal Traducianists suppose), since such a mode of production plainly conflicts both with the essential simplicity and the spirituality of the soul. The only other intelligible source of the soul's existence is God; and since the characteristic and exclusive act of the Divine Cause is creation (q. v.), the soul must owe its origin to that operation.

As regards the time when the individual soul is created, philosophical speculation varies. The ancient Platonic doctrine of the pre-natal existence of souls and their subsequent incarceration in bodies may be passed over as poetic fiction and not scientific theory. The same may be said of the ancient hypothesis of transmigration, which, however, still survives in Buddhism and is revived by recent Theosophy. Besides being entirely gratuitous, metempsychosis rests on a false view which conceives of body and soul as only accidentally, not essentially, combined in the unity of the human person. The traditional philosophy of the Church holds that the rational soul is created at the moment when it is infused into the new organism. St. Thomas, following Aristotle's embryology, taught that the human foetus passes through progressive stages of formation wherein it is successively animated by the vegetative, sensitive, and rational principles, each succeeding form summing up virtually the potencies of its predecessor. Accordingly, the rational soul is created when the antecedent principles of life have rendered the foetus an appropriate organism for rational life, though some time is required after birth before the sensory organs are sufficiently developed to assist in the functions of intelligence. In this view the embryonic history of man is an epitome of the stages through which the upward march of life on our globe is now held by palæontologists to have passed. On the other hand, most neo-Scholastics hold that the rational soul is created and infused into the incipient human being at the moment of conception. It should be noted that the doctrine of Creationism is not an appeal to the supernatural or the "miraculous" to account for a natural effect. The creation of the soul by the First Cause, when second causes have posited the pertinent conditions, falls within the order of nature; it is a so-called "law of nature", not an interference therewith, as is the case in a miracle. So much for the philosophical or purely rational aspect of Creationism; as regards the theological, it

should be noted that while none of the Fathers maintained Traducianism—the parental generation of the soul—as a certainty, some of them, notably St. Augustine, at the outbreak of Pelagianism, began to doubt the creation by God of the individual soul (there was never any doubt as to the created origin of the souls of Adam and Eve), and to incline to the opposite opinion, which seemed to facilitate the explanation

of the transmission of original sin. Thus, writing to St. Jerome, St. Augustine says: "If that opinion of the creation of new souls is not opposed to this established article of faith [sc. original sin] let it be also mine; if it is, let it not be thine" (Ep. clxvi, n. 25). Theodorus Abucara (Opusc. xxxv), Macarius (Hom. xxx), and St. Gregory of Nyssa (De Opif., Hom., c. xxix) favoured this view.

Amongst the Scholastics there were no defenders of Traducianism. Hugh of St. Victor (De Sacr., VII, c. xii) and Alexander of Hales (Summa, I, Q. lx, mem. 2, a. 3) alone characterize Creationism as the more probable opinion; all the other Schoolmen hold it as certain and differ only in regard to the censure that should be attached to the opposite error. Thus Peter Lombard simply says: "The Catholic Church teaches that souls are created at their infusion into the body" (Sent. II, d. xviii); while St. Thomas is more emphatic: "It is heretical to say that the intellectual soul is transmitted by process of generation" (I, Q. cxviii, a. 2). For the rest, the following citation from the Angelic Doctor sums up the diverse opinions: "Regarding this question various opinions were expressed in antiquity. Some

held that the soul of the child is produced by the soul of the parent just as the body is generated by the parent-body. Others maintained that all souls are created apart, moreover that they are united with their respective bodies, either by their own volition or by the command and action of God. Others, again, declared that the soul in the moment of its creation is infused into the body. Though for a time these several views were upheld, and though it was doubtful which came nearest the truth (as appears from Augustine's commentary on Gen., x, and from his books on the origin of the soul), the Church subsequently condemned the first two and approved the third" (De Potentiâ, Q. iii, a. 9). Others (e. g. Gregory of Valencia) speak of Generationism as "certainly erroneous", or (e. g. Estius) as *maxime temerarius*. It should, however, be noted that while there are no such explicit definitions authoritatively put forth by the Church as would warrant our calling the doctrine of Creationism *de fide*, nevertheless, as a recent eminent theologian observes, "there can be no doubt as to which view is favoured by ecclesiastical authority" (Pesch, Præl. Dogm., V, 3, p. 66). Leo

IX (1050), in the symbol presented to the Bishop Peter for subscription, lays down: "I believe and profess that the soul is not a part of God, but is created out of nothing, and that, without baptism, it is in original sin" (Denzinger, Enchir., n. 296). That the soul sinned in its pre-existent state, and on that account was incarcerated in the body, is a fiction which has been repeatedly condemned by the Church.

Divested of this fiction, the theory that the soul exists prior to its infusion into the organism, while not explicitly reprobated, is obviously opposed to the doctrine of the Church, according to which souls are multiplied correspondingly with the multiplication of human organisms (Conc. Lat. V, in Denzinger, op. cit., 621). But whether the rational soul is infused into the organism at conception, as the modern opinion holds, or some weeks subsequently, as the Scholastics suppose (St. Thomas, Q. i a. 2, ad 2), is an open question with theologians (Kleutgen, Phil. d. Vorzeit, II, 657). (See also MAN; METEMPSYCHOSIS; SOUL; TRADUCIANISM.)

F. P. SIEGFRIED.

LORENZO DI CREDI (By himself)

(Louvain, 1905); GUTBERLET, *Psychologie* (Munich, 1896).

Credence (or CREDENCE-TABLE).—A small table of wood, marble, or other suitable material placed within the sanctuary of a church and near the wall at the Epistle side, for the purpose of holding the cruets, acolytes' candles, and other utensils required for the celebration of the Holy Sacrifice. The credence,

properly so called, is contemplated only in connexion with solemn Masses; on it the chalice, paten, corporal, and veil are placed from the beginning of the Mass until the Offertory. When a bishop celebrates, it should be of larger dimensions than usual, the ordinary size being about forty inches long, twenty broad, and thirty-six high. On very solemn festivals it should be covered with a linen cloth extending to the ground on all sides, on less solemn occasions the cloth should not extend so far, while on days of simpler rite it should merely cover the superficies.

For low Masses the rubrics contemplate a niche or bracket in the wall, or some small arrangement for holding the cruets, finger-bowl, and towel, but custom now favours the use of a credence-table.

THE HOLY FAMILY—Lorenzo di Credi

but custom now favours the use of a credence-table. *Ceremoniale Episcoporum*, I, xii sq.; *Rubr. Gen. Miss.*, XX; VAN DER STAPPEN, *De Missæ Celebratione* (Mechlin, 1902).

Credi, LORENZO DI, Florentine painter, b. at Florence, 1459; d. there, 1537. Vasari gives his family name as Sciarpelloni, but his original name seems to have been Barducci. He was a pupil first of the

goldsmith Credi, from whom he took his name, and then of the sculptor Verrocchio, having as fellow-pupils Perugino and Leonardo da Vinci. To the latter painter Lorenzo attached himself in terms of friendship, and he copied the manner of Leonardo with great success. When Verrocchio went to Venice to cast the bronze equestrian statue of Colleoni, he left to Lorenzo the entire administration of all his affairs, and in his will charged him to complete the statue, which he had been unable to finish, adding the following remark: "Because he has the ability to finish it properly". Leonardo was, however, instructed by the Venetians to complete the figure. Di Credi was a devout follower of Savonarola and a man of deeply religious character. He was an eminent portrait-painter, and his religious pictures were in great demand for the churches and convents of Florence and the neighbourhood. One of the finest is at Pistoja, originally painted for the hospital of the Ceppo. The portrait of Verrocchio is at Florence. Other examples are at Berlin, Dresden, London, Paris, Rome, and Turin. They are all remarkable for their magnificence of colour, exquisite composition, but extraordinary rigidity of drapery, the folds having the appearance of metal work in many cases and revealing the original training as a goldsmith which the artist received. He died at the age of seventy-eight in his own house in Florence, near Santa Maria Nuova, and was buried in San Pietro Maggiore. A little while before his death he bequeathed to the hospital of Santa Maria Nuova a farm which he had purchased at Casciano. He was said to have been a very slow painter, but took immense pains in the execution of all he did, prepared and ground all his own colours, and finished his paintings with exquisite refinement and care.

GEORGE CHARLES WILLIAMSON.

Creditor. See DEBT.

Cree (a contraction of CRISTINO or KENISTENO, their Ojibwa name, of uncertain meaning; they commonly call themselves simply EYTHINYUWUK, *men*), the largest and most important Indian tribe of Canada, and one of the largest north of Mexico. They are a part of the great Algonquian stock and closely related to their southern neighbours, the Ojibwa, although only remotely cognate to the Blackfeet, farther to the west. Until confined to reservations their various bands held most of the extensive territory about Lakes Winnipeg and Manitoba, the lower Red and Saskatchewan rivers, and eastward to the country of the Maskegon about Hudson Bay, from whom they are hardly to be distinguished. Most of their former territory is now included in the Canadian provinces of Manitoba, Assiniboia, and Saskatchewan. Their chief alliance was with the Assiniboin; their wars were with the Sioux, Blackfeet, and northern Tinné tribes. With both French and English they have generally been on friendly terms. When first known to the Jesuit missionaries, about the year 1650, the Cree lived farther to the south-east, but, on obtaining fire-arms from the English trading-posts established on Hudson Bay some twenty years later, they pushed out into the open plains in pursuit of the buffalo. They drove the Blackfeet before them, and at the same time began a war of invasion and extermination against the weaker Tinné tribes, as far even as the Mackenzie River and the Rocky Mountains. A great small-pox epidemic in 1781 so far reduced their numbers that they retired south of Churchill River, which has since remained the extreme limit of their claims in that direction.

In physique and intelligence the Cree do not differ markedly from the general Indian type, but are per-

haps slightly below the general "plains" standard. Mackenzie, who knew them before they had been greatly modified by contact with the whites, describes them (1790) as naturally generous, good-tempered, and honest. Their primitive weapons and utensils were fashioned from stone, bone, and horn. They used the canoe of birch-bark and the tipi of buffalo skins. They had no agriculture or pottery art, but their women were expert skin-dressers and workers in porcupine quills. For their food they depended upon fishing, hunting, and the gathering of wild roots and fruits. Wild plums and cherries were pounded, dried, and preserved in rawhide bags or boxes. Buffalo meat was cut into strips, and dried in the sun for immediate use, or was pounded, covered with melted grease, and kept in skin bags as pemmican for winter. Two pounds of this was a sufficient day's ration for a man. Their clothing was of dressed skins; their ornamentation and style of hair-cut varied in different bands. Their dead were buried in the ground under a mound of stones, instead of being placed upon scaffolds or in the branches of trees, as was done by the Sioux and others. In accord with general Indian custom, the personal belongings of the deceased were buried with him or destroyed near the grave. Polygamy was common, and a man might marry two sisters at once from the same family. There was no trace of the clan system, as known among the eastern and southern tribes. They sacrificed to a number of gods, their principal myths centring about a supernatural hero called Wisukateak. They were also great believers in conjurations and witchcraft, and had an influential order of priesthood in four degrees. Their great religious ceremony was the annual Sun Dance. Their two main divisions were distinguished as Wood and Plain Cree, each of which was again subdivided into bands differentiated by slight peculiarities of dialect and custom. With these were sometimes included the Maskegon, under the name of Swampy Cree. On account of the wide extent of their former range the early estimates of Cree population vary greatly. They number now about 15,000, of whom nearly two-thirds are located upon reservations in Manitoba.

The earliest missionaries in the Cree country were the French Jesuits, who accompanied the commander Verendrye in his explorations of the Saskatchewan and Missouri River region from 1731 to 1742. Chief among these were Fathers Nicholas Gonnor, Charles Mesaiger, and Jean Aulneau. No attempt was made at this time to found permanent mission settlements, and the work thus begun was allowed to lapse in consequence of the withdrawal of the French from Canada until after the establishment of the Red River colony by Lord Selkirk. In 1818 Fathers Joseph Norbert Provencher and Sévère Dumoulin established the first regular mission station at Saint Boniface, opposite the present city of Winnipeg. In 1822 Father Provencher was made bishop, with jurisdiction over all of Rupert's Land and the Northwest Territories, and at once proceeded to organize a systematic mission work throughout the whole vast region. Upon his death in 1853 he was succeeded by the noted Oblate Father Alexander Taché, who had come out eight years before. Among other distinguished workers in the same field, all Oblates, may be noted Father Albert Lacombe, author of a monumental grammar and dictionary of the Cree language, besides a number of religious and other translations; Father Valentin Végreville, founder of five missions, and author of a manuscript grammar and dictionary of the language; Father Jean Thibault; and Father Emile Petitot, better known for his great work among the remote Tinné and Eskimo tribes. The Fathers were assisted by sisters of the Order of Gray Nuns. Protestant work was begun by the Episcopalian Rev. John West, as chaplain for the Hudson's Bay Company in 1820, the

Wesleyan Methodists and Presbyterians coming later. The most distinguished Protestant worker was the Wesleyan Rev. James Evans (1840-1861), inventor of the Cree syllabary, which for half a century has been in successful use in the tribe for literary purposes by all denominations. Of the whole number of Cree officially reported as Christian the majority are Catholic and rank high in morality.

JAMES MOONEY.

Creed (Lat. *credo*, I believe), in general, a form of belief. The word, however, as applied to religious belief has received a variety of meanings, two of which are specially important. (1) It signifies the entire body of beliefs held by the adherents of a given religion; and in this sense it is equivalent to doctrine or to faith where the latter is used in its objective meaning. Such is its signification in expressions like "the conflict of creeds", "charitable work irrespective of creed", "the ethics of conformity to creed", etc. (2) In a somewhat narrower sense, a creed is a summary of the principal articles of faith professed by a church or a community of believers. Thus by the "creeds of Christendom" are understood those formulations of the Christian faith which at various times have been drawn up and accepted by one or the other of the Christian churches. The Latins designate the creed in this sense by the name *symbolum*, which means either a sign (*σύμβολον*) or a collection (*συμβολή*). A creed, then, would be the distinctive mark of those who hold a given belief, or a formula made up of the principal articles of that belief. A "profession of faith" is enjoined by the Church on special occasions, as at the consecration of a bishop; while the phrase "confession of faith" is commonly applied to Protestant formularies, such as the "Augsburg Confession", the "Confession of Basle", etc. It should be noted, however, that the Rule of Faith is not identical with creed, but, in its formal signification, means the norm or standard by which one ascertains what doctrines are to be believed.

The principal creeds of the Catholic Church, the Apostles', Athanasian, and Nicene, are treated in special articles which enter into the historical details and the content of each. The liturgical use of the Creed is also explained in a separate article. For the present purpose it is chiefly important to indicate the function of the creed in the life of religion and especially in the work of the Catholic Church. That the teachings of Christianity were to be cast in some definite form is evidently implied in the commission given the Apostles (Math. xxviii, 19-20). Since they were to teach all nations to observe whatsoever Christ had commanded, and since this teaching was to carry the weight of authority, not merely of opinion, it was necessary to formulate at least the essential doctrines. Such formulation was the more needful because Christianity was destined for all men and for all ages. To preserve unity of belief, the first requisite was to have the belief itself quite clearly stated. The creed, therefore, is fundamentally an authoritative declaration of the truths that are to be believed.

The Church, moreover, was organized as a visible society (see CHURCH). Its members were called on not only to hold fast the teaching they had received, but also to express their beliefs. As St. Paul says: "With the heart we believe unto justice; but, with the mouth, confession is made unto salvation" (Romans, x, 10). Nor is the Apostle content with vague or indefinite statements; he insists that his followers shall "hold the form of sound words which thou hast heard of me in faith" (II, Tim. i, 13), "embracing that faithful word which is according to doctrine, that he [the bishop]

may be able to exhort in sound doctrine and to convince the gainsayers" (Titus i, 9). Hence we can understand that a profession of faith was required of those who were to be baptized, as in the case of the eunuch (Acts viii, 37); in fact, the baptismal formula prescribed by Christ himself is an expression of faith in the Blessed Trinity. Apart then from the question regarding the composition of the Apostles' Creed, it is clear that from the beginning, and even before the New Testament had been written, some doctrinal formula, however concise, would have been employed both to secure uniformity in teaching and to place beyond doubt the belief of those who were admitted into the Church.

Along with the diffusion of Christianity there sprang up in the course of time various heretical views regarding the doctrines of faith. It thus became necessary to define the truth of revelation more clearly. The creed, in consequence, underwent modification, not by the introduction of new doctrines, but by an expression of the traditional belief in terms that left no room for error or misunderstanding. In this way the "Filioque" was added to the Nicene Creed and the Tridentine Profession set forth in full and definite statements the Catholic Faith on those points especially which the Reformers of the sixteenth century had assailed. At other times the circumstances required that special formulas should be drawn up in order to have the teaching of the Church explicitly stated and accepted; such was the profession of faith prescribed for the Greeks by Gregory XIII and that which Urban VIII and Benedict XIV prescribed for the Orientals (cf. Denzinger, *Enchiridion*). The creed therefore, is to be regarded not as a lifeless formula, but rather as a manifestation of the Church's vitality. As these formulas preserve intact the faith once delivered to the saints, they are also an effectual means of warding off the incessant attacks of error.

On the other hand it should be remarked that the authoritative promulgation of a creed and its acceptance imply no infringement of the rights of reason. The mind tends naturally to express itself and especially to utter its thought in the form of language. Such expression, again, results in greater clearness and a firmer possession of the mental content. Whoever, then, really believes in the truths of Christianity cannot consistently object to such manifestation of his belief as the use of the creed implies. It is also obviously illogical to condemn this use on the ground that it makes religion simply an affair of repeating or subscribing empty formulas. The Church insists that the internal belief is the essential element, but this must find its outward expression. While the duty of believing rests on each individual, there are further obligations resulting from the social organization of the Church. Not only is each member obliged to refrain from what would weaken the faith of his fellow-believers; he is also bound, so far as he is able, to uphold and quicken their belief. The profession of his faith as set forth in the creed is at once an object-lesson in loyalty and a means of strengthening the bonds which unite the followers of Christ in "one Lord, one faith, one baptism."

Such motives are plainly of no avail where the selection of his beliefs is left to the individual. He may, of course, adopt a series of articles or propositions and call it his creed; but it remains his private possession, and any attempt on his part to demonstrate its correctness can only result in disagreement. But the attempt itself would be inconsistent, since he must concede to every one else the same right in the matter of framing a creed. The final consequence must be, therefore, that faith is reduced to the level of views, opinions, or theories such as are entertained on purely scientific matters. Hence it is not easy to explain, on the basis of consistency, the action of the Protestant Reformers. Had the principle of private judgment

been fully and strictly carried out, the formulation of creeds would have been unnecessary and, logically, impossible. The subsequent course of events has shown how little was to be accomplished by confession of faith, once the essential element of authority was rejected. From the inevitable multiplication of creeds has developed, in large measure, that demand for a "creedless Gospel" which contrasts so strongly with the claim that the Bible is the sole rule and the only source of faith. (See DOGMA, FAITH, PROTESTANTISM.)

Creed, LITURGICAL USE OF.—The public use of creeds began in connexion with baptism, in the *Traditio* and *Redditio symboli*, as a preparation for that sacrament, and in the preliminary interrogations. This use is found as early as the "Canons" of Hippolytus and the "Catecheses" of St. Cyril of Jerusalem, and is so universal as to be probably of still earlier date. (Cf. Acts, viii, 37.) The recitation of the Nicæo-Constantinopolitan Creed at the Eucharist seems to have begun, according to Theodore the Reader, at Antioch under Peter the Fuller in 471 (though James of Edessa says that it was adopted as soon as it was composed), and to have been adopted at Constantinople by the Patriarch Timotheus in 511. Both intended to protest, as Monophysites, against Chalcedonian "innovations", but in spite of this heretical origin the practice spread, though Rome did not finally adopt it until the eleventh century. The Nicene Creed is the only one in use in the Eastern Churches, whether Orthodox, Monophysite, or Nestorian, or in the corresponding Uniat bodies, though the East Syrians, both Nestorian and Uniat, have a variant of their own (see EAST SYRIAN RITE) which may have been originally understood in a Nestorian sense, and the Copts and Abyssinians have also a shortened form for use at baptism. The Roman Rite, besides the Nicene Creed, which it recites only at Mass, uses also the Apostles' Creed and the so-called Athanasian. These three creeds have been retained in the Anglican Rite. The following is the use of Creeds in various rites:—

BAPTISM.—*Roman*: Apostles' Creed in full, followed by a shortened creed in interrogative form.—*Ambrosian*, *Galician*, and *Mozarabic*: nearly the same.—*Celtic*: either the Apostles' Creed in full or a shortened form, both as interrogatives.—*Anglican*, complete Apostles' Creed in interrogative form.—*Orthodox Eastern*: Nicene Creed in full in the preliminary *εὐχὰς εἰς τὸ ποιεῖν κατηχούμενον*.—*West Syrian* (Jacobite, Syrian Uniat, and Maronite) and *Armenian*: Nicene Creed in full.—*East Syrian*: variant of Nicene Creed in a similar position to that which it holds in the Eucharist, on the model of which the baptismal service is constructed.—*Coptic* and *Æthiopic*: a short confession of faith in the Trinity, the Resurrection, and the Church.

EUCCHARIST.—All rites use the Nicene Creed, though in different positions, as part of the declaration of fellowship (of which the Kiss of Peace is another part) with which the *Missa Fidelium* begins. This aspect is less evident in Western than in Eastern rites, owing to removal of the *Pax* to another position. The positions are:—(1) Immediately after the Gospel: *Roman*, *Celtic*, *Anglican*, *Armenian*. (2) After the Offertory, but quite unconnected with the *Pax*: *Ambrosian*. There is good reason to think that the Ambrosian *Pax* originally came, not as now in the Roman position, but at the beginning of the Offertory. (3) After dismissal of catechumens and Offertory, but before the *Pax*:

Coptic, *Greek St. James*, *West Syrian*, *East Syrian*. (4) After dismissal, Offertory and *Pax*: *Orthodox Eastern* (Byzantine), *Greek St. Mark*. (5) After the Consecration, during the Fraction: *Mozarabic*. This last seems to follow the use ordered by the Emperor Justin at Constantinople, that the Creed should be said before the Pater Noster at Mass, but it is probably of much later introduction.

THE DIVINE OFFICE.—*Roman*: Apostles' Creed at the beginning of Matins and Prime, ferially with *preces* in the course of Prime and Compline, and at the end of Compline. Athanasian on Sundays at Prime. The earliest mention of this is in the "Capitulare" of Hayto, Bishop of Basle, c. 820. Many Roman derivatives (e. g. the *Sarum*) said the Athanasian daily at Prime. The monastic rites and the French breviaries of the seventeenth and eighteenth centuries mostly follow the Roman practice.—*Ambrosian*: the Apostles' Creed in the course of Prime and Compline, the Athanasian daily at Prime.—*Mozarabic*: The Nicene Creed at Prime on Sundays and festivals. This was ordered by the Council of Toledo of 589.—*Celtic*: The Apostles' Creed is given with the Pater Noster in the "Bangor Antiphoner", and at the end of the sketch service in the "Book of Mulling", but there is no evidence how it was used.—*Anglican*: The Apostles' Creed is said with *preces* at morning and evening prayer, daily, except that on thirteen fast-days (roughly, once a month, and on Trinity Sunday) the Athanasian takes its place at morning prayer.—*Byzantine*: Nicene Creed at the Midnight Office (*μεσονυκτικόν*) after the Psalms, except on Sundays, and at the Little Compline (*ἀπὸδεικνὸν μικρόν*) after the Great Doxology.—*East Syrian*: Nicene Creed at the end of the morning and evening services.—*Coptic*: At the "Offering of the Morning Incense", at Lauds, Compline, and the "Prayer of the Curtain".

Other uses of creeds are: The *Ambrosian* uses either the Apostles' or Athanasian Creed in the "Ordo Commendationis Animæ".—The *Celtic* used either the full Apostles' Creed or a shortened confession of faith in the Trinity, eternal life, and the Resurrection (both forms are found) before the unction of the sick.—The *Anglican* uses the Apostles' Creed in an interrogative form (as at baptism) in the visitation of the sick.—The *Mozarabic* introduces a three-fold repetition of a Spanish variant of the Apostles' Creed into a "Sermo ad populum" before the Epistle at Mass on Palm Sunday, which is the ancient *Traditio Symboli*.—The *Byzantine* has a recitation, *μεγαλοφώνως*, of the Nicene Creed in answer to the question, *καὶ τί πιστεύεις*; at the consecration of bishops. This is followed by two more elaborate confessions of faith, resembling the "Interrogatio" at the same service in the Roman Pontifical.—In the *Roman* ordination of priests the Apostles' Creed is recited just before the *Accipe Spiritum Sanctum*.—At the beginning of the coronation of the Russian emperor he is required to recite the Nicene Creed in token of orthodoxy.

Creed, NICENE. See NICENE CREED.

Creeks, an important confederacy of Indian tribes and tribal remnants, chiefly of Muskogian stock, formerly holding the greater portion of Central and Southern Georgia and Alabama, but now settled in Eastern Oklahoma. The name by which they are commonly known was originally applied not to the Indians, but to their home territory, i. e. "the Creek Country". The dominant tribe is the Maskoki (Mus-

cogee), who constitute about one-half of the whole body. Besides these there are Hichitee, Koasati, and Yuchi, each with a distinct language; there are also several smaller broken tribes. The Seminole, too, are originally a separated band of Creeks. According to traditional and linguistic evidence, the Muscogee and their cognate tribes had in ancient times lived west of the Mississippi River, but they were found settled in Georgia and Alabama as early as 1540 by De Soto, who crossed their territory from east to west. In the colonial period they held the balance of power between the English of Carolina on the one side and the Spaniards and French of Florida and Louisiana on the other. Their most constant alliance was with the English, whose traders supplied them with guns, and it was chiefly by this means that the English accomplished the utter destruction of the flourishing Franciscan missions of upper Florida in 1702-8. In the final inroad, 1400 of the Christianized mission Indians were carried off and distributed as slaves among the English of Carolina and their savage allies. This unfortunate outcome of more than a century of devoted missionary effort was due to the short-sighted policy of the Spaniards, who refused guns to their own Indians, even in the face of threatened invasion. The Creeks adhered to the English side in the war of the Revolution, but made a treaty of peace with the United States in 1790. English instigation in the War of 1812 led to another war with the Creeks in 1813-14, in which they suffered such heavy losses that they were obliged to purchase peace by the surrender of half their remaining territory. Other land-cessions followed in quick succession until, in 1832, they sold their last acre east of the Mississippi and were removed to a new home in the Indian Territory, where they were permitted to organize an autonomous government under the name of the Creek Nation. In 1906, by previous treaty agreement, this Indian government was formally dissolved, the Indians being admitted to citizen-rights and their country incorporated into the new State of Oklahoma. They number now about 10,000 souls, besides half as many more "freedmen", descendants of their former negro slaves.

In their old homes the Creeks were a sedentary and agricultural, but brave and warlike, people. Their houses were well constructed of logs, and their villages were regularly built around a central square devoted to public games and ceremonies, chief of which was the great annual Buskita, or Creek Corn Dance, when every fire in the settlement was extinguished and solemnly relighted from a new sacred fire kindled by means of friction. There was no recognized central authority, but neighbouring or closely cognate villages commonly acted together. They had the clan system, intermarriage within the clan being strictly prohibited. No systematic mission work was attempted among them until after their removal to the Territory, when a beginning was made by the Presbyterians. A few of their children are now attending the neighbouring Catholic mission schools.

JAMES MOONEY.

Creighton University, an institution located at Omaha, Nebraska, U. S. A., and conducted by the Jesuit Fathers. It comprises high school and college departments, a free classical day college, and schools of medicine, dentistry, pharmacy, and law. The faculty numbered 104 members in 1907-8. There is no charge for tuition in the high school and college departments. The attendance at the university is about 800, divided among the different departments

as follows: Liberal Arts, 360; Medicine, 178; Law, 51; Pharmacy, 105; Dentistry, 107. The Medical College free dispensary treats between 3000 and 4000 annually; the Dental College Infirmary, 400 or 500.

Creighton University was the first free Catholic college founded in the United States. Edward Creighton, after whom it was named, had proposed during his life to establish a free school for higher education, but he died intestate, before making provision for carrying out his project. His wife, Mary Lucretia Creighton, inheriting his fortune, determined to carry out his intention. She died 23 Jan., 1876, but her will made a bequest, which in the settlement of the estate amounted to about \$200,000, one-fourth of which was devoted to the grounds and building, the balance being reserved for foundation. In accordance with the terms of this will, the executors, 1 July, 1878, conveyed the entire property and securities in trust to the Rt. Rev. James O'Connor, Bishop of Omaha. On 27 February, 1879, the Legislature of Nebraska passed an act to provide for the incorporation of universities under certain circumstances. The District Court then permitted Bishop O'Connor to turn over his trust to a corporation called the Creighton University, and he appointed five members of the Society of Jesus as the Board of Trustees, 14 August, 1879. Creighton College as such was not incorporated and the name merely represented what was left in trust by Mrs. Creighton. When the Creighton University accepted the trust, the endowment fund amounted to about \$147,500. Mrs. Sarah Emily Creighton, who died 3 Sept., 1888, wife of John A. Creighton, bequeathed to Creighton University a business block, according to the same terms and conditions as were designated in the bequest of her sister, Mrs. Mary Lucretia Creighton. During 1900 John A. Creighton, desirous of making the university an institution fully equipped for its educational work, generously offered means for the completion of the college buildings. The School of Medicine was founded 30 May, 1892, and the School of Law in October, 1904. The Edward Creighton Institute, erected in 1905, is now the home of the Law Department. The Dental School, opened in 1905, is located with the Law School. The School of Pharmacy, a distinct department of the university since 1 February, 1905, took possession of its splendidly equipped new addition to the Medical Building in September, 1908.

Edward Creighton was born 31 Aug., 1820, in Belmont County, Ohio, near the present town of Barnesville; and died 5 Nov., 1874. John A. Creighton was born 15 Oct., 1831, in Licking County, Ohio, and died 7 Feb., 1907. He was educated at St. Joseph's College, Somerset, Ohio, under the Dominican Fathers, and for these teachers he always retained a feeling of gratitude. Though desirous of becoming a civil engineer, he was obliged to shorten his course of study by the necessity of earning a livelihood. He married Sarah Emily Wareham of Dayton; and her sister, Mary Lucretia, became the wife of Edward Creighton. Both these men were remarkable for courage, enterprise, and a strong sense of justice. John was one of the first members of the "Vigilance Committee" which effectually freed Montana of the desperadoes who made life and property insecure in that territory. Both also made their start in life by constructing roads and telegraph lines in the West and South; John was moreover actively engaged in mining, stock-raising, and investments in land. He left by will large bequests to Creighton University, the Creighton Memorial Hospital and other Catholic institutions in which he was interested during life. Though these sums were somewhat lessened by litigation and compromise with contestants, the university received nearly a million and a quarter dollars, the Hospital nearly a quarter of a million, and the other institutions smaller amounts. The entire revenue-produce

ing property of the university approximates two millions and a quarter, exclusive of its buildings, grounds and equipment. The hospital takes care of about 2400 patients a year, of whom more than half are non-Catholics, and one-third absolutely free. John Creighton was honoured by Leo XIII with the order of St. Gregory and later with the title of Count of the Papal States. In 1900 he received the Lætare Medal from the University of Notre Dame.

Reminiscences of Creighton University; Creighton (biographical sketches of the family)—both published by the University; MORTON, *History of Nebraska*; SAVAGE AND BELL, *History of Omaha*; SORESENSEN, *History of Omaha*; the annual Catalogues and other publications of Creighton University and the annual reports of the Creighton Memorial Hospital.

M. P. DOWLING.

Crelier, HENRI-JOSEPH, Swiss Catholic priest, Hebrew scholar and Biblical exegete; b. at Bure, 16

October, 1816; d. at Bressancourt, France, 22 April, 1889. From 1845 to 1855 he was professor at the college of Porrentruy (Switzerland); later he became chaplain of the Religious of the Sacred Heart at Besançon, France, and devoted his leisure hours to the study of Sacred Scripture. He was subsequently appointed pastor of the church of Rebeuvelier, and finally of Bressancourt, where he died. He left many works on Sacred Scripture, some of which have a special value. Among these we note: "Les psaumes traduits littéralement sur le texte hébreu avec un commentaire" (Paris, 1858); "Le livre de Job vengé des interprétations fausses et impies de M. E. Renan" (Paris, 1860); "Le Cantique des cantiques vengé des interprétations fausses et impies de M. E. Renan" (Paris, 1861); "M. Renan guerroyant contre le surnaturel" (Paris, 1863); "M. E. Renan trahissant le Christ par un roman," etc. (Paris, 1864). To the "Commentaries on the Bible", published by Lethielleux, he contributed the Acts of the Apostles (1883), Exodus (1886), Leviticus (1886), Genesis (1889).

R. BUTIN.

Crema, DIOCESE OF (CREMENSIS), suffragan to Milan. Crema is a city of the province of Cremona, Lombardy, Northern Italy, situated between the Rivers Adda and the Oglio, in a marshy region. It was built by inhabitants of various cities of the Insu-bres, who fled thither during the Lombard invasion of Italy. Crema fell eventually under Lombard rule and shared the vicissitudes of that monarchy. Crema was one of the first cities to organize as a commune. It joined the Lombard League, and was therefore destroyed, first by Frederick Barbarossa and later by the inhabitants of Cremona and Lodi. It afterwards acknowledged the rule of the Torriani and of the Visconti of Milan, for a while also that of the Benzonis. Finally it became subject to the Republic of Venice. It belonged to the Diocese of Lodi until 1580, when it

was made a see and a suffragan of Milan. Among the most noted of its bishops was the zealous Marcan-tonio Zolli. The diocese has a population of 58,000, with 53 parishes, 65 churches and chapels, 174 secular and 4 regular priests, 1 religious house of men and 7 of women.

CAPPELLETTI, *Le chiese d'Italia* (Venice, 1857), XII, 241-75; *Ann. eccl.* (Rome, 1907), 432-33; BARBIERI, *Compendio cronologico della storia di Crema* (Crema, 1888).

U. BENIGNI.

Crementation.—I. HISTORY.—The custom of burning the bodies of the dead dates back to very early times. The Pre-Canaanites practised it until the introduction of inhumation among them along with the civilization of the Semitic people about 2500 B. C. History reveals no trace of incineration among the Jewish people, except in extraordinary circumstances of war and pestilence. It was likewise unknown, in practice at least,

to the Egyptians, Phœnicians, Carthaginians; or to the inhabitants of Asia Minor—the Carians, Lydians, and Phrygians. The Babylonians, according to Herodotus, embalmed their dead, and the Persians punished capitally such as attempted cremation, special regulations being followed in the purification of fire so desecrated. The Greeks and Romans varied in their practice according to their views of the after life; those who believed in a future existence analogous to the present buried their dead, even leaving food in the tomb for the nourishment and enjoyment of the departed; such as, on the other hand, held the opinion that on the decay of the body life was continued in the shade or image, practised cremation, the more expeditiously to speed the dead to the land of shadows. But the practice of cremating never entirely superseded what Cicero tells us (De Leg., II, xxii) was the older rite among the Roman people.

Indeed the Cornelian gens, one of the most cultured in Rome, had, with the single exception of Sulla, never permitted the burning of their dead. By the fifth century of the Christian Era, owing in great part to the rapid progress of Christianity, the practice of cremation had entirely ceased.

The Christians never burned their dead, but followed from earliest days the practice of the Semitic race and the personal example of their Divine Founder. It is recorded that in times of persecution many risked their lives to recover the bodies of martyrs for the holy rites of Christian burial. The pagans, to destroy faith in the resurrection of the body, often cast the corpses of martyred Christians into the flames, fondly believing thus to render impossible the resurrection of the body. What Christian faith has ever held in this regard is clearly put by the third-century writer Minucius Felix, in his dialogue "Octavius", refuting the assertion that cremation made this resurrection an impossibility: "Nor do we fear, as you suppose, any harm from the [mode of] sepulture, but we adhere to the old, and better, custom" ("Nec, ut creditis, ullum damnum sepulturæ timemus sed veterem et

CATHEDRAL OF S. MARIA MAGGIORE, CREMA

meliozem consuetudinem humandi frequentamus"—P. L., III, 362).

II. CHURCH LEGISLATION.—(1) *In the Middle Ages.*—In all the legislation of the Church the placing of the body in the earth or tomb was a part of Christian burial. In the acts of the Council of Braga (Hardouin, III, 352), in the year 563, while we read that bodies of the dead are by no means to be buried within the basilicas where rest the remains of Apostles and martyrs, we are told that they may be buried without the wall; and that if cities have long forbidden the interment of the dead within their walls, with much greater right should the reverence due the holy martyrs claim this privilege. The same may be seen in the canons of other councils—e. g. of Nantes, between the seventh and ninth centuries; of Mainz, in the ninth century; of Tribur, in the ninth century. This legislation evidently supposes the long-standing custom of burial such as the Church practises to-day, and shows that in the sixth century, in other places than Rome, where even to-day the old law of the Twelve Tables exerts a moral influence, the Church had so far conquered the prejudice of the past as to have gained the privilege of burying her dead within the city walls and within the enclosure of the churchyard. Once in the course of the Middle Ages did there seem to be on the part of some a retrogression to the pagan ideals, and as a consequence Boniface VIII, on 21 February, 1300, in the sixth year of his pontificate, promulgated a law which was in substance as follows: They were *ipso facto* excommunicated who disembowelled bodies of the dead or inhumanly boiled them to separate the flesh from the bones, with a view to transportation for burial in their native land. "Detestandæ feritatis abusus", he calls it, and it was practised in case of those of noble rank who had died outside of their own territory and had expressed a wish to be buried at their place of birth. He speaks of it as an abomination in the sight of God and horrifying to the minds of the faithful, decreeing that, thereafter, such bodies are either to be conveyed whole to the spot chosen or buried at the place of death until, in the course of nature, the bones can be removed for burial elsewhere. Those who were party to these enormities either as the cause or agent of their occurrence were to incur excommunication reserved to the Holy See, while the body thus inhumanly treated could not afterward be given ecclesiastical burial ("Extrav. Comm.", Lib. III, Tit. vi, c. i.).

(2) *Decrees of Roman Congregations.*—This rigid adherence to the principles of the early teaching of the Church may be seen in the later decrees of the Roman Congregations. The Vicar Apostolic of Vizagapatam, in the year 1884, proposed the following difficulty to the Sacred Congregation of Propaganda: The bodies of two neophytes had been cremated, the parents testifying that there had been no idolatrous ceremonies. Should the missionaries in such cases protest against what is considered a privilege of caste, or may the following present practice be tolerated?—If a pagan seeks baptism at the hour of death, the missionary grants it, without questioning what mode of sepulture is to be given the body after death, persuaded that the pagan parents will make no account of his desire to be buried, not cremated. The answer was: "You must not approve of cremation, but remain passive in the matter and confer baptism; be careful also to instruct your people according to the principles which you set forth" (Cremationem approbare non debes, sed passive te habeas, collato semper baptismo, et populos instruendos cures juxta ea quæ a te exponuntur). This was given on 27 September, 1884. In 1886 another decree forbade membership in cremation societies and declared the unlawfulness of demanding cremation for one's own body or that of another. On 15 December in the same year a third decree was issued of more or less the same tenor, and finally on

27 July, 1892, the Archbishop of Freiburg, among other questions, asked whether it was lawful to co-operate in the cremation of bodies either by command or counsel, or to take part as doctor, official, or labourer working in the crematory. It was answered that formal co-operation, the assent of the will to the deed, is never allowed, either by command or counsel. Material co-operation, the mere aiding in the physical act, may be tolerated on condition (1) that cremation be not looked upon as a distinctive mark of a Masonic sect; (2) that there be nothing in it which of itself, directly and solely, expresses reprobation of Catholic doctrine and approbation of a sect; (3) if it be not clear that the officials and others have been assigned or invited to take part in contempt of the Catholic Religion. And whereas, under the above restrictions, co-operators are to be left in good faith, they must always be warned not to *intend* co-operation in the cremation. (See "Collectanea S. C. P. F.", nn. 1608, 1609; "Acta S. Sedis", XXV, 63; "Am. Eccl. Rev.", XII, 499.)

(3) *Motives of this Legislation.*—The legislation of the Church in forbidding cremation rests on strong motives; for cremation in the majority of cases to-day is knit up with circumstances that make of it a public profession of irreligion and materialism. It was the Freemasons who first obtained official recognition of this practice from various governments. The campaign opened in Italy, the first attempts being made by Brunetti, at Padua, in 1873. Numerous societies were founded after this, at Dresden, Zurich, London, Paris. In the last city a crematory was established at Pere Lachaise, on the passing of the law of 1889 dealing with freedom of funeral rites. The Church has opposed from the beginning a practice which has been used chiefly by the enemies of the Christian Faith. Reasons based on the spirit of Christian charity and the plain interests of humanity have but strengthened her in her opposition. She holds it unseemly that the human body, once the living temple of God, the instrument of heavenly virtue, sanctified so often by the sacraments, should finally be subjected to a treatment that filial piety, conjugal and fraternal love, or even mere friendship seems to revolt against as inhuman. Another argument against cremation, and drawn from medico-legal sources, lies in this: that cremation destroys all signs of violence or traces of poison, and makes examination impossible, whereas a judicial autopsy is always possible after inhumation, even of some months.

Is cremation a sign of culture?—The report of the French Cremation Society for 1905 has the following: "There exist in Europe 90 crematories . . . and the number of incinerations is above 125,000." In France there are 3 crematories, in the United States 29, in Great Britain 12, in Italy 30, in Germany 9, in Switzerland 4, in Sweden 2, in Denmark, Canada, the Argentine Republic, Australia, one each. "Let us not number here the appliances of Tokio, let us not speak of the pyres raised in the Indies, in China, in Siam, in Cambodia, at all points of the Asiatic Continent, from time immemorial Asia has burned her dead." At first sight 125,000 seems a large number; but a glance at the Paris statistics will help us to realize its true value. From 1889 to 1905 there were 73,330 cremations in Paris. Only 3484 were by request; 37,082 were hospital debris; 32,757 were embryos. Of the requested cremations there were 216 in 1894, 354 in 1904—an increase in ten years of 138—not a large number, and it serves to prove that even Paris is progressing in the use of cremation very slowly indeed.

The arguments in favor of cremation may be reduced to a few heads: (1) it will prevent the corruption of the soil; (2) drinking water will be safeguarded against contamination; (3) corruption of the air will be avoided in localities bordering on cemeteries, with a consequent lessening of the danger of infection in

times of epidemic. In answer it has been urged that cemeteries are not a cause of the infection of the air. In any well-ordered cemetery putrefaction takes place six or seven feet below the surface. In the open air, with abundance of oxygen, corruption proceeds more quickly, with continuous discharge of noxious gases in large quantities highly deleterious to health, but it is not so in the grave. Mantegazza, a celebrated bacteriologist, has shown ("Civiltà Cattolica", Ser. IX, Vols. X-XII) that, where there is but a small supply of oxygen, bodies will decompose without the emanation of any odour whatever. Often, too, the human body is so reduced before death that in the earth it suffers little or no corruption at all, but is first mummified and then slowly reduced to dust. Again, earth-pressure prevents chemical decomposition to a great extent, producing in the place of gas a liquid which enters into various combinations with the materials in the soil, without the slightest danger to the living. Earth is a powerful agent of disinfection. Even were noxious gases to escape in any quantity, they would be absorbed on their way upwards, so that a very small part would ever reach the surface, or were the soil not fit for absorption (as was said to be the case at Père-Lachaise, Paris) the process would be taken up by the vegetable matter on the surface. It is held, also, that it is no more true to say that cemeteries are a menace to water wells. Charnock, Delacroix, and Dalton have proved that of three parts of rain water only one penetrates the soil, the other two either evaporating or flowing into rivers. Now corpses in cemeteries are not so placed as to form continuous strata, but a moderate distance intervenes between any two bodies or rows of bodies. Of the third part of rain, then, which penetrates the soil of a graveyard a very little will touch the bodies at all, and what does will not all reach the water streams, but will be absorbed by the earth, so that the remaining drops that would ultimately trickle into the stream would have absolutely no effect, were the stream large or small. Two experiments have proved this. The doctors above mentioned selected a tank 6½ feet high, filled it with sand, and for many months filtered through it sewer water taken from the drainage pipes of Paris. The water received at the bottom of the vessel was always found pure, clear and drinkable. A like experiment was made with a smaller vessel with like results. To anticipate the difficulty, that what held for an experiment with small quantities would prove untrue were the amount of water very great, a large tract of ground near Genvilliers was inundated for many months with the same putrid and reeking waters of the Seine after they had passed through the sewers of Paris. The result was the same. Wells were dug in the inundated portion, and the water was again found pure and clear, purer, as it chanced, than that of other wells outside the boundary of the place of experiments. In like manner, the waters in the cemeteries of Leipzig, Hanover, Dresden, and Berlin were examined and found purer and freer from organic matter than the wells of the town.

In conclusion, it must be remembered that there is nothing directly opposed to any dogma of the Church in the practice of cremation, and that, if ever the leaders of this sinister movement so far control the governments of the world as to make this custom universal, it would not be a lapse in the faith confided to her were she obliged to conform.

WILLIAM DEVLIN.

Cremona, DIOCESE OF (CREMONENSIS), suffragan of Milan. Cremona is a city (31,661 in 1901) in the Province of Lombardy, Italy, on the left bank of the Po. It was built by the Cenomanni Gauls, but later became a Roman colony and a frontier fortress; it

succumbed, however, to Hannibal. After the victory of Octavian over Antony, the territory was divided among the veterans of the conqueror. Caius Vitellius defended it unsuccessfully against Vespasian, by whom it was pillaged, but it rose again from its ruins. About A. D. 600 Cremona, until then Byzantine, was captured by the Lombard king, Agilulf. Under the Emperors Otto (I-III) its bishops acquired temporal sovereignty, but in 990 the people expelled Bishop Olderico and adopted a republican form of government. The Emperor Henry IV (1056-1106), however, confirmed Bishop Landulf in all imperial grants made to his predecessors. On the other hand Henry V (1106-25) restored to the people their

CATHEDRAL AND TORRAZZO, CREMONA

communal rights. Thenceforth Cremona became a citadel of Ghibellinism and was greatly favoured by Frederic Barbarossa and Frederick II, though for the same reason frequently at war with the neighbouring cities. In later medieval times it had many lords or "tyrants", the Pallavicini, the Bovara, the Cavalcabò, the Visconti, the Sforza, until it became part of the Duchy of Milan (1328). In 1702 it was taken by imperial troops, and in 1796 and 1800 fell into the hands of the French.

The people of Cremona venerate St. Sabinus as their first missionary and first bishop; he is said to have lived in the first century of our era. Among the better-known early bishops are St. Syrinus (c. 340), a valiant apologist of the Faith against the Arians, and St. Silvius (733); the latter is held in great veneration. Liudprand of Cremona was sent (946) as ambassador to Constantinople by the Emperor Otto II, and is the most famous historical writer of the tenth century. Other important bishops were Gualtiero (1096), in whose time the cathedral was begun; Sicardo (1185), author of a chronicle; Cacciante da Somma (1261), under whom was erected the belfry of the cathedral; Nicolò Sfondrati (1560), later Pope Gregory XIV; his nephew Paolo (1607); also the zealous and charitable Omobono di Offredi (1791). The cathedral of Cremona is a splendid specimen of

Romanesque architecture, dates from the beginning of the twelfth century, and is noted for its façade in alternate courses of red and white marble. It possesses many famous paintings and sculptures. Its two marble pulpits were brought thither from the suppressed church of the Olivetans. Near the cathedral is the baptistery (1167), surrounded by ranges of narrow Lombard arches, and bearing aloft an octagonal cupola. The famous brick campanile, known as the Torrazzo, built in 1283 as a peace monument, is 396 feet high and is said to be the tallest in Italy. An ancient saying runs: *Unus Petrus in Româ, una turris in Cremonâ* (One Peter in Rome, one Tower in Cremona). Other noteworthy churches are those of Sant' Agata and Sant' Agostino, the latter externally Gothic, while its interior is Renaissance. San Pietro and San Michele are believed to date from the time of the Lombard Queen Theodolinda (c. 590). There are many industries at Cremona, especially silk manufactures; in the history of music it is known as the birthplace of four famous makers of violins: Amati, Guarneri, Stradivari, and Malpighi.

The population of the diocese is 350,000; it has 345 parishes, 530 churches and chapels, 536 secular and 38 regular clergy, 9 houses of religious men, and 77 of women. It has also 15 educational institutions.

U. BENIGNI.

Cremona, GUIDO DA. See FREDERICK I.

Crépieu, FRANÇOIS DE, Jesuit missionary in Canada and vicar Apostolic for the Montagnais Indians; b. at Arras, France, 16 March, 1638; d. at Quebec in 1702. As a youth he studied in the Jesuit college of his native town and in that of Douai, becoming a member of the order at Tournay in 1659. He continued his studies at Lille and Douai, taught at Lille and Cambrai, and in 1670 sailed for Canada. Upon the completion of his theological studies in the college of Quebec, he was assigned in October, 1671, to the Tadousac region, where, with untiring devotion and great success he toiled among the Montagnais and Algonquin tribes for twenty-eight years. Writing to his brethren he tells them that the life of a Montagnais missionary is a tedious and prolonged martyrdom, and that his journeys and the cabins of the savages are truly schools of patience, penance, and resignation. For the benefit of his fellow missionaries Crépieu wrote a series of instructions embodying the results of his long service among the Indians, which are interesting and practical. These observations are given in the sixty-third volume of Thwaites' "Relations". In 1696 or 1697 he was appointed vicar Apostolic for the Montagnais and, on the discontinuance of the mission a few years later, repaired to Quebec, where he spent the rest of his life. Dablon, Superior of all the missions in Canada, styles him "a veritable apostle".

ROCHEMONTÉLX, *Les Jésuites et la Nouvelle-France au XVII^e siècle* (Paris, 1895-96), a most interesting account of this devoted and successful missionary; THWAITES, *Relations*, LVI, 301, 302; SOMMERVOGEL, *Bibl. de la c. de J.*, II, 1652, I; PILLING, *Bibliography of the Algonquian Languages* (Washington, 1891), 98, 99.

EDWARD P. SPILLANE.

Crescens, a companion of St. Paul during his second Roman captivity, appears but once in the New Testament, when he is mentioned as having left the Apostle to go into Galatia: "Make haste to come to me quickly," St. Paul writes to Timothy, "for Demas hath left me, loving this world, and is gone to Thessalonica, Crescens into Galatia, Titus into Dalmatia" (II Tim., iv, 8-10). All commentators agree in ranking Crescens with Titus rather than with Demas, and in seeing here, therefore, a reference to a missionary journey into Galatia. This term, in New Testament times,

might mean either Gaul or the Roman province of Galatia in Asia Minor, where St. Paul had laboured so much; and here it has been interpreted in either sense. In the other passages where it occurs in the New Testament, however, it denotes Galatia, and most probably it would be so understood here by Timothy, especially as the other regions mentioned are likewise to the east of Rome. Moreover, St. Paul might easily have a reason for sending a disciple to visit his old Churches in Galatia, while there is no proof that he had an active interest in Gaul. Accordingly, the earliest tradition (Apost. Constit., VII, 46) represents Crescens as bishop of the Churches in Galatia. Later traditions, on the other hand, locate him as Bishop of Vienne in Gaul, also at Mainz on the Rhine. But the earliest traditions of Gaul itself know nothing of this disciple of the Apostle as a founder of their Churches, and the belief seems to have arisen later from the desire of an Apostolic origin. The claims of Vienne have been most strongly urged; but they are based upon the mistaken identification of its first bishop, Crescens, who lived in the third century, with the disciple of St. Paul. As little can be said for Mainz. The reading of certain manuscripts (Sinaiticus, Ephraemi), which have Gallia instead of Galatia, has also been advanced in favour of Gaul; but the traditional reading is supported by the great mass of manuscript evidence. Crescens is mentioned as one of the Seventy Disciples of Christ by the Pseudo-Dorotheus, which has no authority. His martyrdom in Galatia, under Trajan, commemorated on 27 June by the Roman Martyrology, lacks the confirmation of older Martyrologies. The Greek Church honours him on 30 July.

JOHN F. FENLON.

Crescentius, the name of several leaders of the Roman aristocracy in the tenth century, during their opposition to the imperial government of the time.

CRESCENTIUS THE ELDER.—With the disappearance of the Carolingian dynasty the papal government of Rome lost its most powerful protector, and the Romans took matters into their own hands. Out of the local aristocracy there arose a powerful family, which assumed the practical charge of all governmental affairs in Rome, controlled the nominations to the papal throne, and held the power for many years. At the beginning of the tenth century the family was represented by Theophylactus, *vestiararius* or high dignitary of the papal palace and the pontifical government, by his wife Theodora, and their two daughters Marozia and Theodora. Theophylactus had the titles of Consul and Senator of the Romans. Crescentius the Elder was a descendant of this family, being a son of Theodora, the daughter of Theophylactus. According to the records, he took a hand in Roman affairs for the first time in 974. At the death of Pope John XIII (965-72), who was a brother of Crescentius, the Emperor Otto I (936-73) designated as his successor the Cardinal-Deacon Benedict, who took the name Benedict VI (972-74). The Romans bore the constant interference of the emperor in the papal elections with ill-concealed indignation. About a year after the death of Otto I, when his successor Otto II (973-83) was engaged in wars at home, they rebelled against the imperial regime under the leadership of Crescentius. The unfortunate Pope Benedict VI was de-throned, thrown into the Castle of Sant' Angelo, and strangled there in July, 974. The deacon Franco, a Roman, son of Ferrucius, was chosen to succeed, and took the name of Boniface VII (974). The protests of the imperial envoy Sizzo were of no avail against this manifestation of national aspirations on the part of the Romans. Soon, however, the imperial party

gained the upper hand; Pope Boniface VII was forced to flee to Constantinople; Benedict VII (974-83) was chosen in his place, and Crescentius disappeared for a time. In all likelihood he took an active part in the restoration of Boniface VII in 984. After the death of the Emperor Otto II (December, 983) the anti-imperial party believed that the time had come for reasserting itself. In April, 984, Boniface VII returned from Constantinople and took possession of Rome. Pope John XIV (983-84), who had been appointed by the Emperor Otto II, was imprisoned in the Castle of Sant' Angelo, where he perished about four months afterwards, and Boniface VII (984-85) ruled again as pope up to the time of his death in July, 985. His protector Crescentius towards the end of his life, whether before or after the restoration of Boniface VII is uncertain, took the monastic habit in the monastery of St. Alexius on the Aventine, where he died, 7 July, 984, and was buried within the cloister. The epitaph on his tomb (Armellini, *Le Chiese di Roma*, 586) is still visible.

CRESCENTIUS THE YOUNGER.—The aspirations of the Roman aristocracy did not vanish with the death of the elder Crescentius. The latter left a son, also called Crescentius, who after the death of Boniface VII took the reins of power in his hands. Circumstances seemed to be particularly favourable. The Emperor Otto III (983-1002) was still a child, and the empress mother, Theophano, although an energetic princess, was absent from Rome. Crescentius the Younger took the title of *Patricius Romanorum*, by which he meant to express that he was ruler in Rome, though not altogether independent of the imperial authority; he considered himself as a lieutenant of the emperor. It is quite likely that the election of Pope John XV (985-96), who succeeded Boniface VII, was accomplished with the participation of Crescentius, although the particulars of that election are unknown. In some of the official documents of the time, issued by the pope, the name of Crescentius and his title of *Patricius* appear together with the name of John XV; and for a number of years Crescentius exercised his authority apparently without opposition. When the Empress Theophano came to Rome in 989, she conducted herself as empress and sovereign, while leaving Crescentius his subordinate position. Meanwhile the young Emperor Otto III assumed the reins of government, and in 996 made his first journey to Italy, induced by various considerations, especially by the appeals of Pope John XV. However, death overtook the pope at the beginning of April, 996, before Otto reached Rome; it was at Pavia that the emperor was apprised of the fact. As the Romans and their leader, Crescentius, did not care at this time to nominate a successor to the deceased pope, they sent a delegation to the emperor with the request that he provide a suitable candidate for the Roman See. Otto III was at Ravenna when the delegates from Rome arrived. After a consultation with his counsellors he chose his own cousin, Bruno, a young ecclesiastic, only twenty-three years of age, who seemed to have the necessary qualifications. Early in May he was consecrated at Rome as Gregory V (996-99), being the first pope of German nationality. A few weeks afterwards Otto III himself was crowned in Rome by the new pope (21 May) in the basilica of St. Peter. On the 25th of the same month the pope and the emperor held in St. Peter's a synod, which was at the same time a high court of justice. The rebellious Romans, including Crescentius, who had embittered the last years of the pontificate of Pope John XV, were summoned to give an account of their doings. The result was that a certain number, among them Crescentius, were sentenced to banishment. Pope Gregory V, who wished to inaugurate his pontificate with acts of mercy, pleaded for the guilty, and the emperor withdrew his sentence of exile. Crescentius was deprived of his

title of *Patricius*, but was permitted to live in retirement at Rome.

The clemency shown to Crescentius by the pope was repaid with deeds of violence. Only a few months after the departure of the emperor for Germany a revolt broke out in Rome under the leadership of Crescentius. The foreign pope and the many foreign officers installed throughout the Papal States were offensive in the sight of the Romans. The rebellion succeeded so well that in September, 996, the pope was forced to flee with only a few attendants. At Pavia he held a synod in February, 997, in which he pronounced sentence of excommunication against Crescentius, the usurper and invader of the Church of Rome. Crescentius, far from being moved by these proceedings against him, completed his work of rebellion by appointing an antipope, Philagathus, Bishop of Piacenza, who had just returned from an embassy to Constantinople on behalf of Emperor Otto III. Born in Calabria, Philagathus was a Greek, and owed his elevation to the episcopacy to the Empress Theophano and her son, but was willing to betray his master. In April, 997, he assumed the title of Pope John XVI (997-98). In February, 998, Otto III returned to Rome with Pope Gregory V and took possession of the city without much difficulty. The antipope sought safety in flight, while Crescentius shut himself up in the Castle of Sant' Angelo. The unfortunate John XVI was soon captured by the emissaries of the emperor; his nose and ears were cut off, his eyes and tongue were torn out, and in this pitiable condition he was made to ride backwards on an ass. At the intercession of St. Nilus, one of his countrymen, his life was spared, and he lived until 1013. Towards the end of April the Castle of Sant' Angelo was taken; Crescentius was made prisoner and executed and his corpse hung on a gibbet erected on Monte Mario. Afterwards his remains were interred in the church of S. Pancrazio on the Janiculum.

JOHN CRESCENTIUS, son of Crescentius the Younger. —Early in 1001 a revolt broke out in Rome against Otto III, who now permanently resided in the Eternal City. The emperor and Pope Silvester II (999-1003), the first pope of French nationality, were compelled to flee; it is quite likely that John Crescentius was the prime mover of the rebellion. At any rate, after this he assumed supreme authority in Rome, and after the death of the Emperor Otto III (24 January, 1002) took the title of *Patricius Romanorum*. Pope Silvester II was permitted to return to Rome, but had little to do with the temporal government. The same is true of his three immediate successors: John XVII (1003), John XVIII (1003-09), and Sergius IV (1009-12), all of whom were appointed through the influence of John Crescentius. The *patricius* himself died in the spring of the year 1012, and with him the Crescentii disappeared from the history of Rome.

FRANCIS J. SCHAEFER.

Crescentius of Jesi. See FRANCISCANS.

Crescimbeni, GIOVANNI MARIO, Italian historian of literature, chronicler, and poet, b. in Macerata, 9 Oct., 1663; d. 8 March, 1728. He was educated at Rome for the law, but gave most of his time to poetry and literature. In 1679 he was made doctor of laws, and in 1705 Clement XI named him canon of Santa Maria in Cosmedin. A few years later (1719) the same pontiff appointed him archpriest, and in the same year he was ordained to the priesthood.

Crescimbeni composed tragedies and *rime* of various kinds, and translated into Italian verse two books of Lucan's "*Pharsalia*". His prose is superior to his verse, and it is especially as a literary critic that he is

known. His special studies in Italian literature helped to pave the way for the general histories of that subject. His greatest work, "Dell' Istoria della volgar poesia" (6 vols., Rome, 1698), was one of the best productions of its kind and is still of considerable value. In it he treats of the origin and development of Italian poetry, appreciates the works of the one hundred chief Italian poets, arranges the poets in chronological order, and discusses the art and kinds of poetry. This huge work was followed in 1702 by the "Commentarii intorno alla sua Istoria della volgar poesia", in 5 volumes, which was at first undertaken to supersede the "Istoria"; but since this had met with such favour, the new work became a supplement to it.

Crescimbeni will also be remembered as one of the founders of the Academy of "Arcadia, conversazione di belle lettere", over which he presided from its foundation in 1690 to the time of his death. "Arcadia" was a kind of pastoral republic, whose members included the leading scholars and poets of Italy who strove to root out the perverted taste of the seventeenth century in matters of art and literature, and to introduce a simpler and more natural style into Italian prose and poetry. The society grew out of a somewhat similar society which had been patronized by Queen Christine of Sweden (d. 1689), who had taken up her residence in Rome. "Arcadia" grew in importance and numbers; "Colonies" were established in the principal Italian cities; and its influence extended even beyond the borders of Italy. The members assumed shepherds' names, and took as their device a Pan's pipes surrounded by laurels. (See ACADEMIES, ROMAN.)

The Life of Crescimbeni, with a list of his works edited and inedited, written by a contemporary, Francesco Mancurti, is in the final edition of the "Istoria" (Venice, 1730-1731), VI, 213 sq. This biographical article also gives much information on the history of the "Arcadia". The *rime* were edited in Rome in 1695, and more completely in 1723.

JOSEPH DUNN.

Cresconius (or **CRISCONTUS**), a Latin canonist of uncertain date and place, flourished probably in the latter half of the seventh century, though it may have been at the end of the sixth or even in the eighth century. He was probably a bishop of the African Church. We owe to Cresconius a collection of canons, known as "Concordia canonum", inclusive of the Apostolic Canons (see CANONS, APOSTOLIC), nearly all the canons of the fourth and fifth century councils, and many papal decretals from the end of the fourth to the end of the fifth century. The content is taken from the collection of Dionysius Exiguus, but the division into titles (301) is copied from the "Breviatio canonum" of Fulgentius Ferrandus, a sixth-century deacon of Carthage. In many manuscripts the text of Cresconius is preceded by an index or table of contents (*breviarium*) of the titles, first edited in 1588 by Pithou. In its entirety the work was first published by Voellus and Justellus in the appendix (33-112) to their "Bibliotheca Juris canonici" (Paris, 1661), and is in P. L., LXXXVIII, 829 sqq. One of its best manuscripts, the tenth-century "Vallicellianus" (Rome), has a note in which Cresconius is declared the author of a metrical account of the "bella et victorias" of the "Patricius" Johannes in Africa over the Saracens. This was formerly interpreted to mean the African victory of the Byzantine "Patricius Johannes" in 697, hence the usual date of Cresconius. Some, however, hold that the poem in question is the "Johannis" of Flavius Cresconius Corippus, a Latin poet of about 550, and on this basis identify him with our canonist, thus placing the latter in the sixth century. Others (with Maassen, p. 810) while admitting that the poem in question can be none other than the "Johannis" of the aforesaid Latin

poet (unknown to Fabricius, and first edited by Mazzuchelli, Milan, 1820), maintain that it has been wrongly attributed to our Cresconius, and that it cannot therefore aid in fixing his date. The "Concordia canonum" was much used as a handy manual of ecclesiastical legislation by the churches of Africa and Gaul as late as the tenth century. Few of its manuscripts postdate that period.

The best account of Cresconius and his work is in MAASSEN, *Gesch. der Quellen und Litt. des. can. Rechts in Abendlande*, etc. (Graz, 1870), 806-13, 846-47, corrective of FABRICIUS, *Bibl. Lat.*, I, 400-01; see also VENABLES in *Dict. of Christ. Biogr.*, I, 712-13.

JOHN WEBSTER MELODY.

Cressy, HUGH PAULINUS SERENUS, Doctor of Theology and English Benedictine monk, b. at Thorpe-Salvin, Yorkshire, about 1605; d. at East Grinstead, Sussex, 10 August, 1674. He was the son of Hugh Cressy by Margery, daughter of Thomas d'Oylye, a London physician belonging to the old Oxford family of that name. Educated first at Wakefield Grammar School, when fourteen years old he went to Oxford (1619) where he took the degree of B.A. in 1623 and that of M.A. in 1627. He was elected a Fellow of Merton College and took orders in the Established Church. Leaving Oxford he became chaplain, first to Thomas, Lord Wentworth, and afterwards to Lucius Cary, Lord Falkland, with whom he went to Ireland in 1638. During his sojourn in Ireland he was appointed Dean of Leighlin, but returned to England the following year (1639). A canonry in the collegiate church of Windsor, which he received in 1642, he was never able to enjoy, owing to the disturbed state of the country; the following year (1643) his patron, Lord Falkland, was killed at Newbury. Cressy then attached himself to Charles Berkeley, afterwards Lord Falmouth, and travelled with him through several Catholic countries of Europe; this experience resulted in his conversion to the Catholic Faith at Rome in 1646. From Rome he went to Paris where he received further instruction from Henry Holden, a doctor of the Sorbonne. He then wrote his "Exomologesis" (Paris, 1647), a work in which he published to the world the motives which led him to change his religion.

After becoming a Catholic Cressy's first inclination was to be a Carthusian monk; this intention was set aside and he joined the English Congregation of the Order of St. Benedict at St. Gregory's, Douai, but so poor was he at the time that Queen Henrietta Maria provided him with money for his journey; he was professed at St. Gregory's, 22 August, 1649. From 1651 to 1652 he acted as chaplain to the Benedictine nuns in Paris, returned to Douai (1653-60), and was then sent to the mission in England, residing at Somerset House as one of the chaplains to Charles the Second's queen. In the English Benedictine Congregation he held the office of definitor of the province in 1666 and was appointed the titular cathedral prior of Rochester in 1669. His last years were spent with the Caryll family at East Grinstead, Sussex, where he died in his sixty-eighth year. The moderate party in the Church of England respected him as a prudent and learned man, and when Dr. Stillingfleet charged him with credulity and want of historical judgment, his defence was taken up by Anthony Wood who commended him for "his grave and good style, proper for an ecclesiastical historian" and spoke of him as one who "doth mostly quote his author and leaves what he says to the judgment of his readers". Cressy's "Church History of Brittany or England, from the Beginning of Christianity to the Norman Conquest" (Rouen, 1668) brings the narrative down to about the middle of the fourteenth century. A second part, "From the Conquest Downwards", was discovered at Douai in 1856, but is yet in MS. (Gillow). His other works are: Appendix to "Exomologesis" (Paris, 1647);

"Arbor virtutum, a MS. preserved at Ugbrooke, Devonshire"; "The Scale (or Ladder) of Perfection" by Walter Hilton, ed. Cressy (London, 1659); "Sancta Sophia" by Ven. Fr. Aug. Baker, ed. Cressy (Douai, 1657); "Certain Patterns of Devout Exercises" (Douai, 1657); "Roman Catholic Doctrines no Novelities" (1633); "A Non Est Inventus" (London, 1662); "A Letter to an English Gentleman concerning Bishop Morley" (London, 1662); "Sixteen Revelations of Divine Love", from an ancient copy (1670); "Fanaticism Fanatically Imputed to the Catholic Church by Dr. Stillingfleet" (1672); "First Question: Why Are You a Catholic?" etc. (London, 1672); "An Answer to Part of Dr. Stillingfleet's Book intitul'd Idolatry practised in the Church of Rome" (1674); "An Epistle Apologetical of S. C. to a Person of Honour" (1674); "An Abridgment of the Book called 'The Cloud of Unknowing' by Maurice Chauncey" (MS.).

G. E. HIND.

Creswell, JOSEPH (vere ARTHUR), controversialist, b. 1557 of Yorkshire stock in London; d. about 1623. His widowed mother married William Lacey, who, after her death, was ordained priest and martyred (22 August, 1582) at York. Creswell joined the Society of Jesus in Rome 11 Oct., 1583, having previously studied at Reims and at the Roman College. Having been rector (1589-1592) after Father Persons of the English College, Rome, he also succeeded Persons as vice-prefect for English Jesuit interests in Spain. Creswell's character and conduct in connexion with his difficulties over the seminaries of Seville and Valladolid, and his controversy about Benedictine vocations have been severely criticized (cf. Camm, *Life of Ven. John Roberts*, and Pollen, *The Month*, London, Sept.-Oct., 1899). Father Creswell had considerable intercourse with Sir Charles Cornwallis, the English resident at Madrid, till the Powder Plot, when Creswell was summoned to Rome. Sent to Belgium in 1614, he was at St-Omer in 1620, and in 1621 was made rector of Ghent. His chief works are: A Latin treatise, "De Vita Beatâ"; "Exemplar Literarum ad Cecilium (sive Burleigh)", 1592, under the pseudonym "John Perne", against Elizabeth's proclamation of 29 Nov., 1591; "Vida y Martirio del P. Henrique Valpolo," (Madrid, 1596); treatise against James First's (1610) proclamation (4to, St-Omer, 1611); "Meditations upon the Rosary" (St-Omer, 1620); translation into Spanish, under the name "Peter Manrique", of Father William Bathe's "Preparation for administering Penance and the Eucharist" (Milan, 1614); translation into English and Spanish, under initials N. T. of Salvian's "Quis dives salvus?" (St-Omer, 1618); "Relacion de Inglaterra", Ms X, 14, National Library, Madrid; memoir for Philip III of Spain on affairs of the Society; "Responsio ad calumnias," Stonyhurst Library; Letters, Vatican Archives (Lettere di particolari, I, 1).

PATRICK RYAN.

Crete. See CANDIA.

Crétin, JOSEPH, first Bishop of St. Paul, Minnesota, U. S. A., b., at Montluel, département of Ain, France, 19 December, 1799; d. at St. Paul, Minnesota, 22 February, 1857. He made his preparatory studies in the petits séminaires of Meximieux (Ain) and L'Argentière (Rhône), his studies of philosophy at Alix (Rhône), and of theology in the Seminary of

Saint-Sulpice, Paris. He was ordained priest 20 December, 1823, and soon afterwards was appointed vicar in the parish of Ferney, once the home of Voltaire, and eventually became its parish priest. He built there a new and beautiful church with funds largely gathered by himself on a tour through France, founded a college for boys, and revived the Catholic Faith among his parishioners, many of whom had become indifferent towards it, owing to the surviving influence of "the philosopher" and the close proximity of the Protestant cantons of Switzerland. But Crétin longed for a larger field of activity; at one time he thought earnestly of going as a missionary to China. His perplexities in that regard were solved by the advent of Bishop Loras, first Bishop of Dubuque, Iowa, who arrived in France in 1838 in quest of priests for his Western diocese. Crétin was one of the few who volunteered, and on 16 August, 1838, he secretly left his parish, embarked at Le Havre with Bishop Loras, and landed in New York in October of the same year. The winter of 1838-39 was spent in St. Louis, Missouri, and on his arrival at Dubuque, 18 April, 1839, he was at once appointed vicar-general of the new diocese. For over eleven years he exercised his priestly ministry in these new and unopened regions, dividing his time chiefly between Dubuque, Iowa, Prairie du Chien, Wisconsin, and the Winnebago Indians in the neighbourhood of Fort Atkinson, Winneshiek Co., Iowa. Only once, in 1847, did he absent himself, when he made a journey to Europe in the interest of his missions. In 1850, St. Paul, Minnesota, became the seat of a new diocese. Crétin was appointed its first bishop, and went to France, to be consecrated, 26 January, 1851, at Belley by Bishop Devie, who had ordained him to the priesthood.

After having obtained some donations and several ecclesiastics for his new diocese, he returned to America and arrived in St. Paul 2 July, 1851. The same evening he made his first appearance in the log chapel of St. Paul, his first cathedral, and gave the first episcopal blessing to his flock. Within less than five months a large brick building was completed, which served as a school, a residence, and a second cathedral. Another structure, begun in 1855, was finished after his death, and serves as the cathedral of St. Paul. In 1853 a hospital was built; during the same year, and again in 1856, he bought land for cemetery purposes. For the instruction of the children he introduced, in 1851, a community of the Sisters of St. Joseph, and in 1855 the Brothers of the Holy Family. He also planned the erection of a seminary, and always eagerly fostered vocations for the priesthood, keeping at his residence seminarians in their last period of preparation. He supported likewise the cause of temperance not only by personal example, but also by organizing in January, 1852, the Catholic Temperance Society of St. Paul, the first of its kind in Minnesota. Another work to which he applied himself was that of Catholic colonization. With an eye to the future he endeavoured to provide for the growth of his diocese by bringing Catholic immigrants from European countries to the fertile plains of Minnesota. Withal he did not neglect his ministerial and pastoral office. He was often alone in St. Paul without the help of a priest, and at times travelled through the vast extent of his diocese bestowing on his people the consolations of religion. Bishop Crétin's memory is held in esteem and veneration, especially by the old settlers of St. Paul.

Most of the material for Bishop Crétin's life is still unpublished. The above details are from letters written by him and other documents in possession of the St. Paul Catholic Historical Society. A few documents and references on the subject are found in *Acta et Dicta* (St. Paul, 1907), I, No. 1; *The Diocese of St. Paul* (St. Paul, 1901); RAVOUX, *Mémoires* (St. Paul, 1892); DE CAILLY, *Memoirs of Bishop Loras* (New York, 1897); O'GORMAN, *History of the Roman Catholic Church in the United*

States (New York, 1895); THEBAUD, *Forty Years in the U. S.* (New York, 1904), 274-75; REUSS, *Biog. Cyclo. of the Cath. Hierarchy of the U. S.* (Milwaukee, 1898); SHEA, *Hist. of the Cath. Ch. in the U. S.* (New York, 1904).

FRANCIS J. SCHAEFER.

Crétineau-Joly, JACQUES, journalist and historian; b. at Fontenay-le-Comte, Vendée, France, 23 Sept., 1803; d. at Vincennes near Paris, 1 Jan., 1875. At first he studied theology at the seminary of Saint-Sulpice, Paris, but, feeling that he had no vocation, he left after a stay of three years, during which he had received the tonsure. He was now in his twentieth year; he quickly obtained the professorship of philosophy at the college in his native town, but soon resigned the position on account of ill-health, and went in 1823 to Rome, as companion and private secretary to the French ambassador, the Duke of Laval-Montmorency.

In 1826 he published at Rome "Chants remains", which contained poor verses of an irreligious character. After his return home in 1828 he issued a number of volumes of poems and dramas, as "Les Trappistes" (Angoulême, 1828), "Inspirations poétiques" (Angoulême, 1833), and other poems, all of which proved, however, that he was no poet. He accomplished much more as a polemical journalist in the struggle against the liberalism, which, after the revolution of July, directed the State during the reign of the Duke of Orléans as Louis-Philippe. Being a Vendean he was an enthusiastic adherent of the hereditary royal house, and with fiery zeal defended its rights in several Legitimist newspapers of which he was editor. In 1837 he went to reside in Paris in order to devote himself to historical research concerning the history of Vendée, but in 1839 he added for a time to these labours the editing of "L'Europe monarchique", a newspaper devoted to the interests of the Bourbons. Before this he had published two writings on Vendée: "Episodes des guerres de la Vendée (1834) and "Histoire des généraux et chefs vendéens" (1838). He now combined the two, made use of a large number of sources until then unknown, and issued his most important work: "Histoire de la Vendée militaire" (Paris, 1840-41), 4 vols.; the fifth edition appeared in 1865. Although he did not lay sufficient weight on the religious side of these struggles, the work brought him reputation on account of the animated descriptions, the clear arrangement of the great mass of material, the correctness and painstaking care in the use of authorities. It must be acknowledged that he was by no means scrupulous how he obtained his materials, and in the prosecution of the narrative he was constantly influenced by practical considerations, for history had no value to him except as a storehouse of weapons against the foe of the moment.

His reputation outside of France was gained largely by his religious-political writings. The most important of these is his great history of the Society of Jesus: "Histoire religieuse, politique et littéraire de la Compagnie de Jésus" issued at Paris, 1844-1846, in 6 vols.; German translation, 1845, 3d ed., 1851. The work was written under the auspices of the Society and was drawn from authentic and unpublished sources; it is an excellent apology for the much abused Society, although at times it shows a lack of critical judgment and of moderation in treating the subject. A companion volume was his much discussed work: "Clément XIV et les Jésuites" (Paris, 1847, 3d ed., 1848). To this Theiner wrote a rejoinder on behalf of Pope Pius IX, and Ravignon one on behalf of the Society, whereupon Crétineau-Joly, after making careful research and in agreement with the pope, published "L'Église romaine en face de la Révolution" (1859, 2 vols.; 2d ed., 1863), a work which testifies to his unwavering fidelity to the Catholic Church. His other writings generally treat some burning question of the day and possess, therefore, less general interest.

MAYNARD, Jacques Crétineau-Joly, *sa vie politique, religieuse et littéraire* (Paris, 1875).

PATRICIUS SCHLAGER.

Crèveœur, HECTOR ST. JOHN DE, a French agriculturist, b. at Caen, France, 1731; d. at Sarcelles, near Paris, 1813. At the age of sixteen he went to England, whence in 1754 he emigrated to America, and for many years resided on a farm. In 1780 he was obliged to return to France to settle some of his affairs, and when he went to New York to take passage he was arrested by the English on suspicion of being a spy. After being in confinement for several months he was released and permitted to proceed on his journey unmolested. During his stay in his native land he succeeded in interesting the farmers of Normandy in the cultivation of the potato, and its culture was taken up by them. After a stay of about three years he once more came to America. It was largely due to his description of the wonderful productiveness of the land that several hundred of his countrymen emigrated to America. They established a colony in Pennsylvania, which for a time flourished. It was at last destroyed by the savages and its inhabitants massacred. The American Revolution having come to a close, Crèveœur was appointed consul at New York by the French Government, in which capacity he served for a long term. It was while occupying this post that he assisted in the founding of St. Peter's, the first Catholic church in the city, and served as one of its first trustees. He is the author of the following works: "Lettres d'un cultivateur américain" (1784); "Voyage dans la haute Pennsylvanie et dans l'état de New York" (1801). These works have been translated into English and German, and are admired for the beauty of their style. They were very popular throughout France.

DE COURCY AND SHEA, *Hist. of Cath. Ch. in U. S.* (New York, 1856); FINOTTI, *Bib. Cath. Am.* (New York, 1872); *Cyclop. Am. Biog.*, II, 8.

THOMAS GAFFNEY TAAFFE.

Crib (Heb. ארית; Gr., φάτρη; Lat. *præsepium*), the crib or manger in which the infant Saviour was laid after his birth is properly that place in the stable or *khan* where food for domestic animals is put, formed probably of the same material out of which the grotto itself is hewn. A very ancient tradition avers that an ass and an ox were in the stable when Christ was born. The tradition bears an allusion to Isaiah (1, 3): "The ox knoweth his owner and the ass his master's crib"; and is probably founded on the words of the Prophet Habacuc (iii, 2) which in the Septuagint version read: "In the midst of two animals thou shalt be known", instead of "In the midst of years" etc. as St. Jerome rightly translated the original Hebrew. Be this as it may, what pertains to the crib we may consider in the present article under three separate headings: (I) The Basilica of the Nativity and the Grotto of the Nativity at Bethlehem; (II) The relics of the crib preserved at St. Mary Major's in Rome; (III) Devotion to the crib.

I. Bethlehem is situated on two hills and is 2361 feet above the level of the sea. The western hill is the Bethlehem of Scripture; whilst on the eastern elevation is situated the Basilica of the Nativity erected over the grotto. We may imagine, then, that the Blessed Virgin and St. Joseph, there being "no room for them in the inn", left the town and came to the cave or stable on the eastern hill which served as a place of refuge for shepherds and their flocks against the inclemency of the weather. We are not concerned here with the controversies both as regards the historicity of St. Luke's narrative of the birth of Christ and as regards the actual site of the Grotto of the Nativity. Suffice it to say that there appears to be no sufficient reason for abandoning the very ancient and unbroken tradition which attests the authenticity of

the place of the crib now venerated. From the earliest times, moreover, ecclesiastical writers bear witness to this tradition. Thus St. Justin, who died a martyr in 165, says that "Having failed to find any lodging in the town, Joseph sought shelter in a neighbouring cavern of Bethlehem" (Dial. c. Tryph., 70). About half a century later, Origen writes: "If any one desires to satisfy himself without appealing either to the prophecy of Micheas, or to the history of the Christ as written by his disciples, that Jesus was born in Bethlehem, let him know that, in accordance with the Gospel narrative, at Bethlehem is shown the grotto where he first saw the light" (C. Cels. I, 51).

St. Helena first converted the grotto into a chapel and adorned it with costly marble and other precious ornaments. The first basilica erected over the crypt is due most probably to the devotion and munificence of her son Constantine, of whom Eusebius says that "The emperor himself, eclipsing even the magnificence of his mother's design, adorned the same place in a truly regal style" (Vita Const., III, 43). Both the grotto itself and the basilica have undergone numerous restorations and modifications made necessary in the course of centuries by the ravages of war and invasion; but, at the present time, little remains of the splendid mosaics and paintings described in detail by Quaresimus and other writers. The Crypt of the Nativity is reached from the upper church by a double flight of stairs leading from the north side of the choir of the basilica to the grotto below, and converging at the place where according to tradition the Infant Saviour was born. The exact spot is marked by a star cut out of stone, surrounding which are the words:

HIC DE VIRGINE MARIA JESUS CHRISTUS NATUS EST.

A short distance to the southwest is the manger itself where Christ was laid and where, as tradition asserts, he was adored by the Magi. In 1873 the grotto was plundered by the Greeks and everything of value, including two paintings by Murillo and Maello respectively, was carried off. No restitution of the stolen treasures has since been made.

II. The relics of the crib that are preserved at St. Mary Major's in Rome were probably brought there from the Holy Land during the pontificate of Pope Theodore (640-649), who was himself a native of Palestine, and who was well aware of the dangers of plunder and pillage to which they were exposed at the hands of the Mussulmans and other marauders. We find at all events that the basilica erected by Liberius on the Esquiline first received the name of Sancta Maria ad Præsepe under Pope Theodore. During the pontificate of Hadrian I the first altar was erected in the basilica, and in the course of succeeding centuries the place where the relics are preserved came to be visited by the devout faithful from all parts of the Christian world. At the present time the remains of the crib preserved at St. Mary Major's consist of five pieces of board which, as a result of the investigation conducted by Father Lais, sub-director of the Vatican Observatory, during the restorations of 1893 were found to be taken from a sycamore tree of which there are several varieties in the Holy Land. Two of the pieces, which like the other three, must have been originally much longer than they are at present, stood upright in the form of an X, upon which three other pieces rested, supported by a sixth piece, which, however, is missing, placed across the base of the upper angle of the X. We may conclude from this that these pieces of wood were properly speaking mere supports for the manger itself, which was probably made from the soft limestone of which the cave was formed. The rich reliquary, adorned with bas-reliefs and statuettes, which at present contains the relics of the crib was presented by the Duchess of Villa Hermosa in 1830. Pius IV (1559-65) restored the high altar upon which the relics are

solemnly exposed for the veneration of the faithful yearly on the eve of Christmas.

III. Devotion to the crib is no doubt of very ancient origin; but it remained for St. Francis of Assisi to popularize it and to give it the tangible form in which it is known at the present time. When St. Francis visited Rome in 1223, he made known to Pope Honorius III the plans he had conceived of making a scenic representation of the place of the Nativity. The pope listened gladly to the details of the project and gave it his sanction. Leaving Rome, St. Francis arrived at Greccio on Christmas Eve, when, through the aid of his friend Giovanni Velita, he constructed a crib and grouped around it figures of the Blessed Virgin and St. Joseph, the ass, the ox, and the shepherds who came to adore the new-born Saviour. He acted as deacon at the midnight Mass. The legend relates that having sung the words of the Gospel "and they laid him in a manger" he knelt down to meditate briefly on the sublime mystery of the Incarnation, and there appeared in his arms a child surrounded by a brilliant light. A painting by Giotto representing St. Francis celebrating Christmas at Greccio is preserved in the Basilica of St. Francis at Assisi. Devotion to the crib has since spread throughout the Christian world. Yearly, from the eve of Christmas until the day of the octave of Epiphany, a crib representing the birthplace of Christ is shown in all Catholic churches in order to remind the faithful of the mystery of the Incarnation and to recall according to tradition and the Gospel narrative the historical events connected with the birth of the Redeemer. The old Franciscan church of Ara Cœli possesses perhaps one of the largest and most beautiful cribs in the world. In this crib the famous *Santo Bambino di Ara Cœli* is exposed from the eve of Christmas to the feast of the Epiphany. The *Santo Bambino* is a figure carved out of wood representing the new-born Saviour. It is said to have come from the Holy Land, and in the course of time it has been bedecked with numerous jewels of great value. It is carried in procession yearly on the feast of the Epiphany by the Minister General of the Friars Minor who solemnly blesses the city with it from the top of the high flight of stairs that lead to the main entrance of Ara Cœli.

STEPHEN M. DONOVAN.

Crime, IMPEDIMENT OF, nullifies marriage according to ecclesiastical law, and arises from adultery and homicide separately or together. The Roman civil law prohibited the marriage of a man with a widow with whom he had committed adultery during the lifetime of her husband. There is serious doubt (Decretum, Gratiani, Pt. II, c. xxxi, q. 41) whether the Church ever accepted this law. Ecclesiastical law since the twelfth century certainly supposes other circumstances in such adultery in order that it may effect a nullification of the marriage.

According to the actual law (Decretal. Greg. IX, Lib. 4 X tit. 7: De eo qui duxit. Cap. i, Propositum—Cap. vi, Significasti) there are two cases in which an adulterer may not marry one with whom the crime was committed: (1) When the adulterer promises to the partner in guilt marriage after the death of the other's legitimate spouse; (2) When the two attempted marriage and this was consummated during the lifetime of a legitimate spouse. Hence neither adultery alone without promise of marriage nor the promise of marriage without adultery forms a diriment, or nullifying, impediment. The promise must be accepted, and if it precede the adultery, must not have been recalled

before the sin. Silence alone is not sufficient evidence of the acceptance of the promise. The adultery to which the promise is attached must be formal and known by both. If Titus should corrupt a woman who believed him to be free, he could marry her after his wife's death, even if he attempted marriage with her during his wife's life, provided she were unaware of his marriage.

Affected ignorance, certainly, and, most probably, crass ignorance does not excuse from the sin or its penalties. The adultery must be consummated, but it is not required that the promise united to the sin should be absolute, nor, most probably, that it should be sincere, because the impediment does not depend upon the value of the promise, which is essentially null, and because a fictitious promise, if apparently true, is naturally inductive to the sin; and this the Church, by establishing such an impediment, strives to prevent as far as possible. In regard to the impediment, it is indifferent whether the promise precede or follow the adultery, if both occur during the marriage. If the promise were made during the life of a first spouse, and the adultery were committed during the life of a second, the impediment would be doubtful. It is well to note that a promise of two persons to marry after the death of a legitimate spouse is recognized as criminal and null, even if confirmed by oath and made without any thought of adultery.

One murdering a spouse to marry another cannot contract marriage with this other (1) when there was co-operation in the murder for the purpose of this marriage, (2) when, without co-operation in the murder, adultery was committed by them, and the murder committed for the sole purpose of their contracting marriage. Thus, if the homicide is apart from adultery, both must concur in this murder. If the adultery occurs with the homicide, it suffices that one of the guilty should take part in the murder. In both cases, one at least must intend to marry the other. That the adultery and homicide, apart or joined, form a diriment impediment certain conditions are necessary: (1) the homicide must take place; an attempt to kill or the infliction of a wound not mortal would not entail it; (2) the homicide must be of the spouse of one of those who wish to be married; so, when the homicide is apart from the adultery, both must be accomplished by a physical or moral action which influences the murder, either by a command or previous approval. Approval of the event after its occurrence does not suffice, as also if the former command or approval had been recalled. The intention of marriage need not have been mentioned, where there was co-operation in the homicide. In the public ecclesiastical court credence is not given to the murderer of a spouse, who may deny the intention of marrying one with whom adulterous intercourse was held. This impediment holds if only one of the parties is a Christian. The Church claims the right to legislate for her children in their relations with infidels. The impediment is incurred even if not known. The Church may dispense from it, as the impediment is established by her authority. In the case of public homicide, however, whether due to only one or both of the parties, the pope never dispenses (Laurentius, no. 659).

Crime, from a canonical standpoint, at times carries with it its own legal punishment, at others it awaits the decision of a court. Thus we have seen its effect in causing an impediment to marriage. For certain crimes determined by ecclesiastical law, the "right of patronage" may be lost to the guilty party or, in some cases, to his heirs; ecclesiastical benefices may also be lost to the holder when guilty of a crime determined in the law. Homicide, fornication, or adultery, however, would not necessarily deprive a cleric of his benefice, dignity, or office, though he may be deposed by his superior in punishment of these or similar crimes. Unless the law is explicit in determining

such privation as resulting from the fact, a legal investigation is required for the punishment. (See IMPEDIMENTS; ADULTERY; HOMICIDE; MURDER.)

Crimont, JOSEPH R. See ALASKA.

Crisium, DIOCESE OF (GRÆCO-SLAVONIC RITE), in Croatia.—Crisium is the Latin name of a little town some miles north-east of Agram (Zagreb), on the Glagovnitza. Its Croatian name is Križevač (pronounced *Krizhevatz*); Slavic, Križ; Hungarian, Kőrös; German, Kreuz. It has 4,000 inhabitants; trade of cattle, wood, and wine.

About the year 1600 numerous Serbs emigrated from Servia and Bosnia to Croatia, where they found coreligionists, known to historians since the fourteenth century as Wallachians. The emigrants soon took the same name. Some of them were converted to Catholicism through the efforts of Dimitrovich, Latin Bishop of Agram, who granted their leader, the monk Simeon Vratania, the monastery of St. Michael on Mount Marzha, near Ivanitz. In 1611 Simeon was appointed bishop of all the Catholic Serbs; he remained a staunch friend of Rome, as did his successors and their flock, in spite of defections caused by the schismatic Servian propaganda and conflicts with the Bishops of Agram. They bore the title "Episcopus Plateacensis" from Platea in Bœotia, while the government called their see "Episcopatus Svidnicensis", a name that has not yet been explained satisfactorily. In 1671 Bishop Paul Zorčić accepted for himself and his successors the position of vicar-general of the Bishop of Agram for the Catholics of the Slavonic Rite. It was not until 16 June, 1777, that Pius VI re-established the Uniat diocese with the title "Episcopatus Crisiensis". Since then its bishops have resided at Križevač; as stated above, they first resided at Mount Marzha, but after 1690 had no settled abode, on account of the persecutions caused by the schismatic Serbs.

The list of the bishops is given by Nilles in his "Symbolæ", p. lxxxiii (index), 765-69. The Græco-Slavonic Uniat Diocese of Križevač, suffragan of the Latin Archbishop of Agram, includes to-day 20,700 Catholics, in 23 Servian and Ruthenian parishes situated in Croatia, Slavonia, Dalmatia, and the county of Bács-Bodrog in Hungary. The languages spoken are Croatian, Ruthenian, and Hungarian; the liturgical language is of course Slavonic. There are 28 secular priests, 30 churches, 22 with a resident priest, and 2 chapels. The schismatics number 225,000; there are also in this territory 17,000 Calvinists, 47 Lutherans, and 7,000 Jews.

S. VAILHÉ.

Crispina, SAINT, a martyr of Africa who suffered during the Diocletian persecution; b. at Thagara in the Province of Africa; d. by beheading at Thebeste in Numidia, 5 December, 304. Crispina belonged to a distinguished family and was a wealthy matron with children. At the time of the persecution she was brought before the proconsul Anulinus; on being ordered to sacrifice to the gods she declared she honoured only one God. Her head was shaved at the command of the judge, and she was exposed to public mockery, but she remained steadfast in the Faith and

was not moved even by the tears of her children. When condemned to death, she thanked God and offered her head with joy for execution. The Acts of her martyrdom, written not long after the event, form a valuable historical document of the period of the persecution. The day of St. Crispina's death was observed in the time of St. Augustine; in his sermons Augustine repeatedly mentions her name, as well known in Africa and worthy to be held in the same veneration as the names of St. Agnes and St. Thecla. Ruinart in his collection of the Acts of the martyrs gives the account of her examination.

BUTLER, *Lives of the Saints*, 5 Dec.; PRO FRANCHI DE' CAVALLERI, in *Studi e Testi* (Rome, 1902), IX, gives a new edition of the Acts; BOISSIER, *Mélanges* (Paris, 1903), 383 sq.; ALLARD, *Histoire des Persécutions*, IV, 443 sq.

GABRIEL MEIER.

Crispin and Crispinian, SAINTS, martyrs of the Early Church who were beheaded during the reign of Diocletian; the date of their execution is given as 25 October, 285 or 286. It is stated that they were brothers, but the fact has not been positively proved. The legend relates that they were Romans of distinguished descent who went as missionaries of the Christian Faith to Gaul and chose Soissons as their field of labour. In imitation of St. Paul they worked with their hands, making shoes, and earned enough by their trade to support themselves and also to aid the poor. During the Diocletian persecution they were brought before Maximianus Herculeus whom Diocletian had appointed co-emperor. At first Maximianus sought to turn them from their faith by alternate promises and threats. But they replied: "Thy threats do not terrify us, for Christ is our life, and death is our gain. Thy rank and possessions are nought to us, for we have long before this sacrificed the like for the sake of Christ and rejoice in what we have done. If thou shouldst acknowledge and love Christ thou wouldst give not only all the treasures of this life, but even the glory of thy crown itself in order through the exercise of compassion to win eternal life." When Maximianus saw that his efforts were of no avail, he gave Crispin and Crispinian into the hands of the governor Rictiovarus (Rictius Varus), a most cruel persecutor of the Christians. Under the order of Rictiovarus they were stretched on the rack, thongs were cut from their flesh, and awls were driven under their finger-nails. A millstone was then fastened about the neck of each, and they were thrown into the Aisne, but they were able to swim to the opposite bank of the river. In the same manner they suffered no harm from a great fire in which Rictiovarus, in despair, sought death himself. Afterwards the two saints were beheaded at the command of Maximianus.

This is the story of the legend which the Bollandists have incorporated in their great collection; the same account is found in various breviaries. The narrative says that a large church was built over the graves of the two saints, consequently the legend could not have arisen until a later age; it contains, moreover, many details that have little probability or historical worth and seems to have been compiled from various fabulous sources. In the sixth century a stately basilica was erected at Soissons over the graves of these saints, and St. Eligius, a famous goldsmith, made a costly shrine for the head of St. Crispinian. Some of the relics of Crispin and Crispinian were carried to Rome and placed in the church of San Lorenzo in Panisperna. Other relics of the saints were given by Charlemagne to the cathedral, dedicated to Crispin and Crispinian, which he founded at Osnabrück. Crispin and Crispinian are the patron saints of shoemakers, saddlers, and tanners. Their feast falls on 25 October.

GABRIEL MEIER.

Crispin of Viterbo, BLESSED, Friar Minor Capuchin; b. at Viterbo in 1668; d. at Rome, 19 May, 1750. When he was five years old, his pious mother took him to a sanctuary of the Blessed Virgin, a short distance from Viterbo, where she consecrated him to the Mother of God and placed him under her special protection. The child grew beyond his years in virtue and the science of the saints; so that the townsfolk of Viterbo were wont to call him *il Santarello*, the little saint. As Crispin one day saw the Capuchin novices walking in procession, God inspired him with the desire to embrace the religious life. He was shortly afterwards received into the Franciscan Order as a simple lay brother. Having been employed for some time as cook in the convent at Viterbo, he was sent to Tolfa, a town not far distant from Cività Vecchia, to fulfil the same office. Thence he was sent to Rome and finally to Albano. Here Crispin was visited by men of the world, by bishops and cardinals, and even by the pope himself, who always took delight in conversing with the humble lay brother. It was Crispin's constant endeavour to imitate the virtues of his patron, St. Felix of Cantalice, whom he had chosen as his model of perfection at the beginning of his religious life. Like St. Felix, he used to call himself the ass or beast of burden of the Capuchins, and, having on one occasion been asked by a stranger why he went bare-headed, Crispin answered jocosely, that "an ass does not wear a hat". Enfeebled by old age and by his numerous austerities, he was sent to Rome by his superiors, there to end his holy life. His body, which even at the present time is still in a remarkable state of preservation, rests under one of the side altars in the church of the Capuchin Fathers in Rome. Blessed Crispin was solemnly beatified by Pope Pius VII in 1806. His feast is celebrated only by the Capuchins.

LEO, *Lives of the Saints and Blessed of the Three Orders of St. Francis* (Taunton, 1886), II, 280-85.

STEPHEN M. DONOVAN.

Criterion of Truth. See TRUTH.

Criticism, BIBLICAL, in its fullest comprehension is the examination of the literary origins and historical values of the books composing the Bible, with the state in which these exist at the present day. Since the sacred Scriptures have come down in a great variety of copies and ancient versions, showing more or less divergence of text, it is the province of that department of Biblical criticism which is called *textual*, or *lower*, to study these documents with a view to arriving at the purest possible text of the sacred books. The name *higher criticism* was first employed by the German Biblical scholar Eichhorn, in the second edition of his "Einleitung", appearing in 1787. It is not, as supposed by some, an arrogant denomination, assuming superior wisdom, but it has come into use because this sort of criticism deals with the larger aspects of Bible study; viz., with the authorship, date, composition, and authority of whole books or large sections, as distinguished from the discussion of textual minutiae, which is the sphere of the lower, or textual, criticism. The subject will, therefore, be treated in this article under the two heads: I. HIGHER CRITICISM; II. TEXTUAL CRITICISM.

I. HIGHER CRITICISM.—Taken in this limited sense, Biblical criticism, in the light of modern philological, historical, and archaeological science, and by methods which are recent in their development, subjects to severe tests the previously accepted and traditional views on the human authorship, the time and manner of composition, of the sacred writings, and discriminates as to their objective historical value. In reaching its results it sets more store on evidences internal to the books than on external traditions or attestations, and its undeniable effect is to depreciate tradition in a great measure, so that there exists a sharply-

drawn line between the exegetes of the critical and those of the traditional school. In the process by which the critics arrive at their conclusions there is a divergence of attitude towards the supernatural element in Holy Writ. Those of the rationalistic wing ignore, and at least tacitly deny, inspiration in the theological meaning of the term, and without any doctrinal preoccupations, except some hostile to the supernatural, proceed to apply critical tests to the Scriptures, in the same manner as if they were merely human productions. Moderate critics of Protestant persuasion—a school that predominates in Great Britain—hold to inspiration and revelation, though with a freedom incompatible with Catholic orthodoxy. Catholic Biblical critics, while taking as postulates the plenary inspiration and the inerrancy of the sacred Writings, admit in a large measure the literary and historical conclusions reached by non-Catholic workers in this field, and maintain that these are not excluded by Catholic faith. With the exception of Abbé Loisy and his followers, no Catholic scholar has claimed autonomy or complete independence for criticism, all proceeding on the principle that it cannot validly, and may not lawfully, contradict the established dogmatic teaching of the Church. Its Christian exponents insist that a reverent criticism is quite within its rights in sifting the elements which enter into human aspects of the Bible, as a means of a better understanding of the written word, since its component parts were given their form by men in certain historical environments and under some of the limitations of their age and place, and since, moreover, inspiration does not dispense with ordinary human industry and methods in literary composition. (See *INSPIRATION*.)

Higher Criticism may be called a science, though its processes and results do not admit of nicety of control and demonstration, as its principles are of the moral-psychological order. Hence its conclusions, even in the most favourable circumstances, attain to no greater force than what arises from a convergence of probabilities, begetting a moral conviction. While some attempts have been made to elaborate a system of canons for the higher criticism, it has not, and probably never will have, a strictly defined and generally accepted code of principles and rules. Some broad principles, however, are universally admitted by critical scholars. A fundamental one is that a literary work always betrays the imprint of the age and environment in which it was produced; another is that a plurality of authors is proved by well-marked differences of diction and style, at least when these coincide with distinctions in view-point or discrepancies in a double treatment of the same subject. A third received canon holds to a radical dissimilarity between ancient Semitic and modern Occidental, or Aryan, methods of composition.

HISTORY.—Before the eighteenth century.—The early ecclesiastical writers were unconscious of nearly all the problems to which criticism has given rise. Their attention was concentrated on the Divine content and authority of sacred Scripture, and, looking almost exclusively at the Divine side, they deemed as of trifling account questions of authorship, date, composition, accepting unreservedly for these points such traditions as the Jewish Church had handed down, all the more readily that Christ Himself seemed to have given various of these traditions His supreme confirmation. As for the N. T., tradition was the determining factor here too. As exceptions we may note that Origen concluded partly from internal evidence that St. Paul could scarcely have written the Epistle to the Hebrews, and his disciple Dionysius adduced linguistic grounds for rejecting the Apocalypse as a work of St. John. The Fathers saw in every sentence of the Scripture a pregnant oracle of God. Apparent contradictions and other difficulties

were solved without taking possible human imperfection into view. Only in a few isolated passages does St. Jerome seem to hint at such in connexion with history. Except in regard to the preservation of the sacred text there was nothing to elicit a critical view of the Bible in the age of the Fathers, and this applies also to the Scholastic period. Even the Humanist movement preceding the Reformation gave no impulse to the critical spirit beyond fostering the study of the Scriptures in their original languages. It was not a Humanist, but the erratic Reformer Carlstadt, who first broke with tradition on the authorship of an inspired book by declaring that Moses could not have written the Pentateuch, because the account of his death is in the same style as the rest of his book. But though Carlstadt adduced a critical argument he cannot be styled a critic. Hobbes (1651), Pereyre (1655), Spinoza (1670) attacked the Mosaic authorship, but merely incidentally, in works in which anything like a systematic criticism found no place. A French priest, Richard Simon (1638–1712), was the first who subjected the general questions concerning the Bible to a treatment which was at once comprehensive in scope and scientific in method. Simon is the forerunner of modern Biblical criticism. The broadening opportunities for the study of Oriental languages, a keen and methodical mind, probably, too, a reaction against the rigid view of the Bible which reigned amongst both Catholics and Protestants of the age were the factors which produced Simon's first great work, the "*Histoire critique du Vieux Testament*", which was published in 1678. In this he called attention to the double narratives and variation of style in the Pentateuch, and thence deduced that, aside from the legal portion, which Moses himself had written down, much of the remaining matter was the work of several inspired annalists, a class to whom are due the later historical books, and who in subsequent generations added touches to the inspired histories by their predecessors. This theory did not survive its author, but the use of internal evidence by which Simon arrived at it entitles him to be called the father of Biblical criticism. His novel view of the Mosaic books excited only condemnation, and his critical work, being an isolated effort which did not win the support of a school, found appreciation only in recent times. A continuously developing higher criticism was not to begin till the middle of the eighteenth century. But a capital distinction is to be made between criticism as applied to the Old and as applied to the New Testament. The two have followed different courses. O.-T. criticism has been developed along the lines of linguistic and historic research. Philosophico-religious prejudices have been kept in the background. But in respect to the N. T., criticism began as the outgrowth of philosophic speculations of a distinctly anti-Christian character and, as exercised by rationalists and liberal Protestants, has not yet freed itself from the sway of such *a priori* principles, though it has tended to grow more positive—that is, more genuinely critical—in its methods.

Since the eighteenth century. (1) Old-Testament Criticism outside the Church.—In 1753 Jean Astruc, a French Catholic physician of considerable note, published a little book, "*Conjectures sur les mémoires originaux dont il paraît que Moïse s'est servi pour composer le livre de la Genèse*", in which he conjectured, from the alternating use of two names of God in the Hebrew Genesis, that Moses had incorporated therein two pre-existing documents, one of which employed *Elohim* and the other *Jehovah*. The idea attracted little attention till it was taken up by a German scholar, who, however, claims to have made the discovery independently. This was Johann Gottfried Eichhorn, the author of an Introduction to the O. T., issued 1780–83, and distinguished by vigour

and scientific acumen. Eichhorn was indebted not a little to his friend Herder, the noted German *littérateur*, and the two conjointly originated the critical habit of looking upon the O. T. as a collection of Oriental literature whose several parts are to be read and interpreted as the productions of the Semitic genius. Eichhorn greatly developed Astruc's hypothesis by observing that the Elohim and Jehovah sections of Genesis bear other characteristics, and by extending the analysis thus derived to the whole Pentateuch. But the German savant was not so orthodox an adherent of the Mosaic authorship as was Astruc, since he left to the Hebrew legislator a very uncertain part of the work. When Eichhorn composed his "Introduction" he was somewhat influenced by free-thinking views which later became very pronounced. His criticism, therefore, had as its antecedents not only Astruc's fruitful conjecture and Herder's poetic insight into Oriental literature, but also eighteenth-century German rationalism. This was in part native to the soil, but it drew much nurture from the ideas of the English Deists and Septics, who flourished towards the end of the seventeenth century and in the first part of the eighteenth. Such authors as Blount (1654-93) and Collins (1676-1729) had impugned miracles and prophecy and in general the authority of the O.-T. writings. The standpoint of the German Orientalist Reimarus was that of the English Deists; the whole drift of his "Wolfenbüttel Fragments", first appearing 1774-78, is one of antagonism to the supernatural. Lessing (1729-81), his literary executor, without departing so offensively from the path of orthodoxy, defended the fullest freedom of discussion in theological matters. Contemporary with Lessing was J. S. Semler, who rejected inspiration, attributed a mythical character to episodes in O.-T. historical books, and, on lines parallel to Lessing's philosophy of religion, distinguished in Scripture elements of permanent and others of transitory and negligible value.

Eichhorn is the first typical representative of modern Biblical criticism, the especial home of which has been Germany. He gave the first impulse to the literary analysis of the Scriptures, applying it not only to the Pentateuch, but also to Isaia's and other portions of the O. T. Outside of Germany the views of Eichhorn and his school found little currency. Yet it was a Catholic priest of Scottish origin, Alexander Geddes (1737-1802), who broached a theory of the origin of the Five Books (to which he attached Josue) exceeding in boldness either Simon's or Eichhorn's. This was the well-known "Fragment" hypothesis, which reduced the Pentateuch to a collection of fragmentary sections partly of Mosaic origin, but put together in the reign of Solomon. Geddes' opinion was introduced into Germany in 1805 by Vater. For the fuller account of this and later stages of the criticism of the Pentateuch the reader is referred to the article under that heading. With some essays of a young scholar, De Wette, which were published 1805-07, properly began the historical criticism of the Bible. De Wette joined to the evidences supplied by vocabulary and style (i. e. those of literary criticism) arguments drawn from history, as contained in the sacred narratives themselves, and the discoveries of antiquarian research. He refused to find anything but legend and poetry in the Pentateuch, though he granted it a unity of plan, and a development in accordance with his conception of Israel's history, thus laying the foundation for the leading hypothesis of the present day. De Wette's ideas also furnished the basis for the Supplement-theory, systematized later by Bleek and others. He was the first to attack the historical character of the books of Paralipomenon, or Chronicles. Bleek (1793-1859), Ewald (1803-75), and the Catholic Movers (1806-56), while following critical methods, opposed the purely negative criticism of De Wette and his school, and sought to save

the authenticity of some Mosaic books and Davidic psalms by sacrificing that of others. Bleek revived, and brought into prominence, the conclusion of Geddes, that the book of Josue is in close literary connexion with the first five books of the Bible, and thenceforth the idea of a Hexateuch, or sixfold work, has been maintained by advanced exegetes. Hupfeld, in 1853, found four instead of three documents in the Pentateuch, viz., the first Elohist, comprising the priestly law, a second Elohist (hitherto unsuspected except by a forgotten investigator, Ilgen), the Jehovist, and the Deuteronomist. He allowed to none of these a Mosaic origin. With Hupfeld's view the idea of one large source, or *Grundschrift*, supplemented by smaller ones, began to give place to the "Document" hypothesis. Meanwhile these conclusions, so subversive of ancient traditions regarding the Five Books, were stoutly contested by a number of German scholars, prominent among whom stood Ranke, Hävernick, Hengstenberg, and Keil, among Protestants; and Jahn, Hug, Herbst, and Welte, representing Catholic learning. These, while refusing to allow the testimony of Jewish tradition to be ruled out of court as invalid against internal evidence, were compelled to employ the methods of their adversaries in defending the time-honoured views. The questions were agitated only in countries where Protestantism predominated, and, among these, in England the conservative views were strongly entrenched.

The critical dissection of books was and is accomplished on the ground of diversity of vocabulary and style, the phenomena of double narratives of the same event varying from each other, it is claimed, to the extent of discrepancy, and differences of religious conceptions. The critics appeal for confirmation of this literary analysis to the historical books. For example, Moses could not have enacted an elaborate ritual legislation for a people leading a nomad life in the desert, especially since we find (say the critics) no trace of its observance in the earliest periods of Israel's settled existence. These and like tests are applied to nearly every book of the O. T., and result in conclusions which, if allowed, profoundly modify the traditional beliefs regarding the authorship and integrity of these Scriptures, and are incompatible with any strict notion of their inerrancy.

The Hegelian principle of evolution has undoubtedly influenced German criticism, and indirectly Biblical criticism in general. Applied to religion, it has powerfully helped to beget a tendency to regard the religion of Israel as evolved by processes not transcending nature, from a polytheistic worship of the elements to a spiritual and ethical monotheism. This theory was first elaborated by Abram Kuenen, a Dutch theologian, in his "Religion of Israel" (1869-70). Without being essential to it, it harmonizes with the current system of Pentateuchal criticism, sometimes called "the Development Hypothesis", but better known as "the Grafian". This hypothesis is accepted to-day by the great body of non-Catholic Biblical scholarship. It makes the Pentateuch a growth formed by the piecing and interlacing together of documents representing distinct epochs. Of these the oldest is the Jehovistic, or J, dating from the ninth century B. C.; E, the Elohist work, was composed a little later. These elements are prophetic in spirit and narrative in matter. D, the Deuteronomic Code, was the organ and instrument of the prophetic reform under Josias; it appeared 621 B. C. P, the great document containing the Priestly Code, was drawn up after the Babylonian Exile, and is the outcome of the sacerdotal and ritual formalism distinguishing the restored Jewish community; it therefore dates from the fifth century B. C. This ingenious and coherent hypothesis was formulated first by E. Reuss of the University of Strasburg, but presented to the public many years later (1866) by his disciple H. K. Graf. It was skilfully elaborated

by Julius Wellhausen, professor (in 1908) at the University of Göttingen, in works published in 1883 and 1889 ("Prolegomena to the History of Israel" and "Composition of the Hexateuch and the Historical Books of the O. T."), and to-day it dominates the critical treatment of the Hexateuch. The shifting of the Priestly Code (formerly called the First Elohistic) from the earliest to the latest in time, a characteristic of the Grafian system, has had a marked influence on the drift of O. T. criticism in general, notably with regard to the books of Paralipomenon. It has reversed the chronological order of the prophetic and priestly elements running through the greater part of the O. T.

Only within the last two decades has higher criticism made notable progress in English-speaking lands, and this has been rendered possible by the moderation of its leading spokesman there. Foremost among these semi-orthodox critics of the O. T. is Professor Driver of Oxford, whose "Introduction to the Literature of the Old Testament" first appeared in 1891. W. Robertson Smith in "The Old Testament and the Jewish Church" had previously (1880), though less systematically, presented the Grafian hypothesis to the English-speaking world. The results of British conservative criticism are embodied in Hastings' "Dictionary of the Bible", while the radical wing in England is represented by the "Encyclopædia Biblica" edited by Professors Cheyne and Black. In America most of the conclusions of German criticism have found advocates in Professors C. H. Briggs ("The Bible, the Church and Reason", 1892; "Higher Criticism of the Hexateuch", 1893), H. P. Smith, and C. H. Toy.

The higher criticism claims to have discerned great inequalities in the value of those portions of the O. T. which are historical in form. In the same book we may find, it asserts, myth, legend, and material of real historical worth, the last of these elements being abundant in Judges and the Books of Kings, though even here a careful sifting must be used. In parts of the Hexateuch, especially in the priestly document and the cognate Paralipomenon writing, history is freely idealized, and existing institutions are projected artificially into the remote past. Esther, Tobias, Judith, Jonas, and portions of II Machabees belong to the class of Jewish Hagadah, or moralizing fictions. The Psalms have few if any compositions by David; they are the religious poetry of Israel. Isaiah is a composite, containing messages of prophets widely separated in time and circumstances. The prophets spoke and wrote primarily in view of definite contemporary situations. Job is an epic, and Canticles a pastoral drama. The book of Daniel is an apocalypse of the Machabean period, describing history of the past and present under the semblance of visions of the future. To conclude this outline of the critical results, the human element in Scripture is given prominence and represented as clothed with the imperfections, limitations, and errors of the times of its origin; many books are exhibited as the products of successive literary accretions, excluding any unity of authorship; in fact, for most of the histories, the unknown writers retire into the shadow to give place to the unifying labours of the equally unknown "redactor" or "redactors".

(2) The Reaction against Criticism.—This has been aided by the antithesis between the conclusions of certain Assyriologists of note (viz., A. H. Sayce and F. Hommel) and the prevailing school of criticism. Recent discoveries in Egypt, Mesopotamia, and Persia prove that a developed civilization existed in Western Asia in times contemporary with Abraham, and earlier. (See BABYLONIA; ASSYRIA.) The inference drawn by the above scientists (Sayce, "Higher Criticism and the Verdict of the Monuments", 1895; Hommel, "Ancient Hebrew Tradition", tr., 1897) is

that the elaborate ritual and legal code of the Israelites could well have been framed by Moses. They charge the critics with not taking Oriental discoveries sufficiently into account, and argue that, since the monuments confirm the substantial truth of some of the historical books, a presumption is raised in favour of the veracity of Hebrew literature in general. The historical character of the narratives is upheld by other considerations of a more minute and technical nature. In America the old views of the Bible were defended with zeal and learning by Dr. William H. Green, of Princeton, author of a series of Biblical works extending from 1863 to 1899; also by E. C. Bissel and W. L. Baxter. In Great Britain the conservatives have been represented in recent times by Alfred Cave, J. J. Lias, and others. In Germany, J. K. F. Keil, who died in 1888, was the last exegete of international name who stood without compromise for tradition. But a contemporary group of Protestant German theologians and Orientalists have championed the claims of the O. T. as a Divinely inspired literature, whose narratives, on the whole, are worthy of belief. Prominent among these are Dr. F. E. König of Bonn ("Neue Prinzipien der alttestamentlichen Kritik", 1902, "Bibel-Babel Frage und die wissenschaftliche Methode", 1904); Julius Böhm, a pastor; Dr. Samuel Oettli, professor at Greifswald. The resistance to the so-called scientific criticism in Germany has been greatly stimulated by the radical positions recently taken by some Assyriologists, beginning with a lecture delivered in 1902 before the German court by Friedrich Delitzsch. The still-continuing discussion it provoked is known as the Bibel-Babel controversy. Delitzsch, Jensen, and their followers contend that the Bible stories of the Creation, the Fall, the Deluge, etc. were borrowed by the Hebrews from Babylonia, where they existed in their pure and original form. This school relegates all the events and personages of Genesis to the region of myths and attributes a Chaldean origin to the Jewish conception of Paradise and Sheol, angels and devils. Of still more recent beginning and extravagant character is the theory of astral myths defended by Stucken, Winckler, and Jeremias, according to which the narrations not only of the Pentateuch, but of large portions of the later books as well, represent in human guise merely the nature and movements of the heavenly bodies.

In replying to the critical systems, conservatives, both Catholic and Protestant, re-enforce the argument from Jewish and Christian traditions by methods borrowed from their opponents; linguistic distinctions are countered by linguistic arguments, and the traditionists also employ the process of comparing the data of one book with another, in an endeavour to bring all into harmony. Not the methods so much as the conclusions of criticism are impugned. The difference is largely one of interpretation. However, the conservatives complain that the critics arbitrarily rule out as interpolations or late comments passages which are unfavourable to their hypotheses. The advocates of tradition also charge the opposite school with being swayed by purely subjective fancies, and in the case of the more advanced criticism, by philosophico-religious prejudices. Moreover, they assert that such a piecemeal formation of a book by successive strata, as is alleged for many parts of the O. T. is without analogy in the history of literature. The Catholic criticism of the O. T. will be described in a separate section of this article.

(3) New-Testament Criticism Outside the Church.—Before the eighteenth century N.-T. criticism did not go beyond that of the Latin and Greek texts, if we except the ancient remarks on the authorship of the Epistle to the Hebrews and the Apocalypse already noticed. When the German Rationalism of the eighteenth century, in imitation of the English Deism

of the seventeenth, had discarded the supernatural, the N. T. became the first object of a systematic attack. Reimarus (1694-1768) assailed the motives of its writers and cast aspersions on the honesty of Jesus Himself. J. S. Semler (1725-91) used the greatest latitude in discussing the origin and credibility of the sacred Scriptures, arguing that these subjects should be dealt with without regard to any Divine content. Semler was the first to question the authenticity of N.-T. books from a critical standpoint. His exegetical principles, if admitted, would largely destroy the authority of the Gospels. Paulus (1761-1851), professor at Jena and Heidelberg, granted the genuineness of the Gospels, and their authors' honesty of purpose, but taught that in narrating the miraculous and supernatural the Apostles and Evangelists recorded their delusions, and that all the alleged superhuman occurrences are to be explained by merely natural causes. Eichhorn, the pioneer of modern German criticism, carried his inquiries into the field of the N. T. and, beginning with 1794, proposed a theory to explain the similarities and differences of the Synoptic Gospels, i. e. Matthew, Mark, and Luke. Some phases of what is now known as "the Synoptic Problem" were examined by Griesbach as early as 1776, and again, in 1781, by a posthumous essay of Lessing treating of the Evangelists "considered simply as human historians". The problem was first clearly formulated by Lachmann in 1835. The dangerous tendencies of the rationalistic writers were ably combated by J. L. Hug, a Catholic exegete, whose "Introduction to the N. T." was completed in 1808. Schleiermacher (1768-1834) was the earliest of those German theologians who acknowledge the religious force of the sacred writings, but imperil their authority by a free and independent treatment of their origin and historical contents; his view of the N. T. was influenced by Semler's criticisms. Somewhat akin to Schleiermacher's attitude is that of De Wette, but his conclusions are often negative and doubtful. The Evangelistic school of Protestant German commentators, represented earliest by Griesbach, Olshausen, Neander, and Bleek, were in the main adherents to the genuineness and truthfulness of the Gospels, though influenced by the mediating or mystico-rationalistic tendencies of Schleiermacher. As N.-T. scholars they belong between 1823 and 1859.

The "Life of Jesus" by David Friedrich Strauss, which appeared in 1835, marked a new departure of view with regard to the N. T., and made a great sensation. Strauss was an Hegelian and one for whom the "idea" obscured the objective facts, while it rested upon them. He held that the orthodox conception of Christ was the creature of the ardent Messianic hopes of the Jewish-Christians of the primitive Church, who imagined that Jesus fulfilled the O.-T. prophecies, and who, soon after His death, invested His personality and the whole tenor of His life with mythical qualities, in which there was nothing but a bare kernel of objective truth, viz., the existence of a rabbi named Jesus, who was a man of extraordinary spiritual power and penetration, and who had gathered about him a band of disciples. Echoes of these ideas are to be found in Renan's "Vie de Jésus". Strauss's relatively refined philosophy of religion was more in the spirit of the age than the moribund, crude naturalism of Paulus, though it only substituted one form of rationalism for another. The "Life of Jesus" soon called forth refutations, but in the advanced circles of German thought the finishing stroke was not given to it until Ferdinand Christian Baur, the founder of the Tübingen, or "Tendency", school of exegesis and criticism, published the mature fruit of his speculation under the title "Paulus der Apostel Jesu Christi", in 1845. Baur, like Strauss, was a disciple of Hegel, but had taken from that philosopher a different key to the significance of the N. T., viz., the principle of the evolution of all truth through

the conciliation of contradictions. He taught that the N. T. is the outcome of an antagonism between Jewish, or Petrine, and Pauline tendencies in the primitive Church. The Pauline concept of Christianity—one of a philosophic and universal order—is represented by the Epistles to the Romans, Corinthians, and Galatians, which alone Baur admitted as the certainly authentic works of St. Paul. The Apocalypse was composed in direct opposition to the spirit of the Pauline writings. The above works were written before A. D. 70. Between 70 and 140 appeared St. Matthew's Gospel, Petrine in character; St. Luke's Gospel, Pauline, though retouched in a conciliatory spirit; Acts, adapted similarly to St. Luke; and latest the Gospel of St. Mark, also of an irenic type. This second period is one of transition between antagonism and complete reconciliation. This latter is the note of the third period, reaching to about A. D. 170, which produced the Gospel and Epistles bearing the name of St. John, and the pastoral Epistles, which therefore cannot have come from St. Paul. The scheme excluded the authenticity of all the Gospels. Baur's theory has not survived except in the very mitigated form seen in the works of Hilgenfeld and Pfleiderer. Nevertheless, aside from his philosophic assumptions, the principles and methods of Baur have left a deep impress on later N.-T. criticism. He first practised on a consistent and developed plan the habit of scrutinizing the sacred documents themselves for evidences of the times which gave them birth, and led the way in the present critical trend towards a division of the N. T. into Judaistic, Pauline, and Johannine elements.

The Tübingen ideas evoked a reaction against their destructive and purely rationalistic conclusions. This movement has been twofold: on one side it is orthodox Protestant, though critical in its method; this section is the natural continuation of the earlier Evangelistic exegesis, and counts as its ablest representatives Zahn, B. Weiss, and Godet; the other branch is partly the outgrowth of the Schleiermacher school and acknowledges as its founder Albert Ritschl, whose defection from the Tübingen group (1857) proved a serious blow to Baur's system. The Ritschlian theology insists on the religious value of the N. T., especially in the impression its picture of Christ makes on the individual soul, and on the other hand allows a free rein to the boldest and most searching criticism of the origin and historical worth of the N.-T. books, in a blind mystic confidence that nothing that criticism can do will impair their religious value. The indifference of the Ritschlians to the consequences of criticism is also shown towards the miraculous element in our Lord's life and in the N. T. in general. This tendency is very manifest among other contemporary German critics, who, while influenced by Ritschlianism, belong rather to the "scientific" and evolutionary school. Holtzmann, Bousset, Jülicher, Harnack, Schmiedel by critical procedure eliminate from the Gospels, or at least call into doubt, all the miraculous elements, and reduce the Divinity of Christ to a moral, pre-eminent sonship to God, and yet, by a strange inconsequence, exalt the saving and enlightening power of His personality. This latest school, however, admit dates which approach much nearer to the traditional ones than to those of Baur. Harnack, besides affirming the genuineness of all the Pauline Epistles except the pastoral ones, and of Mark and Luke, places the Synoptic Gospels between A. D. 65 and 93, and fixes the year 110 as the latest limit for the Gospel and Epistles of St. John and the Apocalypse.

In Great Britain, N.-T. criticism with few exceptions has been moderate and, on the whole, conservative. Excellent service has been done in the defence of contested books by the British divines J. B. Lightfoot, B. F. Westcott, W. H. Sanday, and others.

Holland has produced a small group of radical critics, Van Manen, Pierson, Loman, who, with Steck in Germany, have revived Bruno Bauer's total denial of authenticity to St. Paul's Letters. In France and French Switzerland conservatism has been the keynote of the Protestant scholars Pressensé and Godet; a rationalizing evolutionism that of Sabatier. Abbé Loisy's work will be spoken of below.

A brief summary of the situation of particular books in contemporary non-Catholic criticism follows:

The Synoptic Gospels.—The prevalent critical solution of the problem they present is the "two-document" hypothesis, which explains what is common to all of them by supposing that Matthew and Luke drew from the very early Gospel bearing St. Mark's name or an anterior Apostolic document on which Mark is based, and refers the material which is common to Matthew and Luke only to a primitive Aramaic source compiled by one or more immediate disciples of Christ, possibly St. Matthew. St. Luke's Gospel is recognized as authentic; our canonical Mark as at least virtually so.

Acts.—The integrity and entire genuineness of the Acts of the Apostles have been assailed by a few recent critics: Hilgenfeld, Spitta, Clemen. They would analyze the work into a number of sections, by different authors, including St. Luke, rearranged by successive editors, and containing materials varying much in value. No conscious falsification was used, but legendary narratives crept in. These critics are by no means unanimous as to particulars.

Epistles of St. Paul.—Romans, Corinthians, and Galatians are acknowledged by all serious scholars to be authentic writings of the Apostle of the Gentiles. About Ephesians, Philippians, Colossians, Thessalonians, and Philemon there is diversity of opinion. First Thessalonians is generally admitted to be genuine, but the Pauline authorship of the second letter of that name is strongly contested. The weight of non-Catholic critical opinion is against the authenticity of the pastoral Epistles, viz., the two to Timothy and the one to Titus. The Epistle to the Hebrews is assigned to an Alexandrian Jewish convert, contemporary, or almost so, with St. Paul, and a disciple of his teaching. This is also the view of Catholic exegetes of the new school. First Peter is generally held to be the work of that Apostle, but the composition of Second Peter is placed in the second century, even some Catholics inclining to this date. The question whether the Epistles of St. James and St. Jude are from the pens of the Apostles of those names is variously answered outside the Church.

The Johannine Writings.—The authenticity and authority of St. John's Gospel form the great battlefield of present N.-T. criticism. They had been attacked as early as 1792 by a certain Evanston. The majority of contemporary critics incline to Harnack's view, which is that the Fourth Gospel was composed by John the Presbyter or the "elder" referred to in a fragment by Papias, and asserted by the Harnackians to be distinct from the Apostle and a disciple of the latter. He wrote in the beginning of the second century. Loisy attributes it to an unknown writer of the second century who had no affiliations with St. John. But the historical value of this Evangel is the more vital aspect of the question. The German school of criticism characterizes the Gospel as theology and symbolism, not history; Loisy agrees with them. The Apostolic authorship and historicity of the Fourth Gospel have been vindicated by such critical scholars as Sanday, Stanton, and Drummond in England, and Zahn and B. Weiss in Germany. Orthodox Catholic exegetes, while always holding to the Catholic tradition of the Johannine authorship and historical quality of the Fourth Gospel, admit that St. John's theology indicates reflection and a development over and beyond that of the Synoptists. The first Epistle of

St. John is universally admitted to be by the same hand as the Gospel. The criticism of Apocalypse is still in an immature stage. There is much diversity of view as to its author, the Anglican school inclining to St. John. It has been recently proposed that the book is a Jewish-apocalypse retouched by a Christian; so Vischer, Harnack. Nearly all critics acknowledge that there is much apocalyptic element in it, admitting that some of its visions in a veiled manner depict historical situations under the guise of events to come.

(4) *The Critical Movement Within the Church.*—*Old Testament Criticism.*—France, the country of Richard Simon and Astruc, has been also that of the beginning of the present-day Catholic criticism. François Lenormant, a distinguished Catholic Orientalist, in the preface to his "Origines de l'histoire d'après la Bible et les traditions des peuples Orientaux" (1880-84), declared no longer tenable the traditional unity of authorship for the Pentateuch, and admitted as demonstrated that the fundamental sources of its first four books were a Jehovist and Elohist document, each inspired and united by a "final redactor". Minor discordances exist between them. The earlier chapters of Genesis contain mythical and legendary elements common to Semitic peoples, which in the hands of the inspired writers became the "figured vestments of eternal truths". The same preface bespeaks entire liberty for the critic in the matter of dates and authors. Lenormant's work was placed on the Index, 19 December, 1887. The basis of his literary analysis was supplied by the conclusions of higher criticism, up to that time unaccepted, at least publicly, by any Catholic savant. E. Reuss, a liberal Protestant professor at the university of Strasburg, had published at Paris, in 1879, "L'Histoire Sainte et la Loi; Pentateuque et Josué". In 1883 appeared Wellhausen's influential "Prolegomena to the History of Israel", re-edited in 1889 under the title, "Composition of the Hexateuch and the Historical Books of the O. T."

Alfred Loisy, then professor of Sacred Scripture at the Institut Catholique of Paris, in his inaugural lecture for the course of 1892-93 made a clear-cut plea for the exercise of criticism in the study of the human side of the Bible ("Enseignement Biblique", Nov.-Dec., 1892; reprinted in "Les études bibliques", 1894). In an essay which appeared in 1893, Loisy discussed the "Biblical Question", reasserted the right of Catholic science to treat critically the general aspects of Holy Scripture and also its interpretations, and rejected its absolute inerrancy, while holding to its total inspiration. The historical portions offer data which have only a "relative truth", i. e. with reference to the age in which they were written. The author enumerated conclusions of the criticism which he regarded as fixed; these included the non-Mosaic authorship of the Pentateuch, the unhistorical character of the first chapters of Genesis, the development of Biblical doctrine. Early in the same year Mgr. d'Hulst, rector of the Institut Catholique of Paris, had drawn acute attention to the progress of critical ideas in Catholic scientific circles by an article in the "Correspondant" of 25 January, 1893, entitled "La Question Biblique", in which he expressed the opinion that the admission of inaccuracies in Scripture is theologically tenable. The discussion of these questions was the occasion of the encyclical "Providentissimus Deus", issued by Leo XIII, 18 November, 1893, in which the total inerrancy of the Bible was declared to be the necessary consequence of its inspiration (q. v.). The unwarranted concessions of Catholic writers to rationalistic criticism and the exclusive use of internal arguments against historical authority were condemned as contrary to correct principles of criticism. Sound Biblical criticism was commended. Similar commendation was given in the Apostolic

letter, "Vigilantiæ", establishing the Biblical Commission, 30 October, 1902.

In a paper read before the Catholic Scientific Congress of Fribourg, 1897 (*Revue Biblique*, January, 1898), Father M.-J. Lagrange, superior of the Dominican school of Biblical studies at Jerusalem, defended a literary analysis and an evolution of the Pentateuch which are substantially identical with those of the Graf-Wellhausen hypothesis. He distinguished between the tradition that Moses was the historical author or founder of the Pentateuch, which he retained, and the tradition of the Mosaic literary authorship, which he abandoned. Like Loisy, the learned Dominican maintained that the literary methods of the ancient Orient are sharply differentiated from those of our civilization. During the last decade a considerable number of Catholic Biblical scholars have coalesced into what has been called the "progressive" school. Naturally disagreeing somewhat in details, they agree in holding (a) the composite texture and progressive formation of a number of sacred books, and in abandoning therefore their traditional unity of authorship; (b) in allowing a theological and moral development in the O. T.; (c) in admitting an extensive tacit insertion of popular traditions and written sources, which contain unhistorical statements. Nevertheless these exegetes hold firmly to the objective truth of the essential and larger lines of the history of the Old Dispensation as embodied in the Bible. They assert that in general the question of the literary procedure of Biblical writers is not one of faith. Their position has met with repeated attacks by Catholic adherents of the conservative school, who have combated them with arguments drawn chiefly from the irreconcilability of the new views with the Catholic dogmatic tradition of inspiration and inerrancy as witnessed, it is alleged, in the N. T., the Fathers, the teachings of the councils of Trent and the Vatican, and particularly the encyclical of Leo XIII. (See *INSPIRATION*). The principal adversaries of the advanced conclusions are the Jesuits Delattre (*Autour de la question biblique*, 1904), Brucker (contributions to the "Etudes" between 1894 and 1905), Fontaine, Fonck, Pesch, (*De Inspiratione Sac. Scrip.*, 1906), Murillo, Billot; also Professor Hoberg and Abbé Mangenot (*L'Authenticité du Pentateuque*, 1907).

The Biblical Commission (q. v.), whose decisions have now the force of acts of the Roman Congregations, declared, 13 February, 1905, that the fallibility of implicit citations in the Bible might be admitted, provided solid arguments prove that they are really citations, and that the sacred writer does not adopt them as his own. The Commission conceded on 23 June, 1905, that some passages may be historical in appearance only, always saving the sense and judgment of the Church. On 27 June, 1906, the commission declared that the arguments alleged by critics do not disprove the substantial authorship of the Pentateuch by Moses. This decision has necessarily modified the attitude of such Catholic writers and teachers as favoured in a greater or less degree the conclusions of the Graf-Wellhausen hypothesis. The decree of the Inquisition "Lamentabili" (3 July, 1907) and the encyclical "Pascendi Dominici Gregis" (8 September, 1907) reasserted against the Modernists the sound, Catholic principles to be followed in the study of Sacred Scripture.

New Testament Criticism.—Catholic scholars who were willing to accept some of the critical theories have drawn a line of distinction between the criticism of the Old and that of the New Testament, not only because of the greater delicacy of the latter field, but because they recognize that the documents of the Old and New Dispensations were produced under quite different conditions. In the province of N.-T. higher criticism Catholics have defended the traditional authenticity, integrity, and veracity of the books in

question. Some exegetes admit in a slight measure divergencies in the Evangelical narratives, and the employment of older documents by at least two of the Synoptic writers. As to the "Synoptic problem", it is allowed that at least St. Luke utilized St. Mark's Gospel; so Batiffoll, Minocchi, Lagrange, Loisy, Bonaccorsi, Gigot. Unduly influenced by contemporary German criticism, Abbé Loisy has in recent times broken with the orthodox traditions of N.-T. exegesis. In a reply to Harnack's "What is Christianity?" he defended Catholic dogma as an evolution with its roots in the Primitive Church, but made dangerous concessions regarding Christ's claim to Divinity, His Messianic vocation, knowledge, miracles, and Resurrection ("L'Evangile et l'Eglise", 1902; "Autour d'un petit livre", 1903). In "Le Quatrième Evangile" (1903) Loisy rejects the Johannine authorship and the historicity of the Fourth Gospel, both of which were affirmed by the Biblical Commission (29 May, 1907). His system virtually severs the Catholic Faith from its historical credentials as found in the N. T., and the above works have been condemned by the Congregation of the Index. They have drawn out a number of refutations from Catholic apologists, such as the Abbé Lepin's "Jésus Messie et Fils de Dieu" (1904). More recently Loisy published a work on the Synoptic Gospels (*Les évangiles synoptiques*, 1908) in which he follows the most extravagant rationalistic criticism. Loisy was excommunicated 7 March, 1908. As has been remarked, the Church warmly recommends the exercise of criticism according to sound principles unbiassed by rationalistic presuppositions, but it must condemn undue deference to heterodox writers and any conclusions at variance with revealed truth. When doubt arises about the permissibility of hypotheses, it is for ecclesiastical authority to decide how far they consist with the deposit of faith or are expeditious to the welfare of religion.

GEORGE J. REID.

CRITICISM TEXTUAL.—The object of textual criticism is to restore as nearly as possible the original text of a work the autograph of which has been lost. In this textual criticism differs from higher criticism, whose aim is to investigate the sources of a literary work, study its composition, determine its date and trace its influence and various transformations throughout the ages.

A. Necessity and processes of textual criticism.—Textual criticism has no application except in regard to a work whose original does not exist; for, if extant, it could easily be reproduced in photogravure, or published, once it had been correctly deciphered. But no autograph of the inspired writings has been transmitted to us, any more than have the originals of profane works of the same era. The ancients had not that superstitious veneration for original manuscripts which we have to-day. In very early times the Jews were wont to destroy the sacred books no longer in use, either by burying them with the remains of holy personages or by hiding them in what was called a

ghenizah. This explains why the Hebrew Bibles are, comparatively speaking, not very ancient, although the Jews always made a practice of writing the Holy Books on skin or parchment. In the first centuries of the Christian era the Greeks and Latins generally used papyrus, a material that quickly wears out and falls to pieces. It was not until the fourth century that parchment was commonly used, and it is also from that time that our oldest manuscripts of the Septuagint and the New Testament date. Nothing short of a continuous miracle could have brought the text of the inspired writers down to us without alteration or corruption, and Divine Providence, who exercises, as it were, an economy of the supernatural, and never needlessly multiplies prodigies, did not will such a miracle. Indeed it is a material impossibility to transcribe absolutely without error the whole of a long work; and *a priori* one may be sure, that no two copies of the same original will be alike in every detail. A typical example of this is furnished by the Augsburg Confession, presented to the Emperor Charles V on the evening of 25 June, 1530, in both Latin and German. It was printed in September of the same year and published two months later by its author, Melancthon; thirty-five copies of it are known to have been made in the second half of the year 1530, nine of them by signers of the Confession. But, as the two originals are lost, and the copies do not agree either with one another or with the first editions, we are not sure of having the authentic text in its minutest details. From which example it is easy to appreciate the necessity of textual criticism in the case of works so ancient and so often transcribed as the books of the Bible.

Corruptions introduced by copyists may be divided into two classes: involuntary errors, and those which are either wholly or partly intentional. To these different causes are due the observed variations between manuscripts.

(a) *Involuntary Errors* may be distinguished as those of sight, hearing, and memory, respectively. *Sight* readily confounds similar letters and words. Thus it is that the γ and the η are easily interchanged in square Hebrew writing, E and Z and Θ and O in Greek uncial writing, and ν and υ in Greek cursives, etc. When the exemplar is written stichometrically, the eye of the copyist is apt to skip one or several lines. To this class of errors belongs the very frequent phenomenon of *homœoteleuton* ($\delta\mu\omicron\iota\sigma\tau\epsilon\lambda\epsilon\upsilon\tau\omicron\nu$), i. e. omission of a passage which has an ending exactly like another passage which comes next before or after it. A similar thing happens when several phrases beginning with the same words come together. Secondly, errors of *hearing* are of common occurrence when one writes from dictation. But even with the exemplar before him, a copyist gets into the habit of pronouncing in a low tone, or to himself, the phrase he is transcribing, and thus is likely to mistake one word for another which sounds like it. This explains numberless cases of "itacism" met with in Greek manuscripts, especially the continual interchange of $\upsilon\mu\epsilon\iota\varsigma$ and $\eta\mu\epsilon\iota\varsigma$. Lastly, an error of *memory* occurs when, instead of writing down the passage just read to him, the copyist unconsciously substitutes some other, familiar, text which he knows by heart, or when he is influenced by the remembrance of a parallel passage. Errors of this kind are most frequent in the transcription of the Gospels.

(b) *Errors Wholly or Partly Intentional*.—Deliberate corruption of the Sacred Text has always been rather rare, Marcion's case being exceptional. Hort [Introduction (1896), p. 282] is of the opinion that "even among the unquestionably spurious readings of the New Testament there are no signs of deliberate falsification of the text for dogmatic purposes." Nevertheless it is true that the scribe often selects from various readings that which favours either his

own individual opinion or the doctrine that is just then more generally accepted. It also happens that, in perfectly good faith, he changes passages which seem to him corrupt because he fails to understand them, that he adds a word which he deems necessary for the elucidation of the meaning, that he substitutes a more correct grammatical form, or what he considers a more exact expression, and that he harmonizes parallel passages. Thus it is that the shorter form of the Lord's Prayer in Luke, xi, 2-4, is in almost all Greek manuscripts lengthened out in accordance with Matthew, vi, 9-13. Most errors of this kind proceed from inserting in the text marginal notes which, in the copy to be transcribed, were but variants, explanations, parallel passages, simple remarks, or perhaps the conjectures of some studious reader. All critics have observed the predilection of copyists for the most verbose texts and their tendency to complete citations that are too brief; hence it is that an interpolation stands a far better chance of being perpetuated than an omission.

From the foregoing it is easy to understand how numerous would be the readings of a text transcribed as often as the Bible, and, as only one reading of any given passage can represent the original, it follows that all the others are necessarily faulty. Mill estimated the variants of the New Testament at 30,000, and since the discovery of so many manuscripts unknown to Mill this number has greatly increased. Of course by far the greater number of these variants are in unimportant details, as, for instance, orthographic peculiarities, inverted words, and the like. Again, many others are totally improbable, or else have such slight warrant as not to deserve even cursory notice. Hort (Introduction, 2) estimates that a reasonable doubt does not affect more than the sixtieth part of the words: "In this second estimate the proportion of comparatively trivial variations is beyond measure larger than in the former; so that the amount of what can in any sense be called substantial variation is but a small fraction of the whole residuary variation, and can hardly form more than a thousandth part of the entire text." Perhaps the same thing might be said of the Vulgate; but in regard to the primitive Hebrew text and the Septuagint version there is a great deal more doubt.

We have said that the object of textual criticism is to restore a work to what it was upon leaving the hands of its author. But it is, absolutely speaking, possible that the author himself may have issued more than one edition of his work. This hypothesis was made for Jeremias, in order to explain the differences between the Greek and Hebrew texts; for St. Luke, so as to account for the variations between the "Codex Bezae" and other Greek manuscripts in the third Gospel and the Acts of the Apostles; and for other writers. These hypotheses may be insufficiently founded, but, as they are neither absurd nor impossible, they are not to be rejected *a priori*.

B. *General principles of textual criticism*.—In order to re-establish a text in all its purity, or at least to eliminate as far as possible, its successive falsifications, it is necessary to consult and weigh all the evidence. And this may be divided into: *external*, or that furnished by documents reproducing the text in whole or in part, in the original or in a translation—diplomatic evidence—and *internal*, or that resulting from the examination of the text itself independently of its extrinsic attestation—paradiplomatic evidence. We shall consider them separately.

1. *External (Diplomatic) Evidence*.—The evidence for a work of which the original manuscript is lost is furnished by (a) copies, (b) versions, and (c) quotations. These three do not always exist simultaneously, and the order in which they are here enumerated does not indicate their relative authority.

(a) *Manuscripts*.—In regard to the copies of an-

cient works three things are to be considered, namely: (a) *age*, (β) *value*, and (γ) *genealogy*; and we shall add a word on (δ) *critical nomenclature*, or notation.

(a) *Age* is sometimes indicated by a note in the manuscript itself; but the date, when not suspected of falsification, may simply be transcribed from the exemplar. However, as dated manuscripts are usually not very old, recourse must be had to various palæographic indications which generally determine with sufficient accuracy the age of Greek and Latin manuscripts. Hebrew palæography, though more uncertain, presents fewer difficulties, inasmuch as Hebrew manuscripts are not so old. Besides, the exact age of a copy is, after all, only of minor importance, as it is quite possible that an ancient manuscript may be very corrupt while a later one, copied from a better exemplar, may come nearer to the primitive text. However, other things being equal, the presumption is naturally in favour of the more ancient document, since it is connected with the original by fewer intervening links and consequently has been exposed to fewer possibilities of error. (β) It is more important to ascertain the relative *value* than the age of a manuscript. Some evidences inspire but little confidence, because they have frequently been found to be defective, while others are readily accepted because critical examination has in every instance shown them to be veracious and exact. But how is the critic to discriminate? Prior to examination, the readings of a text are divided into three or four classes: the certainly or probably true, the doubtful, and the certainly or probably false. A manuscript is rated good or excellent when it presents in general true readings and contains few or none that are certainly false; under contrary conditions it is considered mediocre or worthless. Needless to add, the *intrinsic excellence* of a manuscript is not measured according to the greater or less care exercised by the scribes; a manuscript may teem with copyist's errors, though it be made from a very correct exemplar; and one transcribed from a defective exemplar may, considered merely as a copy, be quite faultless. (γ) The *genealogy* of documents, from a critical view-point, is most interesting and important. As soon as it is proved that a manuscript, no matter what its antiquity, is simply a copy of another existing manuscript, the former should evidently disappear from the list of authorities, since its particular testimony is of no value in establishing the primitive text. This, for instance, is what happened to the "Codex Sangermanensis" (E of the Pauline Epistles) when it was proved to be a defective copy of the "Codex Claromontanus" (D of the Pauline Epistles). Now, if a text were preserved in ten manuscripts, nine of which had sprung from a common ancestor, we would not therefore have ten independent testimonies but two, as the first nine would count for only one, and could not, therefore, outweigh the tenth, unless it were shown that the common exemplar of the nine was a better one than that from which the tenth was taken. The consequences of this principle are obvious, and the advantage and necessity of grouping the testimonies for a text into families is readily understood. It might be supposed that the critic would be mainly guided in his researches by the birthplace of a manuscript; but the ancient manuscripts often travelled a great deal, and their nationality is rarely known with certainty. Thus, many are of the opinion that the Vaticanus and the Sinaiticus emanated from Caesarea in Palestine, while others maintain that they were written in Egypt, and Hort inclines to the belief that they were copied in the West, probably in Rome (see CODEX VATICANUS; CODEX SINAITICUS). Hence the critics' chief guide in this matter should be the careful comparison of manuscripts, upon the principle that identical readings point to a common source, and when the identity between two or more manu-

scripts is constant—especially in exceptional and eccentric variants—the identity of the exemplar is established. But this investigation encounters two difficulties. A first, and a very embarrassing, complication arises from the mixture of texts. There are but few texts that are pure; that is to say, that are taken from a single exemplar. The ancient scribes were nearly all to a certain extent editors, and made their choice from among the variants of the different exemplars. Moreover, the correctors or the readers often introduced, either on the margin or between the lines, new readings which were subsequently embodied in the text of the manuscript thus corrected. In such a case the genealogy of a manuscript is liable to become very complicated. It also sometimes happens that two manuscripts which are closely related in certain books are totally unrelated in others. As a matter of fact, the separate books of the Bible, in ancient times, used to be copied each upon its own roll of papyrus, and when they came to be copied from these separate rolls upon sheets of parchment, and bound together in one enormous "codex", texts belonging to quite different families might very possibly be placed together. All these facts explain why critics frequently disagree in determining genealogical groupings. (On this subject consult Hort, "Introduction," pp. 39–69: "Genealogical Evidence".)

(δ) *Critical Nomenclature, or Notation*.—When the copies of a text are not numerous each editor assigns them whatever conventional symbols he may choose; this was for a long time the case with the editions of the original Greek and Hebrew, of the Septuagint and the Vulgate, not to mention other versions. But when, as nowadays, the number of manuscripts becomes greatly increased, it is necessary to adopt a uniform notation in order to avoid confusion.

Hebrew manuscripts are usually designated by the figures assigned them by Kennicott and De Rossi. But this system has the disadvantage of not being continuous, the series of figures recommencing three times: Kennicott MSS., De Rossi MSS., and other MSS. catalogued by De Rossi, but not belonging to his collection. Another serious inconvenience arises from the fact that the manuscripts not included in the three preceding lists have remained without symbol, and can only be indicated by mentioning the number of the catalogue in which they are described.

The notation of Greek manuscripts of the Septuagint is almost the same as that adopted by Holmes and Parsons in their Oxford edition 1798–1827. These two scholars designated the uncials by Roman figures (from I to XIII) and the cursives by Arabic figures (from 14 to 311). But their list was very defective, as certain manuscripts were counted twice, while others which were numbered among the cursives were uncials either wholly or in part, etc. For cursives the Holmes-Parsons notation is still retained; the uncials, including those found since, are designated by Latin capitals; but no symbols have been assigned to recently discovered cursives. (See the complete list in Swete, "An Introduction to the Old Testament in Greek", Cambridge, 1902, p. 120–170.)

The nomenclature of the Greek manuscripts of the New Testament also leaves much to be desired. Wetstein, the author of the usual notation, designates uncials by letters and cursives by Arabic figures. His list was continued by Birch and by Scholz, and afterwards by Scrivener, independently, by Gregory. The same letters answer for many manuscripts, hence the necessity of distinguishing indices, thus D⁶⁶ = "Codex Beza", D⁹⁴⁰ = Codex Claromontanus, etc. Moreover, the series of figures recommences four times (Gospels, Acts and Catholic Epistles, Epistles of Paul, Apocalypse), so that a cursive containing all the books of the New Testament must be designated by four different numbers accompanied by their index. Thus the MS. of the British Museum "Addit. 17469" is for

Scrivener 584^{ev}, 228^{ac}, 269^{pau}, 97^{apoc} (i.e. the 584th MS. of the Gospel on his list, the 228th of Acts, etc.), and for Gregory 498^{ev}, 198^{act}, 255^{pau}, 97^{apoc}. To remedy this confusion Von Soden lays down as a principle that uncials should not have a different notation from the cursives and that each manuscript should be designated by a single abbreviation. Hence he assigns to each manuscript an Arabic figure preceded by one of the three Greek initial letters, ε, α, or δ, according as it contains the Gospels only (εὐαγγέλιον), or does not contain the Gospels (ἀπόστολος), or contains both the Gospels and some other part of the New Testament (διαθήκη). The number is chosen so as to indicate the approximate age of the manuscript. This notation is unquestionably better than the other; the main point is to secure its universal acceptance, without which endless confusion will arise.

For the Vulgate the most famous manuscripts are designated either by a conventional name or its abbreviation (*am*="Amiatinus", *fuld*="Fuldensis"); the other manuscripts have no generally admitted symbol. (The present nomenclature is altogether imperfect and deficient. Critics should come to terms and settle upon special symbols for the genealogical groupings for manuscripts which are as yet almost entirely deprived of them. On this subject see the present writer's article, "*Manuscripts bibliques*" in Vigouroux, "Dict. de la Bible", IV, 666-698.)

(b) *Versions*.—The importance of the ancient versions in the textual criticism of the Sacred Books arises from the fact that the versions are often far anterior to the most ancient manuscripts. Thus the translation of the Septuagint antedated by ten or twelve centuries the oldest copies of the Hebrew text that have come down to us. And for the New Testament the Italic and the Peshito versions are of the second century, and the Coptic of the third, while the "Vaticanus" and the "Sinaiticus", which are our oldest manuscripts, date only from the fourth. These translations, moreover, made on the initiative and under the superintendence of the ecclesiastical authorities, or at least approved and sanctioned by the Churches that made public use of them, have undoubtedly followed the exemplars which were esteemed the best and most correct; and this is a guarantee in favour of the purity of the text they represent. Unfortunately, the use of versions in textual criticism offers numerous and sometimes insurmountable difficulties. First of all, unless the version be quite literal and scrupulously faithful, one is often at a loss to determine with certainty which reading it represents. And besides, we have few or no ancient versions edited according to the exigencies of rigorous criticism; the manuscripts of these versions differ from one another considerably, and it is often hard to trace the primitive reading. When there have been several versions in the same language, as is the case, for example, in Latin, Syriac, and Coptic, it is seldom that one version has not in the long run reacted on the other. Again, the different copies of a version have frequently been retouched or corrected according to the original, and at various epochs some sort of recensions have been made. The case of the Septuagint is well enough known by what St. Jerome tells of it, and by the examination of the manuscripts themselves, which offer a striking diversity. For these various reasons the use of the versions in textual criticism is rather a delicate matter, and many critics try to evade the difficulty by not taking them into account. But in this they are decidedly wrong, and later it will be shown to what use the Septuagint version may be put in the reconstruction of the primitive text of the Old Testament.

(c) *Quotations*.—That the textual criticism of the Greek New Testament, the Septuagint and the Vulgate has profited by quotations from the Fathers is

beyond question; but in using this authority there is need of caution and reserve. Very often Biblical texts are quoted from memory, and many writers have the habit of quoting inaccurately. In his Prolegomena to the eighth edition of Tischendorf (pp. 1141-1142), Gregory gives three very instructive examples on this subject. Charles Hodge, the author of highly esteemed commentaries, when informed that his quotation from Genesis, iii, 15, "The seed of the woman shall bruise the serpent's head", was a serious inaccuracy, refused to change it on the ground that this translation had passed into use. In his history of the Vulgate the learned Kaulen twice quoted the well-known saying of St. Augustine, once accurately: "verborum tenacior cum perspicuitate sententiæ", and once inaccurately: "verborum tenacior cum sermonis perspicuitate". Finally, out of nine quotations from John, iii, 3-5, made by Jeremy Taylor, the celebrated theologian, only two agree, and not one of the nine gives the words of the Anglican version which the author meant to follow. Surely we should not look for greater rigour or accuracy from the Fathers, many of whom lacked the critical spirit. Furthermore, it should be noted that the text of our editions is not always to be depended upon. We know that copyists, when transcribing the works of the Fathers, whether Greek or Latin, frequently substitute for Biblical quotations that form of text with which they are most familiar, and even the editors of former times were not very scrupulous in this respect. Would anyone have suspected that in the edition of the commentary of St. Cyril of Alexandria on the fourth Gospel, published by Pusey in 1872, the text of St. John, instead of being reproduced from St. Cyril's manuscript, is borrowed from the New Testament printed at Oxford? From this standpoint the edition of the Latin Fathers undertaken in Austria and that of the ante-Nicene Greek Fathers published at Berlin, are worthy of entire confidence. Quotations have a greater value in the eyes of the critic when a commentary fully guarantees the text; and the authority of a quotation is highest when a writer whose reputation for critical habits is well established, such as Origen or St. Jerome, formally attests that a given reading was to be found in the best or most ancient manuscripts of his time. It is obvious that such evidence overrules that furnished by a simple manuscript of the same epoch.

(2) *Internal or Paradiplomatic Evidence*.—It frequently happens that the testimony of documents is uncertain because it is discordant, but even when it is unanimous, it may be open to suspicion because it leads to improbable or impossible results. It is then that internal evidence must be resorted to, and, although of itself it seldom suffices for a firm decision, it nevertheless corroborates, and sometimes modifies, the verdict of the documents. The rules of internal criticism are simply the axioms of good sense, whose application calls for large experience and consummate judgment to ward off the danger of arbitrariness and subjectivism. We shall briefly formulate and expound the most important of these rules.

Rule 1. *Among several variants that is to be preferred which best agrees with the context and most closely conforms to the style and mental habits of the author.*—This rule is thus explained by Hort ("The New Testament in the Original Greek", Introduction, London, 1896, p. 20): "The decision may be made either by an immediate and as it were intuitive judgment, or by weighing cautiously various elements which go to make up what is called sense, such as conformity to grammar and congruity to the purport of the rest of the sentence and of the larger context; to which may rightly be added congruity to the usual style of the author and to his matter in other passages. The process may take the form either of simply comparing two or more rival readings under these heads, and

giving the preference to that which appears to have the advantage, or of rejecting a reading absolutely for violation of one or more of the congruities, or of adopting a reading absolutely for perfection of congruity." The application of this rule rarely produces certainty; it usually leads only to a presumption, more or less strong, which the documentary evidence confirms or annuls as the case may be. It would be sophistical to suppose that the ancient authors are always consistent with themselves, always correct in their language and happy in their expressions. The reader is all too liable to imagine that he penetrates their thought, and to make them talk as he himself would have talked on a like occasion. It is but a step from this to conjectural criticism which has been so much abused.

Rule 2. *Among several readings that is preferable which explains all others and is explained by none.*—Gregory, in his "Prolegomena" (8th critical ed. of the New Testament by Tischendorf, p. 63), says apropos of this rule: "Hoc si latiore vel latissimo sensu accipietur, omnium regularum principium haberi poterit; sed est ejusmodi quod alius aliter jure quidem suo, ut cuique videtur, definit sequaturque." It is, in fact, subject to arbitrary applications, which only proves that it must be employed with prudence and circumspection.

Rule 3. *The more difficult reading is also the more probable.*—"Proclivi scriptioni prestat ardua" (Bengel).—Although it may seem entirely paradoxical, this rule is, in a certain measure, founded on reason, and those who have contested it most vigorously, like Wetstein, have been obliged to replace it with something similar. But it is true only on condition that the clause be added, *all other things being equal*; else we should have to prefer the barbarisms and absurdities of copyists solely because they are more difficult to understand than the correct expression or the intelligently turned phrase. Indeed copyists never change their text merely for the pleasure of rendering it obscure or of corrupting it; on the contrary, they rather try to explain or correct it. Hence a harsh expression, an irregular phrase, and an unlooked-for thought are possibly primitive, but always, as we have said, on this condition: *ceteris paribus*. Nor must it be forgotten that the difficulty of the reading may arise from other causes, such as the ignorance of the scribe or the defects of the exemplar which he copies.

Rule 4. *The shortest reading is, in general, the best.*—"Brevior lectio, nisi testium vetustorum et gravium auctoritate penitus destituatur, præferenda est verbosiori. Librarii enim multo proniores ad addendum fuerunt, quam ad omittendum (Griesbach)." The reason given by Griesbach, author of this rule, is confirmed by experience. But it should not be too generally applied; if certain copyists are inclined to put in an insufficiently authorized interpolation, others, in their haste to finish the task, are either deliberately or unknowingly guilty of omissions or abbreviations.

We see that the rules of internal criticism, in so far as they can be of any use, are suggested by common sense. Other norms formulated by certain critics are based on nothing but their own imaginations. Such is the following proposed by Griesbach: "Inter plures unus loci lectiones ea pro suspecta merito habetur quæ orthodoxorum dogmatibus manifeste præ ceteris favet." It would then follow that the variants suspected of heresy have all the probabilities in their favour, and that heretics were more careful of the integrity of the sacred text than were the orthodox. History and reason combined protest against this paradox.

C. *Conjectural Criticism.*—As a principle, conjectural criticism is not inadmissible. In fact it is possible that in all existing documents, manuscripts, versions, and quotations, there are primitive errors which can only be corrected by conjecture. The phrase

primitive errors is here used to denote those that were committed by the scribe himself in dictated works or that crept into one of the first copies on which depend all the documents that have come down to us. Scrivener, therefore, seems too positive when he writes ("Introduction", 1894, Vol. II, p. 244): "It is now agreed among competent judges that *Conjectural Emendation* must never be resorted to even in passages of acknowledged difficulty; the absence of proof that a reading proposed to be substituted for the common one is actually supported by some trustworthy document being of itself a fatal objection to our receiving it." Many critics would not go thus far, as there are passages that remain doubtful even after the efforts of documentary criticism have been exhausted, and we cannot see why it should be forbidden to seek a remedy in conjectural criticism. Thus Hort justly remarks ("Introduction", 1896, p. 71): "The evidence for corruption is often irresistible, imposing on an editor the duty of indicating the presumed unsoundness of the text, although he may be wholly unable to propose any enduring way of correcting it, or have to offer only suggestions in which he cannot place full confidence." But he adds that, in the New Testament, the rôle of conjectural emendation is extremely weak, because of the abundance and variety of documentary evidence, and he agrees with Scrivener in admitting that the conjectures presented are often entirely arbitrary, almost always unfortunate, and of such a nature as to satisfy only their own inventor. To sum up, conjectural criticism should only be applied as a last resort, after every other means has been exhausted, and then only with prudent scepticism.

D. *Application of the principles and processes of textual criticism.*—It remains briefly to explain the modifications which the principles of textual criticism undergo in their application to Biblical texts, to enumerate the chief critical editions, and to indicate the methods followed by the editors. We shall here speak only of the Hebrew text of the Old Testament and of the Greek text of the New.

1. Hebrew text of the Old Testament. (a) *The critical apparatus.*—The number of Hebrew manuscripts is very great. Kennicott ("Dissertatio generalis in Vet. Test. hebraicum", Oxford, 1780) and De Rossi ("Varie lectiones Vet. Testamenti", Parma, 1784-88) have catalogued over 1300. Since their day this figure has greatly increased, thanks to discoveries made in Egypt, Arabia, Mesopotamia, and above all in the Crimea. Unfortunately, for the reason given above under A. *Necessity and Processes*, the Hebrew manuscripts are comparatively recent; none is anterior to the tenth century or at any rate the ninth. The "Codex Babylonicus" of the Prophets, now at St. Petersburg and bearing the date 916, generally passes for the oldest. According to Ginsburg, however, the manuscript numbered "Oriental 4445" of the British Museum dates back to the middle of the ninth century. But the dates inscribed on certain manuscripts are not to be trusted. (See on this subject, Neubauer, "Earliest MSS. of the Old Testament" in "Studia Biblica", III, Oxford, 1891, pp. 22-36.) When the Hebrew manuscripts are compared with one another, it is amazing to find how strong a resemblance exists. Kennicott and De Rossi, who collected the variants, found hardly any of importance. This fact produces at first a favourable impression, and we are inclined to believe that it is very easy to restore the primitive text of the Hebrew Bible, so carefully have the copyists performed their task. But this impression is modified when we consider that the manuscripts agree even in material imperfections and in the most conspicuous errors. Thus they all present, in the same places, letters that are larger or smaller than usual, that are placed above or below the line, that are inverted, and sometimes unfinished or broken.

Again, here and there, and precisely in the same places, may be noticed spaces indicating a hiatus; finally, on certain words or letters are points intended to annul them. (See Cornill, "Einleitung in die Kanon. Bücher des A. T.", 5th ed., Tübingen, 1905, p. 310.) All these phenomena led Spinoza to suspect, and enabled Paul de Lagarde to prove (Anmerkungen zur griechischen Uebersetzung der Proverbia, 1863, pp. 1, 2) that all the Hebrew manuscripts known come down from a single copy of which they reproduce even the faults and imperfections. This theory is now generally accepted, and the opposition it has met has only served to make its truth clearer. It has even been made more specific and has been proved to the extent of showing that the actual text of our manuscripts was established and, so to speak, *canonized* between the first and second century of our era, in an epoch, that is, when, after the destruction of the Temple and the downfall of the Jewish nation, all Judaism was reduced to one school. In fact, this text does not differ from that which St. Jerome used for the Vulgate, Origen for his Hexapla, and Aquila, Symmachus, and Theodotus for their versions of the Old Testament, although it is far removed from the text followed in the Septuagint.

As centuries elapsed between the composition of the various books of the Old Testament and the determining of the Massoretic text, it is but likely that more or less serious modifications were introduced, the more so as, in the interval, there had occurred two events particularly favourable to textual corruption, namely a change in writing—the old Phœnician having given way to the square Hebrew—and a change in spelling, consisting, for example, of the separation of words formerly united and in the frequent and rather irregular use of *matres lectionis*. The variants that supervened may be accounted for by comparing parallel parts of Samuel and Kings with the Paralipomena, and above all by collating passages twice reproduced in the Bible, such as Ps. xvii (xviii) with II Sam., xxii, or Is., xxxvi–xxxix, with II Kings, xviii, 17–xx, 19. [See Touzard, "De la conservation du texte hébreu" in "Revue biblique", VI (1897), 31–47, 185–206; VII (1898), 511–524; VIII (1899), 83–108.]

An evident consequence of what has just been said is that the comparison of extant manuscripts enlightens us on the Massoretic, but not on the primitive text. On the latter subject the Mishna and, for still stronger reasons, the remainder of the Talmud cannot teach us anything, as they were subsequent to the constitution of the Massoretic text; nor can the Targums, for the same reason and because they may have since been retouched. Therefore, outside of the Massoretic text, our only guides are the Samaritan Pentateuch and the Septuagint version. The Samaritan Pentateuch offers us an independent recension of the Hebrew text, dating from the fourth century before our era, that is, from an epoch in which the Samaritans, under their high-priest Manasseh, separated from the Jews; and this recension is not suspected of any important modifications except the rather inoffensive, harmless one of substituting Mount Gerizim for Mount Hebal in Deut., xxvii, 4. As to the Septuagint version, we know that it was begun, if not completed, about 280 B. C. To Paul de Lagarde especially belongs the credit of drawing the attention of scholars to the value of the Septuagint for a critical edition of the Hebrew Bible.

(b) *Critical editions of the Hebrew text.*—After the publication of the Psalms at Bologna in 1477, of the Pentateuch at Bologna in 1482, of the Prophets at Soncino in 1485, and of the Hagiographa at Naples in 1487, the entire Old Testament appeared at Soncino (1488), at Naples (1491–93), at Brescia (1494), at Pesaro (1511–17), and at Aleala (1514–17). Then, between 1516 and 1568, came the four Rabbinic Bibles of Venice. It is the second, edited by Jacob ben

Chayim and printed by Bomberg in 1524–1525, that is generally looked upon as containing the *textus receptus* (received text). The list of the innumerable editions which followed is given by Pick in his "History of the Printed Editions of the Old Testament" in "Hebraica" (1892–1893), IX, pp. 47–116. For the most important editions see Ginsburg, "Introduction to the Massoretic-critical edition of the Hebrew Bible" (London, 1897), 779–976. The editions most frequently reprinted are probably those of Van der Hoogt, Hahn, and Theile; but all these older editions are now supplanted by those of Baer and Delitzsch, Ginsburg, and Kittel, which are considered more correct. The Baer and Delitzsch Bible appeared in fascicles at Leipzig, between 1869 and 1895, and is not yet complete; the entire Pentateuch except Genesis is wanting. Ginsburg, author of the "Introduction" mentioned above, has published an edition in two volumes (London, 1894). Finally, Kittel, who had called attention to the necessity of a new edition (Ueber die Notwendigkeit und Möglichkeit einer neuen Ausgabe der hebräischen Bibel, Leipzig, 1902) has just published one (Leipzig, 1905–06) with the assistance of several collaborators, Ryssel, Driver, and others. Almost all the editions thus far mentioned reproduce the *textus receptus* by correcting the typographical errors and indicating the interesting variants; all adhere to the Massoretic text, that is, to the text adopted by the rabbis between the first and second centuries of our era, and found in all the Hebrew manuscripts. A group of German, English, and American scholars, under the direction of Haupt, have undertaken an edition which claims to go back to the primitive text of the sacred authors. Of the twenty parts of this Bible, appearing in Leipzig, Baltimore, and London, and generally known under the name of the "Polychrome Bible", sixteen have already been published: Genesis (Ball, 1896), Leviticus (Driver, 1894), Numbers (Paterson, 1900), Joshua (Bennett, 1895), Judges (Moore, 1900), Samuel (Budde, 1894), Kings (Stade, 1904), Isaiah (Cheyne, 1899), Jeremiah (Cornill, 1895), Ezekiel (Toy, 1899), Psalms (Wellhausen, 1895), Proverbs (Kautzsch, 1901), Job (Siegfried, 1893), Daniel (Kamphausen, 1896), Ezra-Nehemiah (Guthe, 1901), and Chronicles (Kittel, 1895); Deuteronomy (Smith) is in press. It is needless to state that, like all who have thus far endeavoured to restore the primitive text of certain books, the editors of the "Polychrome Bible" allow a broad margin for subjective and conjectural criticism.

2. Greek text of the New Testament. (a) *Use of the critical apparatus.*—The greatest difficulty confronting the editor of the New Testament is the endless variety of the documents at his disposal. The number of manuscripts increases so rapidly that no list is absolutely complete. The latest, "Die Schriften des N. T." (Berlin, 1902), by Von Soden, enumerates 2328 distinct manuscripts outside of lectionaries (Gospels and Epistles), and exclusive of about 30 numbers added in an appendix, 30 October, 1902. It must be acknowledged that many of these texts are but fragments of chapters or even of verses. This enormous mass of manuscripts is still but imperfectly studied, and some copies are scarcely known except as figuring in the catalogues. The great uncials themselves are not yet all collated, and many of them have but lately been rendered accessible to critics. The genealogical classification, above all, is far from complete, and many fundamental points are still under discussion. The text of the principal versions and of the patristic quotations is far from being satisfactorily edited, and the genealogical relationship of all these sources of information is not yet determined. These varied difficulties explain the lack of agreement on the part of editors and the want of conformity in the critical editions published down to the present day.

(b) *Brief history of the critical editions and principles followed by editors.*—The first New Testament published in Greek is that which forms the fifth volume of the Polyglot of Alcalá, the printing of which was finished 10 January, 1514, but which was not delivered to the public until 1520. Meanwhile, early in 1516, Erasmus had published his rapidly completed edition at Basle. The edition that issued from the press of Aldus at Venice in 1518 is simply a reproduction of that of Erasmus, but Robert Estienne's editions published in 1546, 1549, 1550, and 1551, the first three at Paris and the fourth at Geneva, although founded on the text of the Polyglot of Alcalá, presented variants from about fifteen manuscripts, and into the last, that of 1551, was introduced the division of verses now in use. Theodore Beza's ten editions which appeared between 1565 and 1611 differ but little from the last of Robert Estienne's. The Elzevir brothers, Bonaventure and Abraham, printers at Leyden, followed Estienne and Beza very closely; their small editions of 1624 and 1633, so convenient and so highly appreciated by booklovers, furnish what has been agreed upon as the *textus receptus*.—"Textum ergo habes nunc ab omnibus receptum, in quo nihil immutatum aut corruptum damus" (Edition of 1633). It must suffice to mention here the editions of Courcelles (Amsterdam, 1658) and of Fell (Oxford, 1675), both of which adhere pretty closely to the *textus receptus* of Elzevir, and those of Walton (London, 1657) and of Mill (Oxford, 1707), which reproduce in substance the text of Estienne, but enrich it by the addition of variants resulting from the collation of numerous manuscripts. The principal editors who followed—Wetstein (Amsterdam, 1751–1752), Matthæi (Moscow, 1782–1788), Birch (Copenhagen, 1788), and the two Catholics, Alfer (Vienna, 1786–1787), and Scholz (Leipzig, 1830–1836) are noted chiefly for the abundance of new manuscripts which they discovered and collated. But we must here limit ourselves to an appreciation of the latest and best-known editors, Griesbach, Lachmann, Tregelles, Tischendorf, Westcott and Hort.

In his second edition (1796–1806) Griesbach, applying the theory that had previously been suggested by Bengel and subsequently developed by Semler, distinguished three great families of texts: the Alexandrian family represented by the codices A, B, C, by the Coptic versions and the quotations of Origen; the Western family, represented by D of the Gospels and the Acts, by the bilingual codices, the Latin versions, and the Latin Fathers; and lastly the Byzantine family, represented by the mass of other manuscripts and by the Greek Fathers from the fourth century onward. Agreement between two of these families would have been decisive; but, unfortunately, Griesbach's classification is questioned by many, and it has been proved that the agreement between Origen and the so-called Alexandrian family is largely imaginary. Lachmann (Berlin, 1842–1850) endeavoured to reconstruct his text on too narrow a basis. He took account of only the great uncials, many of which were then either entirely unknown or imperfectly known, and of the ancient Latin versions. In his choice of readings the editor adopted the majority opinion, but reserved to himself the conjectural amendment of the text thus established—a defective method which his successor Tregelles has not sufficiently avoided. The latter's edition (1857–1872), the work of a lifetime, was completed by his friends. Tischendorf contributed no less than eight editions of the New Testament in Greek, but the differences among them are decidedly marked. According to Scrivener (Introduction, II, 283) the seventh edition differs from the third in 1296 places, and in 595 it goes back to the received text. After the discovery of the "Sinaiticus", which he had the honour of finding and publishing, his eighth edition disagreed with the preceding

one in 3369 places. Such an amount of variation can only inspire distrust. Nor did the edition contributed by Westcott and Hort (The New Testament in the Original Greek, Cambridge and London, 1881) win universal approval, because, after eliminating in turn each of the great families of documents which they designate respectively as Syrian, Western, and Alexandrian, the editors rely almost exclusively on the "Neutral" text, which is only represented by the "Vaticanus" and the "Sinaiticus", and, in case of disagreement between the two great codices, by the "Vaticanus" alone. The excessive preponderance thus given to a single manuscript was criticized in a special manner by Scrivener (Introduction, II, 284–297). Finally, the edition announced by Von Soden (Die Schriften des N. T. in ihrer ältesten erreichbaren Textgestalt) gave rise to lively controversies even before it appeared. (See "Zeitschrift für neutest. Wissenschaft", 1907, VIII, 34–47, 110–124, 234–237.) All this would seem to indicate that, for some time to come, we shall not have a definite edition of the Greek New Testament.

The encyclopedias and dictionaries of the Bible have no special article on textual criticism which deals in a particular manner with Biblical texts, but most of the Introductions to Scripture dedicate one or several chapters to this subject; e.g., UBALDI, *Introductio* (5th ed., Rome, 1901), II, 484–615 (*De critica verbalis sacrorum textuum*); CORNELIUS, *Introductio* (Paris, 1885), I, 496–509 (*De usu critico textuum primigeniorum et versionum antiquarum*); GREGORY, *Prolegomena* to 8th ed. of TISCHENDORF (Leipzig, 1884–1894); SCRIVENER, *Introduction* (4th ed., London, 1894), II, 175–301; NESTLE, *Einführung in das griech. N. T.* (2nd ed., 1899) and HOLTZMANN, *Einführung in das N. T.* (Freiburg-im-Breisgau, 1892).

The following may be mentioned as monographs: PORTER, *Principles of Textual Criticism* (Belfast, 1848); DAVIDSON, *A Treatise of Biblical Criticism* (1853); HAMMOND, *Outlines of Textual Criticism* (2nd ed., 1878); MILLER, *Textual Guide* (London, 1885); HORT, *The N. T. in the Original Greek: Introduction* (2nd ed., London, 1896). Although, like several of the preceding, this last work aims chiefly at the criticism of the New Testament, the entire second part (pp. 19–72, *The Methods of Textual Criticism*) discusses general questions. On (b) *Versions* and (c) *Quotations*, under B. *General Principles*, cf. BEBB, *The Evidence of Early Versions and Patristic Quotations on the Text of the Books of the New Testament* in II of the Oxford *Studia Biblica et Ecclesiastica*.

F. PRAT.

Criticism, HISTORICAL, is the art of distinguishing the true from the false concerning facts of the past. It has for its object both the documents which have been handed down to us and the facts themselves. We may distinguish three kinds of historical sources: written documents, unwritten evidence, and tradition. As further means of reaching a knowledge of the facts there are three processes of indirect research, viz.: negative argument, conjecture, and a priori argument.

It may be said at once that the study of sources and the use of indirect processes will avail little for proper criticism if one is not guided chiefly by an ardent love of truth such as will prevent him from turning aside from the object in view through any prejudice, religious, national, or domestic, that might trouble his judgment. The rôle of the critic differs much from that of an advocate. He must, moreover, consider that he has to fulfil at once the duties of an examining magistrate and an expert jurymen, for whom elementary probity, to say nothing of their oath, makes it a conscientious duty to decide only on the fullest possible knowledge of the details of the matter submitted to their examination, and in keeping with the conclusion which they have drawn from these details; guarding themselves at the same time against all personal feeling either of affection or of hatred respecting the litigants. But inexorable impartiality is not enough; the critic should also possess a fund of that natural logic known as common sense, which enables us to estimate correctly, neither more nor less, the value of a conclusion in strict keeping with given premises. If, moreover, the investigator be acute and shrewd, so that he discerns at a glance the elements of evidence offered by the various kinds of information before him,

which elements often appear quite meaningless to the untrained observer, we may consider him thoroughly fitted for the task of critic. He must now proceed to familiarize himself with the historical method, i. e. with the rules of the art of historical criticism. In the remainder of this article we shall present a brief résumé of these rules apropos of the various kinds of documents and processes which the historian employs in determining the relative degree of certainty which attaches to the facts that engage his attention.

WRITTEN DOCUMENTS.—There are two kinds of written documents. Some are drawn up by ecclesiastical or civil authority, and are known as public documents; others, emanating from private individuals and possessing no official guarantee, are known as private documents. Public or private, however, all such documents raise at once three preliminary questions: (1) authenticity and integrity; (2) meaning; (3) authority.

Authenticity and Integrity.—Does the document which confronts us as a source of information really belong to the time and the author claimed for it, and do we possess it in the shape in which it left that author's hand? There is little or no difficulty in the case of a document printed during the author's lifetime, and given at once a wide distribution. It is otherwise when, as often happens, the document is both ancient and in manuscript. The so-called auxiliary sciences of history, i. e. palæography, diplomatics, epigraphy, numismatics, sigillography, or sphragistics, furnish practical rules that generally suffice to determine approximately the age of a manuscript. In this preliminary stage of research we are greatly aided by the nature of the material on which the manuscript is written, e. g. papyrus, parchment, cotton or rag paper; by the system of abbreviations employed, character of the hand-writing, ornamentation, and other details that vary according to countries and epochs. It is rare that a document claiming to be an original or an autograph, when submitted to such a series of tests, leaves room for reasonable doubt regarding its authenticity or non-authenticity. More frequently, however, ancient documents survive only in the form of copies, or copies of copies, and their verification thus becomes more complicated. We must pass judgment on each manuscript and compare the manuscripts with one another. This comparison enables us, on the one hand, to fix their age (approximately) by the rules of palæography; on the other, it reveals a number of variant readings. In this way it becomes possible to designate some as belonging to one "family", i. e. as transcribed from one original model, and thus eventually to reconstruct, more or less perfectly, the primitive text as it left the author's hand. Such labour (merely preliminary, after all, to the question of authenticity), were every one forced to perform it, would deter most students of historical science at the very outset. It becomes, however, daily less necessary. Men specially devoted to this important and arduous branch of criticism, and of a literary probity beyond suspicion, have published and continue to publish, with the generous aid of their governments and of learned societies, more or less extensive editions of ancient historical sources which place at our disposal, one might almost say more advantageously, the manuscripts themselves. In the prefaces of these scholarly publications all the known manuscripts of each document are carefully described, classified, and often partially represented in fac-simile, thereby enabling us to verify the palæographic features of the manuscript in question. The edition itself is usually made after one of the principal manuscripts; moreover, on each page we find an exact summary (sometimes in apparently excessive detail) of all the variant readings found in the other manuscripts of the text. With such helps the authenticity of a work or of a text may be discussed without searching all the libraries of Europe or

tiring one's eyes in deciphering the more or less legible handwriting of the Middle Ages.

The manuscripts once counted and classified, we must examine whether all, even the most ancient, bear the name of the author to whom the work is generally attributed. If it be lacking in the oldest, and be found only in those of a later date, especially if the name offered by the earlier manuscripts differ from that given by later copyists, we may rightly doubt the fidelity of the transcription. Such doubt will often occur apropos of a passage not met in the oldest manuscripts, but only in the more recent, or vice versa. Unless we can otherwise explain this divergence, we are naturally justified in suspecting an interpolation or a mutilation in the later manuscripts. While the authenticity of a work may be proved by the agreement of all its manuscripts, it is possible further to confirm it by the testimony of ancient writers who quote the work under the same title, and as a work of the same author; such quotations are especially helpful if they are rather extensive and correspond well to the text as found in the manuscripts. On the other hand, if one or several of such quoted passages are not met with in the manuscript, or if they be not reproduced in identical terms, there is reason to believe that we have not before us the document quoted by ancient writers or at least that our copy has suffered notably from the negligence or bad faith of those who transcribed it. To these signs of authenticity, called extrinsic because they are based on testimony foreign to the author's own work, may be added certain intrinsic signs based on an examination of the work itself. When dealing with official and public acts care must be taken to see that not only the handwriting, but also the opening and closing formulæ, the titles of persons, the manner of noting dates, and other similar corroborative indications conform to the known customs of the age to which the document is attributed. Amid so many means of verification it is extremely difficult for a forgery to escape detection. Words and phraseology furnish another test. Each century possesses its own peculiar diction, and amid so many pitfalls of this nature it is scarcely possible for the forger to cloak successfully his misdeed. This is also true for the style of each particular author. In general, especially in the case of the great writers, each one has his own peculiar stamp by which he is easily recognized, or which at least prevents us from attributing to the same pen compositions quite unequal in style. In the application of this rule, no doubt, care should be taken not to exaggerate. A writer varies his tone and his language according to the subject of which he treats, the nature of his literary composition, and the class of readers whom he addresses. Nevertheless an acute and practised mind will have little difficulty in recognizing among the various works of a given author certain qualities which betray at once the character of the writer and his style or habitual manner of writing. Another and a surer means for the detection of positive forgery or the alteration of a document is the commission of anachronisms in facts or dates, the mention in a work of persons, institutions, or customs that are certainly of a later date than the period to which it claims to belong; akin to this are plagiarism and the servile imitation of more recent writers.

Meaning.—The critic must now make the best possible use of the written sources at his disposal, i. e. he must understand them well, which is not always an easy matter. His difficulty may arise from the obscurity of certain words, from their grammatical form, or from their grouping in the phrase he seeks to interpret. As to the sense of the individual words it is supremely important that the critic should be able to read the documents in the language in which they were written rather than in translations. Doubtless there are excellent translations, and they may be very helpful; but it is always dangerous to trust them blindly.

The scholar who enters conscientiously upon the work of critic will always feel it a strict duty to warn his readers whenever he quotes a text from a translation. It is well known that to interpret a term correctly it is not enough to know its meaning at a particular epoch, which we are accustomed to regard as classic, in the language to which it belongs. We need only open any large Latin lexicon, e.g. Forcellini's or Freund's (especially if we keep in view the corresponding page of the Latin "Glossarium" of Du Cange), to appreciate at once the very remarkable modifications of meaning undergone by Latin terms in different periods of the language, either from the substitution of new meanings for older ones or by the concurrent use of both old and new. In his efforts to fix the age of a text the critic will, therefore, be occasionally obliged to exclude a meaning that had not yet arisen, or had ceased to be in use when the text in question was composed; sometimes he will be left in a condition of uncertainty or suspense, and obliged to abstain from conclusions agreeable enough but unsafe. Again, in order to grasp correctly the sense of a text it becomes necessary to understand the political or religious opinions of the author, the peculiar institutions of his age and country, the general character of his style, the matters which he treats, and the circumstances under which he speaks. These things considered a general expression may take on quite a particular sense which it would be disastrous for the critic to overlook. Often these details can only be understood from the context of the passage under discussion. In general, whenever there is occasion to verify the exactness of a quotation made in support of a thesis, it is prudent to read the entire chapter whence it is taken, sometimes even to read the whole work. An individual testimony, isolated from all its surroundings in an author's work, seems often quite decisive, yet when we read the work itself our faith in the value of the argument based on such partial quotation is either very much shaken or else disappears entirely.

Authority.—What is now the value of a text rightly understood? Every historical statement or testimony naturally suggests two questions: Has the witness in question a proper knowledge of the fact concerning which he is called to testify? And if so, is he altogether sincere in his deposition? On an impartial answer to these questions depends the degree of confidence to be accorded to his testimony.

Concerning the knowledge of the witness we may ask: Did he live at the time when, and in the place where, the fact occurred, and was he so circumstanced that he could know it? Or, at least, are we sure that he obtained his information from a good source? The more guarantees he gives in this respect the more, all else being equal, does he prove himself trustworthy. As to the question of sincerity it is not enough to be satisfied that the witness did not wish to utter a deliberate lie; if it could be reasonably shown that he had a personal interest in warping the truth, grave suspicions would be raised as to the veracity of all his statements. Cases of formal and wilful mendacity in historical sources may be regarded as rare. Much more frequently prejudice or passion secretly pervert the natural sincerity of a man who really respects himself and esteems the respect of others. It is possible, and that with a certain good faith, to deceive both one's self and others. It is the duty of the critic to enumerate and weigh all the influences which may have altered more or less the sincerity of a witness—personal likes or dislikes, social or oratorical propensities, self-esteem or vanity, as well as the influences which may affect the clearness of a writer's memory or the uprightness of his will. It by no means follows that the authority of a witness is always weakened by the process described above; often quite the contrary happens. When a witness has overcome influences that usually powerfully affect a man's mind and dissuade him from

yielding to the natural love of truth, there is no longer any reason to doubt his veracity. Moreover, when he asserts a fact unfavourable to the religious or political cause which he otherwise defends with ardour; when he thus gains no particular advantage, but on the contrary subjects himself to serious disadvantage; in a word, whenever his statements or avowals are in manifest opposition to his interests, his prejudices, and his inclinations, it is clear that his evidence is far weightier than that of a perfectly disinterested man. Again, the preceding considerations apply not only to the immediate witnesses of the fact in question, but also to all the intermediaries through whom their evidence is transmitted to us. The trustworthiness of the latter must be established as well as that of the authorities to which they appeal.

Given the necessity of observing so much caution in the use of historical texts, it may appear very difficult to reach complete certainty regarding the facts of history. How may we be sure, especially in dealing with ancient times, that our witness presents every desirable guarantee? Often he is scarcely known to us, or quite anonymous. How many facts, once held to be established, have been eliminated from the pages of history. And for how many more must we indefinitely suspend our judgment for lack of sufficiently convincing authority. Historical certitude would indeed be difficult to reach if for each fact we had but one isolated piece of evidence. Full certainty would then be possible only when it could be shown that the character and position of a witness were such as to preclude any reasonable doubt as to the exactness of his statements. But if the veracity of the witness is guaranteed only by negative data, i. e. if we are merely aware that no known circumstances warrant us in suspecting carelessness or bad faith, there arises in us a more or less vague belief, such as we easily accord to any quite unknown person who seriously relates an event which he says he has seen, while on our part we have no reason to suppose either that he himself is deceived or that he is deceiving us. Strictly speaking, our belief in such a witness cannot be called a halting faith. On the other hand it differs considerably from a belief that is based on more solid foundations. We shall not, therefore, be much surprised if the occurrence be later described in an entirely different manner, nor shall we object to abandoning our former belief when better informed by more reliable witnesses. Were it otherwise, our passions would be to blame for causing us to hold to a belief, flattering perhaps, but unsupported by sufficient evidence. We frankly admit, therefore, the possibility of a more or less wavering mental adhesion to facts that rest on a single testimony and whose value we are unable properly to appreciate. It is otherwise in the case of facts confirmed by several witnesses placed in entirely different conditions. It is very difficult, nay generally speaking morally impossible, that three, four, or even more persons, not subject to any common influence, should be deceived in the same manner, or should be parties to the same deception. When, therefore, we find a fact established by several statements or narratives taken from different sources, yet all concordant, there is scarcely any further room for reasonable doubt as to the entire truth of the fact. At this stage, however, we must be very certain that the historical sources are truly different. Ten or twenty writers who copy the narrative of an ancient author, without any new source of knowledge at their disposal, in general add nothing to the authority of him from whom they have gleaned their information. They are but echoes of an original testimony, already well known. It may happen, however, and the case is by no means rare, that narratives based on different sources exhibit more or less disagreement. How then shall we form our judgment?

Right here an important distinction is necessary. The various narratives of a fact often exhibit a perfect

harmony as to substance, their divergence appearing only in matters of detail upon which information was had with greater difficulty. In such cases the partial disagreement of the witnesses, far from lessening their authority regarding the principal fact serves to confirm it; disagreement of this kind shows on the one hand an absence of collusion, and on the other a reliance of witnesses on certain sources of information common to all. There is, however, an exception. It may happen that several writers, whose veracity we are otherwise justified in suspecting, agree in narrating with much precision of detail a fact favourable to their common likes and dislikes. They either report it as eye-witnesses or they declare that they reproduce faithfully the narrative of such witnesses. In dealing with writers of this character the critic must examine carefully all their statements, down to the minutest detail; often a very insignificant circumstance will reveal the deception. We may recall here the ingenious questioning by which Daniel saved the life and reputation of Susanna (Dan., xiii, 52-60). Similar means are often employed with success in the law courts to overthrow clever systems of defence built up by culprits, or to convict a party who has suborned false witnesses in the interest of a bad cause. Occasionally such measures might be advantageously applied in the conduct of historical examinations. Let us suppose that there exists a conflict of opinion about the substance of a fact, and that it has been found impossible to reconcile the witnesses. It is clear that they disagree. At this point, evidently, we must cease to insist on their absolute value and weigh them one against the other. Keeping always in view the circumstances of time, place, and personal position of the different witnesses, we must seek to ascertain in which of them the conditions of knowledge and veracity appear to predominate; this examination will determine the measure of confidence to be reposed in them, and, consequently, the degree of certainty or probability that attaches to the fact they narrate. Frequently, though no indispensable preliminary of mental conviction, a careful comparison of more or less discordant versions of a fact or an event will reveal in the rejected witnesses the very sources or causes of their errors, and thereby exhibit in much clearer light the complete solution of problems whose data seemed at first sight confused and contradictory.

UNWRITTEN TESTIMONY.—To hang a man, a clever examining magistrate does not always need one line of his writing. Silent witnesses have often convicted a criminal more efficaciously than positive accusers. The most insignificant object left by him on the scene of his crime, another found in his possession, an uncommon degree of prodigality, a hundred other equally trifling tokens, lay bare very often the most ingeniously planned schemes for avoiding detection by the law. Even so in the science of history. Here nothing is negligible or unimportant. Monuments of architecture, objects of plastic art, coins, weapons, implements of labour, household utensils, material objects of every kind may in one way or another furnish us precious information. Certain classes of historical sources have long since attained the dignity of special auxiliary sciences. Such are heraldry, or armorial science; glyptics, which deals with engraved stones; ceramics, or the study of pottery in all its epochs. To these we may add numismatics, sigillography, and especially linguistics, not so much for a surer interpretation of the texts as for procuring data from which may be conclusively established the origins of peoples and their migrations. Archæology, in its broadest sense, comprises all these sciences; in its most restricted sense it is confined to objects which are beyond their scope. Truly it is a vast province that here spreads out before the historical pioneer, and he needs much erudition, acumen, and tact to venture therein. Fortunately, as with manuscripts and inscriptions, it is no

longer necessary for the historical student to possess a thorough knowledge of all these auxiliary sciences before entering on his proper task. For most of them there exist excellent special works in which we may easily find any archaeological details needful in the discussion of an historical question. It is to these works and to the advice of men learned in such matters that we must have recourse in order to solve the two preliminary questions regarding all evidence, written and unwritten: that of authenticity or provenance, and that of meaning, i. e., in archaeological remains, the use to which the objects discovered were once put. In dealing with unwritten evidence these questions are more delicate; similarly the rules for our guidance are much more difficult, both to formulate and to apply. It is here, particularly, that shrewdness and acumen, and the prophetic insight that comes of long practice, offer help more important by far than the most exact rules. It is only by dint of observation and comparison that we learn eventually to distinguish with accuracy. These preliminaries once satisfied, we enter on the task of historical criticism properly speaking. Through it these precious relics of the past are called to shed light on certain writings, to confirm their evidence, to reveal a fact not committed to them; more frequently they furnish a sure basis of conjecture whence eventually follow discoveries of great importance. Here, however, and it cannot be repeated too often, the path of the historical student is perilous indeed. The misadventures of amateur archæologists, whether in the matter of pretended discoveries or in dissertations based on them, have provoked no little raillery, not only among severely just professional critics, but also among romancers and dramatic writers. As already stated, it is especially by the judicious use of conjecture that we obtain from these silent witnesses such information as it is in their power to furnish. For more specific treatment of this powerful but delicate instrument of historical criticism we refer the reader to a subsequent section of this article: **CONJECTURE IN HISTORY.**

TRADITION.—Every student of history must eventually face a problem very embarrassing for a conscientious scholar. Facts appear which have left no trace in any writing or contemporary monument. Buried in obscurity for centuries they suddenly appear in full publicity and are accepted as incontrovertible. Every one repeats the story, often with minute detail, though no one is able to offer any credible evidence of the trustworthiness of the current statement or narrative. It is then said that such facts rest on the evidence known as oral or popular tradition. What degree of confidence is due to this popular tradition? Its originators are quite unknown to us as are also the many intermediaries who have passed it down to the time when we are first cognizant of it. How may we obtain a guarantee of the veracity of the original witnesses and then of their successors? Perhaps a rather natural comparison will help us to a clear solution of this question. We may note at once a striking analogy between tradition concerning the past and public rumour about present events. There are in both cases numberless intermediary and anonymous witnesses, concordant as to the substance of the facts, but as to the details often quite contradictory of one another; in both cases also there is an identical ignorance concerning the original witnesses; in both cases, finally, many instances in which the current information was verified and many others in which it was found to be altogether false. Let us suppose the case of a prudent man deeply interested in knowing precisely what is happening in a distant country; one who, moreover, takes much pains to be well informed. What does he do when he learns by public rumour of an important event said to have occurred in the place in which he is interested? Does he accept blindly every detail thus bruited abroad? On the other hand, does

he pay no attention whatever to rumour? He does neither. He gathers eagerly the various narratives current and compares them with one another, notes their points of agreement, and their elements of divergence. Nor does he conclude in haste. He suspends his judgment, seeks to procure official reports, writes to his friends who are on the spot to learn from them reliable news, i. e. confirmation of the facts on which men agree, solutions of the difficulties which arise from discordant versions of the event. Possibly he has no confidence in the persons charged with drawing up the official reports; possibly, too, he cannot correspond with his friends, owing to the interruption of communications by reason of war or other causes. In a word, if such a man found himself dependent on public rumour alone he would remain indefinitely in a state of doubt, content with a more or less probable knowledge until some more certain source of information offered.

Why should we not deal similarly with popular tradition? It appears in just this way to our attention and we have the same motives for mistrusting it. More than once it has been helpful to judicious critics and pointed the way to important discoveries which they would never have made with the sole aid of written documents or monuments. Let us look at the matter in another way. Have not all students of historical documents come frequently across the same peculiar, one might say capricious admixture of true and false which meets us at every step in the case of popular traditions? It would be equally rash on the one hand to reject all tradition and place faith only in written testimony or contemporary monuments, and on the other to accord to tradition an implicit confidence merely because it was not formally contradicted by other historical data, though it received from them no confirmation. The historian should collect with care the popular traditions of the countries and epochs he is treating, compare them with one another, and determine their value in the light of other information scientifically acquired. Should this light, too, eventually fail him, he must wait patiently until fresh discoveries renew it, content in the meantime with such measure of probability as tradition affords. In this way the already acquired historical wealth will be retained, yet no danger run of exaggerating its value, or, finally, of casting suspicion on its trustworthiness by incorporating with it false or doubtful statements.

THE NEGATIVE ARGUMENT.—The negative argument in history is that which is drawn from the silence of contemporary or quasi-contemporary documents concerning a given fact. The great masters of historical science have often used it with success in their refutation of historical errors, sometimes long entrenched in popular belief. It is to be noted that on such occasions they have always held firmly to two principles: first, that the author whose silence is invoked as a proof of the falsity of a given fact, could not have been ignorant of it had it really occurred as related; second, that if he were not ignorant of the fact, he would not have failed to speak of it in the work before us. The greater the certainty of these two points, the stronger is the negative argument. Whenever all doubt in regard to them is removed, we are quite right in holding that a writer's silence concerning a fact in question is equivalent to a formal denial of its truth. There is nothing more rational than this process of reasoning; it is daily employed in our courts of justice. How often is a legal line of attack or defence broken by purely negative evidence. Honourable men are brought before a judicial tribunal who would certainly, in the hypothesis of their truth, have knowledge of the facts alleged by one of the contending parties. If they affirm that they have no knowledge of them, their depositions are rightly considered positive proofs of the falsity of the allegations. Now, evidence of this kind does not differ substantially from the negative argument in the

above conditions. In one case, it is true, the witnesses formally state that they know nothing, while in the other we learn as much from their silence. Nevertheless this silence, in the given circumstances, is as significant as a positive assertion.

There are, nevertheless, some who claim that a negative argument can never prevail against a formal text. But this assertion is not even admissible respecting a contemporary text. If the writer to whom it belongs does not offer an absolute and incontestable guarantee of knowledge and veracity, his authority may be very much weakened or even destroyed by the silence of a more reliable and more prudent writer. It often happens in courts of law that the deposition of an eye or ear-witness is questioned, or even rejected, in view of the deposition of some other witness, equally well-placed to see and hear all that occurred, but who yet declares that he neither saw anything nor heard anything. Mabillon was certainly wrong in maintaining that the negative argument could never be used unless one had before him all the works of all the authors of the time when the event happened. On the contrary, a single work of a single author may in certain cases furnish a very sound negative argument. Launoy, on the other hand, is equally wrong in maintaining that the universal silence of writers for a period of about two centuries furnishes a sufficient proof of the falsity of facts not mentioned by them; it is quite possible that no author of this period was morally bound by the nature of his subject-matter to state such facts. In this case the silence of such authors is by no means equivalent to a denial. But, it is objected, in order to raise a doubt as to a fact related by later writers, have not the best critics often relied on this universal silence of historians for some considerable time? This is true, but the epoch in question was one already carefully studied and conscientiously described by several historians. Moreover, the disputed fact, if true, would necessarily have been so public, and such, in kind and importance, that neither ignorance nor wilful omission could be posited for all these historians. We have here, therefore, the two conditions needed to make inexplicable the silence of these authors; consequently, the negative argument loses none of its strength, and is powerful in proportion to the number of silent witnesses. Of course, this line of argument does not apply in the case of some obscure detail, which may easily have been unknown to, or little remarked by some contemporary authors and quite neglected by others; nor, more particularly, does it apply to an epoch of which few monuments are extant, especially few historical writings. In the latter case, the fact of a universal silence on the part of all writers for a considerable period, may, indeed, weaken the certainty of a fact; in reality we do no more than ascertain thereby the absence of all positive evidence in its favour, other than a tradition of uncertain origin. However, once the lack of information is admitted, it is not permissible to advance a step further and present the silence of documents as proof of the falsity of the fact. Their silence in this case is not the negative argument as described above.

The rule laid down in the preceding paragraphs seems to lack no element of precision and practical advantage. But in applying it to ancient times some caution is necessary. In an age of widespread publicity like our own, no important event can occur in any part of the civilized world without being immediately known everywhere and to all. Its principal details, indeed, are at once so fixed in the memory of all interested parties that they will not easily be effaced within a long period. It is astonishing to see how easily some modern writers forget that the former conditions of mankind were very different. They seek to establish an irrefutable negative argument on the hypothesis that a given public fact of importance could not have been unknown to a certain person of education and refinement who lived shortly afterwards. Such writers

might learn to be more cautious by recalling a series of curious historical facts. It is enough to remind our readers that when St. Augustine was created auxiliary Bishop of Hippo (391) he did not know, on his own avowal, that the sixth canon of the Council of Nice (325) forbade any consecration of this kind.

CONJECTURE IN HISTORY.—Conjecture or hypothesis exists in history when the study of documents leads us to suspect, beyond the facts which they directly reveal, other facts, so closely related to them that from a knowledge of the former we may proceed to that of the latter. Such facts are most frequently related as cause and effect. Let an important event happen. How shall we explain it? How was it brought about? Evidently by another fact or a group of other facts which constitute its cause or sufficient reason. These new facts are revealed in no historical documents, or at least no one has hitherto perceived them. At once the investigator sees that here it is possible to discover more than is known from the extant documents. With this hope he begins to read extensively, to set afoot various researches, to interrogate in every sense a great many works and all the monuments relating to the fact with which he has been keenly impressed, to study the persons concerned in it, or the age in which it took place; all this in order to recover the often almost invisible thread which connects this fact with details that were originally unnoticed or set aside as unimportant. Absorbed in intense meditation, sometimes made needless through a sudden illuminating insight which reveals at once the right path, he seeks with earnestness the truth that the positive evidence before him still withholds; he passes from one hypothesis to another; he calls to his aid all the treasures of his memory; thus reinforced he turns again to the study of the documents, and collects with minute care every hint or indication that may avail to demonstrate their accuracy or falsity. From such close verification it sometimes appears that the path first struck out was misleading and must be abandoned; often the investigator is led by this hard toil to modify more or less his original ideas; on the other hand, he sometimes meets with striking confirmation of them. Feeble rays which seemed at first quite uncertain grow in power and number until they seem a torch that pours a flood of light before which all uncertainty must vanish. In this way, also, many new aspects are revealed to the enraptured eyes of the investigator and make known to him a vast field of knowledge of the highest interest.

As already stated conjecture enables us to conclude from effect to cause, but it may also follow an inverse method and help us to conclude from cause to effect. This process, however, is generally less reliable in historical research, and calls for more caution and reserve than when it is applied to physical facts. In the latter case the agents are necessary causes; once their mode of operation is known it is possible to predict with almost absolute certainty their results in given conditions, and conjecture avails us merely to arouse the idea of an effect certain to follow, but which we have not yet seen produced. Moreover, generally speaking, in the physical sciences it is easy to imagine a variety of methods by which an hypothesis may be tried and its accuracy verified. In historical science the situation is not quite the same. It deals largely with the moral laws that regulate the actions of free beings, and these are far from being as invariable in their application as physical laws. Much caution is therefore requisite before risking any judgment as to what a man must have done in given circumstances, all the more as his acts may have been influenced by the free acts of others, or by a number of accidental circumstances now unknown to us, but which may have notably modified in a given case the ideas and ordinary sentiments of the person in question. Prudence is not less necessary when the hypothesis is principally based on analogy; i. e. when, to complete

our knowledge concerning a fact, certain details of which are not known to us from historical documents, we have recourse to another fact strikingly similar to the one under consideration and conclude thence, in favour of the first, to a similarity of details that are known to us with certainty only in respect of the second fact. Nevertheless we must not reject absolutely this method of investigation; skilfully treated it may render valuable service. A conjecture appeals to the mind all the more convincingly when it solves at once a number of problems hitherto obscure and lacking correlation. Frequently enough, a given hypothesis, taken separately, yields only slight probability. On the other hand, full certitude often results from the moral convergence of several plausible solutions, all of which point in the same direction. Let it be added that in historical research we shall not easily obtain too many hints nor exceed the limit in verification; also that we must be ever watchful against our own preconceptions that easily tempt us to exaggerate the strength of a conclusion favourable to our hypothesis. Nor must we refuse to consider the arguments that tend to weaken or eliminate the latter. On the contrary, it is precisely these arguments that we must study with most care and sift in every sense so that, given their truth, we may abandon opportunely our too seductive conjecture, or at least modify it, again and again if needful, until eventually it acquire such accuracy and precision as to satisfy the most exacting, and be admitted by all as a scientific acquisition both new and solid. A final recommendation, meant to forewarn against the seductions of historical conjecture certain adventurous and inexperienced writers, will not be out of place here. Let them not yield to an illusion only too common among their kind, namely that by their imaginative power and their genius they are destined to advance notably the cause of historical science without acquiring by hard and painful schooling that large and varied and accurate knowledge which men call erudition. Not every learned historian makes brilliant discoveries on the basis of lucky hypotheses; but learning is generally requisite for such discoveries. In historical scholarship, as in all other walks of life, toil and patience are the usual price of success.

THE A PRIORI ARGUMENT.—Historical criticism has at its disposition one other source of truth, the *a priori* argument, a delicate weapon, indeed, but very useful when confided to a well-trained hand. As used in history, this argument is based on the intrinsic nature of a fact, leaving aside for the time being all evidence for or against it. In presence of the fact thus bared of all extrinsic relations the *a priori* process undertakes to show that it does or does not conform to the general laws which regulate the world. These laws fall into three principal classes. The first comprises fundamental or metaphysical laws, e. g. the principle of contradiction, according to which there cannot co-exist in the same subject elements absolutely contradictory of one another, also the principle of causality, according to which no being exists without a cause or sufficient reason for its existence. The second class includes physical laws which govern the phenomena of the world of nature and the activity of the beings which compose it. To this class also belong the laws which govern spiritual natures and faculties that are independent, or in as far as they are independent, of the action of free will. The third class, finally, comprises the moral laws that govern the activity of free beings, considered as such. No one who has acquired, under good guidance, a little experience of the human heart, will deny the existence of this class of laws, i. e. that in given conditions and under certain influences we can forecast in free beings certain habitual activities. Thus, one well-ascertained moral law is that no man will love and follow evil for itself, save only when it appears to him in the guise of good; another such law is that a man, unless he be a monster of perversity,

CROAGH PATRICK—"THE SINAI OF IRELAND"

THE CHAPEL ERECTED UPON THE SUMMIT IS FAMOUS AS A PLACE OF PILGRIMAGE

will naturally tell the truth if he have absolutely no interest in lying.

In what way, now, can these three classes of laws, rightly considered, help us to pronounce on the truth of an historic fact? First, if the fact in question present absolutely contradictory and irreconcilable details it must evidently be rejected without further examination. However, it must be clearly proved that there really is such absolute and irreconcilable contradiction between details presented for simultaneous acceptance. It is important, moreover, to ascertain with certainty whether the contradiction affects the substance of the fact, or only accidental circumstances wrongly connected with it in the imagination of the witness, as frequently happens with popular traditions. In such cases it is only details that need to be rejected, precisely as is done when dealing with more or less conflicting testimonies. Physical impossibility, i. e. manifest opposition between well known laws of nature and an historical statement, is also a conclusive argument against the acceptance of such a statement. Non-believers to the contrary notwithstanding, the possibility of miraculous intervention never seriously troubles at this point the judgment of Catholic critics. They know quite well when to admit, in a particular case, such a possibility. Nor are these cases very frequent. They are also aware that for the acceptance of miracles they must require a far greater amount of evidence than when it is question of purely natural facts. We have in the Catholic process of canonization (see BEATIFICATION AND CANONIZATION) an excellent example of the manner in which the proof of miracles is handled by the tribunal which Catholics most respect. It may not be superfluous to add that prudence suggests a certain hesitation or reserve when the physical impossibility of a fact is in question. The laws of nature are not all so thoroughly understood that we run no danger of confounding a strange or new fact with one utterly impossible. The treatment of moral laws is something more delicate, since they are less absolute in application than physical laws. The mysteries of liberty are even more hidden than those of material nature. Consequently, before asserting the moral impossibility of a fact it is well to consider attentively whether there be not some circumstance, however trivial, which may have accidentally exercised on a given person an influence capable of making him act in a manner opposed to the habitual current of his ideas and sentiments. Such exceptions to moral laws, very rare in the multitude, appear more frequently among individuals. Care must be taken, however, not to admit them without grave reason. It is in support of, or in opposition to a conjecture that the *a priori* argument is mostly used; frequently enough conjecture is confounded with it. Indeed, it is often through the effort to reproduce mentally what certain persons in given conditions must have done, that we finally hit on what they did do; the next step is the collection of more precise evidence such as may confirm and establish quite satisfactorily the truth that we first saw with the eye of the imagination. We should always remember, however, that mere possibility or non-repugnance must not be considered the equivalent of positive probability, any more than mere ignorance of the causes of a fact is equivalent to its improbability, still less its impossibility, when it is sufficiently attested by direct evidence. Superficial or passionate minds are very much exposed to this kind of confusion.

In formulating, as has been done above, the proper rules for the guidance of the mind in its search after historical truth, it should be repeated that the mind must bring to this pursuit certain preliminary qualities and dispositions indicated at the beginning of this article, the first and most essential of which is a sincere and constant love of truth. Nothing can take the place of this sentiment. It is the rule of rules, the

vital and efficient principle in all the processes of criticism. Without it they are quite sterile.

CH. DE SMEDT.

Crivelli, CARLO, an Italian painter. Little is known of his life, and his b. and d. are usually reckoned by his earliest and latest signed pictures, 1468-93. He may have been a pupil of Antonio and Bartolommeo Murano. Crivelli worked entirely in tempora, of which he was a master. He early attained a style of his own and his pictures, though sometimes stiff, are decorative and beautiful in colouring. He could not compose, in the modern sense, but was lavish in his treatment of single figures. Architectural features were often introduced by him and life-like fruits and flowers are placed in vivid relief against beautifully finished marbles. Crivelli, it would seem, worked for twenty-two years in cities lying within the Marches of Ancona, especially near Ascoli. He signed himself "Crivellus" and after 1490, when he was knighted by Ferdinand II of Naples, added "miles" to his signature. The cathedral of Ascoli has a "Virgin and Child" dated 1493. Among his earliest work is the altar-piece of San Silvestro, Massa, signed and dated 1468, while the "Coronation of the Virgin" (1493) in the Oggione Collection, Milan, is probably the latest. The National Gallery, London, has a number of Crivelli's paintings and the galleries of the Continent are also well supplied. His work is best seen in a half light and at a little distance. His more celebrated pictures are: "Madonna and Child", 1476, altar-piece for San Domenico, Ascoli (National Gallery, London); "The Dead Christ" (National Gallery); "Pietà" (Cathedral, Ascoli); "Madonna and Saints", 1491 (Berlin); "St. Francis of Assisi" (Brussels); "Pietà" (Vatican); "Virgin and Saints" (Lateran).

LEIGH HUNT.

Croagh Patrick, a mountain looking out on the Atlantic ocean from the southern shore of Clew Bay, in the County Mayo, and called "the Sinai of Ireland." In pagan times it was known as *Cruachan Aighi*. It rises in a perfect cone to a height of 2510 feet. The account given below is taken from sources that post-date the saint's death by three to four hundred years. There are, however, good reasons to believe that the traditions they embody are genuine. St. Patrick was careworn and fatigued when he came to this remote part of the country. He longed to retire for a while to refresh his soul in solitude, and for that purpose, on the Saturday before Ash Wednesday in the year 441, he betook himself to the mountain top. Here he spent the days of Lent, chastising his body with fasts, pouring out his heart to God, and entreating Him with prolonged importunity and with tears that the Faith might never fail in the land of Erin. The "Book of Armagh" mentions that God summoned all the saints of Erin, past, present and future, to appear before their Father in the Faith to comfort him with a vision of the teeming harvest his labours would produce, and to join him in blessing their kinsmen and their country. The "Triplicate Life" relates that when Patrick was on *Cruachan Aighi* in 441, word was brought to him that a new pope ruled the Church in Rome. The new pope was St. Leo the Great, who was consecrated on the 29th of Sept., 440. Patrick, as soon as he heard it, dispatched one of his disciples named Munis to bear his filial homage to the Vicar of Christ, to render an account of his labours and his teaching, and to beg a blessing for the infant church in Ireland. The "Annals of

Clonmacnoise" relate that Munis came back from Rome bearing sacred relics which the pope had given him for the altars that Patrick was erecting everywhere through the country. The same event is briefly referred to in the "Annals of Ulster", under date of 441: "Leo ordained forty-second Bishop of the Church of Rome; and Patrick the Bishop was approved in the Catholic Faith". It adds a special glory to Croagh Patrick that the first tribute of homage from the Irish Church to the Chair of Peter was sent from its hoary summit. From that sacred spot, on Holy Saturday, Patrick with outstretched hands solemnly blessed the men of Erin that they might cling to the Faith, and the land of Erin that no poisonous reptile might infest it. Then, refreshed with Divine grace and comforted with the assurance that his labours would fructify forever, he came down from the mountain to celebrate Easter with the little flock he had left at Aughagower.

From the days of the saint himself pilgrims began to do penance on his holy mountain. References to them are found in many pages of the annals of the country. It is recorded that in the year 1113, on the night of the 17th of March, during a thunderstorm, thirty of the pilgrims perished on the summit. The "Annals of Boyle" relate that Hugh O'Connor, King of Connaught, who came to the throne in the year 1225, cut off the hands and feet of an outlaw who dared to molest a pilgrim on his way to Croagh Patrick. The following document of Pope Eugene IV, dated 28 September, 1432, shows how this ancient pilgrimage was recognized and honoured in Rome. "A relaxation of two years and two quarantines of enjoined penance, under the usual conditions, to those penitents who visit and give alms for the repair of the chapel of St. Patrick, on the mountain which is called Croagh Patrick whither resorts a great multitude of persons to venerate St. Patrick the Sunday before the feast of St. Peter's Chains" (Calendar, etc., of Papal Registers, Vol. IV). From St. Patrick's own time there had been some sort of a little chapel on the summit.

The "Tripartite Life" relates that the apostle himself celebrated Mass on the mountain, from which we infer that he had an altar and a place to shelter it. For several centuries the Archbishops of Armagh laid claim to this chapel on the grounds that it was founded by St. Patrick and that they were his successors; but the Archbishops of Tuam contended that it belonged to their jurisdiction. Finally, Pope Honorius III on the 30th of July, 1216, assigned it to the Archbishop of Tuam (Calendar Pap. Reg., Vol. 1). But in penal times when Murrisk Abbey at the mountain's base was dismantled, the venerable relic on the summit was demolished. Still the pilgrims never ceased to go there. It was not, however, till 1905 that the chapel on the heights was rebuilt, and then on the 30th of July, Archbishop Healy dedicated it to St. Patrick in the presence of many pilgrims. The day of annual pilgrimage from time immemorial has been the last Sunday in July. On that day about twenty Masses are celebrated within the little chapel while often there have been more than 20,000 persons kneeling without.

MICHAEL MACDONALD.

Croatia, with Slavonia, an autonomous state. It is bounded on the north by the Danube and the Drave; on the east by Servia; on the south by the Save; and on the west by Styria, the River Kupa, and the Adriatic Sea from Fiume (Rieka) in the north-west to Obrovac on the Dalmatian frontier.

HISTORY.—The name Croatia is derived from that of a people called Croats (*Hrvat*, *Хрватъ*), i. e. "the

nation ready to defend its home and rights", whose migration from South-western Russia and Galicia of to-day—then known as "White Croatia" or "Great Croatia" (*Velika Hrvatska*)—towards the old Illyricum and Dalmatia began in the early part of the fifth century. There were several migrations at different times. The people settled during the first half of the sixth century in Pannonia Inferior, now Lower Hungary, and on the eastern banks of the Danube. Here they struggled for their very existence against the Avars, a bloodthirsty people, and then crossed the Drave to Pannonia Superior and Dalmatia, provinces of the Roman Empire, to which they gave the name of Croatia. From 610 to 641 the Croats established their settlements on a firm basis. From that time forward they suffered various vicissitudes owing to the constantly changing political life. The provinces occupied by the Croats were already peopled by Illyrian and Celtic tribes as Roman domains. Friendly terms were maintained, however, and together they made war against the common enemy, the Avars, conquered them, and finally established their own state. The executive head of the Croats was the *ban*, a title still in use, and he had unlimited power as leader and governor of the people. Heraclius, the Byzantine emperor, was compelled to abandon his provinces in the western part of the Balkan Peninsula. At that time the Croats occupied the following provinces: Illyricum, Liburnia, Pannonia, Dalmatia, and a part of Histria, now known respectively as Croatia, Slavonia, Dalmatia, Istria, Bosnia, and Herzegovina. Their kinsmen, the Serbs, settled in Montenegro, Northern Albania, Old Servia, and the western part of the Servian Kingdom. The cities Zara (Zadar or Jadera), Trau (Trogir or Tragurion), Spalato (Spljet), and Ragusa (Dubrovnik), on the Dalmatian coast, and the islands Veglia (Krak) and Arbe (Rab or Absorus), in the Adriatic, remained Latin in character. Elsewhere, however, the assimilative power of the Croats was stronger and the Latin race disappeared.

Christianity flourished in Illyria, Dalmatia, and the other provinces before the coming of the Croats. At the time of migration the Croats were heathens; they did not accept Christianity until the seventh century, when they and the Serbs were baptized by priests of the Roman Church. The Croats promised the pope to live in peace with other nations and he, in turn, to help them in case an enemy invaded their territory. Pope John IV (640–42) sent the Abbot Martin to the Croats, and St. Martin I commissioned John of Ravenna to evangelize this vigorous and adventurous nation. He created John Archbishop of Salona (Solin), a city of Roman culture, whence, owing to the invasion of the Croats, many moved to the neighbouring Spalato. Here John laboured also, and the imperial mausoleum in the palace of Diocletian was converted by the people into a Christian temple. Cyril and Methodius came in 863, devised a special alphabet (the Glagolitic for the translation of the Gospels and liturgical books into the Old Slavonic tongue, and spread Christianity through the western part of the Balkan Peninsula. Even before this time bishops resided at Salona (Solin), Nona (Nin), Narona (Mostar), Epidaurus (Ragusa Vecchia), Siscia (Sisak), Mursia (Osijek), and Symrnum (Mitrovica).

During the eighth century Croatia was divided into several provinces, the principal of which were the independent territories of White and Red Croatia and the Banatus Sisciensis et Symrniensis. The progress of the people attracted the attention of Charlemagne, who occupied Histria in 788 and Northern Croatia in 792. In the year 800, when he was crowned in Rome, the Croats sent a representative. The rule of Louis the Pious (814–40), whose government was in the hands of favourites, was unfortunate in its consequences for the Croats. Their struggle for freedom lasted from 879 until 925, when the people elected

their own king, Thomislav, on the field of Duvno before the cathedral. He was crowned by the legate of John X. The boundaries of the kingdom were, on the north, the Danube and the Drave; on the east, the River Drina; on the west and south, the Adriatic. The reigns of Zvonimir and Peter Kreshimir, successors of Thomislav, are glorious in the records of Croatian history, and both Church and State became firmly established. Native rulers reigned until 1102, when the last, Peter Svachich, died in defence of his country, and Croatia offered the crown to King Coloman of Hungary. The Croats, represented by twelve deputies, administered the oath and stipulated that the new monarch should observe the Constitution and rights of the Croats, exercise the judicial power only when on Croatian soil, and allow no Hungarian to settle upon Croatian territory. This agreement was only partially kept. Croatia was ruled by the Arpád dynasty from 1102 to 1301, but was not made a part of Hungary. The monarchs never resided permanently in Croatia, but were represented by bans, who, as supreme administrators of the kingdom, convened the legislature, exercised the highest judicial power in the State, and commanded the army. The national *sabor* regulated the coinage of gold and silver. The Arpád rulers introduced the feudal system in opposition to public opinion, reorganized the nobility, and gave the lands taken from the peasants (*kmet*) to the holders of titles. During the reign of Croatian rulers the Church flourished. The *primas* (primate) held the office of chancellor of State and the bishops were the principal advisers, spiritual and temporal, of the kings. There were nine bishoprics. Under the Arpád rulers, a change was made, and new sees were erected suffragan to the ecclesiastical province of Hungary. The following religious orders were represented in the kingdom: the Benedictines, favoured by Croatian rulers, Cistercians, Dominicans, Franciscans, Templars, Hermits of St. Paul, or White Friars. Literature, both secular and ecclesiastical, made much progress and the arts were cultivated.

Andrew, the last of the Arpáds, died while making preparations for war against the Croats and their ban, Paul Shubich, who had declared for Charles Robert of Anjou, nephew of the King of Naples, as King of Croatia, Bosnia, and Dalmatia. Charles was crowned in the church of St. Stephen in Agram (Zagreb), the capital of the state, by Archbishop Gregory. The family of Anjou occupied the throne of Croatia from 1301 to 1386, mainly through the support of Pope Boniface VIII. Charles as a ruler was an absolutist and adopted French methods in conducting the army and the judiciary, and in raising money. His son, Louis the Great (d. 11 Nov., 1382), waged war against Venice. He became King of Poland 17 November, 1370. Upon the recommendation of Urban V, Louis appointed his relative, Charles Drachki, Ban of Croatia, and then set out to capture Naples from Queen Joanna. At his death he was succeeded on the throne of Croatia by his daughter Mary, who reigned conjointly with her consort Sigismund of Brandenburg, son of Emperor Charles IV, and later emperor. During Mary's reign there was great hostility among the people both towards her and Elizabeth, her mother. Foremost in the opposition were John Palizna, prior of the Knights of St. John, Paul Horvat, the saintly and patriotic Bishop of Agram (Zagreb), and the bishop's brother John. Declaring that a woman had no right to the Croatian throne, Bishop Horvat offered the crown to Charles III Dratecki, King of Naples. Charles accepted, was crowned by Bishop Horvat at Stuhlweissenburg in the presence of Mary and Elizabeth, but was murdered at Buda, Hungary, thirty-seven days later (24 Feb., 1386), by Elizabeth's hired assassin. Civil war followed. Sigismund (1387-1409) was taken captive by Ivan Horvat, and fresh difficulties arose with the Turks in the eastern part of

the Balkan Peninsula. The coronation of Ladislaus, King of Naples, at Zara, 5 August, 1393, did not result in peace. Internal discord existed among the Frankopani, Zrinski, Gorjanski, Blagaji, Kurjakovici, etc. Gregory XII organized a crusade in Siena to help Sigismund, and Ladislaus, seeing that he could not hold his ground on the Eastern Adriatic, sold Dalmatia to Venice for 100,000 ducats, the agreement being signed in the church of S. Silvestro, 9 July, 1409.

In the fourteenth century there were in Croatia three archbishoprics and seventeen dioceses, subdivided into archdeaconries and parishes. At the beginning of the century the See of Bosnia was transferred to Djakovo. Each diocese had an average of four or five hundred parishes in addition to chapters and collegiate churches. Blessed Augustine of Gazo-

COLLEGIATE CHURCH (X CENTURY) AND BELL TOWER (1377), FIUME

tich was Bishop of Agram. Mare' Antonio de Dominis, famed for his learning, was Bishop of Zengg (Senj.) The religious orders were in a flourishing condition, especially the Knights of St. John (*Crucijeri*) who exerted great influence upon the people. St. John Capistran, defender of Belgrade, died at the monastery of Ilok, Croatia, 23 October, 1456, and was canonized in 1690. The missal was translated into Croatian, and copies are preserved to-day in some of the libraries.

In Sigismund's time Croatia was severely tried by the wars with Venice, and those against the Turks, who invaded Croatian territory in 1414-15. From that until 1838, when the Turks were finally repulsed at Cetin, the struggle was continuous. The Bans Nicholas and John Frankopani and Matko Talovac were the first in the field against the Sultan Murad II. Sigismund was succeeded by his son-in-law Archduke Albert of Austria, who died in 1439 at a critical period. His wife, though civil war was raging, took control of the Government in 1439, and her son, Ladislaus Posthumus was nominal ruler until 1457. After the fall of Constantinople (1453) and the occupation of Bosnia ten years later by the Turks, the Turks were repulsed on the Croatian frontier and Western culture was saved to posterity. The following centuries show bloody records of constant struggles against the Turks. Yakub, Pasha of Bosnia, eager to enslave Catholic

Balkan, invaded Croatia in 1493. He was met by the Croatian forces under Ban Derenchin on the field of Krbava. The Croats were defeated and left the flower of their nobility on the field. In 1513, however, the Turkish army was defeated by the Ban Bishop Peter Berislavich, and Leo X, upon receiving the news of victory, sent the warrior-bishop a blessed saber. Bishop Berislavich's appeal to Charles V was unheeded, and the former was killed in the battle of Kordenica (1520). His death was a terrible blow to the *Antemurale Christianitatis*, as the pope and emperor styled the Croats in their letters. Then followed the conflicts of Jajce (1521, 1525), Klis (1524), Mohacs (1526), and Vienna (1529), which Solyman II attempted to take. He was badly defeated, however, and returned to Constantinople with thousands of Christians, who became either slaves or soldiers (Janizaries). The pashas in Bosnia in retaliation for the defeat, pillaged the country and slew the Christians.

After the defeat at Mohacs where King Louis and so many of his warriors were slain, the Croats elected, at Cetin, New Year's Day, 1527, Ferdinand of Austria as king. The Hapsburg rule was thus begun, Croatia subsequently having the same rulers as Austria. The king took an oath to defend the rights and boundaries of his new kingdom, a promise which was never fully observed, and the hopes of the national heroes Simeon Bakatch, Bishop of Zagreb and Krsto Frankopan failed of fulfilment. The latter fell at Varazdin while the former died of grief. Profiting by the indifference of Ferdinand, the Turks took the fortress of Jajce and Klis in 1536 as well as a large part of Eastern Croatia. With *Reliquia reliquiarum regni Croatiae* for a battle-cry, the climax of the struggle was reached at Siget, where Niklas Zrinski met the Turks, under Solyman, with 700 picked men. Having fired the city behind them, they made an onslaught in which they all perished. The Turks left 20,000 on the field. Solyman died two days later and a shameful peace was concluded by Maximilian. Neglected and misruled, the people rose under Mathias Gubec. They failed and Gubec was put to death with a red hot crown of iron. Ever ready to take advantage of internal strife, Ferhad Pasha defeated General Auersperg at the River Radomja, in 1575. Rudolf, who succeeded Maximilian (1576), had little interest in the welfare of the State. Hassan Pasha Predojevic crossed the Kupa, took the fortress of Bihac, and planned an attack on Sisak. He was met by Jurak and Fintich, canons of Agram, and Ban Bakatch, with an army. The Turks were defeated and lost 18,000 men.

Among the apostles of the Reformation in Croatia were the Ungnad family and George Zrinski who established a printing plant for the purpose of spreading their teaching. The Croats, however, were not won over to Luther's doctrine. Catholicity was too firmly rooted and Anthony Dalmatin and Stephen Istranin preached the new creed in vain. When asked, at a meeting of the *Sabor*, to grant toleration to Protestantism, Ban Bakatch made answer: "I prefer rather to break off relations with the Hungarian Crown than allow this pest to spread." Conflicts occurred with the Turks at Novi Zrinj (1664), and at St. Gothard. The miseries and oppression of the people led to an uprising under Peter Zrinski and Krsto Frankopan against the German military rule. Leopold, however, beheaded the leaders, 30 April, 1671, at Wiener Neustadt, imprisoned their children, and confiscated their possessions. Despite the injustices done the people the struggle against the Turks was heroically continued under Stojan Jankovich and Elias Smiljanich in Dalmatia, Friar Luke Imbrisimovich in Slavonia, and Father Mark Mesich in Lika-Krbava. A division of Turkey and the expulsion of the Turks from the Balkan Peninsula and Constantinople was prevented in 1688 by Louis XIV. The council of war in Vienna established the Military Frontier between Turkey and

Croatia; every male Croat was obliged to serve in the army at his own expense and to be ready at any moment. This organization was dissolved in 1873.

In 1712 the Croatian *Sabor* accepted the Pragmatic Sanction, by which Charles VI secured the succession to his daughter Maria Theresa. In the Thirty Years War and the Seven Years War between Maria Theresa and Frederick the Great the Croats took a prominent part. During the reign of Leopold I (1658-1705) hundreds of families of the Schismatic Greek Church had entered Croatia as refugees from Turkish rule. Jealousy existed between the Catholics of the country and the newcomers because the rulers did not favour any but the Catholic religion. In 1777 Maria Theresa secured the erection of a diocese for the Uniat Greeks, with the Eastern Rite and the Old Slavonic Liturgy. She hoped in this way to bring about a union with Rome, but the breach was only widened. Education reached a high standard in the sixteenth century under the Hermits of St. Paul. Later on the Jesuits became their co-workers in the field. They established an excellent institution in Zagreb. The Croatian youth also attended the universities at Rome, Padua, and Bologna.

The absolutist, Joseph II (1780-90), who succeeded Maria Theresa, failed in his reforms, though he stopped at nothing in his attempts to carry them out. In Croatia he suppressed religious orders, confiscated monasteries and seminaries, and hampered the progress of education. To save the mother-tongue a reaction against Latin began in 1835, and the native speech was revived in church, university, and street. In 1809 Napoleon, having conquered Croatia, set up the Kingdom of Illyria, a union of all the Croatian provinces, under French control. In the first half of the nineteenth century, as an outgrowth of the revival of the language, a vigorous nationalizing movement began under Louis Gaj. Representatives of the people, 300 in number, demanded of the king the same rights for Croatia as those possessed by Hungary: independence under the king; the election of the ban by the people and his presentation for the king's approval; the ban was to be ex-officio president of Croatian cabinet and responsible to the *Sabor*, at its annual meeting; the Croatian army with its head was to take an oath of fidelity to the king; the Military Frontier to be abolished; and Croatian made the official tongue. The only point gained was the appointment, as ban, of Joseph Jellachich. In 1848 the revolution broke out. Jellachich saved the throne for the Hapsburg family, but further enslaved his country in doing so. The Croatian Generals Davidovich and Vukasovich distinguished themselves in the war against Italy in 1866. In 1878 Generals Francis and Ivan Philippovich occupied Bosnia with Croatian regiments.

On 21 July, 1868, a compromise was effected between Croatia and Hungary. Croatia, Slavonia, the Military Frontier, and Dalmatia constitute a separate political body; Fiume (Rieka) and its district were left *condominium*, with two representatives in the Croatian *Sabor*. The military Frontier had been suppressed and part was annexed to Transylvania in 1851 part to Hungary in 1872; and part to Croatia-Slavonia in 1881. Dalmatia remained separate, with eleven representatives in the Austrian parliament (*Reichsrath*). Croatia has autonomy in administrative, educational, and judicial affairs. The national legislative body is the *Sabor*; the executive body, the Royal Croatian-Slavonian-Dalmatian Government. The head of Croatia-Slavonia is the ban, appointed by the king upon the recommendation of the Hungarian prime minister, responsible to the *Sabor*. All State business in common with Hungary is regulated in the Hungarian-Croatian Parliament at Budapest. There are also executive ministries for the administration of national affairs, with separate departments for Croatian interests. The Croatian Minister stands as a mediator between the King of Croatia and the Croatian

Government. He is a member of the Hungarian cabinet and is responsible to the Hungarian Parliament. Croatia is represented in the House of Magnates by three delegates; in the House of Representatives by forty delegates. On Delegations for National Affairs Croatia-Slavonia is represented by one member from the Upper House and four from the Lower.

EDUCATION AND RELIGION.—There is a university at Zagreb with three faculties: philosophy, theology, and law; an agricultural academy; and an academy founded and endowed by Bishop Strossmayer. There are twenty-five high schools and gymnasia each with eight grades, and over a thousand public schools of five grades, all supported by the Government, with the exception of some private institutions.

Ecclesiastically Croatia constitutes one province, erected by the Bull "Auctorem omnium" of Pius IX, 11 Dec., 1852. The archiepiscopal see is at Agram (Zagreb), and there are three suffragan dioceses: Djakovo, Senj-Modrus, and Kreuz (Križevci) (Uniat Greek). Theoretically the relations between Church and State are regulated by a concordat of 18 Aug., 1852; but this is practically disregarded. Civil marriage is not recognized and ecclesiastical regulations are in force. Of the population of 2,186,410, 71 per cent. is Catholic; 26 per cent. Schismatic Greek; 1.6 per cent. Protestant; and 1 per cent. Jewish. Freedom of worship is guaranteed by State law. Religious instruction is given in the schools under Government supervision, the State paying such teachers and supplying textbooks out of the public revenues. Churches are incorporated under the name of the parish or community to which they belong, subject to the requirements of canon law. Church property is taxed, but the clergy are exempt from military and jury service. They are also subject to the civil penal law, have the power to make wills but not witness to them, and can dispose of their personal property according to canon law. Cemeteries are regulated by ecclesiastical and civil law, each denomination having its own. Religious orders may be established with the consent of the Church and State; the Franciscans, Capuchins, Jesuits, and Salvatorians are represented. Bishops are nominated by the king, on the recommendation of the Government, and appointed by the pope. Canons are appointed by the king on the recommendation of the Government, and the latter appoints the irremovable rectors from the *terna*, i. e. from three names proposed, or regardless of the *terna*. Each diocese has its own seminary. The Catholic press has a number of weekly, and a few daily, papers.

CAUSES OF EMIGRATION.—The people are overtaxed. Industry and commerce are handicapped by the centralization of common carriers and by a transportation tariff upon export goods. The import and export tariffs are unjustly apportioned, and agriculture and stock-raising are unprofitable except for domestic purposes. State monopolies prevent free commerce, and bureaucracy hampers the development of trade and the comfort of the people. The land is generally cultivated and is rich in forests. Quicksilver, gold, copper, iron, coal, coal oil and sulphur are found, but the production is small. The rivers are navigable, and there are excellent roads, but the railroads have not kept pace with the needs of the people.

In the United States there are over 200,000 Croats distributed in all sections, working in mines, factories, and upon farms. Many of these are well-to-do. The immigration began in the early part of the nineteenth century and numbers fought in the Civil War. There are about 250 Croatian societies under the patronage of various saints. Owing to the scarcity of native priests the number of parishes is small, only twelve in number (1908) and four parochial schools. It must be remembered, however, that the first Croatian priest came to the United States only ten years ago, while the people had been coming in large numbers for

thirty years, with no one to look after their spiritual needs. The Croatian parishes which have been organized are:—Visitation of the Blessed Virgin Mary, Rankin, Pennsylvania; St. Nicholas, Allegheny, Pennsylvania; St. Rock, Johnstown, Pennsylvania; St. Paul, Cleveland, Ohio; St. Joseph, St. Louis, Missouri; St. John, Calumet, Michigan; St. John, Kansas City, Kansas; Assumption of B. V. M., Chicago, Illinois; Sts. Peter and Paul (Greek Uniat), Chicago, Ills.; Sts. Peter and Paul, Great Falls, Montana; St. Mary of Grace, Steelton, Pennsylvania; Church of the Nativity, San Francisco, California.

Academia scientiarum et artium: Documenta historię croaticę, periodum antiquum illustrantia (Agram, 1877); KUKULJEVIĆ, *Codex diplomaticus regni Croatia, Dalmatie et Slavonię* (Agram, 1874, 1876); LUGIĆ, *De regno Dalmatie et Croatia, libri sex* (St. Mark's Library, Venice); THEINER, *Vetere monumenta Slavorum meridionalium* (Rome, Agram, 1863, 1875); TKALČIĆ, *Monumenta historica* (Agram, 1896); FERBERDŽIĆ, *Acta Bononia* (Agram, 1892); KRČEVIĆ, *De regnis Dalmatie, Croatia et Slavonię* (Agram, 1770); FARLATI, *Illyricum Sacrum* (Venice, 1751, 1801); SVEAR, *Ogledalo Ilirijuma* (Agram, 1839, 1842); TKALČIĆ, *Hrvatska povjestnica* (Agram, 1861); LJUBIČ, *Pregled hrvatske povjesti* (Fiume, 1864); SMIČIKLAS, *Hrvatska povjest* (Agram, 1879, 1882); KLAICH, *Poviest Hrvata* (Agram, 1899, sq.); RAČKI, *u rodovima akademije* (Agram); HORN, *La Hongrie et la Croatie* (Paris, 1907); PLIVERICH, *Beiträge* (Agram, 1886); MACAULAY, *Edinburgh Review* (April, 1842); *Statesman's Year Book* (1908).

M. D. KRMPOTIĆ.
